The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

Daily Digest

HIGHLIGHTS

Senate passed bill on State taxation of interstate commerce, adopted resolution on FNMA mortgage exchanges, and took up military construction appropriations.

House passed bill extending the Agricultural Trade Development and Assistance Act.

Senate

Chamber Action

Routine Proceedings, pages 15083–15090

Bills Introduced: Five bills and one resolution were introduced, as follows: S. 2570–2574; and S. Res. 168.

Pages 15084–15085

Bills Reported: Reports were made as follows:

S. 2500, authorizing the reappointment of Elwood R. Quesada, former lieutenant general, USAF, retired, to the grade of major general, and to retire him in the grade of lieutenant general, with amendment (S. Rept. 748);

S. 1712, to extend the application of the Motorboat Act of 1940 to certain possessions of the U.S. (S. Rept. 749);

H.R. 5067, to repeal section 217 of the Merchant Marine Act of 1936, relating to international freight forwarders (S. Rept. 750);

H.R. 7948, to declare nonnavigable a part of the west arm of the South Fork of the South Branch of the Chicago River (S. Rept. 751);

H.R. 8575, fiscal 1960 appropriations for military construction, with amendments (S. Rept. 752);

S. 2390, to authorize exchange of lands in or near Everglades City, Fla., for use of Everglades National Park, with amendments (S. Rept. 753); and

S. 2181, proposed Mineral Leasing Act Amendments of 1959, with amendments (S. Rept. 754). **Page 15084**

Bill Referred: One House-passed bill was referred to appropriate committee. **Page 15083**

Bill Placed on Calendar: H.R. 4576, suspend import duties on book bindings and covers, was ordered to be placed on calendar. **Page 15083**

Social Security: Senate insisted on its amendments to H.R. 213, providing additional time for certain State agreements under section 218 of Social Security Act to be modified to secure coverage for nonprofessional school district employees. Senate then agreed to hold conference requested by House, and appointed as conferees Senators Byrd (Virginia), Kerr, Frear, Williams (Delaware), and Carlson. **Page 15097**

National Order of Science: H.R. 6288, to establish a National Order of Science to provide recognition for individuals who make outstanding contributions in science and engineering, was taken from desk, passed without amendments, and cleared for President. **Page 15090**

Senators From Hawaii: Majority leader announced that the newly elected Senators from Hawaii will be sworn in next Monday, August 24. **Pages 15090–15091**

State Taxation of Interstate Commerce: Senate passed (motion to reconsider tabled) S. 2524, to prevent, under certain conditions, States or political subdivisions from imposing a net income tax on income derived from interstate commerce, after taking the following actions on additional motions and amendments:

Adopted: Kerr amendment to exempt sales offices within the State, the "sole" purpose of which (as distinguished from "primary" purpose as bill is worded) is to serve representatives of company engaged in solicitation of orders within the State for tangible personal property by 65 yeas to 29 nays (motion to reconsider tabled), Talmadge amendment (motion to reconsider tabled), to eliminate language that would deny to the States the right to tax nonresident corporations which maintain offices and do business within the States; and

Rejected: By 31 yeas to 62 nays, McCarthy amendment to eliminate all language of the bill except that providing for committee study of the problem of State taxation of interstate commerce; by 37 yeas to 56 nays, Sparkman amendment to limit duration of bill to taxable years which begin before July 1, 1962; Long amendment to confine bill to relatively small concerns and setting up a formula based on volume of business as test; and by 36 yeas to 62 nays, Carroll motion to postpone further action on the bill until March 1, 1960.

Higher Export Subsidies No Panacea for Cotton

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Friday, August 21, 1959

Mr. JOHNSON of Texas. Mr. President, a very penetrating and significant piece of writing on this country's agricultural difficulties, particularly with regard to cotton, appeared in the Corpus Christi (Tex.) Caller of August 14, 1959. This editorial, entitled "Higher Export Subsidies No Panacea for Cotton," demonstrates effectively that our farm program must be geared to face economic and political realities, international as well as national.

Mr. President, I ask unanimous consent that this excellent editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

HIGHER EXPORT SUBSIDIES NO PANACEA FOR COTTON

Another exercise in the treatment of the symptom rather than the disease that afflicts the economy of King Cotton began this month. It is designed to recapture at least part of our sadly dwindling export market, but it appears to have no greater prospect of success than have other experiments in the field.

On August 1 the Department of Agriculture began offering an export subsidy of approximately $40 a bale for American cotton. The experience of the past in this connection has been a melancholy one.

Approximately 2,800,000 bales of cotton were exported last year when a subsidy of approximately $32.50 a bale was offered. In the same previous period ending July 31, 1958, 5,700,000 bales were sold abroad, and in the same period ending July 31, 1957, 7,600,000 bales went to foreign buyers.

The source of the difficulties being experienced by American cotton producers in finding a market—other than Government warehouses—for their cotton is simple to define. It arises from the Government price-support program which consistently kept the price of American cotton above the world market price. This has brought a twofold reaction: (1) It has speeded the development and use of synthetic fibers, and (2) it has brought competition for markets, through increased acreage, from new and old producers of cotton in many parts of the world.

The agricultural economy of south Texas is inevitably involved in this and any new approach to the problem of growing cotton surpluses. Obviously if the United States is to protect its domestic producers of oil, machinery and minerals, to name but three, it cannot escape granting its cotton producers a measure of protection. The vital question relates to the nature and extent of that protection.

Increasing restiveness on the part of Congressmen representing urban areas is a warning sign that few farm leaders have ignored. The danger increases that the whole farm price-support program will collapse of its own weight, bringing a grave crisis to agriculture throughout the Nation. A workable farm program addressed to economic and political realities rather than to blind politics is urgently needed. Even the bare outlines of that program appear remote at this time.

Basic Elements of Land Reform

EXTENSION OF REMARKS
OF
HON. E. Y. BERRY
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 11, 1959

Mr. BERRY. Mr. Speaker, I have asked unanimous consent to insert in the RECORD an open form letter published in the August 9, 1959, issue of the Des Moines (Iowa) Sunday Register written by the Right Reverend Monsignor L. G. Ligutti.

Monsignor Ligutti, the executive director of the National Catholic Rural Life Conference with headquarters in Des Moines, and the permanent observer for the Vatican with the Food and Agriculture Organization of the United Nations, is known and respected throughout the world.

His letter follows:

One of the most widespread topics for discussion in the American press has been the Cuban land reform law enacted by Castro and now, supposedly, becoming operative. The Cuban law is of greater interest to us because of our closeness to Cuba and because of the financial implications involved in land ownership and sugar production. However, Cuba is but one Latin American country where land reform is the big political and economic question of the day.

Victor Gymenez, Minister of Agriculture in Venezuela, has just presented the draft for an agrarian reform law in behalf of the Betancourt Government. Senor Pedro Beltram, Peru's new Prime Minister will be considering the report of the commission just back from Italy where they studied the Ente Maremma reclamation and colonization projects.

In Colombia, a committee of Catholic bishops is calling a meeting to study the land reform proposals in the light of Christianity and the national welfare. Mexico's Ejido system is now old enough to be studied for results and implications. Jose Figueres of Costa Rica is being looked upon as a leader in Central America's agrarian legislation. Peron's downfall was in great part due to his pressure on the big ranchers. Guatemala and Bolivia are still suffering from ill-planned reforms.

CONTRAST AND PROBLEM IN BRAZIL

Brazil's vast resources present a contrast and a problem: terribly overcrowded in some parts where, for the sake of a few square meters of inheritance, fratricide is committed; while, not too far away, millions of acres of productive land can be had for the asking.

But, of course, this is only history repeating itself. Have we not right here in the United States our own agrarian problems: surplus production, soil bank, parity payments, meat grading, braceros, sharecroppers, vertical integration, etc. "Nothing new under the sun" runs an old adage. It's as old as the hills.

FOUR REQUISITES FOR SUCCESS

Because of our closeness to South America and our interest in its general economic and social conditions, it would be well for us to consider the basic philosophy, economics, and social implications that must underlie and permeate real land reform schemes.

Having studied the history of land reform and having visited personally almost every general type of land use practiced in the world, may I outline what I believe to be the four basic and essential elements for the success of land reform any place and under any circumstances?

1. Agrarian reform must be economically sound: Land distribution is but a step, not necessarily the first or even the most important. Proper use of land, availability of capital, and marketing facilities are of the essence. What may be sound in one place might probably prove a failure elsewhere under different material and cultural conditions.

2. Agrarian reform must be morally just: Two wrongs never make a right. However, a situation is not morally just because it happens to exist here and now. Neither is it right to eliminate one moral evil by creating another evil. No matter how good the intentions, stealing is wrong, even by Robin Hood who would comfort all in distress.

No antiquated, unjust system of land tenure and use should be continued, but neither should a complete upset be attempted. National and international rights must be respected. To stall a needed reform is wrong and to rush itno it without moral considerations is equally wrong. A middle course is the safest and, in the long run, the most effective.

3. Agrarian reform must be socially democratic: It cannot be based upon decrees and unkases from on high. Man must first be reconstructed from within. He must develop his God-given personality and become conscious of his social responsibilities. It's a slow process, one filled with pitfalls and disappoinment, but it's the only sure and lasting way.

4. Land reform must be for today and not for yesteryear: That implies the application of up-to-date physical as well as social sciences. It means the possession of imagination and vision coupled with good horsesense.

If the four standards briefly outlined above are used as a measuring stick and guide for land reform, no matter where or by whom, society cannot go far wrong even though the process may be slow.

Americans Need To Crystallize "Image" of Our Way of Life

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Friday, August 21, 1959

Mr. WILEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement by me relating to interchanges between the United States and the Soviet Union.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

We recall that during the recent trip of Vice President NIXON to Moscow Premier Khrushchev challenged the United States to a battle of ideas.

Frankly, I think we should take them on. I am confident we will be the victors.

However, I believe the American people today face a real challenge in the need to reevaluate, sharpen up, and crystallize their image of our way of life.

Unfortunately, the benefits of our system are, all too often, taken for granted and thus are hazy in the minds of the American people.

In a peaceful world, this kind of lackadaisical attitude might get by. Today, however, in a world in which communism is challenging our system on practically every front—military, scientific, economic, political, cultural, educational, and others—the time has come to sharpen up our thinking and prepare to defend ourselves in the battle of ideas; or better, to take the offensive in proving the superiority of our system for providing a better life for our people.

INCREASED UNITED STATES-SOVIET TOURIST TRAVEL

The Eisenhower-Khrushchev exchange visits—subsequent to the Nixon trip to Russia—may well be followed by increasing exchanges on a people-to-people, as well as on the government-officials level. As a matter of fact, the flow of persons is stepping up.

During 1958, for example, an estimated 6,000 U.S. citizens traveled to the Soviet Union. By contrast, in the first half of 1959, more than 8,000 Americans have already visited the U.S.S.R.—a rate of more than twice the previous year.

At the same time, the flow of Soviet tourists to the United States is expected to increase. Although only 66 Soviet tourists came to the United States in 1958, it is anticipated that this peaceful invasion is likely to number several hundreds this year.

The Communists—including Mr. Khrushchev and his proteges—can be expected to be well-schooled on their own system as well as knowledgeable of our weak spots.

Consequently, it will be increasingly important that we sharpen up our image of the United States in the minds of our people. We must ask ourselves: "What does our way of life really mean to us? About which of its aspects should be best informed?"

HIGHLIGHTS OF OUR WAY OF LIFE

Among the highlights, I believe, should be included:

A thorough knowledge of our governmental system.

A picture of benefits which the average citizen and his family enjoy; including living standards, wages, ownership of such items as homes, automobiles, television sets.

Opportunity for each person, regardless of place or station of birth to seek and obtain in accordance with his capabilities, the goals he seeks in life—including a vacation of his own choice.

A system of laws that not only aims at maintaining peace and order, but also recognizes and respects individual dignity, rights, and privileges—as opposed to the Communist system which subjugates all rights and personal interests of people to the dictatorship of the State.

Recognition of freedom of thought, including self-selected religious, philosophical, political, or other ideas—so long as adherence to such does not jeopardize, or interfere with, similar privileges of other citizens.

Economic security within our system, including such programs as retirement benefits, unemployment compensation, job opportunities, and others.

Respect for maintaining traditional family relationships—the foundation of our way of life—often either strained or destroyed under communism.

Ability to defend our foreign policy; and also to explain such domestic policies as conflict with the Communist ideas.

Reaffirm the peaceful intentions of our leaders, unity of our people behind our leadership, and to correct the misconceptions of our way of life which have been presented to the Russian people.

Above all, I believe it is important to stress that we are dedicated to attempting to live in peace and harmony with other nations; that we are willing to contribute ideas—yes, even a "helping hand" materially—toward assisting lesser developed nations to resolving economic, social, security, or other problems; but that we do not seek to impose our way of life on any country, but rather, strive for a world in which peoples can, by self-determination, select their own systems of government.

Fortunately, the Russian people—as I'm sure is true of all people—demonstrated, during Vice President NIXON'S tour that—despite years of false propaganda by the Communist machine—they gratifyingly remembered the "helping hand" given Russia—both in terms of military and nonmilitary aid, including food—prior to, and during, World War II.

In countering the Communist ideological offensive, I believe, too, that we must learn more of the Soviet system. By so doing, we will be able to hold up to the light of logic and reason and Communist political, economic, social, and other ideas and reveal their weaknesses and inadequacies.

TRAVELERS TO THE SOVIET UNION

A United States traveler to the Soviet Union—as an ambassador of our country—bears a particularly heavy responsibility.

The reports of visitors within the Soviet Union as—well as the experiences of our U.S. guides at the exhibit in Moscow—confirm the fact that the Americans in the Soviet Union will be the target for a wide variety of questions by the Russian man-on-the-street, as well as the "planted" Soviet inquisitor.

To the degree possible, therefore, the U.S. traveler should be fortified with intimate knowledge and information of our way of life. In addition, he should know something, if possible, of the Soviet system, so as to be able to present his ideas in terms the Soviet people can understand.

In view of the importance of getting our story across—now that we are finally penetrating the Iron Curtain—we might well examine the possibility of providing U.S. travelers to the Soviet Union with either briefings, or at least access to utilizable information, prior to journeying to the Soviet Union.

CONCLUSION

With the opening of what may well be a new era of increasing interchanges between the United States and the Soviet Union, it is especially important that we crystallize our image of the United States and be well prepared to meet the Communist challenge of a battle of ideas.

I am confident that we have the system, reservoir of ideas and ideals, record of accomplishments, and real prospects for an ever-better life that will come out on top in a freedom versus communism conflict.

Hanson W. Baldwin Cites Injustices to Retired Officers of Army, Navy, and Air Force

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Friday, August 21, 1959

Mr. NEUBERGER. Mr. President, many of us have been disturbed over the injustice to retired officers of the Army, Navy, and Air Force in the military pay bill enacted in 1958.

In an article in the Saturday Evening Post for August 8, 1959, the noted military editor of the New York Times, Hanson W. Baldwin, has written an article entitled "Our Fighting Men Have Gone Soft." While I cannot evaluate the basic theme of Mr. Baldwin's article, I think there should be called to the attention of the Senate two or three paragraphs from his very challenging presentation which emphasizes the injustice done by Congress and the President to retired military officers.

I ask unanimous consent, Mr. President, that these paragraphs from the article in the Saturday Evening Post by Hanson W. Baldwin, be printed in the Appendix of the RECORD.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

Even more important is the feeling in the Armed Forces of discrimination by Government at the expense of the services. Pay rates have been raised, and various benefits authorized; but nearly always grudgingly, never without major effort, and usually far less percentagewise than the raises the unions have succeeded in imposing in civilian life, or the increases and privileges which Congress has voted itself. One of the worst blunders the administration and Congress have made was the passage of a clause in the 1958 service-pay act, which has been widely interpreted by many officers as a breach of faith on the part of Government. In the past, service retirement pay always has been keyed to active-duty pay on a fixed percentage basis; if the pay of active officers was increased, the pay of all retired officers and enlisted men was increased by the same percentage formula. But the 1958 pay act violated this principle—which had always been one of the inducements to a service career—and provided only a nominal cost-of-living increase to all retired personnel who took off their uniforms prior to its passage. But those who retired after it was passed received the full benefits, thus creating two groups of retired officers—one of them "second-class citizens" economically. In some cases the monetary difference amounted to $157 a month between retired officers of the same rank and same length of service.

West Berliners Placid in Crisis

EXTENSION OF REMARKS
OF
HON. JOHN E. FOGARTY
OF RHODE ISLAND
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 12, 1959

Mr. FOGARTY. Mr. Speaker, Mr. Edward J. Milne, Washington correspondent for the Providence Journal and Evening Bulletin of Providence, R.I., has returned recently from a tour of the NATO countries. In reporting on his trip, Mr. Milne has captured a vivid impression of the hopes and fears, the potentials and the role of these our allies. He brings an objective eye to that which we have established as our first line of defense and depicts a very real picture of what this country is doing as a member of that organization.

Mr. Speaker, under leave to extend my remarks, I would like to include the first of a series of articles which appeared in the Providence Sunday Journal of June 28, 1959, entitled "West Berliners Placid in Crisis":

WEST BERLINERS PLACID IN CRISIS—MINISTER SAYS PEOPLE DOUBTED MOSCOW WOULD START SHOOTING; SEES DANGER OF WEST TIRING OF PROBLEM CITY

(By Edward J. Milne)

BERLIN.—In the midst of crisis, Berlin seems a city of almost unbelievable calm.

How can that be?

Joachim Lipschitz, who lost an arm on the Russian front in World War II and is now West Berlin's Senator (Minister) for the Interior, has some ideas.

"In the awful days of last November," he says, "no Berliner believed a world war would be started over Berlin. Lots of Berliners polled on May 27 had absolutely forgotten it was the day for which the end of the world had been forecast. They had forgotten because in their hearts they had never believed disaster would come."

On November 27, 1958, the Soviets demanded that the Western powers pull their troops out of Berlin at the end of 6 months.

It is true, Senator Lipschitz acknowledges, that the balance of power, nuclear power, has shifted since West Berlin withstood its last great ordeal in 1948, when the United States and allied airlift broke the Berlin blockade. But talk of Berlin and nuclear power in the same breath does not impress him.

QUOTES AMERICAN

"I might quote an American officer," he says, "who told me the Russians had so many nuclear weapons as to destroy the world three times over and the United States so many as to destroy it five times over. I was interested to know that the earth can be destroyed eight times over, although in my opinion once would be quite enough. Why on earth should we in Berlin fear this awful thing any more than the people in Washington or London—or Moscow?"

When the Soviet ultimatum came out of the blue last November, the United States, Britain, and France repeated the Berlin guarantees of 1952 and 1954 to treat any attack on Berlin as an attack upon themselves.

"And now since Geneva," Senator Lipschitz says, "we know all the more that the West is adamant on not giving up its position in Berlin."

Another reason for the apparent serenity of the west sector of this great green city of gardens and parks and woodlands is psychological, Senator Lipschitz suggests.

COOK WITH WATER

"This is not the first time we have been exposed to Soviet attacks," he reminded visiting American reporters. "They attacked us before the blockade, during it, and after it. We are beginning to believe, as you say it, that the bark is worse than the bite. The Russians also cook with water."

A danger facing Berlin today, he believes, and this is not such a one as to create panic but only to demand a sensible response, is that the Federal Republic is compelled to say no to practically every suggestion the Soviets make.

"The rest of the West could come to regard us as 'cold warriors,'" he says, "and tend to get sick of this troublesome city."

Therein lies a reason that there does not seem to be in West Berlin an optimism matching its calm.

Several West Berlin editors told the reporters they did not expect Germany or Berlin to be reunited in their lifetime.

It is true that many of the ingredients of optimism abound in West Berlin today. There is freedom of speech, press, assembly, and religion. The occupiers are not oppressors. And all one has heard about the contrast between the West and East sectors of the sprawling metropolis—it is almost 20 times the area of Providence—is as true, physically as politically and spiritually.

RUINS LIE TO EAST

On the west side of Brandenburg Gate, one of the border check points between what the Communists call the "democratic" and the "capitalistic" sectors, much of the physical evidence of war has been removed. Great and splendid new buildings are rising. But pass through the gate into Unter den Linden and turn into the Wilhelmstrasse, the old center of government, and the war might have ended last night—acres and acres of huge broken hulks of the stately old buildings, wild flowers growing on the site of Hitler's chancellery, only Goering's air ministry ironically standing untouched while the shattered remains of the German and French cathedrals, for example, and the national theater lie in fields of ruins.

But all that is an oft-told story. What matters today is the outlook for the divided city. It is the fashion in the West to call West Berlin an island of freedom in a sea of totalitarianism, and like names. Yet the freedom leaves much wanting.

In place, Senator Lipschitz says, of the West Germans' maximum demands for a reunited Berlin as the capital of a united Germany, "we are putting forward minimum demands to get out of this mess which has been thrust upon us by the Soviet authorities."

The first of these is that none of the means of access to the city from the west—four highways, three railroads, three air corridors, and two waterways—be denied.

WORKERS CROSS LINE

The second, looking to improvement rather than maintenance of the status quo, is an arrangement for better west and east sectors. Thirty thousand Berliners live in the east sector and work in the west; 17,000 live in the west and work in the east. Ninety-eight streets cross the border. Fifty-seven of them may be used by vehicles, all by pedestrians.

Municipally, three agencies move back and forth—the subway system, the interurban elevated, and the sewage system. But there are separate heat, light, gas, bus, street car, police, fire, and telephone systems. West Berliners are warned not to use the elevated, however, because at points it leaves the east sector of the city and passes into the Russian zone outside the city, and the careless rider could find himself under arrest for traveling without authority. And they do not have to be warned about the hazards of automobile travel. Were one to get a flat tire in East Berlin, he would have to telephone his garage in West Berlin by a long-distance call via Leipzig and Frankfurt.

"CITY IN COUNTRY"

West Berlin has some 7 square miles of parks, 30 square miles of forest or woodland, 12 square miles of lakes and other water surface. It has been called the "City in the Country." It might seem small hardship that the city's 2,100,000 inhabitants are denied by the Soviets access to the beautiful areas beyond the city limits.

But Senator Lipschitz, a Socialist, says that one of the most inhuman measures the Russians have taken has been the denial of kitchen gardens beyond the city limits to some 40,000 workers' families. These modest vegetable plots used to be a prime source of sustenance to the workers' families.

"That is what the 'state of workers,' as they call themselves, has done to the workers on this side," he says.

Last Speech in the House of Representatives of Hon. John A. Burns, of Hawaii

SPEECH
OF
HON. JOHN A. BURNS
DELEGATE FROM HAWAII
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 20, 1959

Mr. DORN of South Carolina. Mr. Speaker, will the gentleman yield?

Mr. BURNS of Hawaii. I yield to the gentleman from South Carolina.

Mr. DORN of South Carolina. Mr. Speaker, as one of the members of the opposition who met in the inner sanctum so often, let me say I formed during that proceeding the very highest admiration for the distinguished Delegate from Hawaii. Not only that, I can truthfully say that it was because of this admiration for you and the love you had for Hawaii that final passage of Hawaiian statehood was obtained. Many people from my area of the country supported statehood for Hawaii. I can say that it was the gentleman's leadership, his sagacity, his ability to look ahead, more than any other factor that led to the overwhelming victory for statehood for Hawaii.

Delegate BURNS, I want you to know when you visited in my home last year you formed a great friendship there among the press and among the people of my district and the deep Southland that will go with you and your great State as long as you live. I feel sure that those people, those friends whom you met, are with you here tonight, and in speaking for them, I wish you well in any undertaking you might pursue, and hope you will some day represent the great State of Hawaii in the Senate of the United States.

Let me say further that Mrs. Dorn joins me in wishing for you and Mrs. Burns the very best.

Mr. BURNS of Hawaii. I thank the gentleman from South Carolina, and may I make this observation to him. I do not know of any people in America who are not fair and just. I do not know of any part of the United States that was actually opposed to the admission of Hawaii into statehood. Maybe some of

them did not understand the facts as well as others did, but no one was opposed. There was no ill will from anybody in the United States toward the people of Hawaii. As for southern support for statehood, I point out that the Honorable James T. Morgan, of Alabama, did everything possible to make a Hawaii a State instead of a Territory in 1900. The Honorable Henry Larcade, of Louisiana, was the chairman of the committee making the first favorable report on statehood.

The gracious hospitality of the people of your district, Mrs. Dorn, and yourself, and the genuineness of your friendship will always be remembered by my assistant, Dan Aoki, and myself.

West Berlin Sustained by Hope of Becoming Capital of Reich

EXTENSION OF REMARKS
OF
HON. JOHN E. FOGARTY
OF RHODE ISLAND
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 12, 1959

Mr. FOGARTY. Mr. Speaker, under leave to extend my remarks I would like to include the second in a series of articles by Mr. Edward J. Milne, Washington correspondent for the Providence Journal and Evening Bulletin of Providence, R.I., concerning his recent tour of the NATO countries. This article appeared in the Providence Evening Bulletin, of July 1, 1959, and is entitled "West Berlin Sustained by Hope of Becoming Capital of Reich":

WEST BERLIN SUSTAINED BY HOPE OF BECOMING CAPITAL OF REICH

(By Edward J. Milne)

BERLIN.—All that keeps West Berlin going, Western observers here believe, is the distant prospect of becoming once again the capital of a reunified Germany.

This frail hope is sustained not only by the security guarantees of the Western Powers but by the political and economic policies of West Germany.

Although it is isolated in East Germany and not a geographical part of the Federal Republic, it has been declared a state of the Republic, and its capital. The last West German presidential election was held here in 1954 and now, despite growls out of East Berlin and Moscow, Parliament has convoked the electoral college to elect the next President here Wednesday as a major gesture of loyalty to the city.

Economically, the city is propped up at every point by the actions and policies of the Federal Republic. While West Berlin is West Germany's biggest industrial city, it constitutes only about 3½ percent of West Germany's industrial capacity. At the end of World War II its manufacturing capacity had shrunk to 15 percent of prewar levels, recovery did not get fairly underway until 1950, and the city remains a drain on the economy of West Germany.

West Berlin's trade is chiefly with West Germany, from which it imports about 5 billion marks ($1.19 billion) worth of goods annually and to which it exports only about 4 million marks ($952 million) worth. A billion-mark deficit in the city government is made up by direct grants by the Federal Government, and that has the effect of financing the city's deficit in the balance of payments.

(Maybe the Federal Republic ought to do more. On the lawn outside the tax office in one of the boroughs here is a statue of two pelicans—"greedy birds," Berliners explain. And their nickname for a heroic statue of a nude athlete is "The Last Taxpayer." "You see," they say, "he has lost everything.")

American occupation authorities feared in November last year that the Soviet ultimatum would have a dampening effect on West Berlin's economy. But the Federal Republic stepped in in December with tax concessions to stimulate commercial construction and industrial plant and equipment outlays, and West German businessmen put on a special campaign to increase purchases from West Berlin factories.

As a result, unemployment has continued to drop—it is now between 6 and 7 percent of the labor force—and new orders are up between 10 and 16 percent over a year ago. American economists are a little nervous, however, because savings deposits, up steadily from 1950 through the fall of 1958, leveled off in November and have drifted down since then. The drop is not significant statistically, they say, but the fact that the upward trend has stopped may be.

The East Germans have been threatening a new blockade of West Berlin to show their displeasure over a new presidential election here. Almost everything the city eats, wears, and otherwise uses must be brought in—about one-third of it by 10,000 trucks a month, one-third by about 400 freight trains, one-third by about 600 barges.

The estimate here is that the city could survive a new blockade 6 months to a year without an airlift, but the emphasis is on "survive." Industrial and export activity, which hardly existed in 1948, could be ruined.

Since American high policy is to assert the West's right of land access to West Berlin, U.S. officials here talk only guardedly and reluctantly about the possibility of sustaining the city's economy through a new airlift.

"Can you keep the economy going through an airlift?" one was asked recently.

"If you had a big enough airlift," he replied.

But the fact is that a big enough airlift is probably impossible. In 1948, when it was only a question of keeping the city from being starved out, the U.S. Air Force controlled Templehof Airdrome, Hitler's masterpiece in the center of the city, handled about two-thirds of the traffic. Its facilities were saturated by the job, and so were those of the airports in the French and British sectors. Airport capacity has not been increased since, and so the turnaround and reloading problem implicit in trying to keep an export-by-air trade alive seems insoluble.

Meantime, Berliners graze sheep and mow hay on the grasslands between Templehof's landing strips and hope the problem won't come up.

Meantime, too, a flame burns in Bismarck Square in commemoration of the East German uprising of June 17, 1953, and the victims of the Russian tanks that crushed it. It is to burn until the day of German unity arrives.

"We hope the gas lasts," West Berliners say wryly.

Diplomats are divided on whether concessions offered to the Soviets by the West at Geneva represented a retreat from the steadfast position on Berlin assumed last November or a shrewd maneuver to prove to the world that the allies are fairminded and conciliatory.

West Berliners are happy that no reduction of the Western Powers' 11,000-man garrison force was proposed. Any considerable reduction might be disastrous to civilian morale, they feel, on the ground that it would be considered the first step on the West's way out of Berlin.

If the allies' offer to limit the garrison to its present size is renewed when the foreign ministers reconvene, West Berliners feel the allies should be careful to avoid a rigid ceiling that would let the Russians demand, say, that two lieutenants go home for every two that come in. That would give the Russians a veto over the allies' clear rights of occupation, West Berliners feel, and set a precedent for Soviet control of the free city in other respects.

One of the allies' proposals at Geneva was for a limitation on propaganda and subversion. Here again the West Berliners sound a warning signal. The West's most powerful voice in eastern Europe today is a 300,000-watt radio station, six times more powerful than any in the United States, which the U.S. Information Service operates out of West Berlin. Known as Radio in American Sector (RIAS), it is largely operated "by Germans for Germans." For West Berliners it is a local radio station. For East Germans it is a strong link with the free world.

The Russians and the East German Communists keep up incessant attacks upon it, coupling it with agents provocateurs and bridge blowers. American officials of RIAS contend that nothing proposed at Geneva would mute this voice. But West Berlin officials say that RIAS would be the first on the Russians' list of what must go if any limitation on propaganda were not drawn specifically to protect it.

West Berliners believe careful conditions would have to be set on the proposal to transfer control of access to West Berlin from the Russians to the East German People's Police. They don't care whether Russians or East Germans man the check points as long as it is clearly stipulated that responsibility for access without let or hindrance remains with the Russians.

Motorists' Prayer

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Friday, August 21, 1959

Mr. JOHNSON of Texas. Mr. President, a thoughtful and valuable suggestion for promoting highway-safety practices comes to us from England by way of the Tyler (Tex.) Morning Telegraph. On August 15, 1959, that newspaper printed an editorial entitled "Motorists' Prayer," regarding a suggestion by the Reverend Vyvyan Watts-Jones, of Staffordshire, England, for a motorist's prayer.

Mr. President, I ask unanimous consent that this editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

MOTORISTS' PRAYER

Much has been said and written on the subject of "practical religion," meaning putting faith into practice in everyday life as well as within the sanctuary and on other ceremonial occasions.

Such a consideration probably caused an English minister to suggest that prayer might be the answer to the problem of keeping safety on the highways these days.

The Reverend Vyvyan Watts-Jones, of Staffordshire, wants every driver, before he starts his car engine, to spend 10 seconds in prayer.

He has devised the following prayer, which he asks motorists to copy and paste on the dashboard:

"Help me, O God, as I drive, to love my neighbor as myself, that I may do nothing to hurt or endanger any of your children. Give to my eyes clear vision, and skill to my hands and feet. Make me tranquil in mind and relaxed in body. Deliver me from the spirit of rivalry, and from all resentment at the actions of others, and bring me to my journey's end."

McGraw-Edison Sets Example of Civic Responsibility

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Friday, August 21, 1959

Mr. BRIDGES. Mr. President, one matter about which I think we all agree is the importance of Americans keeping themselves well informed about vital issues and taking an active part in their Government. This is not a new problem, but something new has happened in recent months in the way of a remedial approach to this situation which deserves laudatory comment.

Businessmen, who once placed a "hands off" label on politics, because of its controversial aspects are now actively encouraging participation in civic affairs. A leader in this field is the McGraw-Edison Co., of New York, spearheaded by the former New Jersey Governor, Charles Edison, chairman of the board of directors.

Mr. President, the example set by this company was the topic of a recent editorial which was published in the Manchester (N.H.) Union Leader. I ask unanimous consent that this fine editorial be printed in the Appendix of the RECORD and I commend it to the attention of my colleagues in the Senate.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

MCGRAW-EDISON SHOWS THE WAY

A sterling example of civic responsibility has been set for all American businessmen by the McGraw-Edison Co., of New York. This newspaper frankly believes the company, through action of its board of directors, led by former New Jersey Gov. Charles Edison, has provided the answer to that perennial question one hears from the lips of countless American businessmen—"But what can I do to effectively combat communism?"

One answer, we feel, is to follow the fine example set by McGraw-Edison: Appoint a committee on public affairs and authorize that committee to take effective action to inform executives and employees of the company on current events and movements which may be either helpful or detrimental to that society which permits these same business organizations to survive and prosper.

Here is how McGraw-Edison accomplished that task. On August 21, 1958, the board of directors adopted this resolution:

"*Resolved*, That the president be authorized to appoint a committee of not less than three or more than five members to be known as the Committee for Public Affairs; that the function of this committee shall be (a) to keep the company informed as to governmental or pressure group actions inimical to the preservation of our form of government as set forth in the Constitution (b) or to the preservation of the concept of private property, and free competitive enterprise or (c) that are hostile to the best interests of the company and its stockholders. Further, that the committee may cooperate with, or take an active part in, activities designed to safeguard the matters referred to, with due regard to legal restriction on company activities in this field."

The committee has operated with great effectiveness, publishing a monthly confidential newsletter describing movements detrimental to company interests; a monthly bulletin devoted exclusively to State and Federal legislative matters; and sending sample copies of Human Events, National Review, American Opinion, the Freeman, and other such periodicals to interested parties. The committee also advises its constituents of books it feels are especially pertinent; recommends activities to be carried out within the community by its constituency, and in general serves as an information center for company employees.

This newspaper has examined copies of the McGraw-Edison newsletter and bulletin and we frankly believe they are the finest of their type we have seen. We feel certain that local firms desiring to put this program into effect in our community will find the McGraw-Edison Co. eager to lend a helping hand.

Duluth Befriends British Seaman—Even in Death

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Friday, August 21, 1959

Mr. HUMPHREY. Mr. President, every once in a while something happens which makes one realize how much genuine goodness there is in this world. All too often these acts of mercy, kindness, and compassion go unnoticed. Fortunately, the editors of the Minneapolis Sunday Tribune did notice an act of friendship and kindness which took place in Duluth, Minn.

I am sure that Duluth is all the better because of the good deeds of some of its citizens. There is nothing which makes a day brighter or a life more meaningful than an act of kindness. Indeed by helping others we help ourselves.

I ask unanimous consent that the article entitled "Duluth Befriends British Seaman—Even in Death" be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Minneapolis Sunday Tribune, Aug. 16, 1959]

DULUTH BEFRIENDS BRITISH SEAMAN—EVEN IN DEATH

DULUTH.—"We are only a small dot on a very large-scale map," read the letter from Middleton-on-the-Wolds, Driffield, Yorkshire, England. "To us, Duluth, then, was another dot on a big map of the world. Now we regard it as part of us—with our son, Peter, there among so many friends."

Peter Dixon, 21, was a Britisher, the second son in a family of five who grew up among the rolling hills of Yorkshire. He was determined to go to sea. At home, his mother kept marking the map where his freighter, the *Deerpool*, was due. The last marking on the map will forever be Duluth.

In the warmth of a mid-June day, the young sailor went for a swim in the Duluth-Superior Harbor. He dived in, and never came up. His three companions swam deep, trying to find him. Harbor authorities were called.

For days, the area was dragged. The master of the *Deerpool* delayed his sailing date. Finally, the freighter could wait no longer. Next day, Peter Dixon's body was recovered from Superior Harbor.

That much was a news item, brief, and saddening. But the understanding hearts of Duluth people who never knew Peter Dixon wrote another chapter.

The shipping line's agent in Duluth called the New York office of the company. Soon, from London, came a phone call to Mrs. Dorothy Dixon, the young sailor's mother.

In an hour, Middleton heard that Peter had drowned in some far-away place called Duluth. Only 300 people live in that Yorkshire village. Everyone knew the boy and his family.

The shipping line had offered to fly Peter's body to New York, where the *Deerpool* could then take it home. The Dixons talked into the night about that. Why not give the lad peace?

"Could you please find an Anglican church and have services for our boy there?" Mrs. Dixon asked. "It seems right to us."

The Reverend John Hildebrand, rector of St. Paul's Episcopal church in Duluth, was called. Would he conduct the services at Crawford chapel for this boy? There were no relatives, no friends of the sailor.

"Perhaps some of you would care to attend the services tomorrow," Rector Hildebrand told his congregation the next Sunday. "We hope you will."

Over that weekend, Jim Crawford, at the mortuary, received several phone calls from Great Lakes seamen.

"Are they going to take care of this fellow right?" asked one. "We'll get together and do what we can. We didn't know him, but we figure what it would be like if this happened to us in some foreign port. A guy would need friends."

Next afternoon, Peter Dixon had more than 100 friends.

"If I died right now, I wouldn't have such people," Jim told me. "There were men and women from every section here. Some of the old families were represented. Three British girls who became GI brides were here. Parents of boys who were killed in Britain, or in flying from British bases in World War II came by."

The front of the chapel was banked with flowers from strangers. The mourners heard the words of Mr. Hildebrand. Then the procession of cars moved to Forest Hill Cemetery. Jim Crawford's staffmen were pallbearers.

"Some 75 people came out to the graveside," Crawford remembers. "It was a moving thing. We see many funerals, but this was unique. You'd think all those people had known young Dixon."

With the group was a woman who phoned her florist later that day.

"I want to be sure there will be flowers to mark that boy's grave," she said. "Will you see to it, please? The friendship I've seen today is something that ought to stay

green. Keep a plant, or flowers, on that grave from now on."

The next day, in that tiny Yorkshire village, memorial services were held for Peter Dixon.

"Everybody knows everybody and our little church was packed," Peter Dixon's mother wrote.

Winging across the Atlantic, at that moment, were letters from the strangers who had attended the young sailor's funeral and burial. A packet of pictures, taken by Jean Basgen, Duluth photographer, showed the Dixon family what had happened. Here were the faces of unknown friends, come to give friendship to the boy they never knew.

Every one of those letters is bringing an answer from Mrs. Dixon. To Mr. Hildebrand she wrote:

"My husband and I wish to thank you for writing so quickly and sympathetically. All we ever expected was official information of Peter's burial. Instead we have been overwhelmed with kind letters from you and American and English residents of Duluth. They have helped lighten our load.

"Peter was our second son. We have been very proud of our fine healthy family.

"We always knew before where Peter would travel. I followed his movements from maps."

That distant dot on the very large map, the city at the head of the seaway, is far, far more than that to everyone in Middleton-on-the-Wolds.

It is a wonderful place where understanding people befriend a stranger—even in death.

Hon. John A. Burns, of Hawaii

SPEECH

OF

HON. ED EDMONDSON

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 20, 1959

Mr. EDMONDSON. Mr. Speaker, will the gentleman yield?

Mr. BURNS of Hawaii. I yield.

Mr. EDMONDSON. I just want to add to the words already spoken in tribute to the statesmanship of the gentleman who has so ably represented Hawaii during his period of service here. I think the tribute which has been paid already is one that could be echoed many times over on this floor, without disagreement by anyone.

I would like to add one word of personal appreciation of JOHN BURNS, not so much as a statesman or legislator, but as a man. In service with him on the committee and in friendly visits outside the committee room I have been deeply and profoundly impressed by the qualities of the man, by his breadth of vision, by his simple and kindly humility, and humanity, by his gentleness and sweetness of character and by the very manly way in which he has accepted a tough setback in a truly impressive career and has with very good grace, I think, confronted the situation. JOHN BURNS continues to speak with genuine friendship of the people of Hawaii, as well as of the colleagues he served with here in the House.

I know that what has happened is merely an interruption, and we hope of very brief duration, in a distinguished public career. I hope and trust that the gentleman will once again return to Washington to serve his Nation ably in the future as he has in the past.

Mr. BURNS of Hawaii. I thank the gentleman.

"Howdy, Hawaii"

EXTENSION OF REMARKS

OF

HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Friday, August 21, 1959

Mr. YARBOROUGH. Mr. President, at 4 p.m. today, Hawaii will join this indissolvable Union of indestructable States. Speaking for the Lone Star State, I would like to extend a warm welcome.

This new State has a long tradition of Democratic self-government and will be a valuable member of the United States, leading our growth in new areas and directions. I was privileged to be a cosponsor of the bill which admitted it to the Union.

In the language of the islands, "Aloha, Hawaii," or, in the language of my State of Texas, "Howdy, Hawaii."

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article from the New York Times for Wednesday, August 19, 1959, entitled "Hawaii Will Join the Union Friday," and an article by Elsie Carper from the Washington Post and Times Herald for Wednesday, August 19, 1959, entitled "Ceremony at White House at 4 p.m.—Hawaii Becomes 50th State Friday When President Signs Proclamation."

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the New York Times, August 19, 1959]

HAWAII WILL JOIN THE UNION FRIDAY—PRESIDENT TO PROCLAIM ENTRY OF 50TH STATE AND SHOW DESIGN OF NEW FLAG

WASHINGTON, August 18.—Hawaii will be the Union's 50th State at 4 p.m., Friday.

At that time President Eisenhower will sign the official proclamation. His press secretary, James C. Hagerty, announced today that the President would fly back from his farm in Gettysburg for the ceremony.

Mr. Hagerty said that the President would also disclose on Friday afternoon the design of the new 50-star flag of the United States. It will not be flown officially, however, until next July 4.

The proclamation will clear the way for the new State's two Senators and one Representative to take their seats in Congress. But formalities may delay that step a few days.

Under the rules, no Member can be seated unless he shows a certificate of election. The new State government of Hawaii cannot issue the certificate until it comes into existence formally on Friday.

A cable from the Hawaii government to Congress might serve as a temporary substitute for the certificates, allowing the three new Members to be sworn in Friday. But no one at the Capitol today was sure they would be here by then.

INVITED TO WHITE HOUSE

The Senators elected in Hawaii last month were HIRAM L. FONG, Republican, and OREN L. LONG, Democrat. DANIEL K. INOUYE, a Democrat was elected to the House.

Mr. Hagerty said today that all three would be invited to the White House on Friday.

Hawaii will have its own ceremony at the same hour—10 a.m. Hawaiian time. Presiding there will be William F. Quinn, the Republican who won an upset victory for Governor.

The three Hawaiian Members of Congress will take office just in time to take part in what seems likely to be a sharp battle over civil rights near the end of the session. In both the Senate and the House civil rights advocates are pressing for action before adjournment.

The new Senators from Hawaii, with its mixture of oriental and western racial strains, will unquestionably add a little weight for civil rights legislation and against any southern delaying tactics. This has been one factor in the general southern opposition to Hawaiian statehood in past years.

The lineup in the Senate after the new Members are seated will be 65 Democrats and 35 Republicans. In the House, it will be 283 Democrats, 153 Republicans and 1 vacancy.

Permanent law fixes the number of seats in the House at 435, but the acts admitting Alaska and Hawaii gave them one Representative each beyond that total.

After the next census, unless the law is changed in the meantime, the number of House seats will drop to 435 again and others will have to lose seats to make way for Hawaii and Alaska. Hawaii's population will probably entitle it to two seats.

Alaska was admitted by Presidential proclamation last January 3.

[From the Washington Post and Times Herald, Aug. 19, 1959]

CEREMONY AT WHITE HOUSE AT 4 P.M.—HAWAII BECOMES 50TH STATE FRIDAY WHEN PRESIDENT SIGNS PROCLAMATION

(By Elsie Carper)

President Eisenhower formally will proclaim Hawaii the Nation's 50th State in ceremonies at the White House on Friday.

Press Secretary James C. Hagerty said yesterday the President will return to Washington from his farm at Gettysburg to sign the proclamation at 4 p.m.

At the same time he will issue an order designating a new 50-star flag.

Hagerty said the ceremony will be similar to the one held January 3 when the President signed the proclamation admitting Alaska. He helped unfurl a flag with 49 stars at the conclusion of that ceremony.

The new 50-star flag will not become official until next July 4, the 184th anniversary of the Declaration of Independence.

Officials invited to witness the historic ceremony will include the two Senators and one Representative elected by Hawaii to represent the islands in Congress.

Hawaii sent HIRAM L. FONG, a Republican, and OREN L. LONG, a Democrat, to the Senate, and DAN K. INOUYE, a Democrat, to the House.

They will be able to take their seats after the Governor of the new State is sworn in and certifies their election.

The Eisenhower-appointed Governor, William F. Quinn, a Republican, was elected to retain that office. He will remain in Hawaii and preside at a celebration to be held at 10 a.m. Friday, Hawaiian time, to coincide with the ceremonies at the White House.

Signing of the proclamation on Friday will permit the State legislature to convene in special session a week from Monday, 10 days after Hawaii officially enters the Union.

A commemorative 7-cent airmail stamp also is to be issued on Friday, the Post Office

announced. The stamp, printed in red ink, shows a Hawaiian warrior extending a lei of welcome to the star of statehood.

Tribute to Michael Shimkin, Government Cancer Fighter

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Friday, August 21, 1959

Mr. HUMPHREY. Mr. President, it is always gratifying when a leading newspaper takes notice of the outstanding work of one of our Government's civil servants.

In a recent issue of the New York Post an article by Barbara Yuncker about Dr. Michael Shimkin tells the story of this remarkable man.

It was my privilege to travel with Dr. Shimkin this past year during our visit to the Scandinavian countries and the Soviet Union. Dr. Shimkin is a highly respected scientist and doctor. His work in the field of cancer research has earned for him a fine reputation. I know Dr. Shimkin not only as an outstanding scientist, but also as a good friend and neighbor. I was delighted to see the article in the New York Post. It tells of Dr. Shimkin's background and of his tremendous contribution to the field of medical research, particularly in the field of cancer.

I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MICHAEL SHIMKIN, GOVERNMENT CANCER FIGHTER
(By Barbara Yuncker)

"The thing we Americans have got to learn is that the Russians aren't 9 feet tall. But they're not 3 feet tall, either. They're just our size."

That's Michael Boris Shimkin, M.D., cancer specialist, expert on Russia, enthusiast for international medicine, talking about sputnik and about Soviet medicine.

The tart and voluble Dr. Shimkin epitomizes a species of bureaucrat new to our age of science, the specialist little known to the public whose expertese lies behind the official pronouncements.

Shimkin was adviser-interpreter to HUBERT HUMPHREY a few months ago when the Senator proposed an International Health Year to Nikita Khrushchev.

When the Senate Government Operations Subcommittee called recently for a worldwide campaign against cancer, it was the National Cancer Institute's Biometrics Branch, of which Shimkin is chief, that supplied the data. (Biometrics applies the tools of statistics to the problems of biological sciences.)

If the currently stymied bill for international medical research, within the National Institutes of Health, gets pried loose and passes the House (it has Senate approval under the shepherding of Alabama's LISTER HILL), the zeal of public servants like Shimkin will rate a large vote of thanks.

What kind of man is this scientific civil servant? For one thing, he gives the lie-direct to the cliches about Government time-servers and patterned thinkers. His opinions fairly crackle, with no apparent awareness of sacred cows.

On catching up with the Russians, for example: "The trouble is our Government wants instant science. And science to them is hardware, military hardware. They think by pouring out money they'll get results, like pouring hot water on instant coffee. They're just not oriented to human values yet."

On an International Health Year: "It's a great idea, a wonderful thing. But don't be under any illusions. Some nations will oppose it because it is against their leader's self-interest to have a healthy educated people. Not everybody buys our happy doctrine."

On the level of Soviet science: "They're ahead on rockets, generally a bit behind in medicine, perhaps a dozen years. We've made such tremendous strides in financing research." He stresses the word "financing."

On our posture before the world: "We've let the Russians steal our revolution. If we finally lose, that may be why."

On smoking and lung cancer: "They keep saying it hasn't been proved and talking about all those smoking mice which didn't get lung cancer. Well, maybe mice just don't know how to smoke too well; maybe it's the puff that does it. If the mice had got cancer the tobacco industry would have said it only proved mice shouldn't smoke.

"They threw a lipstick off the market because it produced lesions on the backs of mice. Mice don't use lipstick but most of us accept the fact that if it irritates mouse skin, it's an irritant. You can go around the circle both ways."

Shimkin completes this comment with a cross between a chuckle and a snort. He smoked heavily for 25 years, gave it up 5 years ago when the statistical reports started coming in.

Shimkin, a round-faced jovial man of 46, was born in Tomsk, Siberia, and became an adopted California at 11, having spent the intervening years mainly in Java. He has kept his Russian but his once-fluent Dutch got lost in the middle of his efforts to learn English and German. His English is excellent and totally unaccented.

Despite his exotic background and the international ramifications of his professional life, he describes his Chevy Chase, Md., homelife with his schoolteacher wife, Mary, in slick magazine terms.

His hobbies, he says, are "chauffeuring the kids around and mowing the grass. A suburban husband is a yardman with sex privileges."

The "kids" are 19-year-old Peter, a premed student at Brown; Ann, going on 16 and a high school senior, and Philip, 7, a pencil-and-crayon artist whose interest in illustrating has just shifted from cats to the Civil War. His creations decorate his father's office walls in Silver Spring, Md.

Amid Shimkin's concern with particular bits of research (he has nearly 150 published scientific papers in his bibliography), the NCI official pursues two giant goals: the war on cancer and the fight for international understanding.

"I like what I am doing," he says. "Anybody who has any part in fighting cancer has a job as great as landing on the moon.

"But important as cancer may be and as important as landing on the moon may be, the most important thing is how human beings get along with human beings. Mankind can live with cancer—though we hope some day he won't have to—but he can no longer live with international war."

NATO's Specialists

EXTENSION OF REMARKS
OF
HON. JOHN E. FOGARTY
OF RHODE ISLAND
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 12, 1959

Mr. FOGARTY. Mr. Speaker, under leave to extend my remarks I would like to include the third in a series of articles by Mr. Edward J. Milne, Washington correspondent for the Providence Journal and Evening Bulletin of Providence, R.I., concerning his recent tour of the NATO countries. This article appeared in the Providence Journal of July 8, 1959, and is entitled "NATO's Specialists":

NATO'S SPECIALISTS
(By Edward J. Milne)

VERONA.—Both north and south of the Alps, the U.S. Army in Europe has highly specialized forces ready for action if NATO finds itself in the war-by-miscalculation that is the only kind of war our commanders seem to expect.

GUERILLA WARFARE

Not far from Munich, for example, is the otherwise unidentified headquarters of a tough bunch of paratroopers newly trained in guerilla warfare with the mission of aiding and abetting revolt in the satellites. The guerillas are part of the U.S. 7th Army, the Nation's major contribution to NATO land forces. Headquartered at Heidelberg, the 7th claims to keep 50 percent of its men combat-ready in 30 minutes, 35 percent ready in 2 hours, and only 15 percent on leave or on pass.

Again, this ancient northern Italian city is the headquarters of the U.S. Army in Europe's Southern European Task Force. A short helicopter hop away across the hilly vineyards that lie between the Alps and the Po, the Army's first oversea missile command, the task force's fighting arm, is in readiness at Vicenza to give atomic fire support to the Italian Army. It has formed the U.S. Army's first "sky cavalary" and has just completed, in June, the training of two Italian battalions in the use of Honest John rockets that also can carry atomic warheads.

ITALIAN MISSILEMEN

Col. Melville B. Coburn, boss of the missile command, tells the story of the creation of the Italian units. It goes back, he says, to 1954, when U.S. military advisory groups throughout the NATO area and the Pentagon in Washington were studying the possibilities of the forces of other nations taking over some of the Americans' commitments.

Political questions had to be answered first. Would the U.S. State Department agree? Would the Italian Government agree? It was not until the summer of 1958 that all agreements had been reached, for the Italians had to wrestle with tooth-and-nail opposition from the Communists to a United States-Italian collaboration in the atomic weapons field.

Once the agreements were reached, Colonel Coburn says, "the Italians did a magnificent job." They "practically drained their artillery of men who could get security clearance and do the mathematics. They finally assembled a training cadre, some of whose men had learned their English in prison camp in the last war."

The training began in January of this year, was completed in June, and the Italian units

are now "operational in the Italian Army," with "probable" commitment to NATO if war comes.

MATTER OF MOTIVES

With the formation of the Italian battalions, the 1st U.S. Army Missile Command lost its own two Honest John battalions. The United States controls the atomic warheads, the Italians now having only the conventional ones.

Maj. Gen. John P. Daley, commander of the task force, is a little impatient with questions about the Italians' fighting qualities. He has studied Italian military history, he says, and he points out that before the Italians broke at Caporetto in World War I they "fought 12 great battles and lost a million men." That they later reformed on the Piave was "almost a miracle," he says, and goes on:

"I've served with French, Dutch, Korean, British, and others. I'm convinced that men will fight as long as they have something to fight for. In World War II, the Italians weren't fighting for anything. I don't think their hearts were in it. Now they have got something to fight for. And every time they turn out another Fiat they've got something to fight for."

The Honest John rocket, with a range of 15 miles, is a modern fire support weapon described as "amazingly accurate within a few hundred yards." Retained by the 1st U.S. Army Missile Command are two battalions of Corporal guided missiles. Colonel Coburn says it would be a waste of time to train the Italians in the use of those more sophisticated 75-mile-range weapons.

In the first place, it has taxed the Italian resources of skilled manpower to form the Honest John units. In the second, and more important place, the Corporal, he says, "is obsolercent if not obsolete. The Corporal is like a woman driver. It either goes all out or slams to a dead stop. It will either be right back on the target or 100 miles off in the wrong direction. It was formerly called the WAC Corporal."

Colonel Coburn would like to have his battalions armed with the newer, lighter, more accurate, and less expensive Sergeant missiles of the same range, but General Daley says that the arrival of the Sergeant on the Italian front "if not in the dim future, is not tomorrow, either." He says this would be "a lovely place," too, for Pershing 500-mile missiles but knows of no plans to place them here.

Besides its Corporal units and their security forces—one U.S. infantry company and one company of crack Italian Alpini troops—the 1st U.S. Army Missile Command has a company of engineers and its unique sky cavalry company. Budget cuts have recently whittled down both outfits.

DEMOLITION EXPERTS

The engineers are trained in atomic demolition. Their wartime job, with Italian acquiescence, would be to blow up mountain pass invasion routes.

The sky cavalry is a target-finding unit equipped with planes, helicopters, radar, and other modern means of telling the rocket and missile groups what to shoot at, and where. Teams of 6 to 12 men can be flown in low behind enemy lines by helicopter or dropped by parachute, to radio back target information.

Are not these men expendable?

"We hope to recover them," Colonel Coburn says, "either by helicopter or by having them work their way back across the mountains. They're good, and they're tough. In training, they've worked their way back past screens of Italian police and Italian troops, and they've all got back undetected after many days in the cold."

There are many other examples of cooperation between U.S. and Italian forces here. But General Daley observes:

"I am completely conscious that we could have the best military command in the world and still be worthless if we did not get along with the Italian people. I think we are accepted and generally well liked. We certainly work at the job. We try to be part of their community family and help them all we can. The headquarters company here has in effect adopted an orphanage. Our worst headache is automobile accidents. If you kill somebody in one, you've lost friends."

SYMBOL OF POWER

Colonel Coburn has a complimentary observation about the presence here of the Southern European Task Force.

"Hardly a day goes by," he says, "that SETAF doesn't appear in the Italian papers. There is hardly a person north of Rome that doesn't hold SETAF symbolic of U.S. atomic power and Italian national security. The 6th Fleet's planes may have 100 times the atomic power of our missiles and rockets, but up here they don't see the 6th Fleet." The 6th roves the Mediterranean.

If the time comes, he says, when it seems advisable to put U.S. intermediate range ballistic missiles into Italy, the Italians will have their answer to protesting Communists.

"They will say," he says, "that SETAF already has atomic missiles, so why the fuss? It makes no practical difference whether those missiles are 75 miles or 1,500 miles."

A good deal of what one hears at task force headquarters sounds as if the preparation is all for a bigger, fiercer version of the ground campaigns of World Wars I and II. Colonel Coburn promptly concedes it.

"None of this is applicable," he says, "to all-out nuclear war. But life would be academic then, anyway."

GOP Pressures for Punitive Labor Bill

EXTENSION OF REMARKS
OF
HON. EDITH GREEN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 30, 1959

Mrs. GREEN of Oregon. Mr. Speaker, there has been a good deal said in the press and on the House floor regarding alleged improper lobbying by representatives of labor. That there has been such lobbying there can be no question. Yesterday's letter by Mr. James B. Carey of the AFL–CIO has been greeted everywhere by loud and indignant shouts of outrage.

But there is another side to this coin. Mr. Speaker, I want to describe, not in my own words, but in the words of the chairman of the Republican National Committee, some of the highly improper pressures that were brought by the administration and the Republican Party to defeat fair and effective legislation and insure the adoption of punitive legislation in its place.

It is not my desire to make unfounded allegations. I am merely going to place in the RECORD a newspaper interview with the chairman of the GOP National Committee. Chairman Morton's disarming frankness about administration manipulation has the undimmed virtue of complete frankness. At least there should be no doubt left about the type of lobbying which resulted in the vote of August 13.

The article is from the Washington Post and Times Herald of Saturday, August 15. It reads as follows:

MORTON SUGGESTS FEDERAL INSTALLATION CLEARINGHOUSE

Senator THRUSTON B. MORTON, chairman of the Republican National Committee, sees a need in the Eisenhower administration for a clearinghouse to review proposed closing of Federal installations.

He said yesterday the party is trying to "get a setup, I don't know whether it will be in the White House, or not, where if any installation has to be closed they will let somebody with political savvy look at it."

"If the action can just as well wait until after an election, let us do that," he proposed.

But MORTON urgently felt the need for such a clearinghouse Thursday. He said he was trying to persuade two Members of the House, both from labor districts, to support the administration's labor bill. One declined flatly, claiming it would be "political suicide." The other reluctantly agreed.

Before the day was over, MORTON related, an announcement was made that a Federal installation would be closed in the district of the Member who was supporting the bill and that a new installation would be opened in the other Member's district.

"We got to that one just in time and got it straightened out," he added.

National Farm Safety Council

EXTENSION OF REMARKS
OF
HON. EDWARD H. REES
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 19, 1959

Mr. REES of Kansas. Mr. Speaker, under approval granted by the House I am including a timely statement delivered by Mr. Maynard Coe, director of farm safety, National Safety Council, at a meeting of this organization held in Washington in July. Mr. Coe is a director of education for the prevention of accidents on the farms of our country. He is an authority on this subject matter. Mr. Coe is known for his leadership in the farm safety movement. His contribution to the cause of the prevention of accidents is immeasurable. His statement follows:

Education in the principles of accident prevention for agricultural leaders and through them for the 20 million farm residents is the essence of the work of the farm division of the National Safety Council. Farm safety is the responsibility of all agricultural agencies and leaders. The job to be done is so enormous that no organization, no matter how large, can do the job by itself. However, with all agencies and leaders that influence farm life, working together in behalf of accident prevention real results can and are being accomplished.

Many agricultural organizations and agencies are cooperating. Each organization attacks problems or makes contributions it is best equipped to make, while the council provides the machinery for cooperation and coordination. Thus, the farm division collects information from statistical bureaus on one hand and distributes it to engineers and educational agencies on the other. The farm division enlists the support of farm-equip-

ment manufacturers in providing educational films and materials and in turn distributes such films and materials to other agencies and organizations. The farm division seeks out successful activities and disseminates information on the methods employed.

Cooperators in farm safety includes the Farm Bureau, the Grange, and other farmers' organizations, the American Society of Agricultural Engineers, the farm-equipment industry, the 4–H Clubs, the Future Farmers of America, State agricultural colleges, the U.S. Department of Agriculture, many commercial organizations closely related to agriculture, and other groups who desire to have a part in this important program that is basic to the welfare of agriculture.

There are more than 500,000 4–H clubs in America, 10,000 FFA chapters, more than 300,000 farm women's groups are organized throughout the United States. There are 200,000 rural schools and there are approximately 75,000 other rural organizations. To facilitate the cooperation of al these groups the farm division of the National Safety Council assists in the formation of State and local farm safety committees. Thus far 43 States have established State farm safety committees, and in Kansas, Minnesota, Ohio, and a few other States, reductions in accidents have occurred annually since the formation of these committees. Thus the pattern for making definite reductions in accidents is being established.

The farm division recognizes that an adequate farm safety program must include the development of safety techniques for the major jobs in farming. Farm equipment manufacturers are doing splendid work in safeguarding farm equipment. As practical methods are developed additional safeguards will be adopted and the farm division will assist in the stimulation of farm people to make maximum use of all safety devices and equipment. Demonstrations and exhibits are required also and the farm division assists in the preparation of such exhibits and other materials.

A bimonthly publication, the Farm Safety Review, is published to inform and aid agricultural leaders. Special publications such as program manuals and discussion outlines are produced, fortnightly releases to agricultural colleges and others are provided, regular news releases to newspapers, feature articles for magazines, and periodic mailings of radio material are prepared and distributed by the farm division.

National Farm Safety Week (July 20–26) is a publicity springboard which mobilized to an unusual degree the public educational facilities of the Nation in behalf of farm safety.

The farm division recognizes that farming is a family proposition and that it is imperative therefore that all members of the farm family be made safety conscious. This includes recognition of the danger spots around the farm, what constitutes major hazards, what are the dangerous practices in the handling of machinery and livestock, how children can be safeguarded, what are the risks in the use of electricity, efficiency in fire prevention, up-to-date knowledge of first aid, and a host of other items. The farm division maintains intensive efforts with Federal, State, and local extenson organizations and individuals and with vocational agricultural and home economic schools as well as with the 4–H Clubs and farm women's groups. It promotes farm safety contests for youth groups, for farm publications, for radio stations to stimulate more and better work against accidents. It provides awards and recognitions for those doing the best job.

The farm division is constantly adding to the materials that are available. These are not only instructional, but includes also inspirational materials to assist in the carrying out of farm safety programs by organizations and others.

Cooperation is extended toward the farm safety specialists who are leaders of farm safety in their respective States. Assistance to agricultural colleges also constitutes an important phase of the work of the farm division. Other work includes the setting up of more unified plans for safety in various agricultural contests, the development and stimulation of research in farm safety, adequate testing and proving grounds for safety devices.

The farm division is alert to the ever present need of expanding the program to include needs as they develop, thus giving leadership and coordination to the entire movement. Through its leadership the farm safety movement is making its contribution to the permanent progress and welfare of agriculture.

Discussion of Dangers to Mankind of Biological and Chemical Warfare

EXTENSION OF REMARKS
OF
HON. WAYNE MORSE
OF OREGON

IN THE SENATE OF THE UNITED STATES

Friday, August 21, 1959

Mr. MORSE. Mr. President, my attention has been called to a press release issued today, relating to an exceedingly important conference of scientists at Pugwash, Nova Scotia. The release reads as follows:

PUGWASH, NOVA SCOTIA, August 21, 1959.—Twenty-five of the world's leading scientists will gather in this simple seaside community next week to discuss the dangers to mankind of biological and chemical warfare. Sponsor of this nongovernmental meeting, the fifth in a series initiated in 1957, will again be Pugwash-born American industrialist, Cyrus Eaton. The four earlier scientific session, which were concerned with the perils of nuclear war, have been credited with laying the groundwork for last summer's first official Geneva understandings.

The Pugwash Conference of International Scientists on Biological and Chemical Warfare, as the new private meeting is designated, runs from August 24 to 30 and includes participants from both sides of the Iron and Bamboo Curtains. Represented will be approximately 60 percent of the world's population.

Purpose of the latest conference, as planned by the Pugwash continuing committee under the chairmanship of Lord Bertrand Russell, is to "examine the potentialities of biological and chemical warfare, both as weapons of mass destruction and as factors in increasing international tensions through the possibility of smaller countries producing such weapons."

Members of the committee, in addition to Nobel Laureate Russell, include top scientific minds from the United States of America, United Kingdom, and Union of Soviet Socialist Republics, prominently identified with such noted institutions as Great Britain's Cambridge University, Massachusetts Institute of Technology, Johns Hopkins University, University of Illinois, and the Soviet Academy of Sciences.

Topics to be discussed by the Pugwash participants range from use of communicable diseases as biological warfare to theoretical possibilities of disease agents produced through guided mutations, and potentialities of chemical weapons such as internal and external visicants, incendiary substances, and physiological poisons.

Conferees will meet in the paradoxically ultra modern new Pugwash District High School, while being housed in Eaton's centuries' old family home, now familiarly known as Thinkers Lodge, as well as in comfortable ancient neighboring homes of the quiet community's leading citizens. The Pugwash population of 500 will be increased at least 10 percent by members of the conference and associates.

Pugwash's original scientific meeting took place in July 1957 at the combined instance of Eaton and Lord Russell, the renowned British mathematician and philosopher. The two started laying plans for such a conference with the late world famous physicist, Albert Einstein, shortly before his death. Subsequent symposia have been held under the Pugwash name at Lac Beauport, Quebec, and in Austria. In turning from nuclear perils to the threat of biological and chemical warfare, Lord Russell's continuing committee stated, "Some scientists believe the destructive potentialities of biological and chemical warfare are now even greater than those of nuclear warfare. Others disagree. Whatever the true position, an authoritative statement on this subject is certainly of the utmost importance particularly in view of the tight secrecy which it is surrounded by the governments concerned. Biological warfare, even if not so dangerous as nuclear warfare, could be of great nuisance value in wars between small nations. In the present state of the world, this might easily lead to global conflict."

The statement points out that "the Pugwash movement deals with all consequences of science that may affect the fate of man. It is quite possible that the potentialities of biological warfare may radically after the conditions necessary for the establishment of stable peace."

Mr. President, we shall be watching for the observations made and the conclusions reached by these 25 scientists on this general subject, which is of such vital importance to the future welfare of mankind—namely, biological and chemical warfare and what we can do to bring reason to bear, before it is too late, by bringing to an end the danger that any such war would ever be started.

Mr. President, I ask that the release which I have read and these remarks be printed in the Appendix of the RECORD.

Mediterranean Patrol

EXTENSION OF REMARKS
OF
HON. JOHN E. FOGARTY
OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 12, 1959

Mr. FOGARTY. Mr. Speaker, under leave to extend my remarks, I would like to include the fourth in a series of articles by Mr. Edward J. Milne, Washington correspondent for the Providence Journal and Evening Bulletin of Providence, R.I., concerning his recent tour of the NATO countries. This article appeared in the Providence Journal of July 10, 1959, and is entitled "Mediterranean Patrol":

MEDITERRANEAN PATROL

(By Edward J. Milne)

ABOARD U.S.S. "INTREPID."—Give a map of Europe a quarter turn clockwise and the continent's peninsula character becomes

strikingly plain—along, in the Navy's opinion, with the necessity of controlling the waters around it.

A big part of the job of controlling the Mediterranean's 2,000-mile sea flank of Europe has been assigned to the U.S. 6th Fleet. A big part of the 6th Fleet's job is done by its Attack Carrier Striking Force, consisting of 2 large carriers, 2 to 3 cruisers, and 20 destroyers.

One of the carriers at present is U.S.S. *Intrepid*, which—according to one's point of view—is either a miracle of modern sea warfare or a beat-up old tub.

At any rate, she's a gallant veteran of the Pacific in World War II, when she took both torpedo and kamikaze hits. She went into mothballs in 1946, came out in 1954 fitted with steam catapults to allow her to launch the ever bigger and heavier planes; 2 years later, she was fitted with an angled deck to increase her plane recovery capacity. Now she can launch and take back all but the biggest of the Navy's retaliatory strike atomic bombers, and some of those she does handle can carry any weapon we have.

Her air group today varies all the way from the fighter bombers, jet and prop, to all-weather supersonic fighters firing guns or missiles to helicopters for sea rescue duty that can pull a ditched pilot out of the water and put him on deck in 5 minutes.

While it ceaselessly prowls the Mediterrean, the 6th Fleet is based on the east coast of the United States—Newport, Norfolk, and so on. It has no major dependence on southern European ports, although its ships constantly visit them on good-will missions, because it is supplied by the oilers, refrigerator ships, and other supply vessels of its own service force.

Depending on whether her planes are nuclear-loaded or conventionally armed, the 6th is ready for all-out war, if that is what comes, or brush-fire war. The fleet has received an estimate from the British, old tenants of the Mediterranean, that from 750 to 1,000 merchant ships a day, not counting countless fishermen, ply the Mediterranean. Every one of these shows a return on radar, and that, the Navy thinks, would give the Russians one devil of a job trying to identify the 6th's widely dispersed units.

"The memory of Pearl Harbor," says the 6th Fleet, "is still with us," and that, plus training needs, is the reason the fleet is constantly churning the Mediterranean's blue waters at 600 to 700 miles a day and its carriers' planes are so much aloft. On June 29, for example, *Intrepid* shot 61 planes into the skies in day and night exercises, setting a new monthly record of 1,504 sorties and bringing the total of sorties since conversion to angled deck to 35,891.

Officers of *Intrepid* and the 6th Fleet have been briefing newspapermen on the missions, capabilities, and problems of the fleet. The missions are plain enough and agreed upon—to join the U.S. Strategic Air Command and United States and other NATO tactical air units in Europe if the Supreme Allied Commander Europe calls for a counterstrike against hundreds of Russian targets; to wage conventional warfare in support of national policy; i.e., handle localized outbreaks; and bolster the confidence of Turkey, Greece, and Italy, the alliance's southern anchor.

But capabilities and problems are something else again.

There's the problem, being fought at higher levels in Washington, of new carriers for the Navy.

"Why do we need new carriers?" one briefing officer asked. "Because the majority we have now are of World War II vintage. Their hulls are fast approaching the point of overage. Maintenance costs are approaching operating costs. In addition, as aircraft increase in speed and size, we need larger launching and recovery areas. The Russians don't use second-line aircraft, and we can't afford to."

Intrepid's engineering officer, a hard-bitten, zealous and obviously sincere commander, said 60 percent of the equipment below decks should be replaced or renewed. *Intrepid* will be going into the yards soon, he said, but a lot of what needs doing to her won't be done because of shortage of both money and skilled personnel.

"I am convinced," he said, "that a Navy board will find the ship is in no fit condition to go to war. It's true of 95 percent of our ships. Should the showdown come today, I wonder if we could count on all our carriers."

Briefed, in turn, on this briefing, neither *Intrepid's* skipper, Capt. Paul Masterton, nor Vice Adm. Clarence E. Ekstrom, commander of the 6th Fleet, endorsed it enthusiastically. Said Captain Masterton:

"I am sorry he made that remark. He is not competent to comment on the fleet or even on the combat capabilities of this ship. The record shows that we have made all our commitments."

Admiral Ekstrom responded in more general terms.

"It is true," he said, "that we have lost ground in modernizing the fleet in the last few years. Korea was an extra charge, and because of it most of the destroyers, of World War II vintage, suffered maintenancewise. But we are in good shape and ready to go.

"We would like to have new and better ships, radar, sonar, and so on. But it cannot all be done at once. The French air force in 1935–36 was the most modern in the world, but they had committed so much to it that by the time World War II started it was reaching obsolescence."

Besides ships, a Navy has sailors, and here there are problems, too. Cmdr. Malcolm W. Cagle, *Intrepid's* Washingtonwise executive officer, undoubtedly knows that the Navy has a little publication, "Facts About the U.S. Sixth Fleet in the Mediterranean," which lists, among others, the fact that "Duty with the 6th Fleet is widely regarded as the best in the seagoing Navy."

"Our enlistment rate," Commander Cagle said frankly, "is not good. We have only 13 re-enlistments on board." (*Intrepid* has a ship's company of almost 3,000.) "These kids can't take it, and you can't blame them. When we go to sea, they sometimes have to go for days without baths. They sleep in those old-fashioned tiered bunks. The heat down there is intense. There's almost no place for them to sit down to have a game of cards."

Yet, there are things that make him proud of his boys. The Navy indoctrinates them with the idea that they are their country's ambassadors in port and urges them to behave themselves ashore. They seem to be doing so.

So far this year, Commander Cagle said, 30,302 sailors have been ashore in Mediterranean ports, and there have been only 19 shore patrol reports—"and 15 of the 19 were for fights at the fleet landing. The kids work like animals and live like animals, and we expect them to go ashore and behave like Little Lord Fauntleroys."

But life aboard is no bed of roses, either, for *Intrepid's* officers. Sixteen- and 18-hour days, even longer, are common. There are times when Captain Masterton, no youngster any longer, is lucky to be able to nap 10 minutes at a stretch in any 24-hour period.

And, at fleet level, Admiral Ekstrom would be a lot easier in mind if he had his hunter-killer task force aboard at all times. Part of the Atlantic fleet, the hunter-killer force, consisting of a carrier, specialized air, and destroyers, is the 6th's antisubmarine screen. Russian submarines and manned aircraft are deemed the greatest threat to the 6th Fleet's striking forces.

"If things got warm it would take the hunter-killer group 7 to 8 days to get here from the east coast," Admiral Ekstrom's staff says. "We feel much better when it's here."

Progress in Korea

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Friday, August 21, 1959

Mr. HUMPHREY. Mr. President, few nations have had to struggle against such odds as has the Republic of Korea. Since its formation in 1948 that country has faced staggering economic problems, a bitter war, and the continued threat of annihilation from enemies to the north.

When one considers the great burdens borne by the Republic of Korea, it is a wonder that it has been able to survive. But the amazing fact is that the Republic has not only survived, but it has been making significant progress.

In the August 3 issue of Newsweek the noted foreign policy analyst, Ernest K. Lindley, reports on the encouraging developments taking place in that country and on the strength and spirit of its people. I ask unanimous consent, Mr. President, that this article entitled "Korean Comeback" be printed in the Appendix of the RECORD.

I have spoken out on certain actions in the Republic of Korea which were not compatible with a free society. Evidence of strong-arm tactics by the majority party cannot be excused or ignored.

Yet despite such shortcomings, we must remember that the Republic of Korea has attempted to work within the framework of the 1948 Constitution, which is patterned in large measure after our own form of government. It maintains a popularly elected assembly, its President and Vice President are elected by the people each 4 years, and its judiciary is an independent branch of the Government.

The Republic of Korea strongly favors unification of Korea. It cherishes the hope that some day the whole of Korea will be united under a republican form of government. This is a hope which is shared by the people of all the free nations of the world. Communist-controlled North Korea stands as a threat to the freedom and independence of the Republic of Korea. It stands also as a symbol of the ruthless aggression and terrorist methods of the Communists.

The Korean comeback, as reported by Ernest K. Lindley, involves much more than the struggle for achievement of the brave people of this tiny country; it involves also the worldwide struggle between the free world and the Communist bloc. The Republic of Korea is in the front line trenches, both literally and figuratively speaking, in this common struggle.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From Newsweek, Aug. 3, 1959]

KOREAN COMEBACK

(By Ernest K. Lindley)

SEOUL.—If all free Asians were as sturdy as the Koreans, the Communist offensive would be at a dead end. Not only naked force, but intimidation, beguilement, economic penetration, diplomatic trickery—all the devices in the arsenal of Red expansionism—would be obviously futile.

Almost every able-bodied ROK youth does 3 years of military service, for less than cigarette money. The truce line is defended by 18 ROK divisions and 2 American (containing many Koreans), half on the front, half in reserve. Behind this line, the Republic of Korea has risen from the debris of war and is making significant economic gains. Most of the damage to Seoul has been repaired. Industrial production has risen 70 percent in 4 years. Farm output has risen much less but has enjoyed two successive good crops. Per capita income is estimated at roughly U.S.$100, medium for free Asia. The standard of living is probably well above North Korea's, although the latter, with more resources and fewer people, is making industrial gains.

Since mid-1957, inflation has been substantially checked. Bank deposits have soared. So have tax revenues—they are nine time what they were in 1953, when the truce was signed. Good progress appears to have been made in curbing corruption and misuse of American goods. Lt. Gen. Song Yo Chan, ROK Army Chief of Staff, has cracked down hard on thefts of military supplies. Pressure toward petty corruption was relieved last October by doubling Government salaries, both military and civilian.

GOOD MANAGEMENT

As long as it has a heavy military burden, the Republic of Korea must have large-scale aid. However, a ROK soldier costs only one-tenth as much to maintain as an American. In administering our general aid two special devices are used to good effect. One is the Combined (American-Korean) Economic Board, which allots funds and verifies their end use. The other is the aid control law, with prison penalties for misuse of aid money. Relations between key Koreans and Americans, both civilian and military, are excellent. "We are like brothers," one Korean minister said to me. Men such as Song In Sang, Minister of Finance, and Kim Chong Yol, Minister of Defense, are highly esteemed by our representatives.

The apparently everlasting President Syngman Rhee (now 84) remains impatient to unite his country, by force if necessary—although he knows the United States will not permit the ROK to take any military initiative. He also remains implacably hostile to Japan. Japan has been sticky in its dealings with Korea and blundered in proposing to send to North Korea some of the Koreans now in Japan. But Rhee's unwillingness to forget the old Japanese tyranny impedes a rapprochement that would serve the interests of both nations.

BETTER PLANNING

Internally, there is discontent with Rhee and his Liberal Party, and this is probably augmented by their tendency to use strong-arm tactics on their opponents. Next in line to Rhee as Vice President is a member of the opposing Democratic Party, John M. Chang, who lives in semiseculsion because of attempts on his life. Rhee's own chances of winning the national election next year are rated better than his party's, if the choice is completely free. Democrats complain of all sorts of discrimination, including press curbs. They favor unification of Korea by peaceful means only and differ with the Liberals on certain constitutional questions. But they seem to be no less friendly to the United States.

Korea still has unemployment and underemployment. It needs a well-coordinated economic program and more money for education. Our 1-year-at-a-time system of dishing out aid handicaps orderly development. A 5-year commitment would help Korea more and probably save money for us. Experienced Americans say that Koreans, given a chance, learn new skills as quickly as the Japanese.

These are an intrepid people. Their severe war losses, in life and property, appear to have stiffened their spirit even more. They have both the will to fight if necessary and the ability, with our aid, to make their country a telling frontline illustration of the superiority of the free way of life.

Thors for Britain

EXTENSION OF REMARKS

OF

HON. JOHN E. FOGARTY

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 12, 1959

Mr. FOGARTY. Mr. Speaker, under leave to extend my remarks, I would like to include the fifth in a series of articles by Mr. Edward J. Milne, Washington correspondent for the Providence Journal and Evening Bulletin of Providence, R.I., concerning his recent tour of the NATO countries. This article appeared in the Providence Journal of July 14, 1959, and is entitled "Thors for Britain":

THORS FOR BRITAIN

(By Edward J. Milne)

LONDON.—Come all-out war, a United States-British team could blast back at Russia today with atomic ballistic missiles.

Both U.S. Air Force Strategic Bomber Command and British Royal Air Force Bomber Command spokesmen say that on an emergency basis the Thor intermediate range ballistic missile, American-made and British-operated, is ready to be "fired in anger" if need be.

Four widely dispersed bases from East Anglia north almost to Scotland are nearing completion as Thor launching sites, and the British are expected to announce within a week or two just when they will be fully operational. In the meantime, SAC says its training role should be completed, and the British ready to take over lock, stock, and barrel, by next spring. The United States will retain control of the warheads.

Thor is not an intercontinental missile in the commonly accepted sense, in America, of a 5,000-mile vehicle. But it becomes intercontinental, for all practical U.S. purposes, when shot from these islands.

President Eisenhower and Harold Macmillan, the British Prime Minister, agreed in March 1957 that until Britain could produce her own, U.S.-built ballistic missiles should be stationed here in the heart of the second most formidable NATO power. The British, overcoming strong antinuclear feeling, have pressed ahead with the job of base construction and missile squadron training.

The Thor-for-Britain program is probably unique in world political and military history. For the first time the United States has supplied a friendly power with a major weapon before putting it to work in its own Armed Forces. For the first time, too, the United States is sharing operational control, and that at an eventual minimum, with another power.

"Mr. Thor" in England, is Maj. Gen. W. H. Blanchard, SAC's 7th Air Division Commander and principal American adviser to the RAF on the missile program.

Scattered over the four Thor bases, he says, are 20 dispersed launching sites with three of the big "birds" on each.

"So we are completely dispersed," he says. "One bird on each location would be the optimum dispersal. But there never was any weapon system in the free world as completely dispersed. If you put in 60 more birds there wouldn't be much of England left."

Since ground was broken for the Thor program last year, construction of two of the four bases has been completed. In one of the two, the missiles have been installed and checked out; in the other, the installation and checkout phase is about to be completed. In both of these, RAF crews got their individual technical training in the States and are now completing their training as crews here in England.

To speed the process, while the third and fourth squadrons' base construction is being completed and the installation and checkout phase is underway, all individual and crew training is being given in the States so that the squadrons will be ready to take over operationally as soon as construction and installation are complete.

There is no room in these tight little islands for test firings of the Thor, and the first two RAF squadrons will be back in the States for that job in a few weeks. The two others will not be far behind.

If the British made a big political decision to go ahead with the Thor program, the Americans made a tremendous financial and physical effort to carry it out. Dollar figures are not available, but they can be sensed from a mere mention of SAC's Ballistic Missile European Task Organization: a force of 1,000 people, military and civilian, moving up and down the English countryside in trailers, managing construction and supervising installation. The British met the cost of the launching pads and accessory construction.

The Thor is roughly in the 1,500-mile range class. The British are working on their own IRBM, the Blue Streak, which will have a greater range than Thor—"2,000 miles would be a serious underestimate," they say—and could be fired from underground. They regard Thor as an addition to, not a substitute for, their retaliatory bombing planes. They offer no date on when their own Blue Streak may become operational, but when it does, they expect it to replace, not supplement, some of their manned aircraft.

Duncan Sandys, the British Minister of Defense, and other military people here agree with the American estimate that in the next 12 months, "provided we maintain the unity and strength of NATO," there is "no likelihood of war at all."

But in any event, he says, "not at any time since the end of the war has the partnership of Britain and the United States in the military field been more intimate and effective than it is today."

General Blanchard has been in the atomic game since before the first bomb was dropped over Hiroshima. He says that by "scrambling everything we have," meaning RAF, USAF, and technical representatives of the American manufacturers of Thor, Feltwell, the most advanced of the four bases in the English lowlands, has had the capacity since last December 31 to fire Thors should they have been needed as part of the first wave of all-out retaliation. Today, he says, there is "reasonable emergency capability in any of these locations," although the operation would "not be as fast and smooth as later on."

Each of the 4 Thor bases carries 15 of the missiles, and these in turn are scattered,

3 to a site, among the main base and satellite bases. Seventh Air Division training forces are fast disappearing from the scene at Feltwell, as they will be doing soon at the three other bases, and when the British are ready to take over, only skeleton U.S. crews will remain to maintain the warheads.

These, under U.S. law, must remain in U.S. Air Force custody until the President releases them. General Blanchard says no one knows just when he might do so. In a period of acute tension, when all the political signs pointed to the possibility of a major Russian thrust, he might do so well in advance of actual attack alerts, General Blanchard says—2 or 3 days, perhaps, or a week.

But even then, U.S. control would be complete up to the moment of decision to fire. The "two key" system makes this possible. The British have the key that starts the 15-minute countdown for launching a Thor. But sometime within the first 12 minutes of the countdown, a U.S. "authentication officer" would have to turn the second key or there would be no lift.

This two-key system is the ultimate satisfaction of American atomic energy law requiring U.S. control over its nuclear weapons. In a nation with an atomic capability of its own, such as Great Britain has, the arrangement has suffered some unpopularity politically.

But as a practical military matter, RAF Bomber Command people treat it lightly. They can hardly conceive of a situation in which the British would want to unleash a nuclear counterattack and the Americans would not, or vice versa.

In any event, what is important to them, however, is the mere existence of these sleek, powerful birds roosting in eastern England. For the British, like the Americans, believe that the more symbols the West displays of instant and overwhelming retaliatory power, the less likely are the Russians to risk challenging it.

A Legislature for American Students

EXTENSION OF REMARKS

OF

HON. HARRISON A. WILLIAMS, JR.

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Friday, August 21, 1959

Mr. WILLIAMS of New Jersey. Mr. President, students from 390 member schools of the United States National Student Association will meet from August 24 to September 3 at the University of Illinois. Their National Student Congress will mark the 12th anniversary of the United States National Student Association; the congress will also be a clear-cut demonstration of student responsiveness to challenges.

The congress, called the Nation's most significant student meeting, will offer workshops on issues ranging from "International Awareness on the Campus" to "Higher Education and the Federal Government." The students will try to predict "The Goals and Directions of Higher Education." Their legislative committees will examine issues which show the wide range of United States National Student Association interests: First, The Student and the Educational Process; second, Human Rights and Academic Freedom; third, Student Self-Government; fourth, The Campus and the Greater Community; fifth, International Student Relations.

The association president Robert R. Kiley, of the University of Notre Dame, put the purposes of the Congress succinctly in his letter of greetings to delegates: "By acting as a legislature for American students on all United States National Student Association campuses, congress delegates also have constructed a basis for the development of national programs of lasting importance, while functioning as the only unified voice for the American student community."

Mr. President, the voice of our students is an important one, particularly at a time when we are asking our educators whether we can meet the challenge of future competition with nations that do not educate as we educate, that do not permit the freedom of thought which we permit.

An answer to those who ask that question is provided in part by this Congress and by the activities of the USNSA within the past year.

In the 12 months since the last National Student Congress the USNSA has completed these programs:

Campus consultations. USNSA staff members have traveled to over 150 member and nonmember campuses, providing local student leaders with help in evaluating their own performances and in improving their liaison with their counterparts in other areas of the country.

Completion of the first year of the student responsibility project, a major innovation in educational programing financed by a $25,000 Ford Foundation grant, and involving experimental programs on 15 pilot campuses and in 2 pilot regions. The responsibility project stressed three areas: student responsibility in college teacher recruitment, student responsibility in counseling and tutoring, and better utilization of existing educational resources.

A series of four summary publications are now in preparation.

A southwide student conference on human relations, which brought together 150 southern student leaders from November 28 through 30 at Pfeiffer College in Meisenheimer, N.C. A result of suggestions from the area's student leaders, the meeting was designed as an open conference stressing discussion and solution of problems.

A student editors' conference on international news coverage, cosponsored with the Overseas Press Club of America. Approximately 120 student editors and 60 club members met at the club headquarters in New York City on March 13, 14, and 15.

The association has recognized the importance of understanding among nations. Among their 1958–59 international programs were these:

Participation in the International Student Conference, held in February in Lima, Peru. As a member of the International Student Conference, USNSA was one of 66 national unions of students represented.

A long-term academic exchange agreement negotiated by representatives of USNSA and the Polish National Union of Students. Two American students now are enrolled in Polish universities under the terms of this exchange, with one Polish student attending the University of Michigan and one more scheduled to arrive in September.

Contributions for academic scholarships for 12 Algerian refugee student leaders have been secured, with the program now in operation.

USNSA's foreign student leadership project entered its fourth year of operation, with special scholarships provided for 16 foreign student leaders from underdeveloped areas. The students spent a full academic year on selected American campuses with reduced study loads, in order to study the structures and operation of American campus organizations.

The seventh International Student Relations Seminar. Fifteen outstanding student leaders have been selected from member school applicants for an intensive 9-week seminar in international student relations, now in progress at USNSA's international commission office in Cambridge, Mass.

The students elected as officers for the 1958–59 year are individuals who apparently have a deep awareness of individual responsibility. These officers are:

Robert R. Kiley, 23, president. He served as student government vice president in 1957–58, after graduating with honors from the University of Notre Dame where he was named outstanding student.

Diane Hatch, 20, executive vice president, will be a senior at Brigham Young University in 1959–60. At Brigham Young, she was a student government officer for 3 years while taking a premedical course. She also served as chairman of USNSA's Utah region for 1 year.

Willard Johnson, 23, international affairs vice president. He served as 1957–58 educational affairs vice president, the position he won at the 10th National Student Congress after serving as UCLA's student body president.

Reginald H. Green, 23, educational affairs vice president, is a former Whitman College newspaper editor and is now a graduate student on leave from Harvard University.

Fred Werner, 22, student government vice president, is a graduate of Trinity College where he was campus newspaper editor.

James J. Harrington, 20, student affairs vice president, graduated in June 1959 from St. John's University in Brooklyn, where he was student body president.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD messages of encouragement received at the August 1958 congress from government and leaders. To give further indication of the importance of this confederation of student government of colleges, I ask, too, for unanimous consent to have printed the names of member schools and members of the National Advisory Council of the U.S. National Student Association.

There being no objection, the messages and list were ordered to be printed in the RECORD, as follows:

MESSAGES RECEIVED IN AUGUST 1958

Dwight D. Eisenhower, President of the United States:

"To all attending the 11th National Student Congress, I send greetings. The young men and women now studying in American colleges and universities are sharing in a great democratic heritage. With renewed dedication to the principles of free inquiry and the discipline of truth, I am confident that your deliberations will add to both the vitality and the stature of American higher education.

"Best wishes for a memorable congress."

RICHARD NIXON, Vice President of the United States:

"It is a pleasure to extend greetings to the delegates and guests attending the 11th National Student Congress.

"During this past academic year the attention of the Nation has been fixed as never before on the subject of education not only in the public schools but also in our colleges and universities. More than ever we realize that education determines our social, cultural, moral, and economic progress and may even decide whether this land shall remain free.

"The National Student Association and its members have willingly entered into efforts to improve the quality of our schools and colleges and have also carried the story of the importance of education throughout the land. By its serious purpose and dedication to the ideals of democracy, it has served a real function in our society.

"With every good wish for a most successful convention."

RALPH W. YARBOROUGH, Senator, Texas:

"Texas is proud of the part her students have played in the founding and continued growth of the National Student Congress. Believing that an educated citizenry is the only true safeguard of a democracy, I have coauthorized the National Education Act of 1958. Having implicit confidence in the youth of America I extend my warmest congratulations to the congress and urge you to push your leadership of American college students to the end that our people will be the most enlightened in the world. Give to student bodies a tone of nobility and dedication to the great challenge which encompasses us on every side. God be with you."

Robert B. Meyner, Governor, New Jersey:

"My best wishes to the officers and delegates of the U.S. National Student Association on the occasion of your 11th congress. Discussion about our schools cannot be carried on as if education is unrelated to the kind of society we have created on this continent and which we want to cherish and improve. In the worldwide conflict which we have come to describe as the cold war, the moral amor of a people dedicated to freedom, individual liberty and self-government, may in the long run prove to be the most important strength in our national arsenal.

"Our reach sometimes exceeds our grasp. Too often, perhaps, we fail to measure up to the best that is in us. Nevertheless, as a people, we do stretch out our hands to raise our practice to our precept. We believe everyone deserves an equal chance. Furthermore, we believe that people deserve more than one chance. A single failure is never final. Our concern is with the person on whom we place the ultimate value. We encourage truth to compete with error in the market place of debate and discussion, confident that a free people enlightened by education can tell the difference between the real and the counterfeit, between good and evil. The record of American students acting through USNSA over the past decade indicates that our faith has not been misplaced.

"May your discussions and resolutions of this next week be fruitful to yourselves and your colleges and instructive to us, your fellow citizens."

NATIONAL ADVISORY COUNCIL OF THE U.S. NATIONAL STUDENT ASSOCIATION

Wallace M. Alston, president, Agnes Scott College.

Ralph J. Bunche, Under Secretary, United Nations.

John Ciardi, poetry editor, Saturday Review.

John Cogley, staff administrator, the Fund for the Republic.

Christine Y. Conaway, dean of women, Ohio State University.

James M. Debbs, president, Southern Regional Council, Inc.

Rev. T. M. Hesburgh, C.S.C., president, University of Notre Dame.

Russell Kirk, editor, Modern Age.

Robert H. Shaffer, dean of students, Indiana University.

George N. Shuster, president, Hunter College.

Harold E. Stassen.

Howard E. Wilson, dean of the School of Education, University of California at Los Angeles.

O. Meredith Wilson, president, University of Oregon.

NATIONAL ADVISORY BOARD OF THE U.S. NATIONAL STUDENT ASSOCIATION

Mr. Charles W. McCracken, dean of student personnel services, Trenton State College.

Mr. Paul McMinn, Department of Health, Education, and Welfare.

Mr. Phil Berry.

Mr. Philip H. DesMarais, executive vice president, St. Mary's Dominican College.

Prof. Warren Ashby, Woman's College of the University of North Carolina.

Dr. Gordon Klopf, visiting professor of education, Columbia University.

Mr. James Lewis, vice president, University of Michigan.

Carl M. Grip, dean of men, Temple University.

Kathryn L. Hopwood, dean of students, Hunter College.

Dr. Charles Gadaire, dean of students, American International College.

Three hundred and ninety colleges and universities, with a total enrollment exceeding 1,300,000 students, constitute the U.S. National Student Association.

UNITED STATES NATIONAL STUDENT ASSOCIATION MEMBERSHIP, AUGUST 1959

California-Nevada-Hawaii: Immaculate Heart College; Los Angeles State College; Mount St. Mary's College; University of California, Berkeley; University of California, Los Angeles; University of Hawaii; University of Southern California; Whittier College; Church College of Hawaii; Chaminade College.

Un-American Attempt To Intimidate the Congress of the United States

EXTENSION OF REMARKS
OF
HON. VICTOR A. KNOX
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 20, 1959

Mr. KNOX. Mr. Speaker, much has been written and said during the last few weeks about labor reform legislation, especially the Landrum-Griffin bill. I have received hundreds of letters, telegrams, and postcards on this subject from all parts of the Nation. None of these contained a threatening tenor, except for the form letter I received this morning from James B. Carey, president of the International Union of Electrical, Radio, and Machine Workers. His threatening communication is a reflection on the citizens of the United States and an un-American attempt to intimidate the Congress of the United States.

Under unanimous consent to extend my remarks, I include at this point in the RECORD my reply to Mr. Carey:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D.C., August 21, 1959.

Mr. JAMES B. CAREY,
President, International Union of Electrical, Radio, and Machine Workers, Washington, D.C.

DEAR MR. CAREY: I have received your form letter of August 18 endeavoring to intimidate me because of my favorable vote on August 13, 1959, in support of the Landrum-Griffin bill, which also was supported by President Eisenhower as well as by 303 of my colleagues out of the total membership of 436 in the House of Representatives.

It is interesting to note that you have described this legislation as "a punitive and repressive measure." This phrase characterizes the tenor of your letter. In my judgment your action constitutes a grave and intemperate misuse of the money of the rank-and-file of labor union members. By your ill-considered threat you are exposing the labor boss practice of the denial of the basic rights and democratic processes of your union members. A threat from you is no more terrifying to me than would be a threat from Mr. Hoffa, although I believe even he would be inclined to use better judgment than you have demonstrated.

By your act you have caused me to realize more than ever that I was correct in voting for the Landrum-Griffin bill. I am sure my voting record has proven to my constituency that I am interested in individual rights and democracy more than in the concentration of power in the hands of big business, regardless of whether that big business be the management boss or the labor boss.

The people of the 11th Congressional District of Michigan will not yield to the unthinking dudgeon of any labor leader when they are exercising the right to mark their ballot in secret for the candidates of their choice. Similarly, I would not, and did not, yield to any pressures from the National Association of Manufacturers and the Chamber of Commerce, as you allege, when I cast my vote for the Landrum-Griffin bill.

I have always supported legislation that would protect the rights of labor union members and would rid the unions of the practices of corruption, breach of trust, gangsterism, violence, and abuses of power. The political hoodlumism that you imply will be brought to bear against me does not dismay me, and I am sure it will not be persuasive with the thinking people of my congressional district.

In order that my constituency may be aware of your activities I am sending a copy of your letter and my reply to all individuals on my mailing list. I respect the intelligence of the people whom I have the honor to represent, and know that they too will realize more than ever the real need for the enactment of the provisions of the Landrum-Griffin bill.

Yours truly,

VICTOR A. KNOX,
Member of Congress.

United States Loses, Other Nations Win With Export Credit Guarantees

EXTENSION OF REMARKS
OF
HON. CLAIR ENGLE
OF CALIFORNIA
IN THE SENATE OF THE UNITED STATES
Friday, August 21, 1959

Mr. ENGLE. Mr. President, a number of Members have expressed concern about declines in U.S. export trade. I have been particularly interested in the recent decline in U.S. trade with Asian countries. During 1958, U.S. exports to the Far East and south Asia dropped 24 percent below the previous year—imports dropped 4 percent. We have grown so accustomed to having export surpluses it is unusual, to say the least, to see our exports and imports approaching a balance. In context, this recent decline follows an increase in exports to Asia of some 25 percent between the end of the Korean war and 1957. To some extent, the decline in exports to Asia since 1957 may be attributed to the cutback in the volume of aid goods to such recipients as South Korea, Formosa, and South Vietnam. Another more recent factor is the increased energy with which other countries are developing Asian markets.

Mr. President, it is not my purpose today to discuss the many complex factors affecting U.S. trade with Asia. I would, however, like to invite the attention of the Senate to one aspect of the competition. A number of west coast exporters have expressed concern over the fact that foreign competitors are able to make the sale, often for the reason that the competitor is able to offer more attractive credit, both in terms of interest rates and period of repayment. He can offer these attractive terms of credit for the sole reason that many foreign governments guarantee or insure a wide variety of export risks, including export credit. The U.S. investment guarantee program covers some risks. The Development Loan Fund provides reasonable interest rates and terms of payment for transactions through the Fund. The Export-Import Bank satisfies the needs of still another type of transaction. There is a large gap, however, placing many American exporters at a disadvantage. In this connection, I call attention to an editorial in the July 31 edition of Business International. The editorial describes in some detail this disadvantage to American exporters. I ask unanimous consent to have this editorial printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

UNITED STATES LOSES, OTHERS WIN WITH EXPORT CREDIT GUARANTEES

Are foreign competitors offering more attractive terms to oversea buyers than U.S. manufacturers are able to offer? This is not a new question. But the continuing deficit in U.S. international payments (suffered every year since 1950, except 1957) and the recent, serious drain on U.S. gold reserves make it imperative for the answer to be found now—and a course of action agreed upon.

It is oversimplification to assert that the United States is pricing itself out of world markets. In many cases, in terms of quality, design, performance, appearance, and service, this is just not so. But there is a great deal of evidence that oversea buyers are swayed by foreign competitive credit terms which the U.S. manufacturer cannot match. In many cases the buyer must have credit—or not buy at all. In some countries the government will grant foreign exchange only if the foreign seller offers credit.

Many foreign governments provide export credit insurance policies against a wide variety of both business and political risks. They include the risks of inconvertibility, insolvency, protracted default, promotional losses suffered by the exporter, preshipment losses (if political events prevent shipment, for example), catastrophe and other risks. These guarantees generally apply both to consumer goods and capital goods—and to short-term as well as long-term credits. And they make possible the lending of money by private banks.

Private banks provide most of the export credit for U.S. manufacturers, although normally this is done with recourse to the U.S. supplier. But obviously U.S. banks cannot match the terms offered by foreign banks which enjoy government-backed guarantees. While the Export-Import Bank actually lends money for export credit without recourse to the supplier, its loans (except for cotton) are confined to capital goods. Credits to individual U.S. manufacturers are not offered by Eximbank to countries in balance-of-payments difficulties.

EXIM HELP OF LIMITED VALUE

Most of Eximbank's money has been used for developmental loans in countries suffering balance-of-payments troubles—Indonesia, Argentina, Brazil and India, for example. And these developmental loans have been enormously helpful to U.S. capital goods manufacturers who otherwise would not be able to sell to these countries. But this does not mean that any U.S. capital goods manufacturer can get export credit to accommodate a customer in Indonesia. Far from it. It merely means that those U.S. manufacturers making certain specified goods for the special project in Indonesia which the Eximbank is financing may compete for the order, and if successful, get the credit. All others are frozen out.

The Export-Import Bank has been holding conversations with private banks about offering limited guarantees against political risks in certain countries. But no program has yet been announced that would enable U.S. manufacturers to meet foreign competition on even terms.

Some bankers and manufacturers argue that the whole idea is unsound—that such guarantees underwrite financial mismanagement by foreign governments, or, more brutally, that they finance the balance-of-payments deficits of other countries. In response, proponents of export guarantees argue that no one can foresee the future, and that it could just as easily be said that life insurance companies underwrite unhealthy living.

Whatever one's philosophy in this matter, the grim fact is that foreign manufacturers (including U.S. firms with plants overseas) and their private bankers are protected against more risks, in more countries, and on more goods than are U.S. manufacturers. Here is a summary of export credit facilities and insurance schemes now operated by six foreign governments.

The United Kingdom's Export Credit Guarantee Department (ECGD) of the British Board of Trade offers the world's most complete coverage of capital and consumer goods against all risks except loss from exchange fluctuation. Coverage is for up to 85 percent of loss when due to insolvency or protracted default and up to 95 percent in all other cases. Terms are up to 3 years for consumer goods, 5 for capital goods, and 7 for aircraft. As a further aid, the ECGD offers exporters to the dollar area the opportunity to recoup a portion of their expenditures for market research and promotion in those countries.

The Japanese Government is giving considerable encouragement to exporters, both through credits and insurance from the Japanese Eximbank and by granting tax relief up to 80 percent on export earnings from new markets or in lagging industries. The bank's insurance agency will guarantee up to 80 percent on all losses (including exchange fluctuations) for both capital and consumer goods, and it will also cover any promotional loss suffered by an independent export drive anywhere. Premiums range from 0.48 to 1 percent. Unlike Britain's ECGD, Japan's Eximbank also provides direct export credit, at rates of 4.5–6.5 percent. Additional export incentives include preferential Government treatment of exporters' requests for information, licenses, etc., and permission to exporters to retain 3 percent of their foreign exchange earnings.

In France and territories of the French Community, the semipublic French Export Insurance Company (COFACE) provides coverage (usually 80 percent) against all risks for up to 6 months on consumer goods, 5 years on capital goods. Premiums range from 0.4 percent upward. In addition, COFACE will cover 50 percent of promotional losses incurred by an exporter expanding or seeking new oversea markets. The French Government also usually exempts exporters when special credit restrictions are introduced, permits accelerated depreciation rates, and allows retention of foreign exchange (12 percent of sales to the dollar area, 8 percent for other exports. Special exporter cards are issued by the Government to companies which export 20 percent or more of their production. Card holders receive privileged treatment by Government agencies and are allowed to retain an extra 3 percent of foreign earnings.

West German Government guarantees are given through Hermes Kreditversicherung, and sureties covering sales to foreign governments are given through a special agency. Both groups cover all risks except default and, with few exceptions, exchange loss. Guarantee extends to 80 percent for political risk (which may soon be hiked to 95 percent for special cases), 70 to 75 percent on other risks. Preshipment coverage is available for capital goods. Insurance premiums average about 1 percent for both capital and consumer goods. Other public banks purchase exporters' bills and provide long-term (8-year) financing. In addition, the Government grants turnover tax rebates ranging from a minimum 0.5 to maximum 3 percent.

In Belgium, L'Office National Ducroire, a Government bank, offers risk coverage up to 90 percent for consumer and capital goods produced in Belgium or the Congo. Insurance against political risks costs from 2 to 10 percent and other risks from 3 to 5 percent. The Banque Nationale de Belgique also offers special visas to exporters enabling them to receive favorable discount rates from private banks to finance export operations.

In Italy, the National Insurance Institute (INA) guarantees or insures credits to exporters of capital equipment and some high-value consumer goods against political disturbances, catastrophe, cancellation, and transfer risks, but not default unless the debtor is a foreign government. Insurance coverage runs for up to 5 years on amounts not exceeding 85 percent of value. Rates vary from 0.2 to 2.5 percent. Although more limited than those of the UK, Germany, and France, the Italian export credit insurance system is developing. The ceiling on guarantees granted by INA was just raised from $160 to $240 million. A bill now before the Parliament would extend coverage to all Italian exports. The Central Institute for Medium-Term Credit (Mediocredito) grants 4- to 5-year credit, covering up to 63.75 percent of the export value for a rate of 3 percent. In addition, the Foreign Affairs Ministry provides special export services to spur export of capital goods. The Government also waives turnover taxes on many exports.

Miss Elizabeth Allen Smart

EXTENSION OF REMARKS

OF

HON. EDWARD H. REES

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 18, 1959

Mr. REES of Kansas. Mr. Speaker, under permission granted by the House, I am including herewith a statement by Charles X. Hutchinson, Jr., president, National Temperance and Prohibition Council, concerning the career of Elizabeth A. Smart, who passed from this life on August 16 in Washington, D.C.:

The notable career of Elizabeth Allen Smart came to a quiet end on August 16 at the Washington Sanitarium. The victim of cancer, she had battled for almost a year to win her fight with the disease. Im-

mediately following the 1958 convention of the National Woman's Christian Temperance Union held in Washington, she entered the hospital with no idea of her precarious condition. She lingered between life and death for several weeks, and with great courage and infinite patience won her way back to partial health. Returning to her apartment, she took up her work with surprising energy in spite of her apparent weakness. After a period of weeks, she recognized that her condition was deteriorating, and made her plans to return to the hospital. She did not go until Bishop Hammaker had gone to his summer home and Mrs. Hutchinson and I had sailed for Europe. She did not want to give us any uneasiness. We found a beautiful bouquet from her in our stateroom when we boarded the *Queen Elizabeth*, and did not know that she had reentered the hospital on that very day. On our return, there was only time for a few precious conversations with her at her bedside. Her strength was gone and she spoke in a whisper. She awaited in faith her blessed release.

Elizabeth Smart was the daughter of the parsonage. Her father, the Reverend John Gardiner Smart, was a minister of the Dutch Reformed Church in Schoharie, N.Y., when she was born. She attended Smith College, graduated cum laude, and was elected to Phi Beta Kappa. She decided to enter the law and matriculated in the New York University Law School. She was admitted to the New York State bar in 1915 and was a practicing attorney in that State. Her special interest at that time was "business law" which was the title of a book of which she was coauthor. She became interested in journalism as the medium through which public opinion is shaped and motivated and launched a career as editor and publisher, and later owner, of the oldest weekly in New York State, the Washington County Post, of Cambridge, N.Y. In law and in journalism her concern was the direction in which our society was drifting, and she supported every movement for moral and social betterment. It was during that period that the conviction crystallized that beverage alcohol was at the root of most of our social ills, and from that time Elizabeth Smart's name became synonymous with temperance reform.

In 1940, Elizabeth Smart came to Capitol Hill as the director of legislation for the National Woman's Christian Temperance Union. Her legal and journalistic background had prepared her for her public relations task as she made her approaches to the Members of the Congress in behalf of pending moral and social, particularly temperance, legislation. She looked upon herself as the voice of the thousands of women in her organization. She had a sense of "calling" that few, if any, lobbyists have ever had. Her penetrating mind and judicious temper won the respect and confidence of congressional leaders. She was far removed from the doctrinaire reformer. She had an understanding of the difficulties of the legislative process in a democracy. She used her power of persuasion in urging the Members of Congress to move in the direction she was convinced we had to go for the sake of the moral health of the Nation. She kept her constituents informed as to what was happening in Congress through her Washington Letter in every issue of the Union Signal, the national journal of the W.C.T.U. She never wearied. She was always patient. She took her defeats in her stride as temporary setbacks. She lived and died in the faith that her cause would ultimately triumph because it is right.

Elizabeth Smart was related to many organizations including the League of Women Voters, the General Federation of Women's Clubs, the American Bar Association, the National League of American Pen Women, and the American Academy of Political and Social Science. Her most active interest was given to the National Temperance and Prohibition Council which includes 23 organizations working in the field of temperance reform. She was the secretary for many years, and was chairman of the legislative committee at the time of her passing. She has been the key person in the organization for so long that her death is almost an irreparable loss.

Above all, Elizabeth Smart was a good woman. No finer or truer thing could be said. During the years we worked together, my regard for a gallant lady grew, and my affection deepened. For she was great as a person. We shall miss her sadly, but we shall carry on in her faith that—

"Though the wrong seem oft so strong,
God is the Ruler yet."

U.S. Guides at Moscow Fair

EXTENSION OF REMARKS
OF
HON. STUART SYMINGTON
OF MISSOURI
IN THE SENATE OF THE UNITED STATES
Friday, August 21, 1959

Mr. SYMINGTON. Mr. President, some of our most able representatives abroad now are the 75 guides at the Moscow Fair.

These young men and women are engaged in hand to hand combat in the war of ideas. They symbolize our way of life to hundreds of thousands of Russians who, until now, have been deprived of personal contact with Americans.

I am proud that one of these guides is from my home State, John D. Levan, Jr., of Springfield, Mo.

In two recent articles, the New York Times reported on the fine work being done by these young Americans.

I ask unanimous consent that these two articles from the New York Times be printed in the Appendix of the RECORD.

The constructive work these young people are doing is but another argument in favor of the establishment of a Foreign Service Academy which would train thousands of people in language skills and other knowledge so essential for those who would act as effective American ambassadors of peace.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

U.S. GUIDES STAR AT MOSCOW FAIR—RUSSIANS FIND TALK IS MORE REWARDING THAN EXHIBITS

(By Max Frankel)

Moscow, August 14.—The full burden of describing, explaining, defending and selling the United States and its ways at the American National Exhibition here has fallen on the shoulders of 75 young guides.

Chosen carefully from 19 States and the District of Columbia for their knowledge of Russian and familiarity with the American scene, the guides have needed both—and their wits—more than anyone had foreseen. Less than halfway through the show, most are weary but unbowed.

The guides, 27 of whom are women, were to have been adjuncts of the exhibition, to translate for exhibitors and to provide answers to questions not covered on hundreds of explanatory placards.

But in fact the young Americans with large red, white, and blue buttons bearing the word "GID" have become the show.

When they can, they make use of the millions of dollars' worth of props around them, or direct visitors to written explanations. But they are never quite successful in diverting attention from their extensive, often good-humored, and endless talk about how Americans live, work, play and think.

"A hundred times a day I ask the crowds whether they didn't really want to move on, to see other exhibits," says Alexander Kucherov of Washington, D.C., who normally works at the paperback book rack. "Invariably the answer is, 'No, we want to talk to Americans.' And who can deny such a request?"

Richard Leed, of Lititz, Pa., and Titiana Akhonin, of Washington try to explain the features of a model house but end up discussing social security and the cost of groceries with pressing knots of Russians.

Mrs. Natasha Carlton, of 749 West End Avenue, New York, stands behind a freezer and before rows of canned goods in a section of supermarket. She is discussing overseas bases and the chances of war.

Curtis Kamman, of Tucson, Ariz., stands in the living room of a model apartment, microphone in hand, with 500 Russians looking in from two floors. He is explaining why there are so few Negro millionaires in the United States.

On the edge of a large turntable bearing a Thunderbird car stands George Feifer of 175 Claremont Avenue, New York, also with microphone, before 300 persons. He gets five questions about his family budget for every one about the car's horsepower.

AN INTERNATIONAL PRINCIPLE

"And if you don't have all that money to buy a Thunderbird?" asks a young Russian into the extended microphone.

"If you don't have the money and don't want to buy on installment, you don't buy," the guide replies. Seeing a few smiles, he adds: "I think this is an international principle."

Now there is widespread laughter, and the guide decides to make a further, unsolicited point:

"I own a Ford, a simple Ford, like the one over there without a crowd around it," he says "And I can buy used cars for half the original cost, and less."

Invariably, the guides have found, when crowds gather and the banter and give-and-take becomes particularly good-natured and informative, there appears from somewhere someone determined to show up the American.

"And do the Negroes in slums own such cars?" the man asks. Or: "Why don't you tell us about the soup lines?"

Normally, the guide tries to answer and to carry on. Usually, the man persists in the same spirit.

"I answered the same question for you 2 hours ago," the guide will say, when pertinent. Or, if really antagonized: "For someone who has never been to the United States and who cannot get our newspapers and magazines, you seem to know much about us."

HECKLERS MEET REBUKES

Often the man comes with five or six friends and then there are not only sharp, aggressive questions but derision and scorn for the answers.

"Why do you persist in asking if you don't believe me?" the guide will remark. And frequently others in the crowd will begin to shout for recognition, openly demanding to hear the American instead of the things they always hear.

"The other day I spoke for 2 hours about everything under the sun," Mrs. Carlton recalled. "When I just couldn't go on without getting hoarse, a few in the crowd who

hadn't budged since I started thanked me and told me to rest. And suddenly, for the first time since we opened, there was a burst of applause. You can't imagine what it meant. It just made everything worthwhile, even the bouts with the hecklers and the terrible mob scenes."

The guides have found that virtually every day brings something unexpected, even though the bulk of the questions from Russians are amazingly repetitious. But there is nothing like the monolithic reaction or response they had expected, nor is the full range or depth of the Russians' curiosity to be foreseen:

"Do you jam foreign radio broadcasts?" "Are Marx and Engels banned or published only with critical annotations?"

"Is abstract art really taken seriously or is it just meant for fun?" "What does that statute mean?"

"Are there many Russians in the United States?" "Are they being detained against their will?"

"What are slums?" "Are they all underground?"

"Is it true you publish 'Anna Karenina' in 12 pages?" "Are all paperback books comics?"

"What is the tallest building in the United States? "Do most Americans live in skyscrapers?"

"What is the purpose of the 'Family of Man' exhibit?"

"Did you not bring heavy machinery because you were afraid we would copy it?"

A QUIZZICAL REACTION

The guides say there is no telling how much of their answers is believed. Most difficult, they find, are explanations of the diversity of opinion, of prices, or products and of ways of doing things in the United States.

They find that most Russians are not starry eyed over the wealth of consumer goods on display. Many a Russian remarks that those things don't count for much.

On the other hand, as Alton S. Donnelly of Berkeley, Calif., explains, "Many are attracted to our ways, but they also seem genuinely afraid of what they have heard about unemployment, high medical bills, and rents."

A good number of the guides are surprised at the freedom with which some Russians have expressed frank opinions, especially when conversing in small groups. They have heard unexpected words of admiration for the exhibition and of grumbling about life here. The guides are surprised, too, by the frequent approaches for private conversations, at their hotels or elsewhere off the grounds.

Thousands of the Russian visitors appear willing to stand and hear the same questions answered over and over again, by guide after guide. Often the guides have the feeling that the words of one are measured against the words of others.

ANSWERS KEPT AD LIB

But the guides deliberately resist standard, rehearsed answers and generally give freely of their own views and experiences. They tell about the lives of their friends and neighbors. Or they say they themselves don't really like abstract art.

Such divergence of view, they say, especially in a foreign country and at a propaganda show is the most effective demonstration of the freedom they are trying to suggest.

No question is too personal for the Russians. Most find out soon after they reach the exhibit that the guides earn $16 a day, and most are impressed with this. They know also that the guides work 6 days a week, from 11 a.m. to 10 p.m. and from 2 p.m. to 10 p.m. on alternate days.

The guides have been given wardrobes—suits, shirts, sweaters, dresses, shoes, and accessories—that enable them to wear different clothes each day, but all dress alike on any given day.

They pay about $3 a day for rooms at a hotel on the outskirts of town and pay for their own food and expenses. As promised, they find the wage covers them, but little more.

A HASTY LOOK AT RUSSIA

The guides range in age from 20 to 35. Most are college and postgraduate students. Many have never before been in the Soviet Union, and they dash in their few free hours to museums and theaters. Some have been to Leningrad for a weekend. Others are planning trips after the exhibition closes September 4.

Whatever they learn on their own, however, they seem to agree that nothing will ever quite match the grueling but rewarding holding forth at the exhibit. And most agree that they have learned two very important things about themselves.

"You learn quickly," one of them remarked, "that when that smile disappears and your sense of humor with it, you are no good to anyone, least of all yourself and your country."

"And, you know," said another, "the average American, until tested under fire, is not really accustomed to articulate America."

RUSSIANS REPEAT QUESTIONS AT FAIR—U.S. GUIDES IN MOSCOW LIST TEN QUERIES PUT TO THEM MOST FREQUENTLY

Moscow, August 14.—Soviet visitors, eager to know more about the United States, have been addressing a great variety of questions to the guides at the American National Exhibition here.

Many of the questions recur frequently. In general terms, following are the 10 questions the guides feel are asked most often and the answers given to these questions:

"Question. What does the average U.S. worker earn?

"Answer. About $90 a week. A family often earns more if there is more than one member working.

"Question. How do your unemployed live?

"Answer. Most guides explain the temporary nature of unemployment, averaging about 3 months. They cite unemployment benefits available in different States. They also try to explain other benefits, varying with union contracts. They stress assistance available in finding work. Sometimes, too, they are called upon to explain why there are periods of relatively high unemployment. They point to the problems of an interdependent but not centrally controlled economy.

LIVING COSTS EXPLAINED

"Question. What do you pay for rent?

"Answer. The guides describe their own living quarters and rents. They generalize by saying most Americans figure they can spend up to one-fourth of their income on rent and another fourth on food. At various displays, the guides also offer explanations of public housing, cooperative housing and private home ownership and mortgage financing.

"Question. What does education cost?

"Answer. The guides explain public and private elementary and secondary schooling available in the United States and describe State and private colleges, varying tuitions, availability of scholarships and jobs for students to supplement their budgets. Most also cite their own experiences.

"Question. Why are Negroes discriminated against?

"Answer. The guides describe the extent of segregation and discrimination and their history in the North and South. They cite progress in various fields and problems remaining, describe antidiscrimination laws of different States, the Supreme Court decision outlawing segregation in schools, and the problems of enforcing this ruling and the reluctance of the United States to force social changes violently. Several of the guides are Negroes.

FREE PRESS IS A TOPIC

"Question. Are Americans free to read Soviet publications?

"Answer. The guides explain that Soviet newspapers and magazines can be bought openly in most big cities and that they are available in most university libraries and major public libraries. They also describe English-language publications that carry translations from the Soviet press and the extensive reprints of Soviet speeches and documents in American newspapers.

"Question. Are Americans free to travel out of their country, and is it true they carry no internal passports and need not register with the police when moving into a city?

"Answer. The guides explain the absence of passports and registration except for criminals on parole, the procedure followed for obtaining a passport to travel abroad, the freedom to move from city to city and from job to job.

U.S. BASES QUESTIONED

"Question. Why has the United States surrounded the Soviet Union with bases?

"Answer. The guides say this is a political question, which they are not expected to discuss. However, if pressed, they try to answer briefly by citing fears of Americans that they will be attacked and that they could not effectively retaliate from their own territory.

"Question. How does the average worker live, what vacation does he get, what does he spend for medical care, what pension does he get, and how much tax does he pay?

"Answer. The guides usually relate the life of a family they know to be living within a budget of $5,000 to $6,000. They explain medical insurance plans, social security, union and company benefits, housing, resorts, and other details.

"Question. Where did you learn Russian, what work do you do, how much do you earn, how do you live, do you have a car?

"Answer. There are 75 answers available at the exhibition to these questions, as many as there are guides. All of the answers are honest and they are usually related with humor and a wealth of corroborative detail."

NATO Dig-in Plan Seen as a Gigantic Job

EXTENSION OF REMARKS

OF

HON. JOHN E. FOGARTY

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

Monday, August 17, 1959

Mr. FOGARTY. Mr. Speaker, under leave to extend my remarks I would like to include the sixth in a series of articles by Mr. Edward J. Milne, Washington correspondent for the Providence Journal and Evening Bulletin, of Providence, R.I., concerning his recent tour of the NATO countries. This article appeared in the Evening Bulletin of July 15, 1959, and is entitled "NATO Dig-In Plan Seen as a Gigantic Job":

NATO DIG-IN PLAN SEEN AS A GIGANTIC JOB

(By Edward J. Milne)

NAPLES.—United States and allied North Atlantic Treaty Organization forces in Europe appear to be digging in for a gigantic holding operation.

A tour of NATO defenses in Germany and Italy leaves the impression that there is

no end in sight to the grim and expensive business of building an atomic retaliatory capacity designed to discourage the Russians from making military inroads to the West.

At Ramstein Air Base in west central Germany, two important air headquarters are centered. One is that of the Fourth Allied Tactical Air Force, a NATO command with French, Canadian and U.S. components. The other is the combat headquarters of the U.S. Air Forces, Europe. For all practical purposes the two are the same, with the same American general in charge.

At the NATO command they say:

"Our aim is an atomic delivery capability which will allow us to deliver the Sunday punch."

At the U.S. command, they say:

"We are SACEUR's private air force."

SACEUR is militarese for Supreme Commander, Europe—once Gen. Dwight D. Eisenhower and now U.S. Air Force Gen. Lauris Norstad.

U.S. Maj. Gen. Gabriel P. Disosway is the deputy commander of both USAFE, the U.S. actual operational air force in Europe, and 4ATAF, the NATO force that will go into action if the bell rings.

"Our first and foremost task," he says very simply, "is to execute an atomic strike. SACEUR has placed the highest priority on this."

General Disosway and his superiors on up to General Norstad are not without their problems, including finding new bases in Germany or the United Kingdom if the French rule atomic bombs out of France. But despite the political uncertainties, he says:

"We have a sizable force, entirely atomic-capable, able to deliver a retaliatory strike."

In south central Germany, the U.S. Army, Europe, built around the billion-dollar-a-year 7th Army and its tough armored cavalrymen and even tougher paratroop guerrillas, is headquartered at Heidelberg. While the Air Force cons the skies to the east with radar, the 7th Army's mounted cavalry patrols the East German and Czechoslovakian borders with tanks, jeeps and helicopters.

The 7th Army is equipped, too, with Redstone and Corporal missiles, both atomic-capable, and with what it still thinks of as "the ultimate weapon—the man on the ground," the infantryman.

But it sees no early use for its missiles, its foot soldiers, its guerrillas.

"Soviet strategy," says Maj. Gen. Ralph M. Osborne, its intelligence chief, "has been based on the estimate that Russia would either lose a general war or suffer too much to make such a war worthwhile."

The U.S. Army in Europe, he says, thinks Russia will not attempt even limited hostilities in Europe because the chances the conflict would become general are too great.

The Army's estimate of Soviet short-of-war aims, he says, is this:

1. To force, by threat of military might, Western acceptance of continued division of Germany.

2. To weaken NATO solidarity, likewise by threat of military might.

3. To keep the West back on its heels so that any eventual negotiation of a permanent European security arrangement will be most favorable to Russia.

"We believe," a spokesman says, "that no war in Europe can now be controlled as a limited war. As soon as the Russians who have great numerical superiority, try to overrun our NATO forces on the ground, we'll be in a major war. If they make any kind of move that can be construed as an attack on Europe, it will be by miscalculation. It is our judgment, and we think theirs, that any war in Europe would become an all-out war in which the Russian motherland would be decimated."

A natural enough question from a layman is why, if the Russians fear a war by miscalculation, they don't pull back and make sure it won't happen.

The Army's answer is that if the Russians turn around and walk away they will suffer a loss of prestige that will defeat the political aims enumerated above.

Cross the Alps and come down here into southern Italy, where NATO's main concern is protecting Turkey, Greece, Italy, and the Mediterranean lifeline, and the thinking is much the same.

The NATO boss here is U.S. Adm. C. R. "Cat" Brown, recently commander of the U.S. 6th Fleet. His NATO command consists of ground, air, and sea forces from six countries—the United States, the United Kingdom, France, Italy, Greece, and Turkey—whose chief difficulties are linguistic.

This Mediterranean theater is one in which the assumption must be made that any part of it could be hit today by Russian intermediate ballistic missiles. Admiral Brown's people profess not to know whether the Russians have that capacity actually or only theoretically.

But whether by bomber, missile, or land movement, any attack on the Mediterranean flanks of NATO could not be confined to a limited war, Admiral Brown thinks.

"Anything that strikes any NATO country would develop into a general war in a hurry," he says.

"Don't forget, the basic NATO concept is that an attack on one is an attack on all. I don't mean some irresponsible border skirmish. I mean a move to take or subdue territory."

It is Admiral Brown's view that for the Russians to start a war in his sector, just as in Germany, "would be an act of insanity." But here, as along the front to the north, the Allies cannot afford to let down their guard "and invite the Russians to walk in."

A Forward-Looking Community Establishes a Nursing School at Dumas, Tex.

EXTENSION OF REMARKS

OF

HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Friday, August 21, 1959

Mr. YARBOROUGH. Mr. President, one of the most acute personnel shortages in this country today is in the field of trained nurses. They are vitally needed to help maintain the good health of our people.

At Dumas, in Moore County, Tex., a new school has been established to train vocational nurses. This new school, set up at the county-owned Memorial Hospital is another step in the progress of the area's forward-looking citizens. As one writer put it, the hospital itself is "not yet in its teens." Now it is doing something many larger and older hospitals have not done.

Mr. President, as a salute to these civic-minded people and their newest step forward, I ask unanimous consent to have printed in the Appendix of the RECORD an article from The Moore County News for Sunday, August 16, 1959, entitled "Memorial Hospital Plans To Open Nursing School—Registration To Begin September 1," and an editorial from the same publication entitled "A Do-It-Yourself Plan."

There being no objection, the article and editorial were ordered to be printed in the RECORD, as follows:

MEMORIAL HOSPITAL PLANS TO OPEN NURSING SCHOOL—REGISTRATION TO BEGIN SEPTEMBER 1

A state-approved program for training vocational nurse candidates has been established at Memorial Hospital in Dumas, according to its manager, Frank Cheevers.

In making the announcement Cheevers said this is the first year the county-owned hospital has been able to extend its operations into the broad field of vocational nurse training.

A minimum of 1 year study is required in the course, which includes approximately 600 hours of actual classroom (at the hospital) study, completing a well-rounded week of from 40 to 42 hours of combined study and nursing.

Because of limited facilities for training, only 12 or 15 trainees will be accepted in the initial year, Cheevers said. Applicants from this immediate area will be given first consideration, the manager added.

Upon successful completion of the course, and after passing the required examination given by the State Board of Vocational Nursing in Austin, trainees will be issued their LVN license (licensed vocational nurse) by the State.

This program, Cheevers said, should not be confused with other types of nursing now practiced in Dumas and in other towns. Other nurse units at Memorial include those of young nurses' aids, usually high school girls employed in training through the school-State ICT program; and the ranks of the RN (registered nurse) staff, a license held only by those who have completed an extensive 3-year course of study.

Requirements for entrance in the nurse training program include age of between 18 and 50; good health; a high school graduate; and possess such personal traits as may be desired by the screening board. Selection of candidates will be made by a board consisting of two doctors, the director of nursing service, the director of nursing education, and Frank Cheevers, all associated at Memorial.

"The training program is twofold," Cheevers said. "It will give us (Memorial Hospital) an opportunity to train nurses within our own organization, providing adequate personnel for the future from a field of trained nurses in whom we have confidence; and, the new service of actual nurse training will benefit the community and help meet the growing demands for trained nurses all over the country."

Cheevers said the present nurses staff at Memorial consists of 14 full-time RN's, 4 vocational nurses, and 6 nurses aids.

Training under the newly formed program locally will be supervised by current ranking nurse personnel at Memorial.

Trainees will receive slight payment as they take their study. A typical study day during the first 30 days, Cheevers said, will include at least 7 hours in class and lecture sessions. Modified facilities at the hospital will be used for classroom area. During the next 30 days the classroom work will be cut to about 4 hours and more time will be given to nursing duties. After the first 60 days, 2 hours of class study will be given daily, and the remainder of the time will be devoted to practical training.

A tuition fee of $35 per student will be charged applicants. "We estimate that each nurse trainee completing the course will receive a training schedule costing a minimum of $100. With books and uniform fees, she should pay only about $75 for the year of study," Cheevers added.

Applicants may inquire about the new program at Memorial Hospital. Deadline for applying is September 1, and classes will begin on September 8.

A Do-It-Yourself Plan

We congratulate Moore County's Memorial Hospital, and its planning board, for what we think is a progressive step, sparked by vision.

At a time when the declining ranks of qualified, well-trained vocational nurses appear to pose a threat to efficient hospital operations everywhere, those persons directing policy of our hospital decided to do something about it.

Starting in September, Memorial Hospital in Dumas will to several nurse candidates become a virtual back-to-school miniature medical college.

Using only what facilities are presently available at the hospital, and these are adequate, the first class of would-be vocational nurses will be given a thorough, 1-year education in nursing which is a compact, accelerated study course containing more than 600 hours of actual classroom study in addition to practical nursing duties.

The fact is fairly common that Memorial Hospital, not yet in its teens, is one of the State's few in-the-black hospitals which are county owned. This commendable record has been achieved despite a constant program of expansion and construction of new facilities to keep pace with the growing demands of our area.

We think a large amount of credit for this status is due to the efficient management of Frank Cheevers who, having been handed the task of maintaining hospital policy, has executed the planning by the county hospital board.

Because of faith in this community, and because of future needs seen years ago, Moore County now enjoys one of the finest hospital facilities in the Southwest. The beautiful, modern, and well-equipped facilities at Memorial are second in value only to a full staff of the outstanding caliber of registered nurses and doctors which make our hospital the envy of other towns.

Dumas and Moore County are growing. Memorial Hospital has kept the pace and now it has stepped out front by meeting challenges of the future.

It is large enough, and select enough, to train its own licensed vocational nurses. The people of Moore County can be proud of their hospital.

Planes Switch Serious for NATO

EXTENSION OF REMARKS

OF

HON. JOHN E. FOGARTY

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

Monday, August 17, 1959

Mr. FOGARTY. Mr. Speaker, under leave to extend my remarks, I would like to include the seventh in a series of articles by Mr. Edward J. Milne, Washington correspondent for the Providence Journal and Evening Bulletin of Providence, R.I., concerning his recent tour of the NATO countries. This article appeared in the Providence Sunday Journal of July 19, 1959, and is entitled "Planes Switch Serious for NATO":

PLANES SWITCH SERIOUS FOR NATO—ACTION DICTATED BY DE GAULLE'S DECISION PRESENTS BOTH MILITARY AND POLITICAL PROBLEMS FOR PLANNING AGENCIES

(By Edward J. Milne)

PARIS.—No attempt is made here to gloss over the serious implications, military and political, of the decision to move 200 American fighter-bombers from bases in France to Britain and West Germany.

U.S. Air Force General Lauris Norstad, the North Atlantic Alliance's Supreme Commander in Europe, made the decision in response to French President Charles de Gaulle's refusal to allow the planes' nuclear bombs to be stockpiled in this country.

It is NATO doctrine that reaction to an all-out attack from the East must be immediate, swift, and, if possible, decisive. The planes involved would be part of the first retaliatory wave. General Norstad felt he could not afford to have the planes separated from their weapons.

Seven of the nine squadrons involved will be shifted to Britain and two to West Germany. That means the front over which they should be dispersed to reduce their vulnerability as targets will be substantially reduced.

In addition, there will be "some loss," the degree not indicated, of offensive effectiveness because the NATO command will have less flexibility in stationing its "sword forces," which are principally the planes and missiles of the U.S. Air Force and the Royal Air Force.

SMALL LIKELIHOOD OF SOLUTION SEEN

Those are both apparent permanent losses—short of some political solution of which no one seems to see an immediate likelihood. There will be, in addition, at least temporary difficulties. Planes, weapons, and personnel will have to be reshuffled on a large scale, with probably some shifting of units between Britain and West Germany as well as from France to those two countries.

Both the British Isles and West Germany are relatively small and densely populated. German Air Force officials told reporters while the move was under consideration at the political level that the difficulty of acquiring new bases is among the chief problems of their fledgling force. The deputy commander of U.S. Air Forces, Europe, said flatly the transfer would mean "an overcrowding of bases" in Germany because "there are no bases in Germany underutilized now."

Base development has been a large problem for U.S. airmen in England, too. British law makes it much more difficult for the government there to acquire land from reluctant farmers, and instances were cited of its taking as much as 18 months to put together land for a 1,000-foot runway extension.

PERSONNEL TRANSFERS WILL TAKE 6 MONTHS

Some 6,000 U.S. officers and airmen and a like number of dependents are involved in the transfers, which are expected to start, substantially, about September 1 and require some 6 months to complete. The move admittedly will be costly, but not to the point of having to ask Congress for more money to foot the bill.

To keep the temporary disruption of combat effectiveness at a minimum, the moves probably will be staged squadron by squadron, so that eight of the nine will be at the ready all of the time.

It is difficult here to get a firm opinion on just why the French have forced this expensive and militarily distasteful move on the biggest and strongest partner in the alliance. A French Air Force general told reporters recently that he would be satisfied if the American nuclear bombs were stockpiled at the French bases under the same terms that American bombs are stockpiled at the British bases.

Under the U.S.-British agreement, the consent of both governments is required before the U.S. planes can be "flown in anger," nuclear bomb-loaded. A similar agreement governs the firing of the 1,500-mile Thor nuclear missiles, 60 of which the United States is supplying to British squadrons now reaching a state of operational readiness.

FRENCH GET OFFER BRITISH ACCEPTED

It has been widely printed that the United States has declined to give President de Gaulle the same veto power over use of the bomb that the British enjoy. But it is flatly said here that such statements are incorrect, that the French received precisely the same offer that the British accepted.

If that is so, it can only be assumed that the de Gaulle government has insisted on the greater U.S. concessions that he has been reported seeking since the almost daily discussions began last January. These appear to include the unrestricted sharing of atomic weapons and secrets with France, against which Congress has balked because it does not want to expand the family of nuclear nations.

The British, of course, have their own nuclear capability. One of their top diplomats suggested a possible key to the French feeling recently when he discussed Great Britain's own case.

The sole reason the British want nuclear strength of their own, he said, is that if there should be any serious deterioration of Anglo-American relations, Russia could dictate at will to a Britain without nuclear arms. By themselves, he acknowledged, the British would not have the strength to deliver a knockout blow at Russia, but they would have at least enough to make the Russians think twice about starting any rough stuff. Even a little nuclear deterrence can go a long way in this age.

FRENCH AIRMAN MAKES HIS POINT

The French airman, who holds an important NATO command, arrived at much the same point, albeit by a somewhat different route.

"You are refusing to us things that are well known to the Russians," he said. "You are refusing to give to your friends what your enemies have. You are our allies, and we trust our allies. But situations can always arise where judgments differ."

He pointed out that the French, unlike the British, made no attempt from 1946 to 1957 to develop nuclear weapons. That was because of a basic decision not to disturb the peace, he said. But the French view now, he said, is that the nation's self-interest demands full great-power status in the nuclear age. Even if there should one day be an East-West agreement on nuclear test suspension, he said, France in its present mood might well go ahead on her own with tests in the Sahara.

It would be a mistake to leave any impression that NATO's military and political problems are regarded as insoluble. There is always the hope, for one thing, that President Eisenhower and President de Gaulle may still work out an agreement for NATO-committed nuclear muscle for France. And while the strength of NATO's "shield forces" in Europe, the ground divisions may leave much to be desired, there is growing satisfaction with the "sword" or strike forces despite the French base problem.

ROLE OF SHIELD FORCE MAY BE PSYCHOLOGICAL

One gets the impression that the importance of the shield forces may well be greater politically or psychologically than militarily. Great stress is placed on showing the world that NATO is a truly defensive alliance, without aggressive intent. That means the ability to display ground forces able to respond to aggression with something less than allout nuclear retaliation—not only an ability but a desire.

But all the way up the line to the military peak at NATO is the repeatedly stated belief that no limited war is really possible in the hot area of Europe. NATO military leaders are determined to use all the weapons available to them in any mission of defense that calls for them, whether the other side uses them first or not.

This determination would be applied with equal force in a serious situation involving West Berlin. There is a feeling here that there are extremely dangerous possibilities in the Berlin situation. There is profound

hope, with the Big Four foreign ministers' conference now resumed at Geneva, that the diplomats can find some formula for a peaceful solution.

Twice, the United States, the United Kingdom, and France have asserted their responsibility for the welfare and security of the people of West Berlin, and twice NATO has associated itself with the tri-partite declarations. Any attack on West Berlin is to be regarded as an attack on the Western Powers' occupation forces there, and any attack on the Western forces is to be regarded as an attack on NATO.

And it goes almost without saying that the response to such an attack would not be, because it could not successfully be, on the ground.

Proposed Labor Legislation

EXTENSION OF REMARKS
OF
HON. GEORGE A. SMATHERS
OF FLORIDA
IN THE SENATE OF THE UNITED STATES
Friday, August 21, 1959

Mr. SMATHERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the CONGRESSIONAL RECORD an editorial from the Gainesville Daily Sun of August 16, which deals with proposed labor legislation.

I think this is a fair and perceptive, although brief, analysis of the proposed labor legislation and I know it is thoroughly representative of the thinking of the people of Florida with respect to the need for labor legislation.

This editorial was written by Mr. William M. Pepper III, one of the State's most vigorous, articulate, and sensible editors. I commend it to the attention of all.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

HOPES HIGH FOR GOOD LABOR LAW

Passage of the Landrum-Griffin bill by the House of Representatives is a sign that the pendulum which has swung so wide and handsome in favor of labor union excesses is about to be checked. For the first time in many a Congress, the guiles of the powerful labor union lobbies backed up by threats of political extinction from the union bosses failed to check strong and realistic legislation in the labor relations area.

Popular sentiment for such legislation was at a peak as our own Congressman D. R. (Billy) MATTHEWS, in the forefront of Landrum-Griffin proponents, will testify. Cards, letters, telegrams, and communications poured in to Congressmen from tens of thousands of citizens sick and fed up with corruption, racketeering, denial of individual rights, secondary boycotts, blackmail picketing, and other high-handed abuses. The response of the House last week was a tremendous endorsement of the wisdom of our democratic government.

It is imperative that every grateful citizen remember for a long time those Representatives who responded to the call for sound labor legislation. Now is the time for tens of thousands more communications to the Florida congressional delegation showing support for the action of the House.

It is to be hoped, of course, that the salient points of the Landrum-Griffin bill will not be watered down in Monday's conference between House and Senate. We believe the Senate will vote for the Landrum-Griffin bill. After all, the same Senate voted for the McClellan amendments to the Kennedy bill, reversing itself only after certain civil rights provisions in the amendments became onerous to the southern solons. In fact, the Kennedy bill with the McClellan amendments was, in many respects, as strong legislation as the Landrum-Griffin bill. It is essential that those citizens who are in favor of enforceable rights for rank and file union members, against racketeering and for the rights of those millions of workers who have chosen not to join unions communicate their feelings to Senators HOLLAND and SMATHERS.

Shift in Emphasis

EXTENSION OF REMARKS
OF
HON. HARRISON A. WILLIAMS, JR.
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Friday, August 21, 1959

Mr. WILLIAMS of New Jersey. Mr. President, the second report of the President's Cabinet Committee on Price Stability has puzzled many observers who remember the first Cabinet committee report. The first report emphasized the perils of inflation; the second report would like us to forget, for the moment, what the first report emphasized so vigorously.

Senator KEFAUVER analyzed the situation well earlier this week and reminded us that the consumer may still be concerned by rising prices despite White House "deemphasis."

An editorial which appeared in the Newark News on August 18 also asks questions about the second report. An article in the Christian Science Monitor of August 17 joins the questioning and suggests a few answers.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, the editorial from the Newark Evening News of August 18 and the article from The Christian Science Monitor of August 17.

There being no objection, the editorial and article were ordered to be printed in the RECORD, as follows:

[From the Newark Evening News, of Aug. 18, 1959]

SHIFT IN EMPHASIS

The Cabinet Committee on Price Stability for Economic Growth set up by President Eisenhower to educate the public on the nature and dangers of inflation apparently is no longer worried about inflation. Its latest report indicates the committee has shifted its emphasis to economic growth.

In fact, the committee, which is headed by Vice President NIXON, doesn't even mention the word "inflation." Instead, it uses the phrase "rises in general price level" on the theory that the public is a little confused about the meaning of inflation.

The public may be a bit further confused when it recalls that only 7 short weeks ago the committee was greatly disturbed by the threat of inflation. In an interim report sent to Mr. Eisenhower on June 28, the eve of the steel strike, the committee warned of the dangers of a settlement that would mean higher wages and prices.

In any case, price stability has now been placed at the bottom of a three-point program offered by the Nixon Committee. In first place is a large and expanding output of goods and services. Next is maximum employment opportunities, meaning not only a chance to work, but a chance to hold the kind of job that suits you best.

Curiously enough, that is approximately the idea advanced by the liberal Democrats in Congress. But the Nixon committee's switch may have a basis much simpler than any political considerations. The steel strike is entering its sixth week today and the economy is beginning to feel the pinch. The Federal Reserve Board reports that its index of industrial output in July fell 2 points to 153 and attributes the decline to the strike's impact. If the strike continues much longer, we'll all be worrying about economic growth, not inflation.

[From the Christian Science Monitor, Aug. 17, 1959]

UNITED STATES SHIFTS ECONOMIC TARGET

(By Neal Stanford)

WASHINGTON.—Economic growth now has become the major economic aim and interest of the Eisenhower administration.

This represents a sharp and dramatic change in administration thinking from 2 months ago, when the same Cabinet Committee which is reporting this week warned repeatedly against spiraling inflation.

This Cabinet Committee, headed by Vice President RICHARD M. NIXON and set up last February by the President, in this, its second report appeared relatively optimisitc about price-stability prospects.

Rather than steps to halt inflation, its second report said: "What we want and need is sound sustainable economic growth."

There are several explanations for this change in the administration's attitudes toward the national economy.

One is that it feels that the battle against inflation is being won and that therefore attention can be directed to other problems.

INFLATION BRAKED

This explanation is supported by the figures making up the united consumer price index trend (the criterion of inflation). These show a rise of only slightly more than one-half of 1 percent in the last year.

However, this does not explain why only 7 weeks ago the committee reported that the nation's economy was "at a critical juncture" and that the Nation was confronted "with overwhelming evidence" that prices might start spiraling upward.

Another explanation is that the administration, feeling that it now would get much of what the President wanted from Congress, was downgrading the threat of inflation. Congress, for example, seems certain to give him an increase in interest on Federal bonds and an increase in the gasoline tax—both anti-inflationary measures.

COMMITTEE CRITICIZED

A third reason relates to the criticism from Democratic liberal economists who followed the committee's June 28 report. They had accused the committee of ignoring the importance of economic growth in its concern over inflation.

And a fourth explanation relates to growing evidence that the Soviet Union's rate of economic growth is double or triple that of the United States and that while the level of U.S. production is still ahead of that of the U.S.S.R., the Soviets in time will catch up with and surpass the United States unless the United States steps up its rate of economic growth.

THREE GOALS LISTED

According to the Nixon committee report there should be three economic goals for the country:

1. Economic growth—through a large and expanding output of goods and services. It sees this being achieved only through im-

provements in health, education, and skills; the development of natural resources; expansion of natural science and technology; and improved equipment and organization.

2. Maximum employment opportunities—meaning not only a chance to work but a chance to hold the kind of job that suits one best.

The committee avers that maximum employment opportunity is a more appropriate goal that simply maximum employment because people should be free to choose for themselves among a variety of occupations.

3. Price stability—referring rather to the general level of prices instead of specific prices.

PRICE FREEDOM BACKED

Actually, the committe said, the freedom of individual prices to change is essential to economic efficency, for prices are messages to producers and sellers telling them what things should be made in greater or smaller quantities.

This 1,600-word statement from the committee is the second, but not the last, that it will put out. The next one, it is expected, will deal with this matter of economic growth in some detail.

This 8-man cabinet committee includes, beside the Vice President: Secretary of the Treasury Robert B, Anderson; Secretary of Agriculture Ezra Taft Benson; Secretary of Labor James P. Mitchell; Secretary of Commerce Frederick H. Mueller; Postmaster General Arthur E. Summerfield; and Raymond J. Saulnier, chairman of the Council of Economic Advisers. W. Allen Wallis is executive vice chairman of the committee, a special assistant to the President, on leave from his post as dean of the University of Chicago's School of Business.

Cross Country With the On-to-Oregon Cavalcade—XII

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES

Friday, August 14, 1959

Mr. PORTER, Mr. Speaker, the On-to-Oregon Cavalcade has successfully completed its remarkable 20th century trip from Independence, Mo., to Independence, Oreg.

From time to time I have inserted in the Appendix of the RECORD a daily account of that trek which has been written by Rudy Roudebaugh, driver of the Drain covered wagon. The record is a bit behind the actual trek, but the accounts today will bring us more up to date. I hope to conclude this fine record by Mr. Roudebaugh soon. Many people have learned about Oregon and our centennial through the efforts of the sturdy 20th century pioneers who were members of the cavalcade. I salute the caravan members and all of the men and women who made this historic venture a reality.

Mr. Roudebaugh's account follows:

[From the Drain (Oreg.) Enterprise, July 23, 1959]

RUDY TELLS OF SAGEBRUSH, HEAT, DUST, AND WARRANTS

(By R. "Rudy" Roudebaugh, driver of Drain covered wagon, now on his final leg in the 2,000-mile trek from Independence, Mo., to Independence, Oreg.)

The Twin Falls sheriff's posse escorted us through Twin Falls. Gail Hopkins and his friends put out Drain letters for me on their bicycles on both sides of the street. There were more people on the trail than any other day yet. Sunday Jan got three new shoes; two in front, one on the right rear. The peas and beans that are grown around here are used for seed.

(Notes that were left out last week.)

July 13: 6:06, we are on Highway 30 going northwest. 6:26, Janell and her girl friend have gone back to bed. Ki is on cook shift. 7:07, the sun is out bright and hot. 7:22, crossed deep creek. 8:35, Janell and Claudia have got up. We are going through hills and sagebrush on both sides of the road, very little farmland here. 8:47, starting down Hagerman Valley and crossing Salmon Fall Creek. 9:16, going along the Snake River with rock walls on each side. 9:40, stopped to water at the 1,000 Spring resort.

Jan and Doc each drank 2 pails of water. The spring water here is supposed to be from some hidden body of water. It has been tested and is the same as water from the Arctic. Last week I wrote that the Pendleton Indians gave us safe passage, but that's wrong—they gave us just the opposite passage. 9:58, rolling again. 10:38, leaving Twin Falls County crossing over the Snake River entering Gooding County. 10:44, big boulders cropping out of the ground all over the fields on both sides of the road. 11:32, entering Hagerman, population 520. 11:46, camped at the city park and rodeo grounds and ball park.

Tim Miller and family from Yoncalla were here to visit us this evening. The mayor broiled steaks for us last night and the drugstore donated ice cream yesterday. It was 105 in the shade. Made 21 miles today.

July 14: 5:55, same story—waiting for Roy again. 6:03, heading northwest. 6:24, crossed Billingsly Creek. This is a pretty little valley with popular trees 125 feet tall. The valley is about ½ mile wide. 6:53, Malad River. The ground is rocky on both sides and we're going up out of the Hagerman Valley. 7:31, we are on top, sagebrush and rock on both sides of us. Weather is cooler with the sun out bright. 8:12, entering Bliss, population 126. 8:44, going into the desert. 9:04, Janell is just getting up. She has a rope burn on her neck from playing cowboy. Ki is still on cook shift. 9:31, stopped to water. Doc and Jan each drank a pail of water. 10:39, entering Elmore County, leaving Gooding County. 11:40, going by the 101 ranch. It produces rodeo stock. 12:22, camped at Graham general store and trailer court about one-half mile from Kings Hill. Ki and I are doing our laundry here at the store and also had a nice tub bath.

Grandma (the one who is walking to Independence, Oreg.) stayed at this place Saturday night. The people of Kings Hill are going to give us a chicken dinner tonight. Mr. Graham has loaned his station wagon to the wagon train bunch to go back and forth to town in. Made 24 miles today.

July 15: 6:00, just sitting here waiting for Roy. I wish he'd hurry the nats are bothering Doc and Jan. (Editor's note: guess an old logger like Rudy is too tough for the nats to gnaw on.) Jan goe one new shoe on left rear food. 6:12, going west and the weather is cloudy and hot. 6:17, entering Kings Hill (unincorporated). It lays in a narrow valley with the Snake River and UP railroad on the south side. There are very few farms around here. Hay is about all they raise. 7:05, Ki just got out of bed. Janell got up early this morning and is riding in the Carnine wagon or Roseburg wagon. 7:49, we are going a quarter of a mile from Glenn's Ferry. Now 130 miles from Oregon border. 7:56, crossing Little Canyon Creek. 8:00, leaving Highway 30 going on a rock road. 8:42, sagebrush and hills on both sides of us. You can see the Three Island crossing of the old Oregon Trail where they rafted across the Snake River. 9:53, stopped to water. Each mule drank a pail of water. 10:11, on our way again. My tire on the left rear wheel is getting loose.

A big horse fly just bit Jan and she raised cane. I got off and killed it. 12:05, stopped for the day at the Jack Hendly ranch. The people at Glen's Ferry took up a collection and gave us a roast beef dinner. By some misunderstanding we almost had to leave our campsite. They even contacted the sheriff, but we are still here so I guess all is well.

July 16: 6:02, all hooked up. 6:10, westward again. Nothing but sagebrush. 6:30, on oil again. Thank gosh. The dust was pretty bad. 8:10, here is a policeman with a summons for us. Don't know for sure what it's all about. I suppose over our campsite. Tell you later. 8:45, stopped to have pictures taken for the Oregon Journal. Also the State police are here teasing us about our trouble. 9:00, I guess they're through with us for a while as we are on our way again. 9:20, here comes Mount Home Rough Riders and also 4-H Club riders to meet us and escort us to Mount Home. 10:05, stopped to water at Mount Home sale barn. Doc and Jan were pretty dry. 10:23, heading west and entering Mount Home. It lays in a small valley. Hay and grain is about all that is grown here. I think the whole town is out to see us. 10:32, on highway 30. 10:31, leaving highway 30 and going on an old highway.

We've had State police escort all morning. Here comes a pickup with a loud speaker from Nyssa, Oreg., to welcome us to Oregon. They are going to have an all-girls rodeo for us at Nyssa. 12:51, entering camp at the Crater station. Made 23 miles today. Our trouble earlier didn't amount to much. By noon everything was taken care of by the wagonmaster, Tex Serpa. Our lunch today was furnished by the people of Mount Home, population 4,552.

July 17: 5:58, ready to go but looks like we are going to be held up. 7:59, finally got started. As I said, "People that came West years ago had their ups and downs and we sure had ours this morning, but all seems well again." It's sure sultry out. We were 2 hours late getting started this morning. It is going to be a long, hot day. 8:20, on gravel. 8:44, crossed over onto the brand new highway, three lanes in each direction. 9:05, we now have a police escort. 8:24, crossing Samar Creek. 9:56, stopped to water. Doc drank one pail and Jan guzzled two.

Our lunch was passed out because we'll be late getting to camp. 10:14, we're still on the fertile desert; in the near future this land will all be under cultivation. 11:44, entered Ada County. Stopped to water for the second time today. Doc and Jan drank two pails apiece. 1:02, rolling again. 1:16, back on Highway 30 about one-half mile. 1:24, on the old highway and Janell is feeling lonesome for Christine Stols. Janelle was looking out the wagons and two girls in long centennial dresses were waving at her. They were Kathy and Sharon Lupher, also John and Mrs. Lupher and Cub's sister, Henry. The two girls rode into camp with Janell and I. Ki rode with Virginia and John. 2:52, arrived at the Lloyd Hanson ranch. Army helicopter dropped bread, pop, milk, cottage cheese to us. They also brought the mayor. We went to the Y for showers. Janell and I went to the Snake River Stampede at Nampa. Ki was the only woman that stayed at camp. She gave out about 500 letters. The six women on the trail received gifts from the Welcome Wagon club.

July 18: Here is Cathy, Sharon, and John to ride with us. 5:58, all hooked up. But we are waiting again. 6:20, rolling northwest again. 8:06, a sign says "Welcome Wagon City." 8:46, crossed over the New York canal. The reason I have mentioned these canals is they are responsible for the development of this country. 8:55, met by

the Ada County Sheriff Possee as we entered Boise, population 34,392. It is the largest city in the world without the main line of a railroad. 8:59, crossed the Rideabough Canal. 9:54, arrived at the capitol to meet some old pioneers. Ki has gone with Virginia to wash and iron at Cub's sisters. Thanks to her we have clean clothes again and we had a very nice visit with them. They brought us a huge bunch of fruit and we sure enjoyed it. 10:24, leaving the capital. 10:04, crossed back across the river. 10:44, stopped to water at the Beasten Plumbing Co. in Boise. 11:01, westward again. 11:12, entering Garden City, population 1,459. We stopped and had cold drinks and the chief of police shook hands with us and welcomed us to the town. 12:14, turned off the highway. Weather is windy and hot. 12:24, arrived at camp at the A. Coffey ranch. Mrs. C. G. Estell was at the wagon when it stopped at Capital (she is Mrs. Bill Gasser's sister). We went out to the Mission Inn for dinner celebrating our 3 months on the road. We passed out about 3,000 letters yesterday. Janell went to the jalopy races at Meridan last night.

This account in the July 30, 1959, Drain Enterprise starts with July 20, a Monday. The next day the sturdy modern-day pioneers arrived back in Oregon.

As Rudy Roudebaugh observes in his diary:

July 21: 6, all hooked up, but as usual waiting. 6:26, here we go. We'll soon be in dear old Oregon.

And it has been a long trip since the train left Independence, Mo., April 19. President Harry Truman was on hand to start the train. Another former President, Herbert Hoover, was invited to greet the cavalcade at journey's end in Independence, Oreg., but he was unable to attend.

Mr. Roudebaugh's account for July 20 through July 25 follows:

[From the Drain (Oreg.) Enterprise, July 30, 1959]

WAGON TRAIN ENDURES 121° HEAT WAVE TRAVELING THROUGH IDAHO

(By R. R. Roudebaugh)

July 20: 6:07 a.m., waiting again, 6:16, rolling west. 6:31 hit Highway 20. 6:59, going by the Joplin Cemetery, which is very old. 7:15, here is the 7 Mile store and inn. 8:21, there is a whole field of seagulls come in from Drain to greet us. 9:20, crossed the Phillip Canal. 9:14, leaving Ada County and entering Canyon County. Being met by the sheriff's posse to escort us. 9:44, stopped to water at the Botts service station. Doc and Jan drank very little water. Ki just got out of bed. Jerry Carnine is riding with us today. We met Mrs. Jim Whipple's brother and sister-in-law at Boise, Mr. and Mrs. Bob Wilcox. 10:04, have left our watering spot. 10:14, crossing the Highline Canal. 10:20, crossed 10 Mile Creek.

10:46, going past the spot where the Ward Massacre occurred. Out of a party of 20 only 2 small boys survived. 11:30, crossing and recrossing the Notus Canal. 11:34, entering Caldwell, population 10,487. 12:00, entering Memorial Park where we are making camp. The mules are staying at the rodeo barns. This park is beautiful, but my mules like dust to roll in. As I recall an old saying that a mule is worth $100 everytimes it rolls over, Doc rolled over four times and Jan three. That makes them worth $700 today. This part of the country is good for dairy farming. Also a lot of corn is grown for ensilage for silos.

We had dinner this evening with Mr. and Mrs. Ben Rohnert and family. I graduated from high school with Mrs. Rohnert.

Ki met a nice woman in Boise who presented us a scrapbook filled with news stories of the wagon train. She and her husband are going to come to Drain to see us.

July 21: 6:00, all hooked up, but as usual waiting. 6:26, here we go. We'll soon be in dear old Oregon. 6:40, pulling onto Highway 20. 6:50, crossing Riverside Canal. 6:54, crossing the Boise River. 6:59, crossing Farmers Coop Canal. 7:20, as we are going close by the railroad tracks Ki counted 125 cars going by.

The most asked question is: How are you going back to Missouri? We have to explain we're all Oregon residents and that we'd only started from Missouri for this trip.

Caldwell was really seeking keepsakes from us. More than any place we've been so far. They were raiding our wagon and even cut a piece of tarp from one of the wagons. 7:27 entering Notus, population 313. 9:21, crossing Sand Hollow Creek. South of us looks like wild hay or pasture. North of us is mostly sugar beets and a little corn. I gave away about 2,000 letters yesterday. Ki is supposed to be on cook shift, but all meals today are being served to us. There is more beets grown around here than any other part of Idaho we've been. 10:07, here is the Canyon County Sheriff's Posse to escort us to Parma. 10:30, stopped to meet Mayor Jim Watson. We picked up a little boy named Harley Noe. His father is riding with the Posse and is a good friend of Gail Carnine. 10:35, entering Parma, population 1,525.

A boy on the street called to me, "Pull off that fake beard!"

I believe the whole town is out. 10:56, stopped and watered the livestock. We were served pie, ice cream, lemonade and iced tea. 12:13, leaving Parma. There is hundreds of cars and people here to see us at the bridge bidding farewell to Idaho and hello to Oregon as we cross the Snake River bridge. 1:27, in Malheur County. While we were on the bridge, John Wilder from Pleasant Hill was there to meet us. We arrived in camp at 1:49 at the Nyssa high school. It was 111°. The horses and mules were taken about a mile from camp to the rodeo grounds. They were right out in the sun—what a day.

This evening, Mr. and Mrs. Rufus Hickethier and Mrs. Shaw and son and Mrs. Irvin Freeze and daughter and son came to visit the wagon train. We were pleased to see them.

July 22: Up at 3:30 to go to rodeo grounds to take care of my mules. Ki is on cook shift so I lit the stoves for her. 6, after I was hooked up we were called together to have a talk with Howard Appling Jr., secretary of state for Oregon, and Dick Smith, president of the On-to-Oregon Cavalcade, 6:25, ready to take off and roll for home. We are going to have National Guard escort the rest of the way home. 7:14, going through the country here reminds me of Idaho. 8:35, hitting the first Oregon desert and its like Hades. 10:10, cold drinks and cookies were given to us by Mr. Spaulding, county road superintendent. 10:31, rolling again. 10:56, stopped to water, but the water truck never showed up. 11, here comes the Malheur County sheriff's posse to escort us in. 11:59, we stopped at the grave of John D. Henderson for a small prayer given by Rev. Vincent Egar the only cowboy priest. He is the only known priest to get permission from the Pope to wear cowboy boots. 12:10, forded the Malheur River. We made out just fine. The water came up to the mule's stomach. This was an original trail. Then we circled through Vale and back to the city park at 12:39. Diner was given us by the American Legion, Lions, Women's Club and Rebeccas. I took a hot steam bath at Dr. Dale N. Scheer's Therapy Springs. He is one of Forrest Johnson's friends. Many other friends of the Johnsons send their regards.

July 23: 5:36, all hooked up and ready to leave, but waiting on the Roseburg wagon and Tex. Our breakfast was served to us by the Vale C of C. 6:08, here we are starting out and heading across Oregon Highway 26. We have a young photographer, Norris Niccum, riding with us a couple of days. He works for United Press International Newspictures.

The weather is just plain hot. I guess I forgot to mention before, but right out of Boise it was 121°. And we were right out where the sagebrush was short—no shade. We all had our tongues hanging out.

9:16, here comes the 4–H riding club to escort us into Jamison. We are also entering Willow Creek (just post office, general store, tavern). We have been going through a valley about 3 miles wide. 9:25, crossing Willow Creek.

Here is a combine at work. The first one we've seen since we have been gone. They are harvesting wheat and barley. 10:04, stopped to water. The mules were really ready for water. They each drank two pails. The drivers were in luck today. They each got an orange. 10:02, about 7 more miles to camp. It's 100 today. 11:20, went through Jameson and hit gravel road. 11:41, going along the foothills. 11:54, we have made camp for today at the Floyd McBride Farm. Mrs. McBride came and took our laundry home to clean for us.

We just found out that no one has been buried in the old pioneer cemetery out of Vale since 1930.

July 24: 6, ready but waiting on Dave. His horse is lame this morning.

As I was talking to the people visiting the wagon train last night, I looked up and here comes Janell riding a cow right out of a barn. I don't know what I'm going to do with her. Ki is riding on the water truck today. I guess she was scared to cross the mountains in the wagon.

Doc got one new shoe on his right front foot. Jan got one on her left rear foot last night. 6:15, rolling northeast through sagebrush and up a canyon. 7:40, stopped to rest the mules for 10 minutes. 8:24, the hills are brown with beef cattle grazing on them. 9:36, we are locking our wheels to go down this steep hill. Moving across Burnt Creek and by old ranchhouse. 9:55, stopped to water. Dewight Lockett and Ellis Allen are guides that came to the wagon train last night to take us on our trip for today. 10:14, rolling northeast again. 10:46, Jan threw her left front shoe. 11:26, we have stopped to rest on a hill as we have been on dirt road all morning. We stopped and rested 10 minutes three different times coming up this hill. 11:40, going out on a hogsback and down the longest hill on this trip to far. 12, we are at the bottom of the hill waiting on Roy Brabham.

We have entered Huntington. The wagons went through main part of town and back to the high school where were are making camp at 12:19, potluck lunch was brought in by the whole town. They put on a small program and we were introduced to all the oldtimers of Huntington and Baker County it seemed.

July 25: Up at 5:30. Went to Howell Cafe for breakfast. 5:57, ready to roll. 6:05, rolling out of Huntington and through Oregon on Highway 30, the Oregon Trail. We have the State police, National Guard, and Baker County sheriff's posse all escorting us today. 6:31, crossing the Burnt River. The weather is windy and cooler this morning. The oil is slippery for the mules today. Jan got one new shoe on her left front foot. She rolled into the fence yesterday and tore the shoe off. 7:28, at Lime, where Portland

Cement Co. has a manufacturing plant. 7:40, going through Dixie, just a wide place in the road. 8:32, passing Weatherby, old pony express station. 8:51, crossed Burnt River again for the last time. Our route previously crossed this river at least 20 times.

A group of 4–H youths on horseback have joined us to ride to Durkee. 9:14, stopped to water at Rattlesnake Springs, one of Oregon's rest areas. 9:54, picked up JoAnne, 6, and Suzanne, 8, daughters of Mr. and Mrs. Lowell Anderson of Yoncalla. They will ride to camp with me. The wind has went down and getting hot. 10:52, arrived in Durkee, which has only a few stores. The town lies in a pretty valley 1 mile wide and 10 miles long. 10:06, crossed Pritchard Creek. 11:24, arrived at camp at Vincent Kirby Ranch, where they had moved in feed bunks filled with hay. This is the first place we have found feed waiting for our livestock when we arrived at camp. Durkee grange is providing us oats, dinner, and entertainment. We are also provided transportation into Baker, 22 miles away, for showers, shopping, public dance at community center, and rodeo tonight.

Besides Mr. and Mrs. Lowell Anderson, of Yoncalla, other north Douglas County visitors at the wagon train encampment at Durkee, Saturday, were Mr. and Mrs. Rufus Pfister and Mr. and Mrs. Arlo Thomas, of Drain, who arrived about 5:30 p.m.

Housing Act Would Meet Many Needs

EXTENSION OF REMARKS
OF
HON. HARRISON A. WILLIAMS, JR.
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Friday, August 21, 1959

Mr. WILLIAMS of New Jersey. Mr. President, as we await final decisions on the compromise Housing bill of 1959, it might be well to explore some of the bill's provisions which have not received as much attention as the urban renewal and other widely publicized programs.

An article from the Plainfield (N.J.) Courier-News of August 14 discusses the housing shortage which exists at Rutgers—the State university. One of the Housing Act provisions is intended to help colleges deal with such conditions. Rutgers officials have, in correspondence to me, clearly indicated the need for housing bill provisions which would deal with this and other college needs.

The other article, from the Camden Courier-Post of August 17, describes how one relatively small program of the housing bill has been discontinued, for all practical purposes, until a final word on a veto is given. Good municipal planning, of course, is essential in these years of growth in the suburbs. It is unfortunate that there should be any slowdown of planning activity, particularly at a time when many municipal officials have worked for years to effect just such planning.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, the article from the Courier-News, Plainfield, N.J., of August 14 and the article from the Camden Courier-Post of August 17, 1959.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Courier-News, Plainfield, N.J., Aug. 14, 1959]

ROOM FOR STUDENTS SOUGHT BY RUTGERS

NEW BRUNSWICK.—Rutgers' housing officials today appealed for help from New Brunswick area householders in finding rental rooms for some 275 students presently on the waiting list for dormitory places.

Housing Director Joseph F. Nolan said that as of August 6, 112 freshmen and 128 upperclassmen at the colleges for men remain on the waiting list, along with 17 graduate women students and about the same number of graduate men.

Nolan said that the waiting list remains after the conversion of the basements of three dormitories to sleeping quarters (which will be rented at half price) the preemption of all study rooms in the three big canal bank dormitories for use as sleeping rooms, and the addition of 55 units to be vacated this month when the college infirmary moves from the "Quad" dormitories to the new student health center.

TEMPORARY USE

The lounge room on each floor of the six-story canal bank dorms will be temporarily used in September as emergency sleeping quarters, but will be vacated as soon as other rooms can be found.

The university's own facilities at the men's colleges will house 1,835 men this fall, with some 700 more living in fraternity houses. Upward of 800, it is estimated, will be commuting to New Brunswick daily from homes in a radius of 25 miles or more.

Douglass College, which this fall will put in use a new dormitory for 240 girls, will have all its quarters at capacity.

Students now pay $300 per year in dormitory rentals and Nolan said rooms in local homes renting at about that level would be ideal for student use.

"Overcrowding is no longer a hypothetical problem," Nolan emphasized, "the rush of students has hit us with a crash and far sooner that we had expected."

ESTIMATES INACCURATE

He explained that last spring's best estimates of this fall's campus population indicated that the addition of space in dormitory basements, the freed infirmary space and the conversion of study rooms would amply meet the needs of informing and returning students.

Rooms in homes within 5 miles of the campus are suitable for students, Nolan said, particularly if bus service is conveniently available.

Nolan said local residents may write or telephone him at Voorhees Hall on the men's college campus to list accommodations and that students would then be given copies of the lists of available rooms. His office, he pointed out, serves only as a referral point for nonuniversity housing.

[From the Camden (N.J.) Courier-Post, Aug. 17, 1959]

HOUSING VETO STALLS STATE PLANNING AID

TRENTON, August 17.—Local planning assistance applications from 30 municipalities are being held by the New Jersey Department of Conservation and Economic Development until sufficient Federal funds are made available.

Conservation Commissioner Salvatore A. Bontempo said today, "In light of the recent Presidential veto of the 1959 omnibus housing bill, it has been necessary to notify local administrators that processing of 701 applications will be delayed until authorized funds are appropriated. The limited funds remaining from last year's authorization may permit four New Jersey applications currently pending Federal approval to be authorized. However, lack of funds makes it necessary to hold all current requests."

Aided by the enabling 1954 national housing legislation, New Jersey has conducted the largest local planning assistance program in the United States. Planning personnel of the New Jersey Department of Conservation and Economic Development have and are acting as consultants in the preparation of 17 of the 116 municipal master plans included in the program.

The $20 million authorization contained in the vetoed housing bill for the urban planning assistance program would have enabled the State to continue its local planning assistance program at its current pace. Commissioner Bontempo said, "The Department's Bureau of Planning is geared to continue providing proper planning guides and recommendations for the physical development of our many communities. The enabling legislation would permit us to offer our services to approximately 300 more municipalities if the program is continued."

The vetoed legislation, amending the 1954 act, also provided Federal funds for local planning assistance for communities whose population was 50,000 or less in the 1950 census. The existing legislation limits applications to municipalities whose population is 25,000 or less. B. Budd Chavooshian, chief of the bureau of planning of the New Jersey Department of Conservation and Economic Development, said, "The omnibus housing bill would enable 21 more communities to be included in the State's program. Thus, all but 13 of New Jersey's 567 municipalities would then be eligible for local planning assistance."

The communities affected are Teaneck, Garfield, Hackensack, Vineland, Belleville, Bloomfield, Maplewood, Montclair, Nutley, Orange, West Orange, West New York, Kearny, Plainfield, Linden, Woodbridge, New Brunswick, Perth Amboy, Hamilton Township, North Bergen, and Union.

NATO Leaders Put Trust in German Ex-Enemies

EXTENSION OF REMARKS
OF
HON. JOHN E. FOGARTY
OF RHODE ISLAND
IN THE HOUSE OF REPRESENTATIVES
Monday, August 17, 1959

Mr. FOGARTY. Mr. Speaker, under leave to extend my remarks I would like to include the eighth of a series of articles by Mr. Edward J. Milne, Washington correspondent for the Providence Journal and Evening Bulletin, of Providence, R.I., concerning his recent tour of the NATO countries. This article appeared in the Providence Journal of July 24, 1959, and is entitled "NATO Leaders Put Trust in German Ex-Enemies":

NATO LEADERS PUT TRUST IN GERMAN EX-ENEMIES

(By Edward J. Milne)

WASHINGTON.—Mixed emotions pursue the observer on an inspection trip through the NATO countries across the ocean and remain upon his return to the States.

If, for example, there is a tendency to look upon all the planes and tanks and men and regret the tax dollars that are required to keep them in the field, it is quickly swallowed in the realization of the tremendous strides that have been taken towards build-

ing the security the dollars are designed to provide.

Again, one reads of a recent public opinion poll in France indicating that while some 70 percent of the French are for more economic and political unity with the Germans, 70 percent likewise still fear or are uneasy over the Germans.

This recalls a visit to a bustling base of the new German Air Force in upper Bavaria and the questions that flash through the mind upon seeing American-made jet fighter-bombers squatting there with Maltese crosses proclaiming the rebirth of German airpower on a field that was put out of action by allied bombers in World War II.

WORLD WAR II ACE

One of the builders of the German's new Air Group South at Erding, a few miles northeast of Munich, is Brig. Gen. Johannes Steinhoff. Now 48, he was a World War II ace with more than 100 planes reported to his credit, but when he is asked how many, he replies:

"I prefer not to remember. I think you will understand."

General Steinhoff's face was badly burned in a wartime crash. He wears dark glasses that serve to hide any emotion his eyes might otherwise reveal as he insists that the new German Air Force is entirely tactical and defensive, with neither strategic capability nor strategic plans.

As Gen. Lauris Norstad, NATO's commander in chief for Europe has pointed out, the nuclear bomb has virtually wiped out the distinction between tactical and strategic aircraft, but the Americans who work so closely with the Germans at Erding and other NATO bases seem largely willing to accept the West Germans' disclaimer of any but defensive intent.

HOPE FOR ALLIES

American airmen have a standing joke that they never meet a German who fought anywhere but on the Russian front in World War II. Yet they seem in general to have a hope, amounting almost to a firm belief, that the Germans will prove as stanch allies as they once were implacable foes.

At its peak in World War II the Luftwaffe had some 7,000 to 8,000 pilots. There were about 6,000 surviving pilots when the war ended. Only about 60 of them are flying in the new German Air Force, reborn in 1956. About 200 of them are in the new force as instructors and administrators.

The new air force has two wings operational today and expects to have six operational by the end of the year—four fighter-bomber, one fighter, and one support. It has about 40,000 officers and men, including about 1,000 pilots and 350 combat planes. Its goal is 100,000 officers and men, 3,000 pilots, and 1,000 combat planes by 1964.

Starting from scratch in 1956, the Germans had a target, permitted by treaty, of 1,364 combat planes by 1962. Several factors account for the cutback in size and the setback in time. One of the main difficulties has been a lack of experienced instructors and maintenance and other technical personnel. The United States is still supplying much of such skill, and the Germans expect to have to rely upon such assistance well into the 1960's.

EXPECT NIKE MISSILE

The Germans see little net loss in the reduction from almost 1,400 to 1,000 combat planes. They are expecting Nike missiles to replace some of the fighter planes, and they are expecting faster, longer range, and more powerful fighter-bombers than envisioned in 1956.

With an assist on parts from the United States they hope to produce in their own plants by 1962 most of the ultramodern fighter-bombers for their force, to acquire others here.

General Steinhoff says the new Luftwaffe had recruiting difficulties at first because of widespread reluctance in West Germany to rearming. But volunteers are now sufficient, he says. Pilot trainees must sign on for 6 years.

There is scattered opinion among the allies that the Germans should be pressing forward faster than their present timetable and have their full force combat-ready earlier than 1964. The rebuttal argument is that the more deliberate pace means a succession of better-trained airmen coming into service with more up-to-date planes each year between now and the completion of the buildup.

Competent American opinion seems to agree with the soundness of the West Germans' position. It is reasoned that no one is in a position to realize more than the Germans the need for speed in forging the NATO sword and that what they are giving up is not speed but haste.

Perhaps underneath the American attitude is the deep satisfaction U.S. and NATO officials feel with one other aspect of the cooperation with the West Germans. That is the no-strings-attached arrangement under which NATO nuclear air might is stationed at German bases, ready for instant retaliation if Russia starts the big one.

The issue of trust in the new German allies was put to President Eisenhower at his press conference Wednesday. A reporter asked what assurance we hav(that "a rearmed and restored Germany" will "not turn against the West as it has twice in a generation?"

What this country must do, the President said, is "decide where your greatest danger is" and give that "your attention at the moment."

"Now this doesn't mean," he said, "that you shouldn't have your eye on future potentialities, but particularly when those potentialities look as low in the—as I think they are along the line that you were suggesting about a hostile Germany, and rearmed, I would say I would rather have Germany strong and my friend today."

The Metropolitan City

EXTENSION OF REMARKS

OF

HON. HARRISON A. WILLIAMS, JR.

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Friday, August 21, 1959

Mr. WILLIAMS of New Jersey. Mr. President, we already have heard much about metropolitan problems throughout the United States. A bill to establish a Federal Commission on Metropolitan Problems is now under study by the Government Operations Committee.

In press and magazines we read daily about the troubles caused by the amazing growth of our suburbs. One medical author even wrote recently that our insistence on shifting to mortgaged homes outside our cities has caused an alarming increase in physical and mental ailments. In Life magazine last week an author paid much attention to methods which may be needed to preserve open land in the relatively rural areas near our cities.

All of these developments are, I think, indicative of the need for a Federal Commission which will study our metropolitan areas.

Another good argument for the Commission is an address given by Frederick G. Gardiner, Q.C., chairman of the municipality of Metropolitan Toronto. Mr. Gardiner spoke on June 16 in Plainfield, N.J., before a meeting of the Metropolitan Regional Council. He described how the municipality of Toronto has applied regional government to that area. To the Metropolitan Regional Council, this was particularly significant, because this informal group of elected officials from cities and counties in or near New York City is seeking some form of regional government cooperation for their own 22-county area.

Mr. Gardiner did not mention the proposed Federal Commission on Metropolitan Problems, but he very clearly described a situation which causes a need for clear-cut answers to vital problems. The closing paragraphs give a very pertinent warning about the need for some kind of action. Mr. Gardner warns:

In these days, emergencies in both domestic and foreign affairs develop with startling rapidity. There is seldom time for an exhaustive examination of all possible solutions in the hope that you can discover the perfect answer.

I think we should pay heed to this warning at a national level and at State, county, and municipal levels. Mr. Gardiner is the first to say that the Toronto experiment may not offer the precise pattern which will fit all metropolitan areas, but his understanding of the overall urban area problem is one which, I believe, is worthy of some study.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the closing paragraphs of Mr. Gardiner's address. I also ask unanimous consent to have printed in the Appendix of the RECORD two editorials which discuss the Metropolitan Commission introduced by the distinguished and knowledgeable Senator from Pennsylvania, Mr. CLARK.

There being no objection, the matters were ordered to be printed in the RECORD, as follows:

Perhaps you are saying to yourself: "It's all very well to come down here and talk as though you came from Texas but what have you learned from your experience that might be useful to us?" Ladies and gentlemen, we have learned quite a bit. May I make it perfectly clear that I am not here to suggest that a metropolitan system such as ours is the solution to the problems of all metropolitan areas. What may be the answer in one area may not be the answer in another. The probability is that the solution in each case must be designed to suit the particular situation which exists and varying conditions are not likely to lend themselves to any simple or standard formula. We have found that you have to be a large shareholder in a company known as "Patience and Persistence Incorporated"; that you have to take a step at a time; that there are many obstacles to be overcome; and that it is just as bad to try to do too much too soon as it is to do too little too late.

We have found that you can line your shelves with reports, plans and models but eventually you must choose those projects which commonsense tells you are most important, give them the necessary priorities and, as Robert Moses would say, put in the steam shovels and the bulldozers. Then

and then only will you know that your project is on its way.

Perhaps our most important accomplishment is that the metropolitan council has adopted the metropolitan concept. Subject to human nature being what it is, and neither you nor I will ever change that, members of council consider projects in relation to their value to the whole area rather than in relation to the advantage they might have upon their respective individual municipalities.

We found that we must spend many millions of dollars to provide the area with the services it needs. We recognize that such expenditures are investments in the plant and equipment which our rapidly expanding metropolitan area must have if it is to remain attractive to industrial and commercial development without which it cannot hope to exist.

One comment which I think is appropriate is that there is probably a more urgent need for action than is generally appreciated. In these days emergencies in both domestic and foreign affairs develop with startling rapidity. There is seldom time for an exhaustive examination of all possible solutions in the hope that you can discover the perfect answer. In our case we had arrived at a stage where our three rapidly expanding residential municipalities were finding it difficult to finance their requirements. When you can't sell your bonds you do not have the time and the composure to undertake an academic discussion into what is the perfect solution.

Under such circumstances the time required for extensive investigations of the problems which have arisen and the solutions which have been adopted in other areas might better be devoted to securing an accurate and comprehensive knowledge of the facts of your own situation. This should be followed by a careful description of the general scheme and its fundamental principles in the simplest possible language so that it may be understood by the general public.

As to any plan which may be proposed it should be based upon two fundamental principles. The first is a realization of the vital interdependence which exists between the local units comprising any metropolitan area. No one local municipality in a metropolitan area can be sufficient unto itself. Secondly the history of both our countries has taught us that local responsibility in local affairs is a vital element in our democratic system of government.

In our case the necessity for certain services required by the whole area became more and more pressing. We discovered that it was not difficult to determine what should be done. You could find a common denominator with respect to what was needed but we found it to be impossible upon a voluntary basis to establish a common denominator as to how the things that should be done would be paid for.

There are many, and I confess to having been one, who thought the problem could only be solved by complete amalgamation of all of our constituent municipalities into one big city. I expounded the arguments of overlapping jurisdiction, and the administrative efficiency and economy that would result from large-scale production, but I have learned from experience that there were those who understood the fundamental issues better than I did and who presented a better solution than complete amalagamation. I cannot say that there is not some duplication of administrative staffs and services nor can I say that dollarwise there may not be some increased costs but I can say that if there is some overlapping and duplication it is minor in degree and if the costs are greater that they are only slightly higher and that the accomplishments are worth many times the increased cost.

In our case the vigorous opposition of 11 out of the 12 suburbs to the city's application for amalgamation surprised the ardent and highly vocal advocates of outright consolidation. Amalgamation seemed like a simple and logical solution of our problem. Like many simple answers, it was deceptive. It would have tended to destroy true local government rather than to improve it.

One recommendation I would make is that you should not wait until you have convinced everybody that you have the perfect solution. No one has ever achieved the acme of perfection. Make a start. Many of the matters which you are apprehensive about will never occur and if they do they will not have the cataclysmic effect you think and time and experience will be your best teacher.

In closing may I say that in the course of our experiments we receive many criticisms and many complaints, but that we are proceeding in accordance with the advice inherent in Abraham Lincoln's words which I paraphrase as follows:

"If I were to attempt to read let alone answer all the criticisms and complaints I receive I would have no time for any other business. From day to day I do the best I can and will continue to do so to the end. If in the end I come out all right then the complaints and criticisms will make no difference, but if the end brings me out wrong, then 10 angels coming down from heaven to swear that I was right would still make no difference."

[From the Providence (R.I.) Evening Bulletin, Aug. 3, 1959]

A HOPEFUL NEW APPROACH TO METROPOLITAN PROBLEMS

A bill to set up a U.S. Commission on Metropolitan Problems is before the Senate, and there is gathering interest in its passage. The proposal was introduced by Senator JOSEPH S. CLARK, Democrat, of Pennsylvania, a former mayor of Philadelphia, who won the respect of many municipal executives for the imagination and vigor he brought to bear on city problems.

Senator CLARK wants an 18-member commission, named by the President and by the Speaker of the House and the President of the Senate. The legislation would guarantee representation by the minority party in both branches of Congress by Governors with major urbanization problems and by mayors of American cities.

The job of the commission would be manifold. It would review present and prospective needs of metropolitan areas for public service; it would study the capabilities of the different levels of government to meet these needs; it would pinpoint the extent of existing Federal support in satisfying those needs.

But its most useful job, it seems to us, would be the review of means for improving coordination of Federal, State, and local policies and programs that affect metropolitan areas. In effect, the commission would be able to put together a blueprint indicating avenues of approach to the solution of metropolitan problems.

Metropolitanization has been a matter of discussion and concern for several years, and the first successful attempt at metropolitanization in Dade County, Miami, has attracted continuing attention. That area had to hurdle early opposition to metropolitanization and a later attempt to hobble metropolitanization severely.

But a major trouble in getting started in any one area on the job of solving metropolitan problems is the lack of experience in the field. The problems are so large and involve so many layers of government that it is difficult to lay hold of a method to untangle the snarl of rights, duties, powers, and authorities.

If the commission did no more than outline a new and effective pattern of interrelated Federal, State, and local policies and programs for handling of metropolitan problems, it would earn the gratitude of many a governor and mayor, as well as the citizens of the crowded, fast-growing metropolitan centers of the nation.

The commission would have no power to impose a thing on Congress or a State and its subsidiary governments. It would be asked to make recommendations to the President and Congress by February 1, 1961, and it would be clothed with enough authority and given enough money to do a meaningful job for the Nation.

We hope Congress approves Senator CLARK's bill. The opportunities for the commission are tremendous in just the one field, for instance, of urban renewal. It could start from the firm basis of the Hoover Commission findings on governmental relations, and it could pioneer with recommendations of great value to the cities of America.

[From the Erie (Pa.) Times-News, Aug. 2, 1959]

CABINET HELP FOR CITIES PROPOSED

New York's Senator KENNETH KEATING, Republican, is the latest to propose a Cabinet-level department at Washington catering to an urban clientele. No figure of speech is intended; the Department of Urbiculture—the name suggested several years ago by Representative J. ARTHUR YOUNGER, Republican, of California—is frankly conceived as a counterweight to the Department of Agriculture, whose name it imitates, and to such other client agencies as Labor and Commerce.

Despite fine theories to the contrary, political scientists generally regard Government agencies as spokesmen more or less for the groups they oversee. The "more or less" may cover an enormous range and leave room, let's say, for a Secretary Benson as well as a Secretary Brannan, but in general Agriculture Secretaries are expected to expound the farmer's viewpoint and Commerce Secretaries the businessman's.

City spokesmen have long complained that nobody understands their viewpoint—at least nobody high enough to matter. Senator JOSEPH S. CLARK, Democrat, of Pennsylvania, in support of his own bill to establish a Department of Urban Affairs, told the American Municipal Association last December that its job would be "to listen to representatives of groups like this one, understand their problems and reflect that understanding in the policy forming processes within the executive branch."

Recently, urban strategists have been softpedaling demands for a separate Federal department. Instead they are concentrating their energies behind proposals for a Hoover-type study of metropolitan problems. Senator CLARK is himself following this course (with public encouragement from Senate Majority Leader LYNDON B. JOHNSON), and the U.S. Conference of Mayors at its mid-July convention skipped over its earlier endorsement of a Cabinet post in favor of the study plan.

The big point is, however, that the plight of the established cities finally has been recognized and something is going to be done.

Statewide Poll on 45 Questions

EXTENSION OF REMARKS

OF

HON. J. GLENN BEALL

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Friday, August 21, 1959

Mr. BEALL. Mr. President, last month I sent out a questionnaire to con-

stituents in my State. Forty-five questions of national interest were asked. Replies came back in great numbers. As a matter of fact, a total of 1,581 questionnaires were filled out and mailed back to me. They came from every part of the State and from every walk of life, on a fairly proportionate basis. In my opinion, these 1,581 answers to each of the 45 questions present a representative cross section of public opinion.

The results, which have been tabulated and reduced to percentages, are informative and interesting to study. I ask unanimous consent, Mr. President, to have the results of the poll printed in the Appendix of the RECORD.

There being no objection, the poll was ordered to be printed in the RECORD, as follows:

[Percent]

	Yes	No	No answer
1. Do you favor integration in schools?	51.6	43.4	5.0
2. Do you favor integration in housing?	30.2	59.4	10.4
3. Do you agree with the scientists who say that the danger from nuclear explosion fallout is negligible?	41.7	36.4	21.9
4. Do you favor changing the law which requires that "equal time" on radio and TV be given to opposing candidates?	52.6	36.9	10.5
5. Would you have voted to confirm Admiral Strauss' nomination?	67.3	17.9	14.8
6. Would you vote for the measure which would provide that a Federal law does not strike down a State law unless Congress specifically says so?	60.1	26.3	13.6
7. Do you favor legislation or constitutional amendment to curb the Supreme Court's power?	40.3	50.9	8.8
8. Would you favor giving the residents of the District of Columbia full voting rights permitting complete home rule?	65.8	26.5	7.7
9. Do you favor the 8-year limit on a President's tenure of office?	68.7	25.2	6.1
10. Are you in favor of equal-rights-for-women legislation?	70.6	17.9	11.5
11. Do you favor liberalizing our immigration restrictions?	31.3	58.2	10.5
12. Do you favor all possible speed in our space program?	62.9	21.5	15.6
13. Do you think that high tariff is better than low tariff for our national economy?	37.4	43.7	18.9
14. Would you favor a program designed to return the farmers to the "law of supply and demand" which would embody the stopping of price supports and the lifting of acreage and production limitations?	84.1	9.8	6.1
15. Do you favor labor legislation to restrict activities of labor officials?	90.8	3.9	5.3
16. Do you favor continuing the McClellan hearings?	76.7	7.8	15.5
17. Do you favor the "open shop"?	71.9	12.9	15.2
18. Are you in favor of raising the minimum wage to $1.25?	35.4	52.8	11.8
19. Do you believe that raising the minimum wage would be inflationary?	55.7	35.2	9.1
20. Are you in favor of a pay boost for steelworkers?	8.1	81.1	10.8
21. Do you favor Federal aid for school construction?	42.2	46.3	11.5
22. Would you support the use of Federal funds for paying teachers' salaries?	21.3	69.8	8.9
23. Would you favor increased retirement benefits under social security?	51.3	39.1	9.6
24. Do you favor further extension of veterans' benefits?	22.4	64.5	13.1
25. In the program of "matching funds" for the aged, blind, and disabled, do you favor the Federal share being increased?	37.3	45.9	16.8
26. Do you think that unemployment benefits are too extensive?	51.0	36.9	12.1
27. Do you favor TVA and other public power projects?	31.1	52.4	16.5
28. Are you in favor of more "socialism" or government paternalism than we have at present?	6.2	80.7	13.1
29. Would you support the President's efforts to keep spending in line with the budget?	84.6	9.5	5.9
30. Do you think that heavy Government spending, without regard to the budget, helps our national economy more than it hurts it?	16.3	66.0	17.7
31. To pay for the highway program, would you favor boosting the gasoline tax rather than boosting other taxes?	68.1	22.5	9.4
32. Would you favor raising taxes to pay for a bigger housing program?	12.0	76.9	11.1
33. Would you favor a tax increase to offset a deficit resulting from increased Federal expenditures?	27.1	60.5	12.4
34. Do you favor indefinite extension of sales, or excise, taxes?	24.0	64.5	11.5
35. Do you think the Geneva talks, now in recess, are likely to solve anything basic?	10.7	76.2	13.1
36. Do you favor a "summit" conference if the Geneva Conference fails?	30.8	55.4	13.8
37. Would you favor our withdrawing from West Berlin?	5.5	83.5	11.0
38. Should we place restriction on the activities of Soviet officials in this country, 80 percent of whom are engaged in spying, according to FBI Chief Hoover?	80.8	9.7	9.5
39. Would you favor the admission of Red China to the Olympic games?	26.0	61.8	12.2
40. Are you in favor of granting passports to known American Reds?	15.4	71.4	13.2
41. Do you favor our dropping the traditional rule that in war the United States "never strikes first"?	44.4	39.6	16.0
42. Do you think we should stop all nuclear tests regardless of what Russia may do or "promise"?	9.9	79.9	10.2
43. Would you favor making France an equal partner, as is Great Britain, in nuclear information and facilities?	37.7	42.7	19.6
44. Do you favor foreign aid?	56.1	28.5	15.4
45. Do you think our mutual security program is paying off?	45.4	25.6	29.0

Miss Elizabeth A. Smart

EXTENSION OF REMARKS

OF

HON. EDWARD H. REES

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 18, 1959

Mr. REES of Kansas. Mr. Speaker, I have requested this time to announce the passing of Miss Elizabeth A. Smart who died in a hospital in Washington, D.C., last Sunday, August 16.

Miss Smart was well known to Members of the House and Senate, as well as others on Capitol Hill. They knew her especially because of her championing the cause of temperance. She represented the Woman's Christian Temperance Union in Washington. No one, to my knowledge, was more diligent and more effective in opposition to the sale and distribution of intoxicating liquors.

She was highly respected by everyone who knew her, even those who disagreed with her views. She was deeply religious, she was sincere, she was a great Christian character.

Even though Miss Smart has passed from this life, her influence and her effectiveness will live on in the years to come. The great organization she represented and the country have suffered a distinct loss of a great American.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD, with Mr. Raymond F. Noyes in charge, is located in Statuary Hall, House wing, where orders will be received for subscriptions to the RECORD at $1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Members of Congress to purchase reprints from the RECORD should be processed through this office.

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer, plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

Appendix

The Preservation of Freedom in Korea

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 24, 1959

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Minister Pyo Wook Han of the Korean Embassy before the Kiwanis Club of Richmond, Va., June 8, 1959. At a time when we hear so many criticisms of the newly independent countries of Asia as they struggle against almost insuperable odds, it is important to look at some of the truly remarkable achievements. Korea is a brilliant example because the gains have been made while a state of war still exists, under an uneasy armistice.

The address of Minister Han is also notable for the fine tribute he pays to Walter S. Robertson of Richmond who was recently forced to retire because of health reasons, after more than 6 years of extraordinarily brilliant service as Assistant Secretary of State for the Far East. The valiantly struggling new government of old peoples in Asia understand even better than we just how great have been the contributions made by Mr. Robertson to the freedom, stability and progress accomplished in the Far East, with great benefits to their countries and to our own.

The address follows:

THE PRESERVATION OF FREEDOM

It is a great personal privilege—perhaps more than you realize—for me to have this opportunity to speak here in Richmond, especially at this time. Richmond is, of course, one of the most interesting and attractive cities of the world; and in this season of the year it is surely one of the most beautiful. Also it is a city which has always taken a lead in its opposition to communism and in its defense of world democracy.

But I have an even more immediate and pressing reason why I am more than delighted to be here with you today.

One of your greatest sons—the Honorable Walter Robertson—is retiring at the end of this month from his position as Assistant Secretary of State for the Far East. I myself came to the Korean Embassy in Washington a few years before he assumed his high duties in this most important office. It has been one of the delights and rewards of my life to enjoy his friendship, just as it is now a great privilege to pay tribute to the dedicated and high service which he has rendered, at great cost to himself, to the freedom and democracy of Asia, to my own country particularly, and to the security and ideals of the United States.

The responsibilities of the office of Assistant Secretary of State for the Far East are vast. It is his responsibility to deal with the destinies of fully half of the human race. He has had to guide the relations of your great Nation with more than a score of Asian nations, many of which have just recently emerged or re-emerged into freedom. He has had to lead the battle against Communist aggression on its most vital battlefront—for it has long been Communist dogma that the conquest of the Far East is the essential road to the eventual conquest of the world.

I think few diplomats have ever had to confront more difficult or delicate problems than those which circumstance have imposed upon Walter Robertson. To his eternal honor, he has acquitted himself superbly well.

Mr. Robertson learned about Communist intrigue and ruthlessness the hard way, when he was attached to General Marshall's mission in China in 1947. He learned then that the Communists simply will not negotiate in good faith—and that they make promises only to break them. He learned that their policy is guided by only one aim—the destruction of freedom everywhere.

To this knowledge he has added the great attributes of personal courage and clear wisdom. He has never faltered in his fight against admitting the Chinese Communist regime into the United Nations—for he knows that to do so would be to strike a mortal blow against the whole cause of democratic liberties in the entire Far East.

When Quemoy and Matsu were under attack, and when the resolution of free peoples around the world wavered, Walter Robertson was a tower of strength. He knew that the only way to combat Communist terrorism is to stand firm—and his position has been vindicated.

During and following the war in my own country, Mr. Robertson has always been a friend upon whom we could solidly depend. We always and forever have found him to be a gentleman of the highest standards of personal honor and integrity. Through him our own small country has been able to deal with the great and powerful United States in a spirit of mutual respect and regard which has well served the common cause of freedom.

His greatest memorial is the high regard in which he is held by the vast majority of the more than a billion human beings with whom it has been his responsibility to deal for these past years.

I am happy to attest, too, that I know the man who has been named as his successor; and I am glad, as I know Mr. Robertson is, to feel assured that the wise policy of firmness and justice which Walter Robertson did so much to shape and maintain will continue to be upheld.

For the problems that afflict our part of the world are far from being solved. Perhaps they never will be solved in our lifetime—for the problems of humanity, especially in this era when totalitarian dictatorship is rampant, are numerous and continuous.

In Korea the fighting was ended with an unjust armistice—an armistice that was violated by the Communists as soon as it was signed—but there is no peace. Our nation is still half occupied by foreign aggressors. A military force of awesome proportions has been built up against us in the northern half of our own country, and we are constantly threatened by infiltration and subversion.

Seoul is a city of more than a million and a half inhabitants—and every one of them lives under daily threat from the jet warplanes that are based just less than 100 miles away. The defense of our security is our very first responsibility—a responsibility that imposes itself upon every aspect of our personal and national life.

Every Korean youth is inducted into the armed forces when he reaches the age of 20 to serve for 3 years of active training, and then to be transferred into the active reserves.

Despite the enormous needs for rehabilitation and development, our principal efforts must all be directed into defense. For the freedom and independence—the democracy and progressive development—to which our government is pledged all depend first of all upon preserving our security against the constant Communist threat.

In many ways the pressure of the Communist will to conquest imposes itself into our national life. Scores of Communist agents have been arrested in our territory—armed with large sums of Korean and American currency and supplied with detailed instructions concerning the subversion of our newspapers and other agents of public information.

It is naive of those who appear to think that the Communists fight only with guns, or with threats of attack. Actually a very large part of their program of world conquest consists of propaganda and infiltration. Their agents are carefully trained to make instant and loud appeal to the very laws that are designed to protect democratic freedom. In this way they hope to win regardless of what happens. In some instances their subversive tactics may succeed. In other instances their agents may be apprehended and found guilty of subversion—but when this happens there are always misty-eyed and innocent idealists who will cry out that freedom is being violated when these agents—who, of course, pretend to be sincere critics—are arrested.

Your own country suffers and has suffered to some extent from these tactics. Our nation, which lies divided right across the world's major battlefront, is much more vulnerable. We are vulnerable to Communist infiltration—and we also are vulnerable to the slashing criticism of some so-called liberals in the West who denounce any action we take for internal self-protection.

Because of these criticisms against the necessary defensive operations of our own government, I want to read to you an official and most careful assessment of the progress of genuine democracy in my country—a statement which I quote from the latest report of the United Nations Commission on the Rehabilitation and Reconstruction of Korea. After 10 years of continuous observation of democratic processes in southern Korea, this is what the Commission says:

"The Republic of Korea was established in 1948 and, in the Commission's view, the foundations of democracy have been progressively strengthened during the past 10 years, despite the difficulties encountered, including the division of the country, the destruction of war and the problem of rehabilitation and reconstruction."

We are especially proud of the democratic developments in our own country because of some of the things we have been able to accomplish—despite all the enormous handicaps. And I am particularly happy to

enumerate some of them to you—for they are your achievements, too. Nothing that we have done would have been possible without the generous aid program of your country. What has been accomplished is, I feel, a proof positive that our kind of international cooperation truly works.

Here, then, in brief summation, is a part of the record:

1. When the Japanese were defeated, after 40 years of unjust colonial rule of Korea, some 80 percent of all our people were illiterate. Today the illiteracy has been reduced to about 6 percent. Of the children aged 6 to 11, 95 percent are now in school. And we have no fewer than 90,000 students in our 78 colleges and universities. This is, I believe, one of the most far-reaching and successful educational revolutions in all history.

2. When the Japanese grip was pried loose from Korea, some 54 percent of all our farmers were tenant farmers, and another 25 percent were partial tenants. One of the first acts of our new Government was to end this system of farm tenancy. We devised a system whereby every tenant farmer became the independent owner of the land he cultivates—with payment made over a 10-year period from the products of his fields and labor.

3. When our Government reverted to our own hands, we devised a constitutional democracy that insures absolute political equality to women and to every adult above the age of 21. This democracy really means something to our people—as is shown by the fact that on the average in all our elections the turnout of eligible voters is 84 percent.

4. In 1948 when our Republic was inaugurated, we had no real political party system. Today we have two major political parties, with the balance of political power fairly divided between them. Our Liberal Party controls the presidency; our Democratic Party the vice presidency. Some 60 percent of the National Assembly is composed of Liberals, some 35 percent of Democrats—the rest being Independents.

5. In 1948 our nation was the victim of a near runaway inflation—a condition rendered far worse by the war. For some 12 years after the Japanese defeat in 1945, our annual rate of currency inflation amounted to more than 220 percent. This means, in your terms, that a bottle of milk that cost 20 cents on January 1 would cost some 45 cents by December 31. Obviously this was a factor of ruination that struck a deadly blow at the welfare of every family in our country. Now I am happy to say that for the past 3 years the inflationary spiral has been cut back to a mere 4 to 6 percent increase a year—a figure somewhat comparable to that in your own and in European nations.

All these factors—plus improvements in the welfare of our agricultural and fisheries population, and the great expansion of our wholesome diplomatic relations, constitute a very substantial gain for Korean and world democracy. We are proud of them, and we look to the future with hope.

But there is another side of the picture that must not be overlooked. Much has been accomplished—but a vast amount yet remains to be done.

The other day, a distinguished American said that in his judgment the most fateful fact in the world today is the great disparity in living standards between the West and the Orient. I can highlight this for you by saying that, in American terms, the average per capita income in southern Korea is now about $105 annually—whereas, in the United States it is over $2,000. These figures mean just what they say—that on the average Americans live perhaps 20 times better than do our people in Korea.

Here is the great challenge of the future—of the immediate future—of today and of all the upcoming tomorrows. This is a problem that can only be dealt with through a combination of American resources, financial and technical, and our own Korean determination. We are willing and eager to make every sacrifice and every effort. But we must move ahead into the benefits of the 20th century. There is no other way.

This is the way we shall defeat communism. This is the avenue to a richer and better life—for us, for you, and for all the world.

Review of Record of 1st Session of 86th Congress

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Monday, August 24, 1959

Mr. WILEY. Mr. President, during the weekend, I was pleased to comment over Wisconsin radio stations on the record of the 1st session of the 86th Congress.

Naturally, it is possible in a broadcast to touch only the highlights of the manifold, complex legislative actions in Congress.

Generally, however, I feel that—when Congress winds up—the record of accomplishments will be moderately good, particularly in two major fields of which have been required bipartisan cooperation:

First, keeping the peace; and

Second, successfully recovering from our economic setback.

I was privileged, also, to review the tasks still ahead of us upon which constructive action is needed prior to adjournment.

And finally, the broadcast covers problems that—as we all recognize will remain unresolved in a number of fields.

I ask unanimous consent to have the text of the broadcast printed in the Appendix of the RECORD.

There being no objection, the text of the broadcast was ordered to be printed in the RECORD, as follows:

WILEY SAYS KEEPING PEACE AND RECOVERING FROM RECESSION ARE TWO MAJOR ACCOMPLISHMENTS OF NATION—EVALUATES RECORD OF 86TH CONGRESS MODERATELY GOOD

(Address by Senator WILEY over Wisconsin radio stations.)

Friends, I welcome the opportunity to be with you.

As you know, the adjournment of Congress is not far away.

In reviewing our progress in Congress, and as a nation, it is important to take a look at the record.

Insofar as it reflects bipartisan accomplishments, I believe the record is moderately good.

With adjournament there will, of course, be efforts—often "colored" in a partisan manner—to evaluate its record by either attempting to take credit for the accomplishments, or, conversely attempting to blame the other party for failures.

Without engaging in such partisanship, however, I would like to review the record briefly, including achievements we have made as a nation.

Question. Senator WILEY, what are the major marks of progress?

Answer. Although there have been advancements in a great many fields, I believe that two major accomplishments stand above the rest in the record. These include: keeping the peace; and successfully recovering from the economic recession.

PREVENTING WORLD WAR III

First of all, we have supported policies and programs that have helped to keep the peace; for the most part, this means preventing the cold war from degenerating into a hot war.

By and large, our foreign policy has had bipartisan support. Naturally, honest men may differ on national policy.

Overall, however, I believe the Nation can be gratified that the majority of its leaders—both Republican and Democrat—have been big enough to rise above lesser considerations and work for what is best for the country.

We are aware, of course, that keeping the peace and promoting greater security is not something that can be achieved—then forgotten. Rather, this is a continuous task.

Although there has been a superficial "thaw" in the East-West relations, we must remain alert and keep our powder dry.

Around the globe, the Communists are continuing their efforts at penetration of more areas and seeking control of more people.

Consequently, we must not be deceived by the words of peace of Khrushchev or any other Communist; rather, it will be necessary to keep up our guard—until words of peace are backed up with actual deeds.

Among the steps that Congress still must take is the approval of an adequate mutual security program—to further strengthen the alliance of free nations.

UNITED STATES MAKES ECONOMIC COMEBACK

Question. What is the second major accomplishment, Senator WILEY?

Answer. I believe the fact that we have successfully recovered from the economic recession is a real victory for the country.

Contrary to predictions of the prophets of gloom and doom, the Nation—despite an economic setback—did not succumb to a major depression. Instead, the Congress, administration leadership, and, most important, the confident outlook of Mr. and Mrs. Average Citizen, demonstrated the spirit and zeal necessary to prevent what might have been a serious depression, with ultimately disastrous international results.

Again, it is gratifying to acknowledge that—though there were differences of views at times—the leadership of both parties again rose to the challenge.

Now, it is true—that, economically speaking, inflation still plagues us—the cost of living is high—and there are still a number of unemployed. However, there also is a number of factors that brighten the outlook.

Question. What are these, Senator WILEY?

Answer. Today, the Nation is experiencing new highs in the economic field. These include the gross national product—that is, the value of all goods and services—amounts to about $485 billion; and national income is at a record high of $374 billion; civilian employment is at a peak of over 67 million.

In Wisconsin, too, the outlook is brightening.

According to a recent survey, the State hit record high levels in a great many facets of the economy.

Employment has hit a high level of 1,582,300—although this still leaves about 2.5 percent of the labor force unemployed (as compared, however, to 5.4 percent this time last year).

Average weekly earnings for production workers in our manufacturing industries are earning an average of $94.57 weekly—an increase of 7.1 percent over last June.

The trend in homebuilding is up over last year;

Sales of cars and trucks are well above comparable 1958 levels;

Department stores sales gained 12 percent in the 5-month period beginning in January;

Business and corporations have set a new record—up nearly 50 percent over last year.

We recognize, of course, that we still have economic problems—including the need for action to reach an early settlement of the steel strike. Based on the record, however, I believe we can continue to deal with these successfully.

There has, of course, been real progress, also, in a great many other fields.

Question. Senator WILEY, we appreciate a quick look at the record of major accomplishments. Now, looking ahead, what are the jobs that must still be completed by the 86th Congress prior to the adjournment of its 1st session?

JOBS STILL TO BE ACCOMPLISHED BY 86TH CONGRESS

Answer. There are, of course, a number of major tasks ahead of us. These include:

Providing financing for the highway program;

Enacting an effective labor reform law;

Strengthening our civil rights status;

Enactment of a good housing program;

Approval of funds to strengthen our mutual security alliance.

In addition, there are a substantial number of other bills still pending on the calendars in both the Senate and House of Representatives that deserve the consideration of Congress.

WHAT CONGRESS—OR THE COUNTRY—FAILED TO ACCOMPLISH

Question. Are there any fields in which it looks like Congress—and the country—still must face serious challenges in the future?

Answer. Yes. Unfortunately, solutions have not yet been found for a number of problems. These include:

First, the farm problem. Despite high costs, the economic outlook for the American farmer has not been substantially improved, nor have surpluses been reduced;

Second, we need tax reform, along the lines recommended in the Wiley bill, S. 1885, to establish a Hoover-type Tax Commission to make an overhaul of the overall tax system.

Third, the economy has not succeeded in mustering forces to block inflation. Regrettably, this economic hazard is still reducing the buying power of dollars, diminishing value of savings, investments in bonds, and life insurance; making it extremely difficult for folks on modest retirement incomes to meet the high costs of living and otherwise plaguing the economy.

Unfortunately, this general but brief review does not provide an opportunity to touch upon activities in a great many other important fields. These include: conservation, veterans' programs, education, programs for the aging, brightening the outlook for youth, and a great many others.

COMPLETION OF THE ST. LAWRENCE SEAWAY

Prior to closing, I would like to mention one more significant major mark of progress; that is, the completion of the St. Lawrence Seaway. Dedicated in June of this year, there has been a tremendous increase in the first-season traffic through the improved, deepened, and modernized waterway.

As a sponsor of the seaway law, I am particularly happy that the completed project promises fulfillment of the great expectations which we envisioned in enacting legislation for U.S. work on the St. Lawrence program.

STOPPING THE "CHICAGO WATER STEAL"

Question. Senator WILEY, now turning to a closely related subject, we recall that the bill, H.R. 1, proposing to divert more water from Lake Michigan, was favorably reported out of the Public Works Committee this week.

Answer. Yes; unfortunately, the measure is now before the Senate. As things look now, it may come up for consideration next week.

Question. What is your strategy, Senator WILEY?

Answer. Naturally, I shall fight the bill. Among other things, I shall attempt to have the measure recommitted to committee; this time to the Foreign Relations Committee, where it rightfully belongs.

Question. Why do you say that, Senator?

Answer. In the U.S. Senate, legislation affecting our relations with other countries, and relating to treaties with other nations, should be handled by the Foreign Relations Committee.

The dangerous water diversion bill touches upon both these criteria in these areas of activity.

First, it threatens to jeopardize our relations with our good neighbor, Canada, by diverting waters of the Great Lakes in which Canada has a vital interest; and secondly, the unilateral action to divert dangerously large volumes of water threatens to violate our treaty with Canada relating to the utilization of common waters between the two countries.

Time after time, the Canadian Government has resoundingly voiced its strong opposition—and wisely, I believe—to the proposed water steal legislation.

The Congress of the United States, I believe, ought not to let go unnoticed the voice of a friendly government in such a critical matter.

There are, of course, sufficient reasons at home why the bill should not be enacted. If this is done, it will seriously jeopardize safe shipping, reduced tonnage carried on the lakes, damage lakeshore property, and impair dock facilities and port and harbor development projects. In addition, it would endanger the St. Lawrence Seaway and threaten to damage beaches and resorts.

CONCLUSION

Question. Thank you, Senator WILEY, for this preadjournment review of the record of the 1st session of the 86th Congress.

Answer. I have been happy, once again, to have the opportunity to discuss with you a variety of programs, issues, and challenges.

Now, this is your senior Senator, ALEXANDER WILEY, saying "Thanks for listening."

Resolution

EXTENSION OF REMARKS

OF

HON. ARCH A. MOORE, JR.

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 24, 1959

Mr. MOORE. Mr. Speaker, I should like to present for the RECORD a resolution recently adopted at the 41st Annual Convention of the American Legion, Department of West Virginia, held in Parkersburg, W. Va., in which the department unalterably opposed H.R. 7650, recently passed by the Congress.

I respectfully invite my colleagues to take a few minutes to read this resolution:

RESOLUTION OF THE AMERICAN LEGION, DEPARTMENT OF WEST VIRGINIA

The following resolution was adopted at 41st annual department convention of the American Legion, Department of West Virgina, held July 24–26, 1959, in Parkersburg, W. Va.:

"Whereas H.R. 7650, the new proposed pension bill has been passed by the House of Representatives, and is now under consideration by the Senate Finance Committee; and

"Whereas the national organization of the American Legion has advocated enactment of this legislation; and

"Whereas contrary to the position taken by the national organization, the Department of West Virginia is unalternably opposed to the pension bill H.R. 7650 in its present form for the following reasons: (1) The bill under consideration is an abrupt change from the historical concept of veterans pensions, and places the recipient of such benefits on the basis of public dole rather than honorable assistance in time of need; (2) it creates more inequities than it proposes to eliminate; (3) this proposed legislation would after July 1, 1960, have two rates of payment for veterans who are identical in service, age, income, and need. This difference caused only by the time the pension was granted: And, therefore, be it

"*Resolved*, That the American Legion, Department of West Virginia, assembled in convention in Parkersburg, W. Va., this 24th, 25th, and 26th of July 1959, urge that the senatorial delegation of the State of West Virginia expend every effort to defeat H.R. 7650, now pending in the Finance Committee of the U.S. Senate; and be it further

"*Resolved*, That copy of this resolution, as adopted, be forwarded to Senator JENNINGS RANDOLPH, Senator ROBERT C. BYRD, Members of the House of Representatives of West Virginia, and to the national commander, Preston J. Moore."

I, Tommy E. Jones, do hereby certify that I am the duly elected, qualified, and acting adjutant of the American Legion, Department of West Virginia, and that the above is a true and correct copy of the resolution adopted at the 41st annual department convention of the American Legion, Department of West Virginia, on Saturday, July 25, 1959, in Parkersburg, W. Va.

Given under my hand this 12th day of August 1959, at Charleston, W. Va.

[SEAL] TOMMY E. JONES,
Department Adjutant.

Where the Public Good Goes It Steps on Toes

EXTENSION OF REMARKS

OF

HON. LYNDON B. JOHNSON

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Monday, August 24, 1959

Mr. JOHNSON of Texas. Mr. President, recently the Waco, Texas, News-Tribune published a thoughtful editorial on the subject of the public good in conflict with personal property rights.

This intelligent editorial echoes the utilitarian writings of Jeremy Bentham, the 19th century philosopher, who held that the "greatest good for the greatest number" should be the aim of just and fair legislation.

Mr. President, I ask unanimous consent that this editorial entitled, "Where the Public Good Goes It Steps on Toes," from the Waco News-Tribune of August 19, 1959, be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WHERE THE PUBLIC GOOD GOES IT STEPS ON TOES

No matter what the project may be—as long as the ultimate goal is for community betterment—we must face the fact that personal property rights in some cases must give way to the greatest public good, yet with fair and reasonable reimbursement for those rights.

As a case in point, hardly a week goes by that we do not hear some rumor about Lake Waco property-owners having a hassle with the Corps of Army Engineers about the value of lands that the new reservoir will inundate. So far as we're able to learn, the only serious rumors are traceable to the curbstone gang, none of whom owns as much as a square foot of lake property—they just like to talk about it.

Certainly, there may be some disagreement as to value, for there are some owners who would like to get more for their holdings. (And who wouldn't?) But, for the most part, those who have completed their negotiations are agreed that the settlement prices have been fair.

Whether it's a flood-control measure, the construction of a new highway system, urban renewal or whatever, no project of any such magnitude can be completed without stepping on a few toes. Somehow, progress has a way of avoiding "no-man's land," and it's probably a good thing—no man would benefit thereby.

Address of the Honorable Alf M. Landon

EXTENSION OF REMARKS

OF

HON. WILLIAM H. AVERY

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, August 24, 1959

Mr. AVERY. Mr. Speaker, the following is an address delivered by the Honorable Alf M. Landon to the AFL–CIO Second Annual Kansas State Convention on July 16, 1959 at Topeka, Kans. After reading Mr. Landon's remarks, I am convinced every Member of Congress will find such of interest:

ADDRESS BY HON. ALF M. LANDON TO AFL–CIO SECOND ANNUAL STATE CONVENTION, TOPEKA, KANS., JULY 16, 1959

I deeply appreciate your invitation to address the duly elected representatives of 150,000 fellow Kansas citizens.

I am going to discuss this morning not only some of labor's problems from your point of view but also from the public's point of view—which I do not believe are well understood.

Revolutionary changes have taken place in industrial conditions and labor organizations in my lifetime that affect every American.

I can remember when the standard work week was 72 hours and father and mother discussing the reduction of the 12-hour day to the 10-hour day—6 days a week. I can remember talking to a superintendent of a steel plant in 1922 when President Harding had persuaded the steel industry to adopt the 8-hour day in place of the 12-hour day. He said it might work in other industries but it would never work in the steel industry. A year later, talking to the same superintendent, he said he wouldn't go back to the 12-hour day if he could.

When I was a student in the University of Kansas—some 50-odd years ago—the fight in the Congress and State legislatures was to abolish child labor in industry and for protective legislation for women in industry. That fight was led by the American Federation of Labor. The argument against that legislation was that it was unconstitutional—that women and little children had a right to work—if they wanted to. At that time there was no limit to the hours that a train crew had to work. That was corrected by legislation led by the late Senator Robert La Follette, Sr., and the Brotherhood of Railway Trainmen to the benefit of not only labor but for the safety of the passengers as well as the equipment—because the physical reactions of a man who had worked 18 or 20 hours or longer were not adequate to the demands of his job.

That's when I became a believer in the right of labor to organize and bargain collectively. And I have never seen any reason to change my mind.

That does not mean that I believe labor organizations—their leadership and their policies—have always been right or above public concern.

I believe strong labor organization supplements a sound capitalistic economy. In the beginning—labor was organized along craft lines exclusively. Then came the unique American development of massed production. That brought about the massed unionism of today. The growth of single companies spread from one plant to—first—scattered nationwide plants. Many of these branch plants are larger today than the original factory. Second—in the last few years many American corporations have branch factories located all over the world and in different nations.

As American corporations have grown in size—so has the AFL–CIO and United Mine Workers.

I believe it can be argued with validity that the natural evolution of massed unionism to meet massed production provides a needed check and balance on economic power in our Nation's life. Without that we would have a chaotic condition similar to other countries in the world today.

Look at the two extremes—from Russia where labor is not free—to England where it is a major political party and as such is involved in a conflict of interests. Right now England's labor party is split wide open on its H-bomb policy in the coming campaign. Faced with the responsibility of government it must take a position on that question of national security that does not involve primary labor economic and social policies.

I do not think a labor political party will ever be successful in America because of our 50 States. And I do not think labor unions will ever take over either one of our political parties for the same reason. They may—in effect—take over some political party temporarily—in one State or another—because of the ineptness of the leadership of the other major party in failing to develop a political philosophy adequate to meet the problems of today.

But that is not a new development in the political life of our great country.

In the nineties we had the Populist and the Farmers Alliance that temporarily dominated several State governments and elected Members of the Congress.

It is significant that most of the policies of that agrarian movement—that scared the pants off a lot of people at that time—have long been written into State and National legislation. What was socialism and revolutionary then is ultraconservative now.

There was one fundamental difference between the political activity of that old agrarian political bloc and Labor's Committee on Political Education. The farmers did not have the cash available for campaign funds that the labor organizations have. What money there was in the country in the eighties and nineties available for campaign purposes was all on one side. Now there is a balance.

We have not developed a practical and successful way to check the unhealthy growth of campaign funds because the Congress and State legislatures have refused to enact legislation providing for accurate and complete public reporting of political campaign contributions—both by parties and candidates.

There is much to be said about that. I do not believe campaign funds are being used to buy votes as they were only a comparatively few years ago in too many cities. Today the rising expenditure of political campaigns is the increased costs of television—radio and printing.

And there is nothing new in our history about the charges of pressure groups like those made against the political activities of the AFL–CIO and the United Mine Workers.

There have always been pressure groups in our history.

In our early history it was charters for toll roads, canals, and land grants. Then came railroad charters, defense contracts, power projects—not to mention such perennial standbys as tariff and river and harbor legislation, known as the pork barrel bills.

Again—when I was a student at the University of Kansas—the battle in the legislature was for an antipass bill—primary and popular election of U.S. Senators to curtail the political influence of the railroads and to establish the Interstate Commerce Commission and State Corporation Commission.

Whatever influence the labor leaders have used has not been confined entirely to the problems of their organizations.

I have been familiar with the work of Kansas Legislatures for 40 years. And in all that time I have never known of more public spirited lobbyists than the representatives of labor.

They have always been for better education, better roads, and streets, better conservation and flood control, improved recreational facilities and better sanitation and safety measures.

All of which today are highly important factors in securing industrial plant locations.

The farmers of the State would not have the REA facilities they do today without the vigorous support from start to finish of that legislation by the labor organizations.

Today the struggling labor unions of my youth have grown in strength and most of them in responsibility.

Because of their size their leaders live in a goldfish bowl just as all public and big business figures. Their character and activities are of public concern.

Arguments as to who has the greatest economic power are fruitless. A strike to settle that by two powerful giants like steel unions and corporations has appalling consequences on all America. If it lasts long enough—more union workers will be laid off in other industries—than are on a strike in steel. Our national defense program is threatened.

Yet not one official word of the final points in dispute has been made public. Why the mystery?

The public ought to know and has a right to know what it is all about.

There are published stories and comments on the points at issue but no official statements by the men who did the talking.

Why not? What were the problems and the needs of both sides as stated to each other and what are the facts to back them up as claimed by both sides?

I believe that both Union President David McDonald and R. Conrad Cooper—spokesman for the steel industry—should sign a joint statement for the public on the points of difference.

Can there be any doubt that the pattern of the negotiations between big steel and big union is as important as any debate on the floor of the Congress?

Therefore, can there be any doubt as to the obligation of both union and management to make public their demands?

It became necessary for Government—by new regulatory legislation—to protect the public as well as investors against the frenzied finance—insurance scandals of past years—inside deals by management—and unconscionable contracts between corporations with interlocking directors.

Big business resisted that kind of legislation as labor leadership is resisting it today for labor organizations.

But there is one very fundamental difference between the two. Big business made little effort to clean its own house. The AFL–CIO under the wise leadership of President George Meany is making a vigorous attempt to do just that and is entitled to receive wholehearted support from public officials, management, and the public that he is asking for.

If your leadership does not succeed in that and unless better labor management relations are established by sincere objective and factual recognition of each other's problems and needs, Government is bound to step in sooner or later, just as it did with big business by increased regulatory powers over both unions and management. That means creating new Government bureaus and endowing Government with new powers.

In this complex industrial life of ours I recognize the necessity of regulatory legislation covering big labor just as I believe that is necessary to cover big business. But I believe such legislation should be held to the minimum essential to public protection—else we will have a cumbersome Government bureaucracy that entangles both labor and management in endless redtape and confusion of administrative laws.

I also recognize that the administration of that regulatory legislation with equity and justice is all important.

But I am opposed to any legislation aimed at weakening the principle and structure of collective bargaining through strong and responsible labor unions.

Now may I speak of the responsibilities confronting you and ahead of you—outside of your organization's problems and policies.

The greatest contribution labor organizations have made to the general welfare—not only to all freedom loving Americans, but to freedom in the world—is their stanch and unrelenting opposition to communism. The future historian, writing of this period, will give more credit to men like George Meany and John L. Lewis for the defeat of the imperial Soviet's plans for world conquest by the sword, slave camp, assassination, and subtle subversion, than they will to any other American civilian.

There is no stronger civilian bulwark anywhere in the world against the Soviet tyranny and slave camps, than the AFL–CIO and United Mine Workers. Massed unionism is democracy's negative answer to the Lenin-Trotsky-Stalin expectation of a proletarian revolution.

I am sure I do not need to warn you patriotic and devoted Americans that the fight will go on probably beyond the lifetime of the youngest delegate present. Either that or civilization will be "booped," like a quail on a rail, in hunting season.

Nowhere in the world is there a Communist government resting on popular support.

Every Communist government in the world rests on bullets instead of ballots and with no choice or freedom of action on the part of the individual.

We must be prepared at all times to offer either the hand of equity and justice to the Soviet, that makes for an orderly and peaceful world, or the mailed fist.

We must be willing and able to give them their choice, without threats or without fear.

The appalling and tragic confusion in the Pentagon, between the heads of our armed services, that has existed under both Democrat and Republican administrations, is a national scandal and menace.

On several occasions our President promised to bring order out of chaos in the so-called General Staff. He has failed to do so.

If he does not—the Congress can and should. There is a vital need for a thorough objective reappraisal of our overall defensive strength. Gen. Maxwell D. Taylor—retiring Chief of Staff—says he has tried to get that done since 1953.

Inflation is as great a threat to our national security as the intolerable and unsatisfactory conduct of our defense affairs. Inflation is the greatest boon to communism and it's a politician's paradise when they do not have to levey taxes to meet public spending.

Inflation by government is like a thief in the night robbing you—while you are asleep—of your earnings—your savings and your pensions.

Up until 1933—except in war—it was unknown legislative procedure to appropriate funds without accompanying revenue measures.

Both major parties—in recent national platforms have pledged expanded Government services—lower taxes and a balanced budget.

Well, I won't go so far as to say that both Democrat and Republican platforms were fooling the citizens. Because a rigid application of the pruning knife on our overstuffed bureaucracy—a rigid and sound decision of what should have priority as between what was desirable and what was necessary—could accomplish wonders in reducing the cost of our National Government. But that was too much in the nature of a miracle to occur.

The fight I had with the resolutions committee at the 1936 Republican Convention for sound money was with the so-called conservatives. They were all for a little snack of inflation then. But there isn't any such a thing. Planned inflation by deliberate Government policy has never worked because the controls never work. Since 1933 we have been steadily debasing the value of the American dollar by our Government's financial policies.

The place to stop the incipient flight from the dollar is in our Government's fiscal policies—either by reducing spending or increasing taxes until the twain do meet. That must be done one way or the other if we are to avoid the destruction of our money and credit.

The solution of the financial mess some 29 States are in—and countless municipalities—is just that simple.

The hope for America is that labor will wake up to the fact that it has more at stake in sound money than capital. The owner of a patch of land or some good common stock or merchandise—has some hedge against soft money. But those who have neither are like ducks on a pond.

Capital is fluid. It can shift around all over the free world and some of the Communist colonies as well. Labor cannot. The nimble speculator can always take care of himself. And that's going on right now.

As other countries of the free world have got on their feet—by America's aid—the American dollar is weakening in foreign exchange. That is partly due to fear of the stability of the American dollar and partly due to trade conditions and also the availability now of other countries for investments—whose governments have sounder fiscal policies.

Another illustration of the effect of our unsound fiscal policies is the invasion of our domestic market by foreign products. As you well know, taxes are a major factor in the cost of every product.

German casing and tubing—made according to the American Petroleum Institute specifications—can be bought in Kansas for $30 a ton less than American tubular pipe. German structural steel is being laid down in Kansas City for $40 a ton less than American steel. With the enlarging of the St. Lawrence Seaway the lower transportation costs will probably be reflected in lower prices. Belgian barbed wire is selling in Kansas for approximately $1.75 a spool less than American barbed wire and it is just as good. Recently our American Navy bought some steel plates from Japan $4 per ton less than American quotations. But on checking it was found that our U.S. Government lost about $6 a ton in taxes. So Uncle Sam was $2 a ton net the loser. American textiles are facing increasing competition from foreign textiles. You all know how foreign automobiles are taking the market away from American cars.

The completion of the St. Lawrence Seaway—lowering transportation costs to the seaboard—makes all of Kansas—with its great natural resources—educational and recreational facilities—more advantageous for industrial development.

I realize our foreign policies—our military disorganization and our imbecile fiscal policies are not on this convention's program. But they are of vital concern to every American. I mention them because they are policies that we all should be thinking about and talking about.

I have discussed with you this morning not only some of the issues in labor-management areas—but also the wider field of public policies.

It is obvious that big business and big unions are here to stay. Therefore, we must seek methods to adjust that development—to our American way of life.

Surely the America that developed new political—social and humanitarian values and principles that revolutionized the governments of the world—and the America that developed new methods of massed production that revolutionized industry all over the world—surely that America is capable of realistically facing and solving the complex problems of our industrial structure.

The American people must never forget the fact that our great Republic was founded on the concept that the average man and woman develops under responsibility and education.

I would like to see Labor's Committee on Political Education do more in the way of public relations such as the luncheon for representatives of statewide organizations and management arranged by Vice President James Yount last year on the educational problems of our great State.

I would like to see labor and management meet occasionally under different circumstances than strictly bargaining—based on who has the biggest club.

Several years ago your secretary—Floyd Black—issued invitations in Topeka for a joint meeting of labor-management and the press for an objective discussion of the problems affecting the growth and development of a better community to live in and do business in.

The relaxing visits during the social time of those meetings provided even a better opportunity for free and frank exchange of views.

I believe the pattern of those meetings is worthwhile for other communities and the State. Eventually regular meetings of that kind will contribute to the education of all the parties concerned. I mean not only labor and management—but the public as well.

It is evident that a better understanding of our existing mutuality of interest and interdependence would be a great asset for all Americans and the free world as well.

We must build our new industrial society on the capacity and the desire of the average man and woman to do what's right.

We must never lose confidence in each other or in the political capacity of each other.

Unless that be true—I mean, unless the mass is capable of exercising responsibility—there is no breath in popular government.

Our perceptions may be imperfect—but there must be and is—more good than bad in our combined intelligence.

The Eyes of Texas

EXTENSION OF REMARKS
OF

HON. LYNDON B. JOHNSON

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Monday, August 24, 1959

Mr. JOHNSON of Texas. Mr. President, all of us know the exciting, heroic story of how the United States got its National Anthem, "The Star-Spangled Banner." But I do not believe many people are aware of the colorful history of the song, "The Eyes of Texas," which, although not the official State song of Texas, is the best known ode to the Lone Star State.

Mr. President, I ask unanimous consent that an article entitled "The Eyes of Texas," from the magazine article, Texas Parade, of August 1959, be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From Texas Parade, August 1959]

THE EYES OF TEXAS—MUCH BETTER KNOWN THAN "TEXAS, MY TEXAS," THE OFFICIAL STATE SONG

(By Joe Tucker)

One moonlit night some 50 years ago, a young student slowly walked across the University of Texas campus to B Hall dormitory, climbed two flights of stairs to his small corner room, and on the back of a piece of laundry wrapping paper scribbled what are probably the most famous words ever written by a Texan.

Those penciled phrases are now sung as lyrics to one of the most typical and well-known college songs of America—"The Eyes of Texas." Written as a joke for a minstrel show, almost entangled in a legal battle involving a U.S. Senator, translated into 10 languages, "The Eyes of Texas" mirrors a unique rags-to-riches success story.

Although "The Eyes of Texas" certainly is not the national anthem—nor even the State song—many Texans jump to their feet when they hear it. It is the school song of the University of Texas and radio station KVET in Austin signs off at midnight with it instead of "The Star-Spangled Banner." The song is played before the beginning of all athletic contests of the University and is the theme for many welcoming committees in the East.

The song has been sung at many a hard-fought football game, by servicemen on lonely Pacific isles, and even by German infantrymen during World War II. An American medical officer in Tunis watched in amazement as German PW's of Hitler's defeated Afrika Korp filed down a dusty road singing "all the livelong day."

Many words have been exchanged and humorous situations arisen over the similarity between the song "Ive Been Working On The Railroad" and the more recent "The Eyes of Texas."

Years ago when the University of Texas Longhorn Band appeared in the East, a radio announcer said: "Here comes the University of Texas band dressed in its white and orange uniforms playing 'I've Been Working on the Railroad.'" The following week, the station was flooded with letters pointing out the error.

On November 22, 1948, at 6:45 p.m., over radio station WFAA in Dallas, the following news broadcast was heard:

"There was another slap taken at Texas today—and by a foreigner no less. It came from a gentleman—so-called—by the name of Harmon Nichols, who does some writing for the United Press up in Washington. Nichols sat himself down in front of his typewriter to do a piece on the fact that there aren't very many original tunes kicking around anymore. And the very first thing he took a swipe at was 'The Eyes of Texas'—suh. Rather than get involved we're going to quote this man Nichols directly. He writes:

" 'The Eyes of Texas'—anthem of the proud Lone Star State—is billed as original: PFFFT. That's Pfff. It's a theft from 'I've Been Working on the Railroad,' which in turn is a theft from 'I've Been Working On the Levee.' "

An immediate defense of the song came from a loyal and indignant ex-student of the University of Texas, Ed Nunnally, of San Angelo, Tex. "Hah," said Nunnally, "as for the 'Levee Song' or the 'Railroad Song,' those tunes were hardly known until John Lang Sinclair, the beloved author of 'The Eyes of Texas,' wrote his immortal words."

However, Nunnally admitted the copyright governed only the words. "But," he said, "without them you'd only have just another tune, or a folk song, if you like."

The battle for the song's copyright made interesting reading in newspapers around the country in 1936.

In the fall of 1935 Nunnally led a movement to have the song copyrighted, but an investigation led to the discovery that a former director of the University of Texas Glee Club, J. Oscar Fox, and a Boston publishing company had already secured a copyright. A major battle followed. The Texas attorney general and Senator Tom Connally came to the rescue of the State university.

Fox defended his copyright, saying, "It's simply like finding a steer that has gone unbranded for years." However, Fox relinquished his rights to the university, after it threatened suit, and Nunnally received a letter in March 1936 from the Director of Copyright Division of the Library of Congress successfully ending the 4-month contest.

The copyright protects the song on two counts:

1. Whenever the song and the "Texas" words are used in movies, plays, on records, radio, or television it will be played only to reflect credit to the university and command the respect of the audience.

2. Money collected in royalties and movie rights will go into a fund, half of which will go to the University Students' Association and half into a John Lang Sinclair Eyes of Texas Scholarship Fund.

Despite the fact that the song officially became the property of the University of Texas, the copyright was not enforced. In 1951 the song was used in the MGM movie "Go for Broke," a story of the 36th Infantry Division. The committee wrote MGM asking where they obtained permission to use the song. They answered they had obtained the right from Broadcast Music, Inc., who in turn stated they had received the right from a deceased Boston music publisher. In 1952 a contract was negotiated between the copyright committee of the University Student Government and BMI.

As a result of the new arrangement, a $675 check was obtained for rights to "Night Train to Galveston"—a Columbia Pictures western production. A grand total of $1,600, minus BMI's cut, was subsequently received for "Go for Broke" rights. In 1951 the song brought in $2,400 on the copyright with several suits pending against firms who had violated the copyright. Dick Powell of movie, radio, and television fame made a record of it in swing time.

In 1964 the copyright will run out. It may then be renewed again for 28 years. In 1992, 89 years after its composition, the most popular song a Texan ever produced will cease legally to be the property of the University of Texas where it was born.

But despite its widespread popularity through the years, love for "The Eyes of Texas" has not always been equally shared by everyone. Several years ago, a newspaper reporter interviewed Frederick Jagel, Metropolitan Opera star, who at that time was raising eyebrows around the country by declaring "The Star-Spangled Banner" was no good as a national anthem. He was asked:

"Mr. Jagel, how do you like 'The Eyes of Texas'?"

"The eyes of what?" the singer replied.

"Why 'The Eyes of Texas,' " the reporter returned. "You know, the college song."

"I don't believe I know how it goes," came the reply.

The reporter sang a few phrases before Jagel came to his defense.

"Yes, of course, I do remember it," he said. "No," he said kindly, "that's not the proper kind of rhythm for a national anthem. It has qualities for getting crowds together but would never be inspiring enough to arouse enthusiasm. Noooo, I don't think it would do. But, it's a fine song—just a little lame."

In spite of its wide acclaim and universal popularity, the song's father, John Lang Sinclair, a red-faced, blue-eyed gentleman with quizzical eyebrows, pooh-poohed the idea he had written "The Eyes of Texas" for a college hymn.

"It was just something dashed off for diversion," he said. In New York City he was considered an authority on stocks, bonds, and income taxes. His interest before his death in 1947 was primarily statistical—not musical.

However, Sinclair's lyrics were not conceived by accident.

"In 1903," Sinclair said, "I was closely connected with the musical organizations at the University of Texas, being a member of the band and glee club. Some of the boys got up a show—University Minstrels—and asked the glee club for a selection. We didn't have anything new or good and we were in a pretty bad fix up to the last minute. A classmate, Lewis Johnson (a retired Jacksboro, Tex., rancher before his fairly recent death) said I would have to make up a song of some kind, so it was a case of do or die. I was very fond of that old son 'I've Been Working on the Railroad' so I decided to write new words."

The lyrics actually sprang up from a campus joke of the time. Referring to criticism leveled at the University of Texas, Col. William L. Prather, university president, in

a speech to a group of students that year, said:

"Young ladies and young gentlemen, the eyes of Texas are upon you." The statement might have been forgotten had not the colonel picked up the same phrase in subsequent talks. Soon the phrase "eyes of Texas" became a campus jest leveled at the president. In thinking up words for his new song, Sinclair decided on "Eyes of Texas."

Instead of being peeved by the song, Prather took it as a considerable honor and laughed with great glee. It touched a tender spot in his heart to his dying day.

In one of his customary addresses delivered at the June 1905 commencement, the Colonel gave his usual fatherly advice and as he closed an otherwise serious speech, the characteristic twinkle came into his eyes and he brought forth a thunderous applause by saying, "and in the words of one of our own poets, remember young men and women, the eyes of Texas are upon you, till Gabriel blows his horn."

Four weeks later Colonel Prather died.

When planning the funeral, those in charge asked that the song might be used in the services. The family answered they thought it appropriate, reverent, and considerate, knowing as they did, how dear to his heart the song's sentiments were.

And from that day, "The Eyes of Texas" changed from a campus joke to a revered college hymn.

Footnote on Western Capitalists Trying To Do Business With Communists

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 24, 1959

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following illuminating news item from the report of the company meeting of Paton & Baldwin, Ltd., as it appears in the London Economist of August 1, 1959. It illustrates vividly the folly of imagining it is possible to do business with Communists except on their terms and insofar as it helps them prepare for final liquidation of the West. Lenin said that capitalists would cooperate in their own destruction. Some in America, also, seem to want to prove him right.

[From the Economist, Aug. 1, 1959]

SHANGHAI

Developments over the year have made it plain that continued operation of the company's factory in Shanghai, China, is a fruitless if not impossible task. There is no true modus vivendi between Communist and Capitalist regimes, at least not within the borders of the totalitarian state, and with the growth of China's own productive resources the need for continued toleration of foreign-owned enterprise within China has become less and less. The Chinese authorities were, therefore, approached with a view to the company being relieved of further responsibilities for running and maintaining our plant and personnel and in the hope of obtaining proper compensation for the surrender of our assets.

An agreement has been come to in recent weeks which will not be fully implemented until the end of 1959. Another announcement will be made to stockholders as soon as is appropriate in the circumstances, but I can say now that it would be unrealistic to expect that the settlement of affairs will bring much material benefit to the company.

Resolution Adopted by Aviation Post No. 651 of the Illinois American Legion

EXTENSION OF REMARKS
OF
Hon. EVERETT McKINLEY DIRKSEN
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Monday, August 24, 1959

Mr. DIRKSEN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, a resolution adopted by the Aviation Post No. 651 of the American Legion for the State of Illinois.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

RESOLUTION OF AVIATION POST NO. 651, AMERICAN LEGION, DEPARTMENT OF ILLINOIS

Whereas Aviation Post No. 651, the American Legion, Department of Illinois, has in the past, been the recipient of the good graces of the Rt. Reverend Bishop Ezekiel of the Greek Archdiocese of North and South America, and who is presently the Archbishop of Australia and New Zealand; and

Whereas the late and venerable Archbishop Micheal has been called to eternal rest, and has been succeeded by his Eminence, Archbiship Iakovis, whose wisdom and zeal is known throughout the Christian World; and

Whereas for the last 6 years, our post has been favored with a representative of the Greek Orthodox faith, to give the invocation and convocation at every large public function, commencing with your past President, John Manos, and thereafter by the personal and most gracious participation of His Grace Bishop Ezekiel; and

Whereas because of the close collaboration with this dearly beloved, cultured, compassionate, and truly great divine leader, Aviation Post, has through its Public Relations counsel, been most articulate and outspoken in its denunciation and condemnation of the forces of evil that have plagued our Greek brethren in Turkey, Cyprus, and other parts of the world, resulting in action by the President of the U.S. State Department, United Nations and other governmental agencies, and bringing great Americans, Governors of many States, generals and admirals of our Armed Forces to participate together with outstanding representatives of Greek organizations; and

Whereas the Greek American Progressive Association is recognized as a great, compelling force for good, that has supported many educational, philanthropic and worthwhile undertakings, and has done all in its power to preserve the traditions of its great Hellenic heritage, and has contributed to the education of American-born young men, to finance their schooling in theology in Greece until the establishment of the present seminary, and has further succeeded in integrating and preserving the ancient and modern Hellenic philosophy which makes them better Americans and better men and women; and

Whereas, in addition thereto, the Greek Americans Progressive Association have have pledged $100,000 to the Greek Archdiocese Foundation, for the building and establishing of a much needed Home for the Aged, which was the dream and hope of His Eminence Archbishop Ezekiel, and those stalwart individuals, whose sincere contributions in time, effort and devotion, are bringing this dream into reality; and

Whereas the Honorable Andrew Fasseas, Director of Revenue, has embarked upon a "Road Building Machinery for Greece Program," and, which Aviation Post feels is one of the most needed enterprises to help our great ally in every war since the First World War: Therefore, be it

Resolved, That Aviation Post No. 651, the American Legion, Department of Illinois, hereby pledge our unqualified support, first, to bring to the attention of our Government, through the Congress of the United States of America, by resolution and personal effort, such aid and assistance as is necessary on matters of legislation, in the purchase of surplus property, such as farm implements, machinery, tools, surplus vehicles and parts, to follow the peaceful pursuits for farmers, artesans and others, needing such assistance; and be it further

Resolved, That we herewith pledge to maintain a helpful attitude in furnishing speakers on Americanism and citizenship as related to the ancient Hellenic philosophy, and to render such services to the Greek American Progressive Association as is humanly possible and in keeping with the principles of the American Legion, free from partisan politics; be it further

Resolved, That we extend our felicitations and good wishes for a long, useful, successful and healthy life to his Eminence Archbishop "Iakovis" of the Greek Orthodox Archdiocese of North and South America, and much success to all of the officers and members of Greek Americans Progressive Association, and the future Bishop of the Greek Orthodox Diocese of Chicago, Ill.

Dated at Chicago, Ill., this 21st day of July A.D. 1959.

A. HENRY GOLDSTEIN,
Public Relations Counsel.
ODD MEYER,
Commander Aviation Post No. 651, the American Legion.

NATO's Nuclear Power Grows

EXTENSION OF REMARKS
OF
HON. JOHN E. FOGARTY
OF RHODE ISLAND
IN THE HOUSE OF REPRESENTATIVES
Monday, August 17, 1959

Mr. FOGARTY. Mr. Speaker, under leave to extend my remarks I would like to include the ninth and final in a series of articles by Mr. Edward J. Milne, Washington correspondent for the Providence Journal and Evening Bulletin of Providence, R.I., concerning his recent tour of the NATO countries. This article appeared in the Providence Sunday Journal of August 9, 1959, and is entitled "NATO's Nuclear Power Grows":

NATO'S NUCLEAR POWER GROWS
(By Edward J. Milne)

WASHINGTON.—The North Atlantic Alliance passes a new milestone tomorrow in the development, always slow, frequently frustrating, but on the whole steady, of its sword forces, or nuclear strike capacity.

On that day, August 10, there becomes effective the last of new agreements with

four of this country's NATO allies designed to allow them to sharpen the sword by achieving the capability of turning today's terrible weapons against a common aggressor.

The agreements are among six which President Eisenhower proposed to Congress this year as the result of the lowering of some—but by no means all—of the barriers to exchange of atomic information during last year's session. Senator JOHN O. PASTORE, chairman of the committee which handles international agreements in the atomic energy field, steered them through Congress under a ground rule which permits them to become operative if Congress does not adopt a resolution rejecting them.

The agreement which becomes effective tomorrow is that with Greece. Late last month, agreements became effective with Turkey, which forms with Greece the southeastern anchor of the alliance, and with West Germany and the Netherlands, key nations to the West and North.

MANY HANDS NEEDED

To see British speeding smartly through "dry runs" of launching Thor intermediate range ballistic missiles is to understand two things: That with NATO, the United States is far from alone in building the defense of the West; but that to reach optimum effectiveness, the alliance must be sure that as many as possible of the partners have the modern modern deterrent weapons.

Despite years of angry warnings from the Kremlin, the NATO heads of government accepted the principle of nuclear armament in December 1957. Congress relaxed the strict law on sharing of atomic secrets a few months later, accepting, with no substantial resistance, the argument that this country could not expect NATO to remain a going concern, politically or militarily, if our allies were required to remain in a condition of inferiority.

Our secret-sharing is not extended to all the allies on the same basis. We are much more open-handed with the United Kingdom than with any other for the simple reason that she already had such knowledge in the nuclear-weapons development field that we were not making it possible for her to become an atomic power, but simply easier, cheaper, and quicker for her to do so.

FRANCE LIMITED

An agreement with France was among those becoming effective this year, but it is far more liimted than any of the others. Unlike the United Kingdom, France does not have the ability to design, develop, and build nuclear weapons.

On the other hand, unlike others of the allies, she thinks we should help her acquire that ability, and she thinks, too, that she should have a say in the use of such weapons by this country. Last year's changes in the law were carefully tailored to prevent our telling France how to make the weapons. With so many high United States-French political problems unresolved, the new agreement with France provides only for a sale to her of nuclear fuel for use in a prototype submarine reactor.

But Greece, Turkey, West Germany, and the Netherlands for all practical purposes don't care whether they are told how to make nuclear weapons as long as they learn how to use them. As the law stands, and as the agreements provide, they would never be able to use them without the specific authority of the President of the United States.

EXCLUSIONS CITED

Here is what the four agreements do not provide: They do not involve the transfer of atomic weapons, the nonnuclear parts of atomic weapons, nuclear materials, or information on the design, development, and fabrication of such weapons.

Here is what they do provide: The exchange of information necessary to the development of defense plans; to the training of personnel in the use of and defense against atomic weapons; to the evaluation of the nuclear capabilities of potential enemies; and to the development of delivery systems capable of carrying atomic weapons (i.e., planes and missiles). Finally, the agreements allow the transfer from the United States to each country of nonnuclear parts of atomic weapons systems.

The information which may be passed on to the four nations is strictly limited to that necessary to enable their military forces to use the weapons, not to design or build them. As someone has pointed out, an artillery man doesn't have to know the formula for gunpowder or how to make it in order to use a shell effectively. But he does need to know how to load and fire a shell and what it will do when it explodes on target.

DEFINING NONNUCLEAR

The nonnuclear parts of weapons systems do not include any part of the atomic warhead. Rather, they are such things as lugs, pylons, and other devices for attaching the missile or bomb to its launcher or carrier, other accessories for handling the weapons, and control systems for checking out bombs or warheads to make certain they are safe and in operating condition.

Training in the elaborate launching and electronic checkout procedures would be accomplished with dummy weapons.

On the whole, the path of the four agreements through the Congress was a smooth one, but the administration and Senator PASTORE had to meet a number of objections during the hearings. Chairman ANDERSON, Democrat of New Mexico, of the Senate-House Atomic Energy Committee was one of the doubters.

He was disturbed lest the extension of U.S. atomic capabilities to new NATO allies would be countered by transfer of nuclear weapons by Russia to its satellites. Senator PASTORE's rebuttal: That what the Russians do about arming the satellites doesn't depend "for a minute" on what we do.

Senator ANDERSON was worried, too, about the "stability" of some of our own allies. "This is like a Paul Jones dance, you don't know who you will be dancing with when the music stops," he said.

"God help us," Senator PASTORE retorted, "if that is the situation in NATO."

Thrift and Rates of Interest

EXTENSION OF REMARKS

OF

HON. PRESCOTT BUSH

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Monday, August 24, 1959

Mr. BUSH. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Blow Against Thrift," published in the Hartford Courant of August 23, 1959, and also an article entitled "Tight Money Likely To Get Tighter," written by Harold B. Dorsey, and published in the Washington Post of August 24, 1959. These two items deal with the subject of thrift and rates of interest.

There being no objection, the editorial and article were ordered to be printed in the RECORD, as follows:

[From the Hartford (Conn.) Courant, Aug. 23, 1959]

BLOW AGAINST THRIFT

Early last week a duly constituted committee of Congress decided to disdain the repeated pleas of the administration for permission to raise the ceiling on interest rates for Government bonds. Whether or not this was the final word of the 86th Congress on this subject, it was a serious economic mistake. Of greater interest to most Congressmen, probably, is the fact that it eventually may prove a political boner as well.

The decision to cling to an outgrown ceiling affected, in the first place, all new issues of marketable bonds of more than 5 years maturity—those intended for such institutions as banks and insurance companies and for big individual investors. By refusing to lift the top rate beyond 4¼ percent, Congress has greatly handicapped Secretary Robert Anderson in managing the ever-growing public debt with the least possible stimulus to inflation.

But that is not the whole story. More significant to the average citizen is the fact that the resounding congressional "No" will prevent the Treasury from raising the long-outdated interest rate on E and H saving bonds. And these are securities that one administration after another has been persistently trying to sell to the American public for some 18 years.

In the past the Treasury has succeeded in winning from Congress occasional modest increases in the interest it can pay on savings bonds, to keep the return roughly commensurate with that available from other conservative investments. On E bonds held to maturity, for example, the yield has inched up over the years from 2.9 percent to 3.26 percent. Meanwhile however, the rate paid by commercial banks has risen as high as 3 percent. Savings banks have gone to 3¼ percent and within a few months some will step up again to 3½ percent. Some savings and loan association, for their part, are paying 4 percent.

Yet the U.S. Government, by decree of Congress, is unable to keep pace. The inevitable result has been a steady cashing in of savings bonds by their holders. The Treasury has just disclosed that cashins of E and H bonds had outrun sales for 12 successive months through July. For the first 7 months of this year, redemptions outstripped sales by $613 million. Furthermore, Treasury officials said that unless the arbitrary ceiling is lifted, the whole savings bond program is "in danger of collapse."

It could be. Most Americans bought these bonds in the first place out of patriotic zeal, and a desire to back the boys on the firing line in every way possible. When the guns fell silent, many persons continued to buy them, as a form of regular savings, for their safety and perhaps even for their steady if unspectacular yield. But with the continued march of inflation all that has changed. Few savers are going to put money into government bonds that pay a scant 3¼ (and that only if held to maturity), when other institutions offer higher rates along with a government guarantee of the principal. Under today's circumstances, moreover, saving in any form has become a dubious procedure. Hence the popularity of the high-flying stock market, as a possible, if risky, hedge against the rising cost of living.

If it is to halt the ravages of inflation, Washington must act forcefully on several fronts. But it surely will not succeed if it persists in penalizing the saver. That is exactly what Congress is doing by clinging to an interest rate that was adequate 10 years ago, but is clearly inadequate now.

[From the Washington Post, Aug. 24, 1959]

TIGHT MONEY LIKELY TO GET TIGHTER

(By Harold B. Dorsey)

Now that the House Ways and Means Committee has pigeonholed for the balance of this session legislation permitting the Treasury Department to issue Government bonds with an interest coupon higher than 4¼ percent, business analysts are trying to figure the consequent effects on business activity and the credit market.

Their analysis must start out with the fact that short-term credit is very tight. Small business borrowers are beginning to complain that their bankers are "pretty well loaded up," meaning a bank's ratio of loans to deposits is just about as high as the banker wants to see it go. And, as a generality, it may be noted that this ratio for the total of all of the commercial banks at the end of July was at a high level.

It is against this current status of the banking system that business analysts have to project conditions, which must include a normal seasonal increase in the demand for bank credit between now and the end of the year, to finance harvests, Christmas inventories, and the higher rate of business activity that usually develops in the fall and winter.

On top of the already tight situation, plus the rising seasonal needs for short-term credit, we now have to superimpose the credit needs of the Federal Government. The latter is being forced to borrow in competition with business for the available supply of credit in the short-term and intermediate-term markets. Thus simple arithmetic strongly suggests that the present tight credit situation threatens to become extremely tight over the next several months.

The failure of Congress to give the Treasury Department more flexibility in solving its financing and refinancing problems is going to place a considerable penalty on legitimate business borrowers, large and small—but, as usual, more severely on the small rather than the large.

All of which presents some very difficult problems for the monetary authorities at the Federal Reserve. One of their primary responsibilities is to exercise credit controls in a fashion that will prevent an inflationary abuse of credit. In the past year they have been discharging that responsibility with excellent results and without retarding sound business expansion.

That reminds us that another primary function of the monetary authorities is to provide the economy with a bank credit base that will be sufficient to permit sound economic expansion. There probably is no group of men in the country that is more anxious to see a rising trend of business activity, providing, of course, that the prosperity does not contain those excesses which cause a boom-and-bust pattern.

It appears that the monetary authorities in the next several months must try to find a very delicate solution for a set of unusually rough problems. It would seem that they will have to ease credit policies to a sufficient extent to prevent the extreme tightness now indicated for the fourth quarter of the year, or else the soundly expanding economy might be threatened by a deficient supply of credit. Simultaneously, the Treasury Department's demands for credit will have to be handled in such a fashion as to prevent an inflationary expansion of money supply, or we will be threatened with the development of a boom-and-bust pattern.

From a security market viewpoint, when credit is this tight it certainly is not bullish, and usually it is the reverse. The condition means: (1) That there are less funds readily available for buying securities, (2) it leads toward an increase in the relative yield attraction of bonds over stocks, and (3) it could have a dampening effect on business activity. In most earlier cycles, this combination has frequently led to downswings in both the trend of business and the trend of stock prices.

But in none of those earlier instances were the nonfinancial economic forces operating as strongly in the direction of sustained business activity as they are now. In those earlier instances, the tightness of the credit situation reflected the presence of an overexpanded economy and an abusive use of credit. The nonfinancial economic factors were set for a downswing to a much greater extent than they are now. Present indications suggest quite strongly that there will be a good snapback of business activity when present work stoppages are terminated. As a corollary, fourth-quarter earnings of a great many companies promise to be excellent.

In brief, the money situation is bearish, so far as common stocks are concerned, and the business situation is bullish. It was because the money situation had been bullish in the presence of a fairly severe inflation scare that high price/earnings ratios and low yields have been recorded in the stock market, especially for "quality" stocks and some of the extremely speculative issues. It is because the business and earnings situation for numerous cyclical groups of companies had been bearish that some of the stocks in this category do not appear to be high in relation to the earnings and dividend improvement now indicated by business prospects.

Shutdown in Steel

EXTENSION OF REMARKS

OF

HON. ELMER J. HOLLAND

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 24, 1959

Mr. HOLLAND. Mr. Speaker, under leave to extend my remarks, I thought the statement made by the AFL–CIO executive council on August 17, 1959, concerning the shutdown in steel, would be of interest to the Members:

SHUTDOWN IN STEEL

(Statement by the AFL–CIO executive council)

The shutdown in steel is now in its fifth week. This is no ordinary strike. On the surface the issues may appear to concern wages, fringe benefits, work rules, and similar issues. But, as Roger Blough, chairman of the board of the United States Steel Corp. has said, this strike involves more than those issues. It represents the focal point of an effort by corporate management of this country to reverse the whole pattern of labor relations in industrial America by converting unions into subservient tools of management.

The crisis in steel is but the latest in a series of events which illustrates the determination of corporate management in this country to achieve this result. The position taken by the automobile companies in negotiations with the United Automobile Workers in 1958, the position of the manufacturers of electrical appliances in response to the legitimate requests for employment security programs in that industry, were forerunners of the frontal assault upon cooperative labor management relationship which is now taking place in the basic steel industry.

The story in steel began in April of this year. At that time the steel companies proposed to the United Steelworkers of America that they agree to a 1-year freeze on wages and other benefits. This meant giving up both the cost of living protection which was contained in the Steelworkers' agreements and giving up the annual improvements which were contained in the existing labor agreements.

The supposed basis for this proposal was the necessity of preventing inflation. That this was not the real basis was immediately demonstrated when the Steelworkers Union proposed an agreement that there should be no increase in steel prices but such improvements in wages and other benefits be negotiated as could be justified by the industry's increased profits and the increased productivity of the workers in the industry. The industry rejected this proposal out of hand.

The more than 2 months of negotiations which followed were completely fruitless. Despite their own knowledge that their profits were increasing at an exorbitant rate, the representatives of the steel industries refused to abandon their preconceived position that those increases and the increases in worker productivity must be reserved solely for the companies.

The steel industry knew full well that neither the United Steelworkers of America nor any other self-respecting union could accept its proposition. They knew full well that by their adamant insistence upon that position they would create a crisis in steel.

But to make assurance doubly sure, they injected into the negotiations during their closing weeks still another issue, the union must agree, they said, to the abolition of clauses in the agreements protecting individual working conditions and must give management a full rein to take any action at whatever cost to the individuals, if such action would result in an increase in profits.

The result was the result which the industry anticipated. Although the union, in a final effort to avoid a test of strength, agreed to a 2-week extension of the expiring contracts, the companies still maintained their position, and the strike began on July 14.

That the inflation issue which the companies had posed was a false issue became obvious when the companies reported publicly, as they are required to do, their profits for the first half of 1959. Without exception those reports showed that the industry could not possibly claim that any reasonable increase in steel wages or other benefits would provide the basis for increase in prices and thus further inflation. The reports demonstrated equally the falsity of the companies' claim that existing agreements prevented increases in efficiency.

Thus, for example, United States Steel showed a profit after all costs were paid, before taxes, of more than $2.28 for each man-hour worked in the first 6 months of 1959, as compared to the prior record profit year of 1957 when its profits before taxes per man-hour were $1.61. Profits for each hour worked had grown by 67 cents an hour, despite the wage increases which were placed in effect in 1958, despite the cost of living increases which had been placed in effect in that period and despite the fact that the operating rate had actually dropped. Profits per man-hour, after taxes, for the first half of 1959 are $1.11.

There was also given the lie to the industry's position by the phenomenal increase in worker productivity shown by the 1959 reports. In the last 3 months in which work was performed in 1959, United States Steel shipped steel products at a rate almost 6 million tons greater than in 1953 but with 51,000 less employees. Nor was this phenomenal increase in profits and productivity necessary to bring steel up to general levels in profits. United States

Steel earned a return on net worth after taxes of 15 percent in the first 6 months of 1959 and a return on sales, after taxes of 10.1 percent.

These figures make it perfectly plain that the steelworkers' case for an increase in wages and other benefits without a price increase in steel is an overwhelming one. But the figures do more than that. They make it plain, because they are so overwhelming, that there can be no reasonable dispute concerning the ability of the steel companies to absorb reasonable increases. They make it plain, therefore, that the struggle in steel is not solely, or even primarily, a question of economics.

The issue in steel is one which involves all of American labor. The corporations of America have determined that this is the time to attack the American labor movement. Utilizing the genuine concern about inflation which is existing in America, and what they think is the attitude of the public generated by the exposition of the sins of a small minority of labor leaders, the companies have decided that this is the time to weaken, if not to destroy, the organizations which have compelled them to give up some portion of their unlimited prerogatives in dictating the terms and conditions of employment. And the steel industry, because it is an industry which has just emerged from a period of heavy unemployment, but one in which the companies continued to enjoy profits, was the place to have that fight.

The steel companies have found that the workers in the steel industry, despite their recent unemployment, are nevertheless determined not to yield their hard won union protections. American industry should understand that the labor movement of the United States is fully cognizant of the fundamental nature of the issues involved in this strike and they will rally wholeheartedly to support the Steelworkers' Union.

The executive council of the AFL–CIO understands the nature of the issues in steel. The executive council of the AFL–CIO recognizes that at issue in this strike are not only differences over wages, fringe benefits, work rules and similar issues but the whole course which labor-management relations will take in major industries in this country in the future. For this reason, the executive council of the AFL–CIO on behalf of all of the unions represented in the AFL–CIO pledges to the United Steelworkers of America not only its full moral support but also every assistance that can possibly be rendered to that union in its struggle with the basic steel industry.

I Did My Best

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Monday, August 24, 1959

Mr. WILEY. Mr. President, we recognize that, from time to time, it is desirable to pause in our busy cycle of day-to-day activities—to reevaluate our progress—to gain new perspective—perhaps just to be inspired by the words or deeds of those who, having attained notable planes of accomplishment in their fields, have crystalized ideas worthy to be considered by their fellowmen.

I am aware, of course, that there are those who feel that the consideration of philosophical concepts is not the mission of political bodies. Yet, the actions of each of us—and the caliber of the jobs we perform—are determined, to a significant degree, by the ideas and concepts in which we believe.

Consequently, I feel that a new look at those philosophical ideas which underlie our actions, as well as new thoughts, can well be beneficial.

Yesterday, This Week magazine published brief excerpts from a speech by the Honorable Learned Hand, a notable, respected, and revered jurist, who has carved a unique role in his field. Under the title, "I Did My Best," his eloquent words—excerpted from a collection entitled, "Spirit of Liberty"—convey a thoughtful philosophy which, if more broadly applied, may well help men and women to better travel their respective roads through life.

I ask unanimous consent to have the excerpts printed in the Appendix of the RECORD.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

I DID MY BEST

(By Judge Learned Hand)

Man is a projector, a designer, a builder, a craftsman. His reward is not so much in the work as in its making; not so much in the prize as in the race. We may win when we lose, if we have done what we can; for by so doing we have made real at least some part of that finished product in whose fabrication we are most concerned: ourselves.

And if at the end some friendly critic shall pass by and say: "My friend, how good a job do you think you have made of it all?" we can answer: "I know as well as you that it is not of high quality; but I did put into it whatever I had, and that was the game I started out to play."

How To Go Places by Team Tactics

EXTENSION OF REMARKS
OF
HON. J. ARTHUR YOUNGER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 24, 1959

Mr. YOUNGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include Malvina Lindsay's column in the August 21, 1959, issue of the Washington Post which is not only a humorous, but rather factual description of how to rise to the top in Washington.

HOW TO GO PLACES BY TEAM TACTICS

(By Malvina Lindsay)

I had long worried over my inability to go everywhere and at the same time to do my work. People who amounted to anything, it seemed, missed nothing in the way of mass gatherings.

What was more puzzling—especially from my taxpaying point of view—was how high public officials with supposedly demanding jobs could be regulars on the party circuit, the television screen, and at all public affairs.

I had a feeling I was off the main current of American life. Hence I sought the advice of my public relations counsel, Dr. Gulliver Shrugg, operator of Shrugg's Specter and Spy Service, and top ghostwriter for both sides in all major controversies of the last 25 years.

Things were humming at Dr. Shrugg's office. "It's the chance of a lifetime, this Khrushchev visit," he exclaimed. "Anybody can get his name in the papers—with comment supplied by us. Members of Congress can keep in the spotlight after they go home. Besides, I have a new gimmick in campaign training."

I broke in to tell of my own problem. Dr. Shrugg looked at me severely. "You probably have the obsolete idea that a person should do his own work."

"But who else——"

He waved me to silence. "You probably even stay home at times with a good book."

"I would like some time," I admitted, quoting Yeats, " 'to sup at journey's end with Landor or with Donne.' But I never get around to it."

"It might be a little more excusable if you had said with Jack Kerouac or James Jones. However, even that sort of thing is out of date, as even you should know. My office can supply you with authoritative cocktail-party comment on any best seller——"

"But how do I get to the cocktail party?"

"The way most big shots do—by having others do your work. Now, if you expect to get anywhere in this town, you must begin to organize your team."

"My team?"

"Yes. Your secretary, researcher, speechwriter, magazine writer, bookwriter, scriptwriter, television coach, 'think' man, or woman, promotion director——"

"Wait. How do I pay these people?"

"You work up to that. Perhaps your first investment should be in a promoter. If you are sufficiently promoted, you'll get a salary raise or a better job. Then you start hiring your team to do your work. You begin to go places, to be seen more publicly. People will think you important. You will make advantageous friends, make more money, hire more teamworkers."

"I draw the line at hiring a thinker."

"Why? Greater figures than yourself have had their names attached to other people's ideas. It's been a practice since the Monroe Doctrine, and no doubt long before that. Most historic Government programs that bear the names of prominent men have been created or thought out by obscure persons."

"I still say it's dishonest not to try to do your own thinking——"

"There isn't time any more. Your smartness now is gaged by your ability to assemble a capable unobtrusive team. All public men who go places are adept at this."

"Then we should not judge a presidential candidate on whether he's wise or has the capacity for greatness."

"Those things don't hurt. But what counts is what kind of a team does he have? Who, above all, are his 'think' men? You don't elect a man any more; you elect a team. That system is reaching down through business and social life. You start with the promoter——"

"And you end with an animated facade, shopworn from public exposure."

"You end with an efficient front man—one who knows how to select good thinkers, writers, etc., how to use them effectively, how to put their products across with the public. That's why I'm starting a new course for political candidates in front-man techniques." He handed me a leaflet. "It can also help anyone go places professionally or socially."

"I don't have the aptitudes, or the energy," I sighed. "It's easier to go back to my office and tackle that piled-up desk."

Invite Mr. Khrushchev to the TVA

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Monday, August 24, 1959

Mr. KEFAUVER. Mr. President, as I have already stated, I am glad that Premier Khrushchev is coming to this country. I do not expect his visit to end the cold war, or even substantially to melt it. And I recognize, as have others, the inherent risks of such a tour. But I nevertheless believe that the advantages outweigh the disadvantages, and that therefore the President was wise in extending his invitation.

Perhaps the most fruitful result of Mr. Khrushchev's stay will be his increased awareness of American strength and increased understanding of American life. Many suggestions have been offered for the Russian leader's itinerary. I know of no better illustration of America's strength than the humming complex of dams and plants and rivers and mountains in the Tennessee Valley region. And I know of no better example of America's life than the strong, freedom-loving inhabitants of the valley.

An excellent editorial appeared in the Knoxville Sentinel of August 5, 1959. Entitled "Sure, Expose Mr. K. to Valley People," it forcefully expresses two of my own views. It compellingly states the benefits of a visit by Mr. Khrushchev to TVA, and it reminds him, and us, that the most important knowledge to be gained from the forthcoming visit is not about the power of our industry, military and technology. It is about the power of the American people, which the Tennesseans in the valley so well represent.

I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SURE, EXPOSE MR. K. TO VALLEY PEOPLE

A good idea, Senator ESTES KEFAUVER has, in urging President Eisenhower to suggest that Russia's Khrushchev be taken on a tour of TVA installations when he comes over here.

If the main purpose of inviting the top man in the Communist hierarchy to America is to expose him to this Nation's strength, technological skills, industrial wealth, tenacity to the principles of freedom, and love for peace, we don't know of any better place for the exposure.

We say let Mr. K. take a long look at the TVA hydro and steam plants, the natural resource conservation program covering the whole valley; let him visit some farmers, factory workers, and industrialists.

Take him right into the top-secret areas at Oak Ridge (as a nonscientist he couldn't steal any secrets); let him see the Air Force's wind tunnel at Tullahoma, the fertilizer pilot plants at Muscle Shoals. Show him through a typical all-electric home of a modestly paid white-collar worker.

Here in the Tennessee Valley, where there are those who trace their ancestors to soldiers in the Battle of Kings Mountain, Mr. K. would come face to face with the real American.

The people of this valley are a cantankerous, argumentative, and sometimes ill-tempered breed. Some of them are tight-fisted; others profess to hanker after so-called mountain ballads sung in a high nasal monotone. Some vote "dry," go to church on Sunday and drink a beverage distilled from corn mash that looks, smells, and tastes like bad vodka. (Mr. K. might go for it.)

But by golly, there's one thing Mr. K. will find that is a great common denominator in this magnificent land of lakes, mountains and lush valleys.

It is a fierce and unwavering defense of liberty, fairplay, and love of this country.

Mr. K. couldn't help from being impressed. Send him in, we say.

Those of us who have been traveling about this country recently, on business or vacation, return to our desks tremendously impressed with this land and its people—its wealth and richness, its strength and vitality, its growth and change.

This is reflected in myriad ways—by the great superhighway developments, by the mushrooming of huge suburban shopping areas, by the number of new schools, churches, and other public buildings—not to mention uncountable new factories and residences.

Seeing them will help Khrushchev estimate how quickly he can match and surpass the Americans.

Health Coverage Needed for Retired Career Federal Civilian Employees

EXTENSION OF REMARKS
OF
HON. JAMES H. MORRISON
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 24, 1959

Mr. MORRISON. Mr. Speaker, today I have introduced legislation to provide voluntary health benefits coverage for retired career civilian employees of the Government. I do so in recognition of my responsibility as chairman of the Civil Service Subcommittee of the House Committee on Post Office and Civil Service.

My bill is a companion bill to the bill introduced Friday in the Senate by Senator RICHARD L. NEUBERGER, who has rendered such an outstanding service to the Government and Federal civilian employees in developing the legislation which became S. 2162, providing a comprehensive governmentwide health benefits program for 2 million active Federal civilian employees.

My bill provides health coverage for career retired civil employees on the same basis that active employees and those who will retire after June 30, 1960, are covered in the Federal Employees Health Benefits Act of 1959, which passed the Senate on July 16 by a vote of 81 to 4 and early this week was unanimously reported by the House Post Office and Civil Service Committee.

ANNUITANTS AND GOVERNMENT SHARE COSTS

This bill would provide health benefits coverage for approximately 260,000 retired Federal employees, Federal employees disabled while in service for the Government, and their spouses and minor children. The premiums under this bill are the same as provided for under the Federal Employees Health Benefits Act of 1959, and are not to exceed $3.80 per month for an annuitant who enrolls for himself only, and $9.20 for an annuitant who enrolls for himself and members of his family. These premiums would be matched equally, on a 50–50 basis, by the Federal Government. The retired annuitant may have a free choice of plans: a service benefit plan, such as offered by Blue Cross-Blue Shield; an indemnity plan, such as offered by the insurance industry; a group practice prepayment plan, such as offered by the Kaiser Foundation on the west coast and Group Health Asosciation here in Washington, D.C.; and an employee organization plan, such as offered by national employee organizations.

CONTRACTS, COVERAGE, ANNUITY DEDUCTIONS

Specific health benefits would be negotiated by the U.S. Civil Service Commission, as the administering agency, with the various carriers. Annuitants would have 90 days after July 1, 1960, to elect coverage, and those who had not elected coverage within this period would lose the opportunity to do so. The annuitant's contribution, which would equal one-half of the cost, would be withheld by the Civil Service Commission from the annuity check.

COSTS

Reliable figures as to the family composition of the presently retired annuitants of our Government are not readily available and, of course, the cost of such a program could not be ascertained until this information is studied by the Civil Service Commission. Another factor in determining costs would be the number of annuitants who might elect coverage under this voluntary health plan. However, reliable estimates place the first year's cost of health coverage for retired Federal civil employees at around $40 million, which cost will be shared equally by the Federal Government and by the annuitant. The first year's cost will be the greatest since the presently retired and those who retired prior to July 1, 1960, is a group which inexorably will decline in size.

PRIVATE INDUSTRY PROTECTS RETIRED EMPLOYEES

The Federal Government cannot ignore the progressive examples of many large private employers who sponsor health benefits programs and have included in these programs persons already retired. These number, for example, the Arkansas Power & Light Co., B. F. Goodrich Co., Eastman Kodak Co., Goodyear Tire Co., Firestone Tire Co., Gilmore Belt & Rubber Co., American Sugar Refining Co., Swift & Co., Minnesota Mining & Manufacturing Co., and the First National Bank of Oregon.

If present retirees are not included in health benefits legislation on the same basis as future retirees will be included under the Federal Employees Health Benefits Act of 1959, large groups of retired employees may be penalized be-

cause they may lose such health insurance as they now have, or if they do not lose it, the premiums for continuing the insurance may be so greatly increased and become so high that it will be difficult for them to continue it. The reason for this is that many retirees are now insured in small local groups or under the plan established by the National Association for Retired Civil Employees—NARCE—or other plans composed of active employees which allow them to continue such coverage after retirement. When the Federal Employees Health Benefits Act of 1959 becomes effective on July 1, 1960, the presently active employees may promptly abandon these policies and seek coverage under the favorable terms of the new act. Without an influx of new members and newly retired members, the rates for these policies would become prohibitive, since the group would continue with only the presently retired, who, of course, become older each year.

It is my opinion that the need of older people in our area for voluntary health coverage has long been neglected. Providing health coverage for presently retired Federal employees would prove an important step forward in meeting the health needs of our older people. It is well known that the need for health services is extremely critical in older groups. We must not shut our eyes to this urgent need.

CHAIRMAN OF CIVIL SERVICE COMMISSION RECOGNIZES NEED

Chairman Roger W. Jones of the U.S. Civil Service Commission, in a letter to Senator RICHARD L. NEUBERGER dated May 18, 1959, stated:

> Anyone who expressed indifference to the plight of our already retired employees in being unable to obtain adequate health insurance at a price they can afford to pay would be callous indeed. * * * To require retirees to assume all or a major portion of the cost would put the insurance out of their financial reach. The only possibility which suggests itself would be to consider already retired employees as a separate group from active employees and try to work out separate legislation for them.

SECRETARY OF HEALTH, EDUCATION, AND WELFARE FAVORS

The report of the Secretary of Health, Education, and Welfare on S. 2162 contains the following statement:

> In making this recommendation, we have not overlooked the fact that the bill does not address itself to the problem of health insurance for those who are already retired, a fact that has given us much concern. We consider it essential that legislation for active employees and future retirees be supplemented in the near future by providing similar protection for those already retired. While we recognize the complexity of the problems involved in providing effective health benefit coverage to those already on annuities, the pressing health insurance needs of retired Federal employees suggest the importance of an early formulation of ways and means to meet their problems * * *. The Bureau of the Budget advises that it perceives no objection to the submission of this report to your committee.

NEW YORK PROVIDES HEALTH COVERAGE FOR ITS RETIRED STATE EMPLOYEES

The State of New York has wisely made health benefits coverage available to its retired State employees as of June 1, 1958, with the State paying 50 percent of the cost of the coverage for the retired employees. I am pleased also to report that our northern good neighbor, the Dominion of Canada, has adopted a national hospitalization program which includes its already retired senior citizens.

Health coverage for retired employees on a voluntary basis also has been endorsed by the insurance industry and the Blue Cross and Blue Shield plans. I am also pleased to report that the Government Employes' Council of the AFL–CIO, representing over 600,000 Federal employees who are members of the AFL–CIO affiliated unions, have endorsed coverage for retired Federal civil employees.

As chairman of the Civil Service Subcommittee of the House Post Office and Civil Service Committee, it is my hope that health coverage for presently retired Federal civil employees and those who retire prior to July 1, 1960, will take effect on July 1, 1960, the same date when coverage begins for active and future retirees.

Legislation to provide voluntary health coverage to our career retired Federal civil employees is of vital importance and our Government, the Nation's largest employer will be following in a pattern already established by progressive private industry and our most populous State, the State of New York.

Credit Union Movement in America Celebrates 50th Anniversary

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Monday, August 24, 1959

Mr. NEUBERGER. Mr. President, the year 1959 marks the 50th anniversary of the establishment of the first credit union in the United States, and the 25th anniversary of the Federal Credit Union Act.

Today there are some 20,000 credit unions in this country with a total membership of about 11 million persons. Their assets total $4.4 billion.

In my own State of Oregon, the Oregon Credit Union League represents 188 credit unions with 91,000 credit union members.

America's credit unions have performed a highly beneficial service over the past 50 years in making available credit to persons of limited financial resources.

Last week the Senate Banking and Currency Committee ordered reported legislation to modernize the Federal Credit Union Act. I hope such a bill will come to the floor soon. The value of the credit union program has been proven. Congress should give every assistance to insuring its effective operation.

Mr. President, I ask unanimous consent that an article from the August 17, 1959, issue of the Mail Tribune of Medford, Oreg., by United Press writer Elmer C. Walzer, discussing the growth of credit unions in the United States be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

GROWTH OF CREDIT UNIONS REACH ABOUT 20,000 IN THE UNITED STATES

(By Elmer C. Walzer)

NEW YORK.—Credit unions, according to Alexander Hamilton Institute, are growing at a faster rate than any other financial institution in the Nation.

These do-it-yourself institutions might be compared to banking somewhat as investment clubs are to the stock market. There is one difference. Bankers aren't too fond of them. The stock market loves the investment clubs.

Credit unions take business away from banks. Investment clubs brings business.

The two groups are thrift institutions and each is growing rapidly in scope and in the money invested.

ELEVEN MILLION CUSTOMERS

There are some 20,000 credit unions in the Nation with a membership aggregating 11 million persons. Their assets total $4.4 billion. They have $3.1 billion of loans outstanding. Membership averages 550 persons.

These unions pay 4 percent interest on deposits and charge 1 percent per month on the unpaid balance on loans.

A credit union is described as a group of people organized into a sort of bank to save their money together and make loans to each other at low interest rates. Loans include those for auto purchases, home modernization, and the like.

The unions are subject to regulations and must maintain reserves. In their formation they must obtain charters. They maintain their own insurance for members—mutual insurance society—which has $4.2 billion of insurance in force.

The Alexander Hamilton Institute made a study of these unions. It found their history dates back to 1849 when they were first organized in Germany.

The institute found that a French-Canadian legisaltive reporter, Alphonse Despardin, became interested in the European experiment and after a long period organized the first credit union in North America at Levis, Quebec, in 1900. In 1906, the Quebec legislature passed the first credit union law in the Western Hemisphere.

Despardin helped to form the first credit union in the United States in Manchester, N. H., in 1909.

Meantime, Edward A. Filene, Boston department store owner and philanthropist, came into contact with credit unions in India. He gave around a million dollars to further the idea in the United States.

The U.S. Federal Credit Union Act was passed in 1934. By that time legislative approval of credit unions had been attained in 39 States.

Today, the Alexander Hamilton Institute estimates, the 20,000 credit unions serve better than 6 percent of the U.S. population. Of the total number of unions, almost a third have been organized by employees of manufacturing companies, independent of labor affiliations.

Government employees have organized 19 percent of the total and another 10 percent has been formed by employees in transportation or utility services. Church groups, teachers, and school maintenance employees, labor union locals, and employees of wholesale and retail establishments complete the membership picture.

Three Hundred and Fiftieth Anniversary of Founding of Santa Fe, N. Mex.

EXTENSION OF REMARKS
OF
HON. CLINTON P. ANDERSON
OF NEW MEXICO
IN THE SENATE OF THE UNITED STATES
Monday, August 24, 1959

Mr. ANDERSON. Mr. President, the capital of New Mexico, Santa Fe, celebrates next year the 350th anniversary of its founding. It is the oldest seat of government within the United States. Santa Fe was the capital of a farflung empire—and had been so for a decade—before the Pilgrims arrived at Plymouth Rock. For generations it was the object of overland travelers, fur trappers, traders, and emigrants.

Therefore, Mr. President, it was with some astonishment and dismay that the residents of the State, the Southwest and the Rocky Mountain regions—not to mention students of history in the South and East—learned of the Post Office Department's recent refusal to issue a special stamp commemorating this anniversary on grounds that it is only of regional interest.

Such a statement is ridiculous, especially when weighed against some of the stamps which have been issued for other reasons. To date, editorials replying to this Post Office Department decision from four great newspapers have come to my attention. They are from the Santa Fe New Mexican, the Denver Post, the Dallas Morning News, and the Shreveport (La.) Times. Others, in the United States and abroad, have noted the occasion and deplored the Post Office reaction.

Therefore, Mr. President, I ask unanimous consent to have editorials on this subject from the New Mexican, and the Shreveport Times printed in the Appendix of the RECORD.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Santa Fe, New Mexican, Aug. 17, 1959]

DON'T THESE GUYS READ HISTORY?

Santa Fe's request for a special stamp to commemorate its 350th anniversary has been turned down by the Post Office Department screening committee on grounds that the event is of only regional interest.

Evidence to the contrary is beginning to build up. In Sunday's edition, we reprinted an editorial from the Dallas Morning News—one of the biggest and most influential newspapers in Texas—which reflected the interest of our big neighbor to the southeast concerning the committee's ruling.

Below you'll find the opinion of our big neighbor to the north—an editorial entitled "Don't These Guys Read History?" from the Denver Post.

"A citizens committee which makes recommendations to the Postmaster General regarding the issuance of commemorative postage stamps has—believe it or not—turned thumbs down on a request that a special stamp be issued next year in honor of the 350th anniversary of the founding of Santa Fe, N. Mex.

"The reason given for the committee's action was that it is contrary to established policy to issue stamps in celebration of events which are of only local or regional interest.

"Do tell.

"Isn't it a matter of national interest that Santa Fe is the oldest seat of any government in the area now comprising the United States?

"We believe it is—except, perhaps, to a few provinical easterners who think of the Alleghenies as the western border of civilization.

"Isn't it a matter of national interest that Santa Fe has the oldest public building in the United States—the Palace of Governors, built in 1610, which housed public offices under Spanish, Mexican, Confederate and U.S. jurisdictions?

"We believe it is.

"Isn't it a matter of national interest that Santa Fe was the terminus of the oldest before the Pilgrims arrived at Plymouth Rock?

"We think so.

"Isn't it a matter of national interest that Santa Fe was the terminus of the oldest highway in North America—the Turquoise Trail, the original trade route between Mexico City and New Mexico?

"Of course it is.

"Among special stamps issued by the Post Office Department recently were those commemorating the completion of Mackinac Bridge in Michigan, the 200th anniversary of the establishment of Fort Duquesne, and the 50th anniversary of the founding of the Missouri University School of Journalism.

"We have no quarrel with any of these issues but we can't understand why those events should be worthy of special stamps if the founding of Santa Fe is to be brushed off as a local event of no national significance.

"We understand Mayor Leo T. Murphy of Santa Fe is protesting the decision of the Citizens Stamp Committee to Postmaster General Summerfield, who has authority to overrule the committee. He should do so."

[From the Shreveport Times, Aug. 17, 1959]

THE POST OFFICE PEOPLE SHOULD STUDY HISTORY

The Post Office Department has turned down the plea of the city of Santa Fe, N. Mex., for a special postage stamp commemorating the 350th anniversary of the founding of that metropolis. The reason given by the Post Office Department is that "It is contrary to established policy to issue stamps in celebration of events which are of only local or regional interest."

Well, whatta yuh know?

Perhaps the gentlemen in the Post Office Department, where commemorative stamps have been issued for such things as the opening of a bridge in Michigan, the establishment of an anti-Indian fort, and the 50th anniversary of a school of journalism, should read a bit of history. The way we got it from our books, Santa Fe is:

1. The oldest seat of any government in the area now comprising the United States (a claim sometimes questioned by hinterlanders who think of the Alleghenies as the western border of civilization).

2. The present site of the oldest public building in the United States—the Palace of Governors, which has housed public offices under Spanish, Indian, Mexican, Confederate and U.S. jurisdictions, and was built in 1610.

3. The only existing city which was established as a capital before the Pilgrims arrived at Plymouth Rock.

4. The terminus of the oldest highway in North America—the old Turquoise Trail, the first trade route between the nation of Mexico and what now is New Mexico.

The Post Office Department nonchalantly bypasses such history as this, yet it probably would rush into print with a new commemorative stamp if someone should come up with a chicken that walked backward.

Moscow Discloses the Fakery of Its New Peace Disguise by Blaming United States and Laos for the Disturbances There Directed by Itself

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 24, 1959

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Times. Moscow, as was to be expected, interprets as weakness our desire for a civilized settlement of world issues, and rewards our efforts by blatant charges that we are responsible for the troubles in Laos which it and its minions there have organized and are directing:

MOSCOW'S HAND IN LAOS

State Department suspicions that the Soviets, under cover of Premier Khrushchev's projected visit to the United States, are helping to stir up new trouble in Southeast Asia involving this country are confirmed by an official statement broadcast by Moscow.

The statement, issued by the Soviet Foreign Ministry, not only supports the Communist attack on Laos but, with typical Communist effrontery, presumes to make the victim the guilty party. It accuses the Laotian Government of violating the neutrality provisions of the Geneva truce agreement of 1954 by admitting American military personnel and bases and thereby risking a "civil war" that could shatter the peace of all Southeast Asia. More bluntly Soviet propaganda accuses the Laotian Government of seeking to suppress a "democratic," meaning a Communist, movement, and Communist North Vietnam boasts that the Communists have already "liberated" vast areas in Laos.

The facts are, of course, otherwise, and back the assumption that the Soviets and their Communist allies are trying to use the apparent easing of world tensions due to the Soviet-American exchange of visits for a breakthrough in Southeast Asia as they used the "Geneva spirit" of 1955 for their breakthrough into the Middle East. Neither Laos nor the United States has broken the Geneva agreement; there are no American military bases in Laos and the American supply of arms and a few instructors in their use is wholly in keeping with that agreement.

It is the Communists who have violated all agreements. They have staged a revolt against the 1957 agreement between the Royal Laotian Government and the Pathet Lao integrating the Communist-dominated provinces and forces with those of the rest of the country. And they have backed this revolt with men and arms from North Vietnam. The 1957 agreement supplanted the Geneva agreement and the truce commission it created, and the Soviet demand for reactivation of this commission is merely an attempt to nullify the 1957 agreement and to repartition Laos as a step toward a Communist conquest of it. Neither the United

States, a member of the Southeast Asian collective defense treaty that protects Laos, nor the United Nations can permit this to happen.

Hays Says TVA Has Made United States $12 Billion Richer

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Monday, August 24, 1959

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article containing several statements by the Honorable Brooks Hays, who is now a member of the Board of Directors of the Tennessee Valley Authority, which appeared in the Chattanooga Times of August 15.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HAYS SAYS TVA HAS MADE UNITED STATES $12 BILLION RICHER

(By Fred Hixson)

The U.S. Treasury is some $12 billion richer and the people of the Tennessee Valley have been saved many millions of dollars in flood damage and in costs for electric service because of the work of the Tennessee Valley Authority, Brooks Hays, junior member of the TVA Board of Directors, said Friday.

The former Arkansas Congressman, who took his seat on the TVA board July 1, was here "for a family gathering" with key members of the agency's Chattanooga division. He had luncheon with the TVA Friday Luncheon Club on his first official visit here since he took office.

Hays explained to newsmen at a conference before the meeting that "I'm new on this job—I don't feel sure of myself on a lot of questions." However, he sailed into the questions shot at him and showed that he apparently had learned much about TVA while a member of the House of Representatives, where he was considered a staunch congressional supporter of the agency.

Hays' reference to the $12 billion supplement to Federal income came when he was asked to comment on the current advertising campaign of private utilities against public power. The ads are appearing in a number of national periodicals.

Hays referred to these advertisements as "Madison Avenue superficialities" and charged that they ignore the pertinent facts about the "real benefits TVA has brought during the 26 years of its existence." He added that the benefits are too numerous to cover in a single interview and emphasized that "they cover many, many fields."

Hays was accompanied here from Knoxville by TVA General Manager A. J. Wagner and Information Director Paul Evans. He was joined here by G. O. Wessenauer, manager of the power division; C. E. Wilkerson, TVA coal procurement officer, and Louis Marks, reports officer.

Wagner, Evans, and Wessenauer helped Hays with statistical information. He explained they were more familiar with detailed information of that kind than he, since he has been a Director for less than 2 months. He sidestepped questions about his future, declaring:

"I am enjoying a vacation from politics." He added that "I am devoted to the nonpartisan and nonpolitical character of TVA."

Asked if he would be willing to continue as TVA Director "as long as the President and Senate want you to serve," Hays answered:

"It would be presumptuous for me to assume they will want me to serve when my 11 months are up." He is serving the unexpired term of Dr. Frank J. Welch, dean of the College of Agriculture of the University of Kentucky, which will expire May 18, 1960.

Later, in answer to a question, Hays said he still maintains his legal home in Arkansas.

He sidestepped questions about the possibility of his becoming a candidate for Governor of his native State in 1960, emphasizing that "I have no political plans whatsoever."

The $12 billion Treasury supplement he referred to, Hays said, resulted from improved economic conditions in the seven-State area served by the Tennessee Valley Authority. During the 26 years the TVA has been in existence, great economic gains came to this area, resulting in heavy increases in Federal tax collections from the area, he said.

Hays said the TVA has served "all elements of life in the valley well." Even the "private utility companies which seem anxious to destroy it have materially benefited by TVA operation," he continued.

"Let the record speak," Hays continued. "The average common-stock earnings of private electric utility companies all over the United States have increased three times what they were in 1937 when the TVA started its power operations.

"The average common-stock earnings of private companies serving areas surrounding the TVA territory have increased eight times what they were in 1937.

"Now with respect to rates. The record shows that the private companies having the lowest rates also had the highest earnings on their common stock. Of course, this applies to private companies operating in territory surrounding the TVA territory.

"In 1932, the year before TVA was created, residential electric rates in Tennessee and surrounding areas were among the highest in the United States. In 1959 residential rates were lowest in the TVA area in the east, and in the Bonneville Dam area in the west. Rates become progressively higher as distance from the TVA area increases, and by the same token, earnings on common stock of these companies decrease with distance from the TVA area."

Hays also challenged the contentions made in advertisements that TVA is being subsidized by taxpayers over the Nation.

"The TVA is paying its way, liquidating the Federal investment in power facilities and earning an average of 4 percent on that investment," Hays declared.

He said it would cost the American taxpayers $50 million a year to "adjust upward, by 1 mill per kilowatt-hour, the Federal Government's bil for electricity to operate its atomic energy program."

SAYS FACTS IGNORED

"Consider, for instance, how much the TVA has haved the people of Louisiana by controlling flood waters in the Tennessee basin and keeping them off of the low lands of that State," Hays continued. "It is easy to distort facts, such as is being done by the advertisements being publicized about public power these days.

"After all," Hays said further, "the people who are paying rates to the companies which are doing this advertising, are actually paying for this propaganda. I don't believe the officers of the companies are passing the hat among themselves to pay the advertising bills. They are charging it against rates.

"The TVA has never engaged in that sort of a thing. Why should the ratepayers of the private companies have to bear the expense of this advertising campaign?"

Leyden, Mass., Celebrates Its 150th Anniversary

EXTENSION OF REMARKS
OF
HON. SILVIO O. CONTE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, August 24, 1959

Mr. CONTE. Mr. Speaker, the township of Leyden, Mass., is celebrating its 150th anniversary. Last weekend a special celebration, including a parade and a special service at the Methodist Church, were held in Leyden to mark this historic occasion. And next month a monumental history of the town, written by W. T. and Masha Arms of Leyden, is scheduled to be printed.

Under leave to extend my remarks, I wish to include an article from the Greenfield (Mass.) Recorder-Gazette describing this important event in the history of Leyden, a town which I am honored to represent in the Congress:

LEYDEN HISTORY, WRITTEN BY ARMSES, LABOR OF LOVE SPANNING 3 YEARS

(By Ken Walker)

Distilling old memories, combing facts from legend and resurrecting the long-dead infancy, youth, and manhood of an old Franklin County town—this has been the labor of love spanning more than 3 years for W. T. and Masha Arms of Leyden.

The Arms project is "History of Leyden," to be published late next month in a 224-page clothbound book by Carl P. Bradbury of the Orange Enterprise and Journal.

Leyden's chroniclers conceived the idea of a town history a decade ago after investigating the life of Leyden native H. K. Brown, who died in 1896, after painting Arms' grandfather's portrait.

Most of the research and writing going into the history has been done over the past 3 years, approximating 5 man-hours daily, 6 days a week, for a total of more than 6,000 hours, including initial historical research in Boston and Cambridge in 1955.

Mr. and Mrs. Arms credit Leyden townsfolk with a share of the success of the venture, furnishing the links of history from family memory, letters, diaries, and old photographs and maps. Particularly helpful were Harold V. Campbell and Edith M. Howes.

Included in the history are three specific re-creations of the township, showing all roads, boundaries, and public buildings as of 1794, 1830, and 1871. Also between the orange covers will be 11 other halftone illustrations and linecuts.

Every man, woman, and child who lived in Leyden in 1781 and the location of their residences will be included as well as a listing of all individuals now residing there. Peak population in the 1880's was about 1,100 compared to 350 now.

Stamped on the book's cover in gold foil will be the town seal. The covers will be orange, Arms explained, because the town was named for Leiden, Holland, which at one time was international headquarters for the House of Orange.

In addition to digging into dusty records in Leyden and Bernardston, the Greenfield courthouse, and Boston, Mr. and Mrs. Arms have hunted old cellar holes to place accurately former structures. They have found many, including the site of the old Dorril place.

The Dorrilites were a religious sect which flourished briefly in Leyden under tutelage of William Dorril, former British soldier under General Burgoyne.

"The Indians didn't live here too extensively," Arms related. "They lived in lower elevations and hunted through this area each fall. We've found several Indian artifacts, including the remains of a campfire."

The geographic history of the white man's Leyden starts in 1734, according to Arms, when "Fall Town" was included in a land grant. This was composed of the present Bernardston and East Leyden.

An additional grant was made in 1743, including West Leyden and East Colrain. East Colrain was made part of Colrain in 1779. Leyden was named in 1741, became an official district in 1784, and became a township in 1809.

The latter date determines the sesquicentennial date of Leyden, to be celebrated Saturday and Sunday. Sesquicentennial events will include recording of excerpts from the history and placing a historical marker at the former site of the Dorril place.

The Armses came to Leyden from Greenfield 14 years ago to make their home on Eden Trail Road in the eastern part of town.

The history has not been writer Arms' only project during these past few months. Although weakened by illness and confined to his home, he has assisted Mrs. Arms in planning this weekend's celebration.

With the exception of this story and two others on this page by Dorothy Howes, Arms wrote every word in today's Leyden anniversary suplement of the Recorder-Gazette. He has also turned out countless news stories to publicize both the history and the celebration.

One might think he has been so busy the new beard he sports on his lower jaw was the result of being too busy. But not so. This is Bill Arms' way of joining in the fun of the town's birth.

Indiana Dunes

EXTENSION OF REMARKS
OF
HON. PAUL H. DOUGLAS
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Monday, August 24, 1959

Mr. DOUGLAS. Mr. President, I ask unanimous consent that a letter which appeared in the Washington Post and Times Herald this morning be printed in the Appendix of the RECORD. The letter is from Freeman E. Morgan, Jr., whose family once owned most of the Indiana dunes. It is a plea that the dunes be saved from being taken over by steel mills, and made into a national park.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

STORY OF THE DUNES

I have watched with interest and some alarm the struggle to save the Indiana dunes for the people waged by Senator PAUL DOUGLAS and other friends of nature. Interest, because I have known and loved the dunes since I first saw them in 1917. Alarm, because of the general apathy I find on the issue which must be changed if we are to overcome the selfish forces of political power and big industry.

A century ago the dunes belonged to my family. My great-grandfather, Lansing Morgan, cut millions of feet of pine there that was used to build Chicago into the great city that it is. With the timber gone for a while, the lumber industry moved on and most of the 8-mile Morgan tract reverted to the State. One mile was saved for future development and soon after the turn of the century it began to flourish as a recreation center for people from Fort Wayne to Chicago.

Cottages were built by the hundreds and picnickers swarmed to Waverly Beach (as the Morgan estate was then known) by the thousands. In the middle 1920's the property was purchased by a syndicate of public-spirited millionaires to form the nucleus of a State park. The Chicago Prairie Club property and another mile of undeveloped property were added to the Morgan estate to create the Indiana Dunes State Park.

In the early days of the park, the Governor of Indiana had a summer capital there. A beach hotel was erected to accommodate weekend visitors. Several acres were developed as a second-to-none swimming beach and the rest retained in its natural setting.

The sand is cleaner than on any other public beach I have ever seen. The water is clean with a sand bottom. From Memorial Day to Labor Day, the temperature of the water is ideal for swimming.

Most of the time the dunes are quiet and tranquil, offering the nature lover a relaxed respite from the cares of the world. But I love it best when the Lake Michigan storms whip up 25-foot waves that come crashing far up the beach and the wind whistles through the trees with a mournful tune. Then it is that we see nature's triumph over man, glorified and majestic.

We have camped in parks from Florida to Ontario and from Connecticut to Minnesota, but my family prefers the dunes to any other campsite. The new turnpikes have made the dunes available to travelers from all over. For a half century it was the playground of a relatively limited area. Now it is only 10 minutes off the main route for any Indiana Turnpike tourist. It is a wonderful place to rest and relax.

Let your Congressman know that you would rather visit a dunes park on your next trip west than another steel mill.

FREEMAN E. MORGAN, Jr.
TAKOMA PARK, MD.

White Fleet Supported

EXTENSION OF REMARKS
OF
HON. ED EDMONDSON
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 24, 1959

Mr. EDMONDSON. Mr. Speaker, just a month ago the gentleman from Massachusetts [Mr. BATES] and I introduced in the House, and Senators HUBERT HUMPHREY and GEORGE AIKEN introduced in the Senate, concurrent resolutions calling for the establishment of a Great White Fleet of mercy ships to carry American surplus foods, medical aid, and supplies to disaster and distress areas throughout the world.

On August 4, under extension of remarks, I described in some detail the moving response of the American people to this bright new concept for peace, which is the idea of an Oklahoma naval officer, Comdr. Frank A. Manson, of Tahlequah. Life magazine, in its July 27 issue, threw its full support behind the Manson plan for a Great White Fleet as a "bold proposal for peace" and devoted its cover to a striking picture of the proposed fleet and also devoted its lead story to the proposal and endorsed it in an editorial. Since that time Life magazine has followed up on this story, and favorable comment has come from almost every corner of the land.

Massive mail has been received urging establishment of the Great White Fleet by every sponsor of these concurrent resolutions, and I have received in my office alone more than 1,470 communications from every State in the Union, including Alaska and Hawaii, favoring the proposal. Less than 1 percent of the mail I have received has been unfavorable to the Manson plan.

I am informed that at the present time 47 Members of the House have sponsored concurrent resolutions calling for the establishment of the fleet, and that 35 Members of the other body are cosponsoring the Senate concurrent resolution calling for the establishment of the Great White Fleet.

Since my report to you on August 4 I have received many other communications of strong support and offers of help, financial, technical, or personal, in the activation of the Great White Fleet.

Mr. Speaker, as an example of the type of endorsement and support which has been forthcoming in connection with this plan, I should like to insert in the RECORD at this point an editorial by Mr. Bruce Palmer, news director of television station KWTV in Oklahoma, which was broadcast over that station on August 18, and also to salute Mr. Palmer for giving this fine message, in the form of an editorial, to his many listeners.

Last evening we observed that the United States has just begun to smarten up in terms of international propaganda. We are learning how to give a somewhat better account of ourselves in the word war between the free world and the Communist world. But we need new devices to make our propaganda messages more effective.

Within the last month, an imaginative project to focus world attention on the United States as a friend to all mankind has been suggested by a native Oklahoman. Comdr. Frank Manson of the U.S. Navy, who hails from Tahlequah, proposes to form up a new Great White Fleet, reminiscent of the one President Theodore Roosevelt sent around the world in 1907.

But where the Great White Fleet of 52 years ago had the mission of impressing the world with American naval power, Commander Manson's ships would carry hope and help to areas of the world struck with poverty, disease, or starvation. They would carry supplies and equipment necessary to bring relief to people of all nations in times of emergency or disaster.

The ships would come from Uncle Sam's mothball fleet, their crews from the Navy or the merchant marine, and the food, medicines, and other relief items from America's great store of all those items.

Commander Manson offers a bold approach to our national problem of making and keeping friends around the globe. The

Great White Fleet could quickly become an international symbol of American concern for the destitute everywhere. It could carry medicines to India to combat the annual onslaught of dysentery, or to Indonesia, where malaria is frequently epidemic. Its helicopters could rescue thousands from flooded areas, as the Navy's choppers did in 1957 when the cruiser *Princeton* was dispatched to the inundated island of Ceylon. Its supply ships could carry wheat and other foods to lands where crop failures threaten mass starvation, as was the case in India in 1951. Its potential for extending a helping hand is enormous.

As Commander Manson says, a new White Fleet would not bring peace to the world in one sweeping movement. Progress toward peace will come only a bit at a time. America may never be able to bring peace to the world by herself, but American leadership can prevent the people of the world from losing hope.

As the good idea of an Oklahoman, Commander Manson's proposal deserves Oklahoma's support. If you think that some of America's fighting ships might well be transformed into ships of peace and assistance to make the benefits of the free enterprise system available to the entire human race, here again is an opportunity to let your Congressman know about it. A new Great White Fleet could give the United States a tremendous victory in that propaganda war.

Approval of Senate Resolution 21

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Monday, August 24, 1959

Mr. WILEY. Mr. President, we recall that on August 21 the Senate approved Senate Resolution 21, expressing the sense of the Senate relating to making of loans by the REA.

As we know, Senate Resolution 21 states that it is the sense of the Senate that the Rural Electrification Act of 1936, as amended, continue to be interpreted to authorize the making of loans for the construction of facilities to, first, bring electric service to persons in those areas defined in the act as rural areas if such persons are in fact not receiving central station service, and, second, continue to serve those who are presently being served with the aid of funds loaned under the act.

Today I received a resolution from the Rural Electric Cooperative of Columbus, Wis., expressing approval of the resolution and thus, in effect, endorsing the Senate action.

I ask unanimous consent to have the resolution printed in the Appendix of the RECORD.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

RESOLUTION OF THE COLUMBUS RURAL ELECTRIC COOPERATIVE, COLUMBUS, WIS.

"Whereas the Comptroller General a year ago on July 21, 1958, issued a ruling imposing an unprecedented restriction on the Rural Electrification Administration's loan-making authority, and completely reversing congressional intent as set forth in the 1936 law, and ignoring a historic precedent of 23 years' standing; and

"Whereas this ruling, in the opinion of the Department of Agriculture General Counsel and other lawyers conversant with the REA program, would, if enforced, destroy the REA loan program and jeopardize hundreds of loans previously made; and

"Whereas protests registered by the Department of Agriculture, Members of Congress, rural electric cooperatives, and the National Rural Electric Cooperative Association have caused the Comptroller to make no fundamental change in his original disruptive and destructive ruling; and

"Whereas Senator AIKEN and 13 of his colleagues in the Senate have recognized this as a potential dagger pointing at the heart of REA and have therefore introduced Senate Resolution 21 designed to reaffirm the original congressional intent with respect to REA loans; and

"Whereas prompt and favorable action on Senate Resolution 21 will contribute measurably to the strength and stability of the rural electrification program: Now, therefore, be it

"*Resolved*, That the board of directors of the Columbus Rural Electric Cooperative here assembled do urge our own Senator A. WILEY to actively support and promote Senate approval of the Aiken resolution (S. Res. 21)."

This is to certify that the foregoing resolution was unanimously approved by the board of directors of the Columbus Rural Electric Cooperative at its regular monthly board meeting on August 12, 1959.

LESTER WELCH,
Secretary.

A Proud Record for Indiana

EXTENSION OF REMARKS
OF
HON. J. EDWARD ROUSH
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 24, 1959

Mr. ROUSH. Mr. Speaker, every man has an intense pride in his home State and this is intensified when as a Member of Congress his whole effort is devoted to serving a part of that State. My own pride in Indiana is one which words cannot adequately express, but among the many attributes which contribute to that pride is the great industrial potential which exists in this State which has come to be known as the crossroads of America.

This feeling of satisfaction which I have is shared by my constituency and is forcefully expressed in the following editorial recently published in the Marion Chronicle, one of the outstanding newspapers of my district.

A PROUD RECORD FOR INDIANA

Indiana has just outdistanced 48 other States in an important popularity contest.

Mill & Factory, a trade magazine, recently conducted a national survey asking industrial firms of all types and sizes which State they would choose for the location of a new plant.

We finished second, 1 percentage point behind Illinois.

Of the 133 firms participating in the survey 9 percent picked Illinois and 8 percent chose Indiana. Ohio was third choice.

The industrialists were also asked: Which States do you think are doing the most to attract new industry?

Indiana tied for third place on this point with Ohio and Florida. Pennsylvania was first with Georgia second.

It is interesting to note that 15 percent of the firms said they plan to move plants in the near future.

What does industry look for in new locations?

The survey produced these significant answers:

1. Favorable labor climate.
2. Favorable tax policies.
3. Nearness to market.
4. Adequate transportation.
5. Nearness of raw materials.
6. Adequate water and power supply.

Another question asked: Which States do you think are doing the most to discourage new industry? The replies listed Michigan, New York and Massachusetts in that order.

Indiana can be proud of finishing second in choice for new plant locations and tying for third in doing the most to attract new firms.

But Indiana must keep its industrial climate favorable. Industry—as the poll shows—is on the move.

If Indiana retains its sensible, fair, and independent outlook on State government and if our cities maintain their aggressive efforts to attract new plants perhaps we'll even pass Illinois.

Texas Loses Dr. James I. McCord to Princeton University

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Monday, August 24, 1959

Mr. YARBOROUGH. Mr. President, this fall Dr. James I. McCord will take another step in his distinguished career of education, theology, and service. He will become president of the Princeton Seminary.

Dr. McCord, dean of the Austin Presbyterian Theological Seminary and who has been associated with the University of Texas in some capacity since 1939, has an outstanding record on which is based the admiring respect accorded him by all who know him. He served as an instructor in philosophy at the University of Texas and has served as dean of the Austin Presbyterian Theological Seminary since he was 24. In addition, he assisted with the Presbyterian Bible chair at the University of Texas; has served as temporary pastor for The University Presbyterian Church in Austin and is a member of the executive committee for the Presbyterian World Alliance.

This man's example of religious leadership, moral example for students, and working citizenship has helped many students find a pattern for their lives. His leadership in the fields of education and theology is widely recognized. I have been stimulated by his comments and intellectual boldness as a member of Austin Town and Gown.

Princeton made an excellent selection for its seminary president. Texas' loss is Princeton's gain.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by Richard M. Morehead, an able Texas writer, which was published in the Alcalde, the University of Texas alumni magazine, for May 1959.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Alcalde, May 1959]

DR. JAMES I. MCCORD

(By Richard M. Morehead)

The new president of Princeton Theological Seminary is going to miss seeing the Longhorns gallop across the turf of Memorial Stadium next fall.

Dr. James I. McCord will leave Austin with a deep sense of regret. But he is stepping into the presidency of the largest Presbyterian seminary in the land and one of the greatest of the Protestant world.

When he wasn't tripping to Europe or other distant spots doing the Lord's work, Jim McCord was usually on hand to watch the Texas football team play.

While noted most for his keen intellect, the churchman-teacher keeps tab on sports, politics, and other worldly affairs.

Take, for example, the time when Malcolm Kutner, Texas' All-American end of the early 1940's, was a student in a philosophy class which McCord taught at the University of Texas.

"Kutner met his wife in my class," McCord recalls with pleasure. "The girl, Marilyn Tillery of Beaumont, was a Presbyterian. He was a Baptist from Dallas. Now he's an officer in the Presbyterian Church at Lubbock."

Jim McCord came to the university as a graduate student in philisophy in 1939–42, holding one degree from Austin College at Sherman. He received his master's degree here in 1942. He served as an instructor in philosophy and a Charles Oldwright Fellow for 2 years, 1941 and 1942, and remembers well that his class included part of the great Texas football teams of those years.

But McCord's admiration for the University of Texas is based upon deeper things.

"This university has in Logan Wilson one of the outstanding educators in the country," McCord commented. "He has brought to Texas more vision than any educator I know—and I think education in Texas is developing in every way in recent years."

The churchman believes that the state university has a duty of leadership in the whole educational structure.

"And the most powerful force for lifting the educational standards of Texas is the alumni of the University of Texas," he continued. "It ought to be the main objective of every ex-student to interpret the University of Texas' program to the people of the State."

McCord's words take added meaning because he has been a student, faculty member, and an observer of the university at close range for 19 years. Yet he can take the impartial view, for his career has been largely in church-sponsored education.

"It is impossible to carry on theological education without a great university," said McCord. The Austin Presbyterian Theological Seminary, where McCord became dean at 24 and served until called to Princeton, sends its students to the University of Texas for nontheological courses.

McCord also taught hundreds of Texas students while assisting the late Reverend Samuel Joekel in occupying the Presbyterian Bible chair. Every major denomination maintains off-campus facilities where students can take specified Bible courses for university credit.

This frank and keen-minded minister-educator once made a speech that could well be repeated to those who look upon The University of Texas as a Godless place.

"As an alumnus of this University and as one who has been privileged to have a connection with it for years, I do not subscribe to the oft-repeated charge that godlessness and irreligion characterize a great State institution," McCord said during a Religious Emphasis Week address on the campus.

"I want to acknowledge publicly my debt to the spiritual inspiration I have received from my association with students, faculty and administration. From you I have learned lessons in discipline, openmindedness, and dedication to purpose."

McCord also disputes the idea that religion and the natural sciences conflict.

"While they may represent different ways of looking at the same reality, there is no necessity in opposing these two ways," he said. "It has been especially from men in natural sciences, like Dr. Roger Williams, that I have learned most and in them I have seen most clearly the ideals of scholarship coupled with singleness of purpose and devotion to truth."

The man tapped to head Princeton's training school for ministers has touched many lives, from Austin to Central Europe.

Twice he served as temporary pastor of the University Presbyterian Church in Austin. As such, he was pastor to the largest congregation of Presbyterian students in the Southern Church which ordained him. No other Presbyterian Church in the South serves so many students as the one situated one block west of the university campus.

On the larger front, he is a member of the executive committee for the Presbyterian World Alliance, which represents 47 million members of the church.

The seminary which he will head at Princeton has approximately 500 students from many nations. McCord believes it can and must serve to promote church union as well as to train young ministers. Many Protestant faiths are represented at the Princeton Seminary.

"I hope at Princeton to help serve as a bridge between northern and southern Presbyterians," McCord told a questioner. "I have always favored church union."

Princeton is operated by the recently merged Presbyterian Church in the U.S.A. and the United Presbyterians. The new name is the United Presbyterian Church in the U.S.A. The Presbyterian Church, U.S. (southern church), remains separate.

People at Princeton will come in for a real treat from their new theologian.

He speaks with a voice of authority. His positive manner prompts some Presbyterians to refer jokingly to McCord as "the Bishop"—although his church does not have bishops.

McCord is a strapping 6 feet 2, weighing 204 pounds. He keeps the weight distributed by brisk walking, often 5 miles a day. This posed a problem in Geneva, he added, "because it's hard to walk 5 miles in Geneva without crossing into France."

McCord is a lover of serious music, preferring Berlioz. His wife is an accomplished musician. They have three children.

Recent Earthquake in Montana

EXTENSION OF REMARKS

OF

HON. FRANK CHURCH

OF IDAHO

IN THE SENATE OF THE UNITED STATES

Monday, August 24, 1959

Mr. CHURCH. Mr. President, the catastrophic force of nature which was centered in the west Yellowstone area of Montana a week ago is impossible to portray in words.

A destructive slide and great physical damage resulted from the earthquake in a part of Montana separated by but a few miles from my own State. Many citizens of my State own summer homes and cabins on the portion of the Hebgen Dam Lake and in the canyon below it. It has been a wonderful recreation area. One of my friends in Idaho, who owns such a home, has written to me a letter giving his personal experience in the earthquake.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD excerpts from this letter, which so vividly tells the reactions of one family to the violent natural forces that struck in the fateful night of August 17.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

IDAHO FALLS, IDAHO,
August 20, 1959.

Hon. FRANK CHURCH,
U.S. Senator, Senate Office Building, Washington, D.C.

DEAR FRANK: My wife and I went to our cabin on Hebgen Lake on June 12 this year and have been there ever since until day before yesterday. It literally took an earthquake to convince us we should return to Idaho Falls.

We were right at the focal point of the quake, and it was an experience neither of us wish to repeat. We were asleep when the quake struck, and awakened to find ourselves being tossed around the bedroom like a chip on the ocean, our bed sliding from one wall to the other and back again. There was a terrific rumbling noise, then crashes and a high moaning sound. My first coherent thought was that we had been struck by a tornado and the cabin had been deposited out in the middle of the lake and we were tossing around on the waves. As soon as the first shock passed we jumped out of bed, I turned on the light and started out into the living room, but stopped abruptly and stared at the havoc. Our fireplace was down in a heap on the living room floor and there was a great hole in the wall where it had stood, and it appeared that not one brick was in place on top of another. The room was a shambles with broken glass, crockery, pictures, and furniture strewn all over the floor. The kitchen and dining room floors were 6 inches deep in broken dishes, broken catsup bottles, jam, jelly, and supplies, the fixtures in the bathroom had torn loose from the walls and water was streaming out of broken pipes. I never saw such a terrible mess.

We ran out of the cabin in our night clothes, barefooted, and then the second shock took the ground out from under us and we sat down and held on till it passed. The big pine trees were swaying and groaning, the water in the lake was churning and rushing by like a mill race. It was bright moonlight and the eerie feeling was increased by the roaring sound, like water going over a high falls. Boats, trees, and debris of all kinds went sailing by in the lake at a good 10 to 15 miles an hour and the water was dropping out of the lake so fast that it appeared it would be dry in an hour or so. Our boat stayed tied to the dock and was up high and dry in just a few minutes.

As soon as we could collect our senses we went back in the cabin, dressed and started out to see if any of the other summer residents were hurt or needed help. Your wife's cousin, Harrold Holden was in a trailer at Aunt Mercede's Cabin just east of us, with his wife and family. You probably know that he is a judge of the superior court in

California. We talked with all of them a while and then went on up the shore line and looked at the rest of the cabins. All fireplaces were down, anything made of brick, stone, or concrete blocks, was shaken to pieces, but the cabins themselves withstood the shocks quite well. My cabin was moved off of its foundation about a foot, and twisted toward the east, but believe it or not, as Ripley says, not a window was broken. Some of the other cabins did not fare quite so well in this regard. No one was hurt in our section and another miracle—not a single fire started. It is almost unbelievable with all the fireplaces down, kitchen stoves torn loose, etc. If a fire had started, the whole forest would probably have gone up in flames, as dry as everything was.

I was proud of everyone, there were no women screaming, no children crying, and while everyone, including myself, was scared and frightened beyond words, we all took it calmly, at least outwardly, and decided to remain right where we were until we could learn of a safer place to go. We turned on the radio to try and learn how extensive the damage was, but there was nothing until nearly 5 o'clock the next morning, and then only sketchy reports. We worked like beavers all through the night trying to clean up the worst of the mess, although continuous tremors occurred at from 1 to 3 minute intervals, some of them quite sharp.

The next morning, after the sun came up, Harrold and I took pictures of most of the cabins, and then after the roads were cleared we piled in our cars and started for home. I was about the last one to leave at about 11 that morning.

Am sorry this letter turned into such a long epistle, but thought you might like to have an eyewitness report on just what happened. The newspapers have given a very good factual account, but it is almost impossible, even for one who was right there, to describe the catastrophe so that others can understand the confused and jumbled feelings of fear, awe, and yes—panic, that swept over all of us.

With kindest regards to yourself and wife, I remain, your loyal and admiringly grateful constituent,

ED HOLDEN.

Appraisal of Khrushchev's Visit

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 24, 1959

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include two pertinent questions submitted to the column of Edgar Ausel Mowren, and his very cogent answers—what we should not do in dealing with Khrushchev, and what we should do.

"Don't you think showing Khrushchev the reality of American power will cause him to call off his ambitious imperialism?" (J.S., Monterey, Calif.)

No, it may cause him to substitute honeyed lies for threats and promises. But as a Soviet realist, he knows that more important than military and economic power is the will to use it in time.

Unless the President and other American contacts convince Mr. K. that we shall stand no more nonsense from him, he may go home convinced that by small aggressions he can not only secure what he wants in Berlin but gradually disintegrate NATO and force the U.S. forces out of Europe. Any way you look at it, the invitation to Mr. K. was a desperate gamble.

"Since you don't seem to fancy negotiation with Khrushchev, just what would you do?" (A.L., Provo, Utah.)

Accept the cold war, study the blatant weaknesses of the adversary and use the weapon of nationalism to break up the Soviet empire, as it uses this force to break up the empires of our allies.

Sewage-Disposal Problems of Chicago

EXTENSION OF REMARKS
OF
HON. PAUL H. DOUGLAS
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Monday, August 24, 1959

Mr. DOUGLAS. Mr. President, as we all know, the Senate will shortly have to pass upon H.R. 1, the O'Brien bill, providing for a 3-year study of sewage-disposal problems of Chicago.

It is also known that most of the Lake States are insisting that Chicago should not return its sewage into Lake Michigan, where it would contaminate the drinking water and close the bathing beaches.

In view of these arguments, I think it is appropriate that various articles and editorials from newspapers indicating that this same practice, pursued by other cities on the Great Lakes, is resulting in the pollution of the waters of the lake and the closing of bathing beaches, be printed in the RECORD. Among those cities are Milwaukee; Green Bay, Wis.; Toronto, Canada; and sundry other cities as well.

I ask unanimous consent that these articles and editorials be printed in the Appendix of the RECORD.

There being no objection, the articles and editorials were ordered to be printed in the RECORD, as follows:

[From the Chicago Daily News, Aug. 18, 1959]

SANITARY DISTRICT CHIEF HAILS OK OF DIVERSION IN SENATE

The president of the sanitary district Tuesday hailed the approval by a Senate committee of a bill to permit Chicago to take more water from Lake Michigan for sewage disposal.

"The favorable action by the Senate Public Works Committee Monday on lake diversion is another step toward victory in this long-drawn battle," said Frank W. Chesrow.

The bill will permit Chicago to experiment with taking more water from the lake for additional sewage disposal problems.

Chesrow said that the study of lake currents and the operations of the sanitary district proposed in the bill will do much "to remove the hysteria and fear which have surrounded this subject in the minds of our neighbors on the Great Lakes and in Canada."

The bill has been hotly opposed by six Great Lakes States and Canada who have expressed the fear that it would lower the lake level.

Meanwhile, the Chicago-Milwaukee feud over lake pollution continued.

Chesrow ordered sanitary district engineers to make a study of currents along the lake to see if they could carry pollution from Milwaukee to Chicago.

Milwaukee withdraws water from the lake for sewage disposal and then returns the water to the lake. The city recently had to close seven beaches because of pollution.

Milwaukee's Mayor Frank Zeidler said Chicago has nothing to fear because studies show that lake currents near Milwaukee don't come near Chicago.

The Army Corps of Engineers said that two surveys made shortly after World War II show that certain currents do bring sand and silt from upper regions of the lake and deposit them along the Chicago shoreline.

[From the Chicago Daily News, Aug. 18, 1959]

GREAT LAKES CITIES DIRTY OWN WATER, BUT FIGHT CHICAGO—DAILY NEWS CHECK BARES SHOCKING LEVEL OF FILTH

(By Nicholas Shuman)

MILWAUKEE.—"No swimming" is an increasing sign of the times northward from Chicago on Lakes Michigan and Superior.

At the metropolitan centers, the Great Lakes are becoming choked with filth-sewage, industrial waste and ship pollution.

Bacteria counts in "the land of sky blue waters" are soaring to levels that Chicago medical experts consider shocking.

All this was revealed in an on-the-spot inspection by the Daily News of lake cities in Wisconsin and Minnesota.

These are two of the six States that are demanding in a Supreme Court suit that Chicago dump its treated sewage in the lakes—as their cities do, treated or raw.

Milwaukee, though the most recently publicized, is by no means the only afflicted city. Serious problems also were found in Duluth, Minn., and Superior and Green Bay, Wis.

In all these cities—once blessed with miles of sparkling clear waterfront for the recreation of the masses—beaches have been closed.

And the unlucky burghers are being forced to pay for new pools or take their families on voyages to inland lakes.

"Considering all the water we have, bathing beaches here are very poor—there's no question about it," said Dr. Mario Fischer, Duluth's commissioner of health.

His city has only one authorized beach on 25 miles of waterfront.

In Superior, E. W. Berg, director of public works, said, "The only place my kids go swimming is out at the cottage, and that's the way it is with most people here."

Superior has one authorized beach, and it is often closed because of pollution. The city began treating its sewage only last year. Until then it had gone into Superior Bay—which opens on the lake—raw.

In Green Bay, Karl A. Mohr, deputy health commissioner, said:

"Bay Beach—our only beach—was at one time a beautiful place, but it has been closed since 1942. And as far as fish are concerned, there just aren't any for 22 miles up the bay."

For its drinking water, Green Bay must go 29 miles by land across Door County to the open lake.

But in terms of population, Milwaukee is in the worst shape for bathing facilities.

There, four city beaches and three others in the county were closed recently on the recommendation of Dr. E. R. Krumbiegel, health commissioner.

Two of the beaches—South Shore and Bay View—have been barred to the public permanently. They catch the heaviest load of raw and treated sewage washed out at the Milwaukee River's mouth on south-flowing currents.

Krumbiegel said dourly, "I can't see anything that will cause the quality of our water to improve. It's going to deteriorate."

He is recommending that the city build swimming pools on the lake shore—a bitter irony.

The health commissioner acted after the coliform bacteria count at South Shore Beach on July 27 hit 110,000 per 100 cubic centimeters of water (about 3.3 ounces).

The coli are bacteria that exist in the colon. They indicate the presence of human or animal waste. Swallowing water containing them can cause diseases such as typhoid and dysentery.

And Krumbiegel pointed out that it's usually child bathers who swallow water.

The Illinois health department specifies that a coliform count of 500 is safe and anything over 10,000 is definite evidence of sewage pollution.

Shock at Milwaukee's 110,000 figure was expressed by Dr. Gerald Atlas, Chicago Park District health director.

"When we get a count of 240 at the beaches on the far north side, we consider that high," he said.

A high count at Calumet Beach—which gets its pollution from outside the city limits—is 1,100.

Krumbiegel said ship traffic and a rising number of pleasure craft are responsible for Milwaukee's woes.

But he said "the biggest single factor in producing beach contamination is the overflow of raw sewage from the city's combined sanitary-storm sewers and treatment plant during storms."

Chicago has this problem, too, but its sewers have a larger capacity, carry a higher volume of water before overflowing.

Krumbiegel noted that sewage in the water is retained at the city's shoreline by breakwaters that form the harbor.

Ray D. Leary, general manager of the Milwaukee Metropolitan Sewerage Commission, was bitter about the health commissioner. He said that his own coliform counts—taken farther out in the water—showed no change.

"Krumbiegel is trying to get you your increased diversion," Leary said, adding that this remarks was facetious.

The reference was to the Chicago Sanitary District's frustrated efforts to get more Lake Michigan water to purify its treated sewage—which is washed into the Illinois waterway and not the Great Lakes.

Milwaukee is fighting Chicago on the issue in Congress.

But Leary tacitly admitted that something could be done about his own problem. He said a plan is in the talking stage to pipe his plant's effluent (treated sewage) from the shoreline, where it is now dumped, out beyond the breaker.

In the meantime, on a hot August day at beautiful South Beach, not a single carefree foot splashed in the lake's water.

It was a sickly gray, and it coated the stones with a green slime.

[From the Chicago American, Aug. 19, 1959]

NOW GET THE FACTS

The Senate Public Works Committee's decision to send the Lake Michigan water diversion bill to the Senate floor opens the way for a vote on the measure, and it seems likely that it will pass. Both Senator LYNDON JOHNSON, Democrat, of Texas, the Senate leader, and Senator EVERETT DIRKSEN, Republican, of Illinois, the Republican leader, favor it.

The vote is expected to come next week, and we hope it will. A vote on last year's diversion bill was delayed until the closing days of the session. The shortness of time made it possible for Senator PROXMIRE, Democrat, of Wisconsin, to kill the measure with a filibuster, and no doubt he would be happy to try it again if the vote were delayed long enough.

PROXMIRE, who has been demanding that Chicago be required to follow Milwaukee's system of sewage disposal, does not seem to have been subdued by the fact that Milwaukee has had to close its Lake Michigan beaches to prevent epidemics of typhoid fever and amebic dysentery. PROXMIRE is opposing Chicago's diversion measure as noisily and as illogically as ever.

Wisconsin, five other lake States and the Canadian Government have been protesting that it would cripple lake shipping and reduce the Canadian production of electric current at Niagara Falls if an additional 1,000 cubic feet of water a second were taken out of Lake Michigan at Chicago. The U.S. Army Engineers say it wouldn't have any effect either on navigation or electric power production.

The argument has been going on for years with no result except to generate bad feeling. This year's diversion bill is designed to settle it. It provides for increasing the withdrawal of water into the Illinois Waterway from 1,500 cubic-feet per second to 2,500 for a 1-year period and then conducting a 2-year study to determine exactly what effects the increase has, if any.

We hope the Senate, understanding that this is the only possible way to get at the facts, will quickly pass the bill, as the House already has done. And we hope President Eisenhower, who has vetoed two other diversion bills because Canada did not like them, will sign this one if it comes to him. The health of the millions of Americans who live in Chicago and along the Illinois Waterway is more important than the preferences of the Canadian power interests.

The chief reason why Chicago and Illinois need a little more Lake Michigan water is that Chicago's sewage disposal system, although it is the finest in America, cannot get quite all the impurities out of the sewage it treats. No disposal system can. So more fresh water is needed to dilute and purify the effluent discharged into the Illinois Waterway from the disposal plants.

More water is needed also to keep enough water in the Illinois Waterway, which is indispensable to the whole Nation, so that it can always be navigated safely and without delay.

Those are real and legitimate needs, and they should not be denied because of the insincere and unreasoning opposition offered by other lake States and Canada.

[From the Chicago Daily News, Aug. 19, 1959]

WASTE IN RIVER GIVES GREEN BAY ODOR ALL ITS OWN—YET WISCONSIN SENATORS HIT CHICAGO'S FIGHT ON POLLUTION

(By Nicholas Shuman)

GREEN BAY, WIS.—Citizens of this northlands city are literally choking on their own industrial wastes.

Ask anyone who has to cross the nauseous East River downtown as it makes it junction with the bay-bound FOX River.

On a summer's day the rotten-egg odor of hydrogen sulfide gas rises from the charcoal-brown surface of the water, which bubbles from the decomposition of organic matter below.

Green Bay has a problem. But it is not alone.

An one-the-spot inspection to the Daily News revealed that metropolitan centers on the lakes are having sewage problems all the way up the Wisconsin coast and to Duluth, Minn.

Oddly, Wisconsin's two Senators have been among the most outspoken critics of Chicago's sewage system in that city's fight for increased Lake Michigan water to purge Illinois Waterway of pollution.

Both Senator PROXMIRE, Democrat, and Senator WILEY, Republican, argue that Chicago shouldn't be allowed another drop because its sanitary district is doing a poor job of treating sewage.

The fact is that virtually every city on the Great Lakes except Chicago—pick your State or county—dumps its sewage into the lake, whether treated or plain, raw muck.

And the fact is that none of them has a sewage disposal system that does a better job of treatment than the sanitary district.

This is shown by the standard sanitation yardstick—BOD, or biochemical demand—which measures the organic matter in water.

Last year the sanitary district removed 90 percent of the BOD in Chicago's sewage before dumping the remaining effluent into the waterway. Here are the corresponding figures elsewhere.

Duluth, 36 percent; Racine, Wis., 38 percent; Superior, Wis., 40 percent at best (no average because the plant is new); Green Bay, 70 percent, and Sheboygan, Wis., 84.8 percent.

Percentagewise, only Milwaukee topped Chicago, with a reading of 94 to 95. But on the basis of actual waste remaining in the treatment effluent, Milwaukee's record is poorer.

The BOD of its effluent is 18 parts per million, against only 10 in Chicago.

The reason for this is that Chicago's sewage is diluted in the sewers before treatment by a much higher water content, thus only about half as much pollution remains in it after treatment.

Green Bay's 70-percent BOD reduction looks fairly good.

But Karl A. Mohr, deputy commissioner of health, pointed out that all of the industrial waste from three downtown pulp mills is pumped directly into the rivers.

The sewage plant is bypassed "because of high volume and the difficulty of treating pulp mill chemicals."

Mohr said that the three mills empty 45 million gallons of waste water a day into the river, and this represents "sulfites with a terrific BOD."

By contrast, the average daily flow of domestic sewage and other industrial waste is only 11 million gallons.

According to Mohr, the biggest of these mills, the Marathon division of American Can Co., is about to undertake a million-dollar cleanup project.

Basins and pumps are to be erected to settle out its waste and dump the effluent into the already filthy bay instead of the river.

The treatment plant stands on the bay, within a mile of what once was the town's only waterfront swimming area, Bay Beach Park.

The plant was opened in 1935—and the beach was closed forever in 1942.

There, in comparative isolation on a hot day, children frolicked in a small wading pool. For adults there was nothing but a scum-coated shoreline overgrown with weeds.

The twin ports of Duluth and Superior are gunky with their own waste, that of other towns up the St. Louis River and the pollution of ships in th world's second busiest harbor.

But its own industrial pollution is substantial.

For example, Dr. Mario Fischer, Duluth commissioner of health, said that the American Steel & Wire division of United States Steel Corp. "uses more water than the whole city combined and washes it all back in the river with its chemical byproducts."

"Minnesota has a State water pollution commission," Dr. Fischer said, "but they haven't done anything about the St. Louis River."

Carl Lund, assistant director of the city's sewage department, said his system's sewers serve a connected population of 90,000.

But the sewage of another 20,000 persons—including whole suburbs, goes into the bay raw, and thence into Lake Superior.

Duluth is now building three new sewage plants at a cost of $500,000. Nobody in town mentioned this, but across the river in Superior, a city official said: "They had to do something, because sewage was getting into their water supply."

Henry Wick, operator of Duluth's sewage treatment plant, was asked if he didn't think 36 percent BOD reduction was pretty low—even for that part of the sewage that was treated.

His answer—and the philsosophy of officials all up and down the deteriorating lakes—was:

"Any more treatment would be unnecessary. We are fortunate in having a large body of water to dump into."

Superior has a year-old treatment plant. Before it was constructed, the city dumped its sewage raw into Superior Bay, which also flows into Lake Superior.

E. W. Berg, director of public works, said: "The bay is unfit. We've been dumping sewage there for 60 years, and we're not going to clean it up overnight."

According to A. W. Ecklund, head of the health department laboratory, the city's one authorized beach—Billings—is closed because of pollution toward the end of nearly every other season, "but the kids swim there anyway."

What if they don't want to take a chance on catching a disease?

"Pattison State Park is only 10 or 12 miles south of town, and the swimming there is fine," said Joseph T. Leszcynski, Superior's beach-poor director of parks.

Racine and Sheboygan so far are blessed with clean bathing waters, though both have cloudy rivers.

According to Thomas F. Hay, superintendent of the Racine sewage plant, he's treating "16 million gallons of sewage a day, though the plant was designed to handle only 12 million."

Obviously, the efficiency of the treatment suffers, though not to a critical degree here.

Sheboygan is seeing better days. Like Manitowoc, it was pressured into adding secondary treatment to its primary works recently by the State board of health.

But all these plants, whether their treatment is good or bad, are dumping the sewage that remains after treatment into the Great Lakes.

Only Chicago can say that it doesn't.

[From the Chicago Tribune, Aug. 20, 1959]

SEWAGE BACKS UP, TORONTO BEACH UNSAFE—SHIFTING CURRENTS OF LAKE BLAMED

(By Eugene Griffin)

TORONTO, ONTARIO, August 19.—Toronto's entire waterfront on Lake Ontario has been polluted by wastes from the city's sewers.

All beaches have been posted as dangerous to the health of swimmers.

Donald P. Scott, Toronto deputy works commissioner, said the biggest cause of the current pollution is that a shift in lake currents has carried Toronto's sewage back inshore to the waterfront, instead of out into the lake.

Dr. A. J. Boyd, health officer for Metropolitan Toronto, who ordered the beaches declared unsafe, said the lake water was filthy and highly dangerous.

Signs warn swimmers that they enter the water at their own risk. Few have taken the chance to step into the lake, even during sweltering heat waves in recent days.

Untreated sewage emptied into the lake by Toronto has been found on half a dozen beaches in the city, and in suburban Scarboro and Mimico, by health inspectors. Some beaches on Toronto Island, a summer resort in the harbor also have been polluted.

NINTH CLOSING SINCE 1945

Toronto's sewage treatment plants are not efficient enough for their job. The largest plant gives only primary treatment to sewage, removing only some of the solids. When lake water is warm, the germs multiply rapidly as the Toronto sewage is pumped into it.

This is the ninth time since 1945 that Toronto beaches have been closed because of pollution in the lake. The colon bacilli count, considered dangerous at 2,400 for 100 cubic centimeters of water, reached 380,000 in 1952.

Toronto has 30 miles of lakefront, and the sewage is a health hazard for 50 miles down the lakeshore to Hamilton.

"Untreated and partly treated sewage has turned one of the world's great fresh-water bodies into a health menace," the Toronto Globe and Mail said in an editorial.

FIND DEAD CATS

Even dead cats have been washed ashore. Dysentery, infantile paralysis, and all manner of stomach ailments may be caught from the germs in the water, health authorities have warned.

Miss Jean Newman, member of the Toronto City Council, who visited some of the beaches, said they "smell like an open sewer."

Toronto plans to expand its sewage treatment system, at a cost of several million dollars, but the expansion is not expected to be completed for another 2 or 3 years.

The city is a center of Canadian opposition to Chicago's attempts to divert more water from Lake Michigan into the Illinois Waterway.

Public officials and newspapers agree here that the answer to Toronto's sewage problem must be more efficient treatment before the sewage is emptied into the lake. More or less water in the lake here will not affect the situation.

If Toronto, or other Ontario lakefront cities, wanted higher lake levels, they could get it by allowing the power dam in the St. Lawrence Seaway near Cornwal, Ontario, to store more water upstream.

At present, this dam lets 10,000 cubic feet of water a second run off as waste, in excess of the water needed by the power generators. Chicago wants to divert only another 1,000 cubic feet a second from Lake Michigan.

[From the Chicago Daily News, Aug. 18, 1959]

CLOSE WILMETTE BEACHES—LAKE BLUFF AREAS CHECKED

Bathing beaches at Wilmette and Lake Bluff were closed Tuesday because of pollution.

The beach at Lake Bluff was later reopened, but a special laboratory report was ordered.

Other suburbs along the North Shore and the Lake County (Ill.) Health Department were keeping a sharp eye on bacteria count in water off their beaches.

The Wilmette beaches were ordered closed when the bacteria count was found to be more than four times above the permissible level, Frank Le Jeune, beach director, said.

Under study was the possibility that sewage from Milwaukee, where all beaches have been closed because of pollution, had floated southward.

The chief sanitary officer of the Lake County health department, John Morris, said bacteria counts go up when the wind blows steadily from the north.

"However, I don't think we can say that it is necessarily attributed to Milwaukee," he added.

Chicago health authorities reported meanwhile that beaches here were not in danger of pollution.

Drinking water was also ruled out of danger by health officers in the entire North Shore area.

Ye Jeune said the Wilmette pollution was discovered in a routine check by the village water department late Monday. Another report was expected late Tuesday.

The beaches would remain closed until the pollution had cleared, he added.

The permitted level of coliform organisms varies among health departments, Morris explained.

His office doesn't consider a beach polluted until the level has reached 3,000 organisms per 100 milliliters. A milliliter is a tiny measure, less than an ounce.

In Wilmette the permitted level is 1,100. The count was 4,630.

[From the Toronto Globe and Mail]

MORE DISEASED BEACHES

There must be an immediate and exhaustive investigation into the conditions which necessitated the closing of the eastern beaches yesterday. It is disgusting that pollution has again been permitted to deprive Toronto citizens of the pleasures of this city's greatest natural asset, Lake Ontario.

Pollution on the eastern lakefront would be bad enough as an isolated incident, but it is shocking when viewed in conjunction with what has been happening all along the shore from here to Hamilton. Untreated and partly treated sewage have turned one of the world's greatest freshwater bodies into a health menace. There is now no beach left within the city where swimming can be officially and safely tolerated—and this at one of the hottest periods of an unusually hot summer.

Many millions of dollars were spent to make the eastern beaches safe by expanding the nearby Ashbridge's Bay sewage treatment plant, which had been shamefully overloaded. The recurrence of pollution there justifies the most drastic action to fix responsibility and take whatever remedial action is required to make the beaches safe again.

Extension and Amendment of Public Law 480

SPEECH
OF
HON. WILLIAM L. SPRINGER
OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 19, 1959

The House in Committee of the Whole House on the State of the Union had under consideration the bill H.R. 8609, which would amend the Agricultural Trade Development and Assistance Act of 1954 (Public Law 480) as amended, by extending the authorities of titles I and II, and adding the program of disposals through barter, and for other purposes.

Mr. SPRINGER. Mr. Chairman, Public Law 480, the Agricultural Trade Development and Assistance Act of 1954, is one of the most helpful and far-reaching pieces of legislation in behalf of agriculture that has been passed by the Congress in over a quarter of a century.

This is the only legislation on agriculture which has become famous and well known outside the continental limits of the United States. This is true because this law provides for disposal abroad of U.S. agricultural surpluses other than those that are sold for cash dollars.

I consider my efforts in the enactment of this law in 1954 to have been thus far the best legislative contribution I have made since I have been in the Congress. Because of the impact of this law upon agriculture, I have traveled in its behalf in some 27 countries and in excess of 35,000 miles. I believe I understand not only what the law has meant to agriculture in the United States, but also its effect upon needy and hungry people in every part of the world.

We have sold in excess of $8 billion in American agricultural surpluses in the 5 years the program has been in operation. These sales have been made in 28 countries, from Japan to Spain and from Iceland to Argentina.

The act now consists of three titles. Title I authorizes the sale of surplus agricultural commodities overseas for local currency of the purchasing country. By the end of this year we will have sold $6,250 million in surplus produce overseas under this title.

Title II of the act authorizes donations of surplus agricultural commodities "on behalf of the people of the United States to friendly peoples in meeting famine or other urgent or extraordinary relief requirements." Under this title the United States will have contributed over $800 million in surplus commodities through the year ending December 31, 1959. Some of these donations have met the needs of countries where conditions near famine have existed. No greater act of mercy has been shown in history than in some of the donations made under this title.

Title III authorizes principally the barter of surplus agricultural commodities for strategic and other materials of value to the United States. We have disposed of approximately $1,165 million in surplus under this program. Of special significance at this time are the records which show first that the materials acquired under barter are worth more today than the price the United States paid for them in surplus commodities and second that the annual cost of storing these materials is $105 million less than the annual cost of storing the surpluses given in exchange.

PROVISIONS OF THE BILL FOR 1959

Under the 1959 extension now under consideration by the House, we hope to sell in the coming year $1,150 million worth of surplus agricultural produce outside the continental limits of the United States. This is an ambitious program but one which can be achieved.

LONG-TERM SUPPLY CONTRACTS

For several years after the enactment of the law in 1954, I appeared regularly to testify before the House Committee on Agriculture for authorization in this bill to include long-term supply contracts. I am happy to see a provision for long-term supply contracts contained in the 1959 bill for the first time. I consider this provision to be the major step in the last 5 years in improvement of Public Law 480.

Under the provision of this new title which would be added to Public Law 480, the President would be authorized to make agreements with foreign nations under which the United States would undertake to finance the export of surplus commodities over periods of up to 10 years and to accept from the country payment in dollars over periods of up to 20 years at an interest equivalent to the cost of money to the U.S. Treasury. I believe that such a program will fill a major gap in our existing export operations and result in a substantial increase in our agricultural exports.

It has been my observation in studying Public Law 480 operations and agricultural exports in many parts of the world that as a nation concentrates its efforts on industrial and economic development, its demands for food and agricultural products almost always overload the ability of its domestic agriculture to produce. This is for two major reasons: First, increased individual purchasing power from commercial and industrial development creates a greater demand for food and agricultural products and, second, capital, labor, and management are drawn from agriculture into industry and commerce, and in many instances agricultural production actually declines, at least for a temporary period.

In numerous instances, officials of countries which are experiencing these "growing pains" of economic and industrial development have expressed their urgent need for some long-term assurance of adequate agricultural supplies during their development period. These nations expect to be able to pay for these commodities, and they are willing to pay in dollars, but they need all their existing resources, and particularly their foreign exchange, to carry out the industrial and commercial development programs they have planned. It is with this type of situation particularly in mind that the Committee has included the provisions for long-term supply contracts in this bill.

In addition, this new program will open up markets that are not now available on other than a strictly cash basis. I feel sure many nations which are now buying surplus commodities under title I would prefer to take advantage of the extended dollar credit authorized in the new long-term supply contract provision.

A new section 8 has been proposed by the Department of Agriculture and adopted by the committee. It will authorize inclusion of agreements for a relatively small stockpile of surplus commodities to be established in recipient countries, under the ownership and control of the recipient country, to be later used for emergency relief donations or for sale under the regular provisions of Public Law 480. Definite language was added to make it clear that full responsibility for the condition of the commodities and for handling and storage charges shall be assumed by the recipient country upon transfer of title and the placing of the commodities in storage.

Two points I would like to make fully clear. First, we make no claim to perfection in this program. We have done and will continue to do our best to reduce a large portion of the accumulated surplus of farm products by disposal overseas. Second, the U.S. surplus disposal program is not entirely altruistic. We believe it to be just as much in the interest of the American farmer to reduce accumulated stocks. In this we hope to improve the economic position of the American farmers. I realize full well that an economically strong and progressive agriculture is vital to the United States. This program is strengthening agriculture and providing a market beyond our borders for the food surpluses of this country. It is a practical program geared to 1959. It is a program that deserves not only the commendation of the farmers of this country but the approval of every Member of this House who is genuinely interested in the future of American agriculture.

Wilderness and Wildlife

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Monday, August 24, 1959

Mr. MANSFIELD. Mr. President, the June issue of Montana Wildlife, the official publication of the Montana Fish and Game Department contains an excellent editorial supporting the need for wilderness areas. Because the wilderness bill, now being considered by the Senate Interior and Insular Affairs Committee is one of the more important pieces of legislation we have before us this Congress, I ask unanimous consent to have this editorial printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WILDERNESS AND WILDLIFE

We are becoming increasingly aware of the important part wilderness is playing in our wildlife program in general and specifically in the preservation of several important game and fish species.

Big game hunting is earning an important place in Montana's outdoor recreational program. Much of the high-quality aspect of this sport, particularly in regard to hunting the rarer species, is due to the remote regions in which these animals are found. A great deal of the finest sport hunting in the State today lies within the boundaries of designated wilderness and wild areas.

In regard to specific species, the grizzly bear population has reached a critical low in the United States. Total elimination has taken place throughout the greater part of its former range. It has been found that the grizzly shuns areas dominated by man's activities. The chief hope, therefore, for the survival of this highly prized game species lies in the preservation of a reasonable amount of wilderness range.

The native black-spotted cutthroat trout is in jeopardy in Montana. The disappearance of this valuable game fish is directly attributable to habitat destruction as well as the introduction of nonnative fishes. Only a few waters, and they mostly in remote areas, still have pure strains of the original cutthroat.

It is an important and practical consideration of fish management that these rare strains be preserved. They will be needed for introduction into waters that are presently barren and will be the raw material for creating improved strains as needs arise. Then, too, cutthroat are important for the particularly rewarding type fishing they provide.

The salvation of these native strains of cutthroat lies in the more remote inaccessible waters and, in particular—wilderness areas. Here the habitat will be preserved and incompatible exotic fish excluded. It is very evident that those who seek native cutthroat will not hesitate to expend the necessary energy to reach these more remote regions. This is clearly testified by the resident and nonresident fishermen enjoying this sport in wilderness areas.

A further value of wilderness has often been realized. This is the importance of having undisturbed plant and animal communities available for scientific studies. It is felt that only with such controls can the effects of man's many modifications be properly judged, and unwise practices avoided.

In summary, we feel that we are obligated to furnish the highest quality hunting and fishing possible. This is becoming an increasingly difficult task in the face of rapidly mounting hunting and fishing pressures and the continual shrinkage of the more desirable areas in which these activities may be enjoyed.

We look, therefore, to a planned wilderness preservation system as insurance that we may continue to provide outstanding recreational opportunities, so important to Montana and the entire nation. We agree with principles expressed in the proposed wilderness legislation. We believe that this program may be accomplished without jeopardizing other important uses of public lands. We sincerely hope that national wilderness preservation may soon become a definite policy of Congress.

Annual Training of Reservists and Citizen Soldiers

EXTENSION OF REMARKS
OF
HON. JOHN H. DENT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 19, 1959

Mr. DENT. Mr. Speaker, after Congress adjourned for the week, I had the opportunity to visit Camp Meade, Md., at Odenton, Md., for an afternoon and evening. The occasion for my visit was the fact that a group of citizen soldiers from my area, together with the contingent from the State of Kentucky, are on active duty for annual training in compliance with LTR O T 6-952 XXI USACR, IGMR, Pa., dated June 23, 1959.

A great number of us are too prone to take for granted the value of our so-called reservists and citizen soldiers who leave their homes and occupations to go back into an intensive 2-week training period in order that they may keep abreast of the latest developments in our national defense.

I can assure you, Mr. Speaker, and Members of Congress that this is not mere play-acting but downright serious business. These men, most of whom are family men, are dead serious and in earnest about the training they receive.

In talking to them, from private on up to our own Maj. William Wolinsky from Greensburg, Pa., who in private life is the chief of police of that city, and his officers under him, Louis P. Antolini, Jeannette, Pa.; Frank O. Bavdek, Latrobe, Pa.; George J. Caperelli, Greensburg, Pa.; Russell H. Ault, State College, Pa; Cleo M. Wildasin, Hanover, Pa.; Jean T. Fuqua, Mayfield, Ky.; and Malcolm R. Boaz, Mayfield, Ky. Not forgetting, of course, Captain McKetta from New Kensington, Pa., who is one of our very capable officers in our State police force in Pennsylvania.

I learned that these civilian soldiers are very proud and doing their very best to fulfill their obligations to our country by better preparing themselves for any eventuality. I was particularly struck with the serious manner in which they go about their duties and their apparent desire to strive for perfection. I was happy to greet many of the men whom I have known for years and I admit frankly, that as a Member of Congress, I was not aware of the very important role they play in our overall picture of defending this country. They are entitled to a special commendation because no matter how you look at it, this tour of duty is, in most instances, a personal sacrifice, and one which they willingly make without complaint. I believe that they are all entitled to a special note of thanks from this Congress because it could very well be that devotion to this duty carries out the admonition of Thomas Jefferson when he said: "Eternal vigilance is the price of liberty." They rate a special salute, and in passing, I would like to name the citizen soldiers of these two great States and to thank them for receiving a Member of Congress with the spirit and with the understanding that we too are part of the defense of this Nation. The following is a list of assigned enlisted personnel of the 394th Military Censorship Detachment:

Assigned enlisted personnel

Nixon Journeys Contrasted

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Monday, August 24, 1959

Mr. MUNDT. Mr. President, Mr. George Todt, noted west coast columnist and commentator, whose column originates on the editorial page of the Valley Times which covers the San Fernando Valley out in California, has come up with some highly interesting observations growing out of Vice President NIXON's visits to Russia and Poland.

I think many Americans will share Mr. Todt's conviction that the existence of the Iron Curtain is not so much to keep news, and facts and people from getting behind the Iron Curtain as it is to prevent people unhappy with communism from fleeing their homelands.

I ask unanimous consent that the editorial may be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

NIXON JOURNEYS CONTRASTED

(By George Todt)

What may very well have been the most significant feature of Vice President RICHARD NIXON'S recent trip to Moscow and Warsaw seems to have been lost on many writers and observers who covered this event.

For the warm reception he received behind the Iron Curtain indicated pretty conclusively that those who know communism best receive most affectionately those who fight against it the hardest.

Conversely, NIXON'S trip to South America a little more than a year ago—where and when he was stoned and spat upon—shows us the other side of the coin: Those who know communism the least are, at the same time, also the most antagonistic to those who oppose its expansion at the expense of free nations around the world.

There is a lot of difference between those who can afford to seat themselves on the sidelines and preach theoretical communism as an attractive ideology for their fellows—and others who are forced to live under its godless tenets as a working formula.

Let's think this one over for ourselves, shall we?

Speaking along such lines as we have been discussing here, Senator KARL E. MUNDT, Republican of South Dakota, one of the wisest and most solid of the solons on Capitol Hill, recently had this to say:

"I believe that several lessons can well be learned from the short interval of history which took the Vice President of the United States on the big jump from rocks in Venezuela to roses in Warsaw, on his good will mission for the people of the United States."

"I think the first lesson is clearly this: Communism has its greatest appeal to the people who live farthest from it.

"The second lesson is that to people living under communism, but once enjoyed freedom—as is true in the case of the people of Poland—the existence of freedom and its demonstration anywhere in the world, as exemplified by Vice President NIXON'S visit to Warsaw and to Russia, is a cause of great rejoicing.

"The third lesson is, I believe, that the more one knows about communism, or the closer he lives to it and the more intimate his connections with it become, the more he detests and abominates it—both as a philosophy and a way of life."

As so often is the case, the well thought out words of Senator MUNDT add up to commonsense and reason. The difference in the receptions afforded the Vice President at Caracas and Warsaw amply illustrate the point he has made for us.

The inhabitants of the first city, in Venezuela, are happily not infested, infected or otherwise inflicted with the plague known as Marxist communism: How easy for them to sit around and prate of what an excellent system of government it might be.

But the more practical denizens of the capital of Poland, which is Warsaw, are not the unrealistic theorists of the South American variety who, to put it in the words of the overrun Poles, may be said to have "never had it so good."

The liberty-loving people of Poland have had the Red colossus on their backs since the end of the Second World War. Although the cream of the Polish patriots and democratic elements of the stricken country have long since been liquidated by the Communists—first notable instance of Marxist mass murder there was the Katyn Forest massacre of 14,000 army officers while the late war was still in progress—those who yet remain have forgotten neither their former freedom nor hatred for the Communists who took it away from them.

The real reason for the Iron Curtain today, as it has been in the past, is not so much to keep us out—as it is to keep the poor, miserable wretches on the other side from running away.

Do we need look any further than West Berlin to see that this is so? Actually, several millions of grateful East Germans have succeeded in gaining freedom for themselves via this escape route.

But how many West Germans—or how few—have gone the other way?

Washington Report

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 12, 1959

Mr. ALGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the newsletter of August 22, 1959:

WASHINGTON REPORT

(By Congressman BRUCE ALGER, Fifth District, Texas)

AUGUST 22, 1959.

The first session of the 86th Congress is struggling to a close, many Members think, although in the next breath some concede the possibility of endless debate ahead. Here's a roundup.

Controversial issues to be carried over include minimum wage, aid to education, aid to depressed areas, Federal unemployment compensation, Federal health insurance, social security expansion, interest rate ceiling removal (and others?).

Controversial issues considered earlier and scheduled for further action include labor reform, housing, and the farm program. New items for House debate include Public Law 480, (surplus food disposal), civil rights, highways and gasoline tax increase, and foreign investment tax incentive (H.R. 5).

Controversial clashes of viewpoint continue and include the political front, for example, who's for big spending, and the balanced budget; our international policy embodied in foreign aid (including food surplus disposal) and the Khrushchev visit.

Public Law 480, the Agricultural Trade and Assistance Act of 1954, to dispose of surplus commodities, with amendments, was the week's big floor debate, centered around a barter provision. The big question—should the United States dispose of our surplus food products in exchange for strategic materials for our national stockpile rather than sell for foreign currency, which currency may or may not be of any use to the United States. If not, then the food in effect becomes a gift. The complicated, confusing, and at times self-defeating nature of this program led me to observe in debate that the problems confronting us arise because of a very basic problem, quite overlooked; namely, that the Federal Government is not set up nor intended constitutionally to be in the distribution of food, clothing or other necessities, neither at home nor abroad. The original emergency nature of disposal of farm surpluses has now, in my view, been distorted so that surpluses are encouraged, Government regulation fostered, and the free market destroyed in the United States and throughout the world. The fact is, our surpluses endanger the economies of other nations, too. This basic fault of the program itself was not debated. Government has been accepted as a food distributor at the taxpayers' expense. All I can hope to do is to keep the criticism alive, until the people demand an accounting. This I have done and shall so continue.

Civil rights, already through the Senate, will probably be before the House soon. The Democrat leadership is committed to advance in this field. The questions to be resolved: (1) A tough bill or a relatively innocuous one? (2) This year, or next (election) year? Odds are, in my opinion, an innocuous bill this year, because: (1) Few can show any real need (other than political in some districts) for further legislation; and (2) many Republicans may feel constrained to cooperate with those Southern Democrats who helped in enacting a legitimate labor reform act. I expect a bill to extend the Civil Rights Commission and give the Justice Department a little greater authority to investigate local election practices. The gasoline tax increase may take time, now that the Ways and Means Committee has voted out a 1-cent increase for 22 months and a later 5-percent excise tax allocation to highways. I am among those opposing a tax increase. (See newsletters of July 25 and August 1). Highways can be built without more tax, I believe.

Earlier controversial issues yet to be resolved are headed by labor reform, which is now in conference between the House and Senate. Housing could continue as a tremendous struggle in view of the veto, the Senate's attempt to override (both Texas Senators so voted), and the legitimate needs embodied in the earlier outrageous bill, that require that a bill be passed. The present suggested compromise is only a lesser degree of the faults of the vetoed bill, including more public housing direct loans for college classrooms (backdoor Treasury financing beyond Congress' control), urban renewal (though reduced), and others. As before, this bill probably will be held until the last minute and then railroaded through. As for agriculture, the general recommendations of the President for reduced price support levels and eased acreage requirements will get little if any attention, I believe, even though the President may urgently so request of Congress.

The interest rate ceiling's removal (see newsletters of June 13, 27, and July 11) so urgently requested by Treasury Secretary Anderson to reduce the cost of Government

financing has become a political football. By a party line vote (Democrats for, Republicans against), the Committee on Ways and Means voted to shelve such needed action until next year. The Government thus is forced to continue to compete with families and small business men for the available money in the short-term loan market. As I see it, it is wrong for Congress after spending the money to tie the hands of the Secretary in financing the Government debt.

So Congress struggles on, not all good, not all bad, but just like people. Congress will improve only as the people force improvement by demanding right action. Adjournment date is anyone's guess.

The Captive Nations

EXTENSION OF REMARKS
OF
HON. MICHAEL A. FEIGHAN
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, August 10, 1959

Mr. FEIGHAN. Mr. Speaker, under leave granted, I insert in the RECORD a recent article written by George E. Sokolsky on "The Captive Nations":

When NIXON and Khrushchev held their now famous debate in the American-style kitchen at the American Fair in Moscow, the cause for Khrushchev's unruly anger was that Congress had passed a joint resolution on July 17 providing for a Captive Nations Week. The President approved the resolution the same day. Several times, during NIXON's visits with Khrushchev, the latter referred to the "captives"—his captives. After his anger, it struck him as funny. It is not so funny for millions of human beings.

The nations referred to in the resolution are as follows: Poland, Hungary, Lithuania, Ukraine, Czechoslovakia, Latvia, Estonia, White Ruthenia, Rumania, East Germany, Bulgaria, Mainland China, Armenia, Azerbaijan, Georgia, North Korea, Albania, Idel-Ural, Tibet, Cossackia, Turkestan, North Vietnam, and others.

This is a long list of areas conquered by Soviet Russia, mainly during World War II and after. Some of them have been incorporated within the Union of Socialist Soviet Republics; others are so-called people's republics. It is a record of imperialistic success of the Kremlin. The resolution further states:

"These submerged nations look to the United States, as the citadel of human freedom, for leadership in bringing about their liberation and independence and in restoring to them the enjoyment of their Christian, Jewish, Moslem, Buddhist, and other religious freedoms, and of their individual liberties."

This resolution seems to have bothered Khrushchev more than any criticism that has been made of his brutality or rudeness because it is a wholly true statement of fact. Following the theories of Treitschke, Stalin set out to establish a number of satellite countries that would take the first brunt of war.

To Soviet Russia, the captive nations represent a Chinese Wall against the West. However, that wall is realistically rubble now that war must be conducted by airborne bombs, rockets, and missiles. Nevertheless, it has been characteristic of Russian history that what the Russians take, they never give up willingly. Russia has been like a rolling snowball, gathering size as it rolled on and on.

Men's memories are short. We, in America, forget, for instance, that the United States brought into existence the most progressive Slavic state, Czechoslovakia. It was the great friendship of three men, Woodrow Wilson, Prof. Thomas G. Masaryk, and Charles R. Crane that carved out this nation, liberated it from the Austro-Hungarian Empire, and obtained its independence at the Paris Conference after World War I. Czechoslovakia became a democratic republic with Prof. Thomas G. Masaryk as President and Dr. Eduard Benes as Prime Minister. Hitler seized this country on the ground that the Sudeten Germans (Bohemia) were ethnically Germans and therefore belonged to him. The Kremlin succeeded to Hitler's ownership. Czechoslovakia is now practically an integral part of Russia with no life of its own.

Americans were excited when Hitler marched into this peaceloving country of hardworking, energetic people. We are not excited today when Czechoslovakia is, for all practical purposes, a province of Soviet Russia.

In fact, it has become fashionable to go to Russia. Those who do not go there are not "in." I cannot imagine what they are "in" or not "in" but they all went to Russia this summer like bees swarming together. This winter, we shall be hearing all about Russia from 10-day experts who saw the Red Square in Moscow, the Nevsky in Leningrad, and whatever it is they can see in Kiev—possibly the ancient cathedral. They will all tell of the wonders of the one big department store in Moscow—something like Gimbel's basement. They will say that all Russians smile when they see Americans. It looks more like a belly laugh watching the fools part with their money.

Controversy Still Waxes Warm Over Khrushchev's Visit

EXTENSION OF REMARKS
OF
HON. ROBERT C. BYRD
OF WEST VIRGINIA
IN THE SENATE OF THE UNITED STATES
Monday, August 24, 1959

Mr. BYRD of West Virginia. Mr. President, in the past few days, I have made several comments to express just how I feel about the prospect of Premier Khrushchev's visit to America. I have tried to emphasize that I, for one, do not wish to extend any festive welcome and great show of comradeship for this international tyrant.

As a sort of footnote to my previous remarks, and to illustrate that quite a number of other Americans feel as I do in this respect, I would like to have printed in the CONGRESSIONAL RECORD a group of letters to the editor which were published in the August 17 issue of the Washington Evening Star. I ask unanimous consent that they may be printed in the Appendix of the RECORD.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

CONTROVERSY STILL WAXES WARM OVER KHRUSHCHEV'S VISIT

It is surprising that few people question the assumption that Khrushchev is in many ways ignorant of conditions in the United States. Harriman returned from Russia stating that he found the Soviet leader badly informed; NIXON took up the same line; then the President said he would like to show Levittown to Khrushchev so he can see that the U.S. housing exhibit in Moscow is typical. A little thought ought to convince Americans that Khrushchev cannot be so uninformed. Consider the size of the Soviet Embassy staff in Washington; consider the mass of reports that are surely being sent to Moscow; consider the ease with which information of such a nature can be obtained in the United States from personal inspection, newspapers, official sources. Khrushchev's purpose is quite transparent. He wants to minimize the effect of the housing exhibit on the Soviet people, make them think Americans are not as far ahead of them as is actually the case. How Khrushchev must chuckle when he sees how this simple ruse has pulled the wool over some eyes.

H. C. NEAL.

Khrushchev is coming. Where are the Paul Reveres? One if by land, and two if by sea, and three—the manifesto calls for us to be brought down as a free nation.

With some, I think of the peoples of the world who will see pictures of the hammer and sickle flying over our land. Why don't we keep the flags after Khrushchev leaves so as to have them ready when he comes again as victor instead of as visitor?

I am one citizen of this country who does not wish to see diplomatic courtesy extended to this man who has bragged of our forthcoming demise.

BETTY M. BONNETT.

Premier Khrushchev's visit and President Eisenhower's return visit should not be considered as "missions of peace," but merely as opportunities to examine more thoroughly and closely conflicting world policies.

To interpret these informal talks as gestures of good will would be a misconception. However, it is hoped that Americans will pledge their full-fledged support to the President and demonstrate to Premier Khrushchev that we are peace-loving people, educated, informed, and enlightened as to the international variances at stake.

SUZANNE R. STALLING.

All the way from Union Station
And along the city's parks
The crowds sing their hosannas
For the salesman of Karl Marx.

The day is warm and sunny
And brimming with good will
But in J. Edgar's dwelling
There's an autumnal chill.

He looks out of his window
And he views with jaundiced eye
The hammer and the sickle
Beneath the summer sky.

But then, let's all be jolly
And let no one frown
For Khrushchev's in the White House
And the Reds are on the town.

HYMEN R. KAPLAN.

We see that for Premier Khrushchev's first American visit it is planned to fly the hammer and sickle flag from Washington lampposts. In his plan to bury us, we can only assume that he will hang statesmen, Congressmen, and reporters from lampposts on his second visit to Washington.

JURI BARTHOLD.

It was a shock to me, and I believe it was to the average citizen, when our President gave out the news that he had invited a criminal like Khrushchev to become a guest of the United States. How low have we sunk when our Chief Executive can shake hands with and entertain a man who has murdered thousands of people and has boasted that he will bury us?

Why should the taxpayers and decent citizens of this country have to put up the money to entertain and actually protect the life of this murderer?

LINDA MCCLURE WOODS.

It is too late now to consider the wisdom of extending to Khrushchev an invitation to visit our country, but we can do certain things when he comes. We can, and should, treat him with punctilious curtesy because he is an invited guest. Since few people in the United States, however, wish to consort with a murder, a liar, and a thief, it follows that we should not honor him further than has already been done by asking him here is a guest. It is unthinkable to me that he should be the guest of honor at functions not strictly and solely official, such as are being proposed by businessmen and others throughout the Nation.

I would ike to see Khrushchev confronted with a wall of complete indifference, except for reporting the actual facts of his visit. There should be neither praise nor censure, and everything possible should be done to prevent him from making his visit a basis for his well-known propaganda, of which he is a master. Because we are a reasonably honest and fairminded people we cannot excel or even match him in the field of propaganda and, at all costs, we should avoid being taken in by any of his proposals until they have resulted in positive, clear-cut action; for the man is a consummate liar and from all indications has no comprehension of what we mean by honesty.

E. R. BALLINGER.

It is regrettable that when Khrushchev arrives in Washington in his official capacity as Prime Minister of the U.S.S.R., Congress may no longer be in session. However, this unfortunate situation may very well be remedied by inviting Mr. Khrushchev to appear before one of the congressional commitees, thus keeping him in the limelight.

The Committee on Internal Security would be the most appropriate one to extend the invitation. Mr. Khrushchev, as chairman of the central committee of the Communist Party of the Soviet Union and boss of the world Communist movement, could perform a signal service to the cause of peace and friendship by supplying many a missing link in the investigations of the committee which has amassed evidence on incidents of Communist subversion, sedition, spying, arousing of interracial hatred, etc. in this and other countries. An additional point: As a foreigner, Mr. Khrushchev could not claim the privileges of the fifth amendment.

CHARLES COLLINS.

The President pulled the biggest blooper of the century by inviting Khrushchev here, thereby skyrocketing his waning prestige at the expense of the oppressed, enslaved peoples of Europe and Asia.

Of all the naive reasons for having the Russian dictator here, that of visiting strategic air bases is the most inane. Naturally, Khrushchev rejected Secretary McElroy's invitation, for the Soviet leader doubtlessly has seen them in pictures and movies brought to him by his diplomatic couriers. Then, too, he doesn't want Eisenhower looking at his.

As for seeing how the West lives, don't you suppose Khrushchev knows? On his visit there several years ago, Khrushchev saw England's cottages, manors, industrial complexes, and cities similar to those in America. Angry sullen crowds greeted him and he returned to the Kremlin in disgust. Yes, he knows how the west lives. And he knows too, he must bury it if communism is to survive.

CHARLES P. BEASLEY.

It came as a great shock to read that the President is extending to Dictator Khrushchev a courtesy he has chosen to withhold from some of our friends—that of meeting him at the airport. If, in the general interest, this persons must be permited to enter our country, it sems to me our conduct should be no more than formally courteous, considering the numerous outrages committed not only with his consent but at his order.

Our sudden switch in policy resembles the switches called by Khrushchev himself, which switches have always brought from us comments of amusement or contempt. It sems that we are not only doing business with the devil—we are doing it on his terms.

DORIS STIVERSON.

The Speaker's Rebuke

EXTENSION OF REMARKS
OF
HON. ROBERT W. LEVERING
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Monday, August 24, 1959

Mr. LEVERING. Mr. Speaker, under leave to extend my remarks, I am inserting in the Appendix of the RECORD an editorial from Business Week for August 1, 1959.

This editorial relates to a statement made recently by our distinguished Speaker, and I feel that it is most appropriate that it be put into the RECORD so that those in the executive branch who take the time to read of our activities and statements here will realize the necessity for thinking before they start talking. I believe our distinguished Speaker gave a needed rebuke to some spokesmen for the Federal Reserve Board.

The editorial follows:

THE SPEAKER'S REBUKE

Speaker SAM RAYBURN has a sharp tongue, but there was considerable justice as well as sharpness in the rebuke he administered last week to some of the more vocal supporters of the Federal Reserve Board.

"I have been forced to the conclusion," RAYBURN declared, "that the Federal Reserve authorities have reached a point in their thinking where they consider themselves immune to any direction or suggestion by the Congress, let alone a simple expression of the sense of Congress."

Speaker RAYBURN's voice is a powerful one in Washington, and when he says something like this, it is worth listening to. In fairness, though, his rebuke should apply not to the Fed itself but to some of its more ardent champions who have rushed to attack the proposed "sense of Congress" amendment to the bill raising the ceiling on the interest rate the Federal Government can pay.

The merits of the amendment itself may be arguable—though it can be remarked in passing that the language is moderate and the principle has been supported by some highly qualified students of central banking.

But whether the amendment is wise or foolish, the right of Congress to give these or any other instructions to the Fed should be beyond question. The Fed itself has always acknowledged this. But some of its partisans with their charges of a "political foray" seem to have forgotten it.

It is a basic principle of our Government—and an excellent principle—that the expert administrator operates not by divine authority but by virtue of his ability to persuade duly elected representatives of the laity that he knows what he is doing.

Regardless of what happens to the "sense of Congress" amendment, it will be a sad day for the country—and for the Federal Reserve System—if we ever try to operate on any other basis.

The Senate's Responsibility for Labor Legislation

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES

Monday, August 24, 1959

Mr. MUNDT. Mr. President, I think Members of Congress and readers of the CONGRESSIONAL RECORD, generally, will be interested in reading the August 10 lead editorial in the St. Louis Post-Dispatch, of St. Louis, Mo. It places upon the U.S. Senate the direct responsibility for enacting effective labor reform legislation in this session of Congress and it supports the point of view which I presented in the more than 2-hour debate on this subject on Monday, August 17. In other words, the Post-Dispatch urges the Senate to follow the constructive action of the House by enacting the Landrum-Griffin bill.

Mr. President, if the conference committee can agree upon a better and more effective piece of labor reform legislation than the Landrum-Griffin bill, let it bring such legislation to the floor of the Senate. If it cannot agree, let it act in conformity with the commitments made on the Senate floor last Monday and give the Senate itself the opportunity to vote to instruct its conferees to carry out its wishes and desires.

The conferees have now had this legislation before them for a week. We are 1 week closer to adjournment. Time is marching on. I hope that within the next few days the Senate will be given an opportunity to register its views on effective labor reform legislation, either by adopting a conference report containing such provisions—if the conferees will accept such provisions—or by voting to instruct the conferees of the Senate to conform with the House provisions on the areas of disagreement.

Mr. President, this Post-Dispatch editorial merits careful reading on this issue.

I ask unanimous consent that the editorial may be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the St. Louis Post-Dispatch, Aug. 10–16, 1959]

THE SENATE'S RESPONSIBILITY

Enactment of strong labor reform legislation at this session of Congress now is up to the Senate. The House of Representatives acted Thursday with commendable speed and statesmanship in voting 229 to 201 to approve the Landrum-Griffin bill, which carried administration indorsement. There is no question of a veto if the Senate goes along with the House, and Senators should examine carefully the meaning of Thursday's rollcall and insist that their conferees conform to it.

It is fair to say that in this crucial vote the House succumbed to pressure, but it was the

pressure of public opinion and not of a special interest. In following the wishes of the people the House repudiated the most severe and potentially the most politically damaging pressure from organized labor that has been brought to bear in the present Congress. Those Members who stood against it are entitled to a vote of thanks.

The House opened debate with three bills before it. One was the Landrum-Griffin bill, given final approval Friday 303 to 125 after passage was assured in the key vote the day before. At the opposite extreme was the measure backed by organized labor. In the middle was a version of the Senate-approved Kennedy-Ervin bill, which emerged from a House committee and which had the support of the Democratic leadership. Thus the House rejected the alternatives and chose the toughest of the lot, and did so by a comfortable margin despite the last minute efforts of AFL–CIO lobbyists to hold down the winning vote as a lever for use in the expected Senate-House conference. A close tally would have provided argument for a weakened compromise.

Each of the three measures before the House had its topflight supporter; each advocate took his case to the country by radio. President Eisenhower put his prestige behind the Landrum-Griffin bill; AFL–CIO President George Meany appealed for the labor bill; House Speaker SAM RAYBURN asked support for the committee bill. What happened to RAYBURN was surprising and significant. When the venerable MISTER SAM resorts to the unusual step of arguing publicly for a piece of legislation, his colleagues in the House pay careful attention. But in this case he lost control even of his own Texas delegation; of 21 Democrats, 16 voted for the Landrum-Griffin bill.

It was to be expected that Mr. Meany would denounce the House action. "A victory for antilabor forces," he called it. The same comment was made by labor leaders at the time of the Taft-Hartley battles in the forties. John L. Lewis termed Taft-Hartley a "slave labor act." Yet anyone who thinks Taft-Hartley damaged the labor movement is sadly out of touch with the times. The Landrum-Griffin bill, which in many ways merely tries to end the abuses of Taft-Hartley, would not hurt honest unions or legitimate organizing practices.

There is one aspect of the House vote that Senator KENNEDY, the presidential aspirant, and other influential Senators would do well to ponder. It is this: Something has happened since last April when the Senate passed the mild Kennedy-Ervin bill 88 to 1. Certainly organized labor went all-out in its effort to defeat the Landrum-Griffin bill. It failed. Does that mean that labor's actual political power is a great deal less than it appeared only a week ago? Or does it mean the public is insistent on a good reform measure? Both elements figured in the House vote, and should make it easier for the Senate to concur.

There is little room for compromise between the Senate and the House bills. The compromises have already been made. The only course for the Senate to follow is to accept the Landrum-Griffin bill.

Mission With Nixon

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 24, 1959

Mr. BOGGS. Mr. Speaker, Mr. George W. Healy, the editor of the New Orleans Times-Picayune, accompanied Vice President NIXON on his recent trip behind the Iron Curtain. He has now completed a very penetrating series of articles about that journey. I commend the series to all the Members of the House and the Senate.

The series is written in an informative and lucid style. The articles are most timely in light of the approaching visit of Mr. Khrushchev.

Mr. Healy is a distinguished journalist and is the recent past president of the American Society of Newspaper Editors. During World War II he had an outstanding record as director of all domestic activities of the Office of War Information.

The first of the series follows:

[From the New Orleans Times-Picayune, Aug. 9, 1959]

NEW YORK-MOSCOW FLIGHT LIKE NEW ORLEANS-SAN FRANCISCO TRIP—CROSSING SO RAPID IT'S HARD TO BELIEVE

(By George W. Healy, Jr.)

Moscow.—What's it like to fly the 4,800-plus miles from New York to Moscow in a record 8 hours 53 minutes?

It feels about like flying from New Orleans to San Francisco—only you don't stop at Dallas, and the plane is almost twice as big and climbs twice as high as the largest airliner now in regular service in Louisiana. It's quieter, too, and the seats are almost as wide as a divan.

This 707–321 intercontinental jet transport carrying its first payload for Pan American World Airways, "raced" an older, smaller 707–121 plane flown by the Military Air Transport Service (U.S., that is) from the Atlantic coast to Moscow.

NIXON OFF FIRST

Vice President RICHARD M. NIXON and part of his official party left Friendship Airport, Baltimore, July 22 about 9 p.m. aboard the MATS plane. Those of us assigned to the newer 707–321 took off from Idlewild Airport, New York, about 10:30 p.m.

Less than 9 hours later were were on the ground in Moscow, waiting for the Vice President's plane, which had refueled in Iceland, to come in for a landing. Just ahead of us had been a Russian jet, returning Nikita S. Khrushchev from Poland.

Every plane in the air near Moscow was "stacked" until Khrushchev, the Chairman of the Council of Ministers of the Union of Socialist Soviet Republics, was on the runway. A commercial jet, coming in from Copenhagen, with William R. Hearst, Jr., and Frank Conniff, the editorial director of Hearst newspapers, among its passengers, was held up an hour to permit the Khrushchev plane and the two Nixon party planes to get on the ground.

CROSSING SEEMS FAST

The Atlantic Ocean, Norway, Sweden, Latvia and a sizable part of Russia are crossed quickly when friends are with you aboard a roomy plane and you can spend about 5 hours in sleep.

So rapid is the crossing that it's hard to believe that it has been accomplished.

Before takeoff Juan Trippe, president of Pan American, and Alfred F. "Mike" Flynn of Pan American entertained at Idlewild's new International Hotel.

When the plane got in the air old friends had held reunions, and strangers had been introduced. Fortunately, many of the 73 official party members and press, television and radio correspondents in the cabin were old friends.

Ruth Montgomery of Hearst headline service and Bob Considine, columnist, talked about Ruth's recent series about Gov. Earl K. Long when I stopped at their seats. Westbrook Pegler reminisced about a "Roman holiday" party given in Washington at the peak of World War II. "Peg" was in the hotel where the party was given, but didn't attend. He wanted to give the party a working over in his column—and did.

Jinx Falkenburg, the model and actress, was aboard in a new role—as correspondent for Newsday, Alicia Patterson's Long Island tabloid. She wondered out loud what the Moscow streets might do to her new shoes.

Demaree Bess of the Saturday Evening Post asked about Charley Nutter of International House, with whom he worked in Russia 20 years ago.

John Charles Daly strolled the aisle—looking for a candidate for "mystery guest."

Most representatives of the press, television and radio who planned to file "spot" copy wondered about how long it would take to pass their stories and pictures through the Iron Curtain. They soon found out: about 8 hours for stories and longer for pictures.

I wondered how much time my duties as a member of the official party and of the President's advisory committee for the U.S. exhibition in Moscow would permit me to write and to file copy. I found that out, too; very little; and when I waited 6 hours for a long-distance telephone call to go through to New Orleans and it never went through, I resolved to file little but write much—for use on return.

The country around Moscow looked just about like the rolling land around Alexandria or Jackson, Miss., as we made a steep bank and sharp turn while coming in for our landing. Farmhouses, though, were in clusters—not widely separated.

From the air the Moskva River, winding through the city, seemed slightly wider than the Red or the Pearl, but not as muddy as either. Its banks are reveted with concrete, like the Works Progress Administration reveted the banks of Bayou St. John.

WELCOME CORDIAL

Our welcoming crowd was neither as large nor as enthusiastic as the one that receives the Zulu King on Mardi Gras. The official hosts, it seemed to me, were formally cordial.

The drive from the airport to the Ukraina Hotel started on a black-topped road like the old Chief Menteur Highway. About every 70 yards was a policeman in a white coat, and in between were groups of Russian men in boots and trousers and jackets resembling army fatigues and women in coveralls.

Occasionally we saw a woman in the field, cutting grass with a scythe.

As we came closer to the city our procession of automobiles moved faster—with pedestrians scurrying to the sidewalks at every intersection. Every principal street in Moscow apparently is as wide or wider than South Clairborne Avenue. None that I've seen has a neutral ground or winky lights. Autos, most of them owned by Intourist, the official travel agency of the Soviet Union, run through red lights faster than through the green.

Russians may work together and play together, but on the streets it's every man for himself.

Wide Honor for Benson

EXTENSION OF REMARKS
OF
HON. E. ROSS ADAIR
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 24, 1959

Mr. ADAIR. Mr. Speaker, the South Bend Tribune recently had an editorial entitled "Wide Honor for Benson." Be-

cause I think it contains much food for thought, I include it herewith:

WIDE HONOR FOR BENSON

The "prophet without honor in his own land" axiom comes to mind as a set of guiding principles drafted by farm economists representing 25 nations comes into the news. These economists are working under the United Nations Food and Agriculture Organization.

When the full membership of the FAO meets later this year, these guiding principles may be presented to it for consideration as farm price policy in the 76-member nations. If so, it will mean that things for which Secretary of Agriculture Benson has been berated in the United States will be recommended for adoption in those 76 nations.

The FAO agricultural economists don't mention Secretary Benson in their declaration of principles. But, obviously, they are impressed by his farm price support reform program.

They advocate price supports below levels that tend to encourage surplus production. That is a Benson objective. They state that price supports should not be based on farm prices and costs in a remote reference period. Secretary Benson recommends abandonment of the 1910–14 "reference period" in the U.S. support system.

In some other respects also the FAO economists rule out things that Secretary Benson has refused to endorse.

Of course, our Secretary of Agriculture isn't entirely without honor at home. But where propaganda and practical politics are concerned, he has been given the worst of it for a long time.

It is highly significant that international endorsement of his farm price support principles is developing.

Courage and Heroism of Dr. Thomas A. Dooley, M.D., Medical Missionary in the Jungles of Laos and Vietnam

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Monday, August 24, 1959

Mr. NEUBERGER. Mr. President, I have spoken before in the Senate of the humanitarian dedication of Dr. Thomas A. Dooley, the American doctor who has devoted his career to caring for natives in the jungles of Laos and Vietnam. I have written in magazines of Dr. Dooley's courage, skill, and tender care. And I have said that this man is the type of ambassador whom our country needs—indeed, whom humanity needs.

Dr. Thomas A. Dooley also emphasizes the wisdom of the proposal by a number of us in the Senate, and by the editors of Life magazine, to send a Great White Fleet of hospital ships across the seven seas bearing American doctors, nurses, and medicines. If one man in the steaming jungles can accomplish what Dr. Dooley has accomplished, then think of the horizons of mercy and healing open to an entire flotilla of Dr. Thomas A. Dooleys.

But now Dr. Thomas A. Dooley, age 32, has cancer, and he has returned to the United States for care—this time not for others, but for himself. His illness, and his typically heroic reaction to it, are described by his personal friend, Dr. Howard A. Rusk, in the New York Times for August 23, 1959. It is a moving tale of sacrifice, valor, and dedication. Everyone reading it will want to help at once Medico, a division of the International Rescue Committee, which helps to send doctors like Thomas A. Dooley, M.D., on their missions of mercy and kindness.

As a person who has suffered from cancer himself, I have special sympathy with Dr. Thomas A. Dooley. As a person whose own doctors are very encouraging with respect to his recovery, I feel confident and hopeful the same recovery will await this dedicated man, Dr. Dooley, who is needed so urgently by the backward and underprivileged races of mankind. I ask unanimous consent, Mr. President, that the article by Dr. Howard A. Rusk, from the New York Times, entitled "Dr. Dooley's New Fight," be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DR. DOOLEY'S NEW FIGHT—PHYSICIAN RELUCTANTLY LEAVES JUNGLE HOSPITAL TO BECOME A CANCER PATIENT

(By Howard A. Rusk, M.D.)

Late last Thursday, one of America's leading unofficial ambassadors, Dr. Thomas Dooley arrived in New York from his jungle hospital in Muong-Sing, Laos, 5 miles from the border of Communist China. At a hurriedly called press conference, the razor-thin (he has lost 28 pounds), driving and dynamic Dr. Dooley calmly announced that he had been ordered back from his post to start the toughest fight of his life. He had cancer.

Three months ago, while on a mission into the interior and while traversing almost inaccessible footpaths, Tom Dooley fell and injured the right side of his chest. The soreness persisted, but he was too busy to pay much attention to a "minor ailment" when there were so many people to treat and so many births to be attended to.

Two weeks ago he noticed a small growth on the chest wall; it had been the size of a pea and now was the size of a walnut. When a visiting surgeon happened by, Dr. Dooley asked him to remove it and take it to the nearest laboratory in Bangkok, Thailand, for examination. It proved to be malignant, but Dr. Dooley would not leave his post.

The Peiping and Hanoi radios had been calling daily for the natives of the villages he served to kill "this American spy." The American Ambassador in Laos had urged him to leave because he was in great danger. Dr. Dooley refused, for he did not want to leave "his people," nor let the Communists feel that they had driven him to cover.

CONFIDENCE IN AIDS

His greatest anxiety now is not the impending surgery nor the pain, but the time it takes and the fear that his patients will feel he has deserted them. He is confident, however, that his 2 assistants, Dwight Davis and Earl Rhine, 2 young premedical students from Austin, Tex., and 23 Lao students and the 5 Lao-trained nurses can carry all the services except major surgery.

Dr. Dooley, who is 32 years old, was a Navy physician in Indochina in 1954 after the fall of Dienbienphu, when Vietnam was partitioned into the Communist north and the free south. Dr. Dooley's mission was to render medical aid to thousands of Vietnamese who chose to abondon their homes in the north and find freedom in the south. After his discharge from the Navy, he spent almost 2 years in Laos, where in 1956 he established his first hospital at Namtha, under the auspices of Medico.

Medico, a division of the International Rescue Committee, 255 Fourth Avenue, N.Y., is a nonprofit, nonsectarian voluntary organization, set up to facilitate scientific communication and to provide health services throughout the underpriviliged parts of the world.

Today, Dr. Dooley feels greatly heartened by the change in this primitive jungle area during the past 3 years. More than 14,000 refugees from North China have come across the border, some seeking and obtaining help at his medical outpost, the only on in that part of the world.

The natives who 3 years ago knew nothing of communism have learned from these refugees, and from information sent out by the Laotian Government, what Communist aggression really means. They learned what has happened in the communes, and they know too that for the last 3 months no refugees have got across the border.

Dr. Dooley, who speaks the native language, points out with great pride that his is not a government operation nor an American operation; it is a partnership. The Government of Laos pays all the internal expenses: food, gasoline, coal, oil; the salaries of physicians, students, nurses; and provides whatever medicine it can. The rest comes from contributions from the American people, who have learned that there is no better tool to promote international understanding than help to the sick and the crippled.

Last year this one American doctor and his staff treated more than 36,000 patients at a total cost of $35,000, less than $1 a year for each patient. Drugs, supplies and surgical instruments were provided by generous American manufacturers. When the Dooley team moves to establish drugs and supplies are left, and natives carry on the services they have been trained to give.

OTHER MEDICO PROJECTS

Dr. Dooley's mission in Laos is only one of a number of Medico projects. More than $500,000 worth of drugs was shipped by Medico to Dr. Albert Schweitzer's hospital in French Equatorial Africa, Dr. Addus Samad's hospital in Karachi, Pakistan, Dr. Gordon Seagrave's hospital in Namkham, Burma, and to Dr. Theodore Binder's hospital in Peru.

Last December, a team of six specialists from the John Hopkins Medical School spent 6 weeks on a teaching mission in Jordan. Working with Jordanian physicians, they diagnosed and treated more than 12,000 patients, leaving behind them not only healing, but understanding.

Medico is Tom Dooley's creation, now and for time immemorial. His own fight against cancer he considers just a skirmish, when the tools of health and healing can combat the international cancer of communism.

His work and his fight against disease and communism must continue. Industry must help; labor must help; the average citizen must help. Congress could help by passing the health for peace bill this session, to establish a new Institute for International Research.

Possibly new clues that would help Dr. Dooley win his fight against cancer might be found in the farflung laboratories of the world, which for lack of funds have not been able to develop their new ideas or new discoveries. But time is of the essence; next session, next year may be too late.

Much that is irresponsible has been said and written about so-called ugly Americans,

Many splendid Americans are daily preventing disease and death, relieving pain and assisting others in the struggle for freedom and a better life. Tom Dooley is truly the splendid American.

Air Landing Rights: New Facts of International Competition

EXTENSION OF REMARKS
OF
HON. JOHN JARMAN
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 24, 1959

Mr. JARMAN. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I wish to bring to the attention of my colleagues a very timely article which appeared in the August 17 edition of Time, relative to the current competitive problems being experienced by U.S.-flag international airlines.

The article follows:

AIR LANDING RIGHTS: NEW FACTS OF INTERNATIONAL COMPETITION

As U.S. international airlines enter the jet age the United States is junking a belief as outdated as its piston planes. The belief was that U.S. flag carriers could hold their lead over a growing flock of aggressive foreign competitors without a drastic change in U.S. air policy. Last week the U.S. airlines got a new warning of the onward march of foreign competition. From the State Department came an announcement that Air France will get an additional U.S. gateway at Baltimore and a polar route to the U.S. west coast. BOAC will get the right to land at Tokyo on its San Francisco-Hong Kong run, which is expected to take $7,800,000 yearly away from U.S. lines. A CAB examiner recommended that Air India be authorized to fly into the United States.

But the biggest threat is Russia's Aeroflot, the world's largest commercial airline. Its 1,600 planes fly 350,000 route-miles, serve 500 airports from Kamchatka to London. Airmen expect that one of the points of discussion between President Eisenhower and Premier Khrushchev will be yet another jump for Aeroflot—the right to carry passengers to and from the United States.

If Aeroflot gets rights into New York, Pan American World Airways will fly into Moscow. But the exchange does not tell the whole story. Aeroflot, which now matches International Air Transport Association rates (though it does not belong to IATA), is expected to behave for a while. But airlines fear that, as a totally subsidized State airline, it will eventually cut fares to aid Russia's economic offensive.

Despite last week's OK on new competition, U.S. lines found some cheer in the decisions. They showed a real change in U.S. policy to conform to the new competitive facts. What made the decisions different was not so much what the United States granted—BOAC, Air France, and Air India were entitled to the routes under reciprocal exchanges—as the manner of giving. France had formally denounced its bilateral air route agreement with the United States 13 months ago, insisted on getting "double trackage" rights, i.e., the right to serve any U.S. city where a U.S. carrier originates a flight for France. The State Department flatly refused.

CAB and the State Department have not always been so alert to protect the interests of U.S.-flag lines. When Great Britain and the United States laid down the basic postwar air route pattern in Bermuda in 1946, the United States was the only nation equipped with planes to operate long-distance service. It campaigned for a free competition agreement, but the plane-short British forced a compromise that provided for an equitable exchange of traffic between nations signing a bilateral pact. Since then the United States has often ignored breaches by foreign airlines, drawn criticism from U.S. carriers for giving out fat new routes without getting much in return.

Now the State Department and the President, who has the final say about what international routes the United States gives out, are ending the giveaway period in favor of more horse trading and stricter rule watching. The new trend was forced by the awareness that U.S.-flag lines could follow the downward path of the U.S. maritime industry. Though 70 percent of all air passengers between the United States and foreign countries are U.S. citizens, the share of traffic carried by U.S. carriers has fallen from 75 percent in 1949 to 60 percent today. In the first quarter this year, BOAC nudged out Trans World Airlines as the second biggest transatlantic carrier (No. 1: Pan American), the first time a foreign-flag line has flown ahead of a U.S. line.

Foreign carriers have rushed into the United States in such numbers that 40 now draw from the U.S. market versus 22 in 1949. Most of them get far more than U.S. carriers out of the bargain, often add extra flights to siphon off as many passengers as possible in violation of the spirit of the Bermuda agreement. In return for permitting Pan American to serve Amsterdam, KLM flies into New York and Houston. Result: last year KLM collected $29.4 million on 86,225 U.S. passengers, while Pan Am got only $1,700,000 from 2,842 Dutch passengers. While cutting into U.S. markets, foreign carriers are strengthening themselves against inroads into their home territory; e.g., European carriers got IATA to place a special tariff on transatlantic jet flights because they do not have jets to compete with the Boeing 707.

As the only private, nonsubsidized air fleet in the world, U.S. carriers must find a better way to face competition if the United States is to keep its place as a powerful air nation. The most obvious solution would be Government subsidy, but most airlines themselves admit that this is a last resort. What they want is for the United States to show a tougher stand in route bargaining and in enforcing current agreements. In the next 5 years the jets will force a revamping of virtually all of the 54 bilateral agreements between the United States and other nations. Unless the United States trades much more shrewdly with foreign airlines, U.S.-flag carriers may not be able to compete in the jet age.

How Crime Rings Seek To Exploit and Widen the Already Perilous Traffic in Obscenity

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Monday, August 24, 1959

Mr. NEUBERGER. Mr. President, a most significant interview with Postmaster General Arthur E. Summerfield appeared in the New York Times for August 23, 1959, regarding what he describes as the effort of organized crime rings to dominate a multi-million-dollar mail-order traffic in sordid and obscene materials.

I think I am as broadminded as any body about censorship. I abhor dictation and control of what people should read and see. But, Mr. President, literature is one thing and outright obscenity and pornography is quite another thing.

With some of my colleagues on the Senate Committee on Post Office and Civil Service, I recently accepted the inventation of the Postmaster General to observe some of the materials which he and his subordinates have taken from the mails. I can only describe the exhibits as sickening. They were not art, they were not literature. They were disgusting attempts to pander to such degrading impulses as masochism, sadism and to virtually every form of perversion. One only can image the impact of these fiendish materials on the minds and habits of children, and it is toward young people that many of such obscenities are directed and sold, according to the information we received from Mr. Summerfield.

Because the Postmaster General has emphasized that crime rings are seeking to exploit this dangerous distortion of youthful minds, I believe the Senate and House should be alerted to his warnings. Therefore, I ask unanimous consent, Mr. President, that the article from the New York Times of August 23, entitled "Mobsters Linked to Smut Traffic," be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the New York Times, Aug. 23, 1959]

MOBSTERS LINKED TO SMUT TRAFFIC—LUCRATIVE MAIL-ORDER TRADE IN FILTH LURES RACKETS, SUMMERFIELD WARNS

WASHINGTON, August 22.—Postmaster General Arthur E. Summerfield says organized crime rings appear to be moving into the multimillion-dollar, mail-order traffic in obscenity.

In an interview Mr. Summerfield said the chief postal inspector had evidence indicating the mobsters were trying to get a share of what already is a $500 million-a-year racket.

Mr. Summerfield started a nation-wide drive against the racket last May 5. L. Rohe Walter, a special asistant to the Postmaster General, said the department estimated that 1,500,000 children in the United States would become victims of the filth distributors.

The text of the interview with the Postmaster General follows in part:

Question: "Mr. Summerfield, you have said commercialized pornography has doubled in the past 5 years. How do you account for this expansion in the business?"

Answer: "Many factors have caused this increase. First, there is the lure of fantastic profits—which run into very high percentages—attracting more and more promoters into this filthy business. We should remember, too, that until recently promoters were, in many cases, given only light sentences by taking refuge behind legal technicalities in certain large cities."

TECHNIQUES IMPROVED

Other significant reasons include technical developments in photographic and printing equipment in recent years. More material can be turned out in less time, at less cost and in less space. Today, for instance, a small dwelling, or even a basement can

house modern machinery that turns out a sizable quantity of obscene material.

Question: "Is there any evidence bigtime, organized crime is getting into the business?"

Answer: "Yes. Our chef postal inspector, David H. Stephens, has reason to believe organized crime has entered the mail-orders obscenity business.

"Not long ago, in New York City, a multimillion dollar mail-order business in obscene and pornographic films, slides, pictures, and circulars suffered a devastating blow with raids in which our inspectors played a prominent role.

"Three of the East Coast's largest dealers were involved and more than 17 tons of pornographic material were seized in one dealer's place of business."

ADS FROM ABROAD

Question: "There have been reports of ads for mail-order pornography from sellers abroad. How can these overseas merchants be controlled?"

Answer: "There is a substantial amount of mail from overseas soliciting the sale of pornographic or obscene material.

"When this department discovers that a foreign operator is advertising the sale of obscene material by mail to this country, resulting in a formal com-issued.

"This order is sent to our postmasters at ports of entry which handle the mail from the particular foreign country from which the foreign operator conducts his business.

"Under this order the postmasters return all mail addressed to U.S. residents by the foreign pornographers, marking it unlawful."

Question: "Last year Congress authorized the Post Office to prosecute those in the business of mail-order pornography in the communities where the material is received, as well as at the points of mailing. How has this new power been used? Is it making a dent on the racket?"

Answer: "The new authority, giving the power to prosecute in home communities all over America where the damage is actually done—rather than in a few big cities where pornography operators have become entrenched behind legal technicalities—is the most effective weapon yet devised against the mail-order obscenity business.

"However, the new law is important in another respect. Not only does it make more prosecutions possible, but sentences are stiffened."

Soviet Bosses Tolerate but Discourage Religion

EXTENSION OF REMARKS

OF

HON. HALE BOGGS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 24, 1959

Mr. BOGGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the second in a series of articles written by George W. Healy, editor of the New Orleans Times-Picayune, and who accompanied Vice President NIXON on his recent trip to the Soviet Union:

[From the New Orleans Times-Picayune, Aug. 10, 1959]

SOVIET BOSSES TOLERATE BUT DISCOURAGE RELIGION—OLD FOLK GO TO CHURCH, HAVE NO JOBS TO LOSE

(By George W. Healy, Jr.)

Moscow.—The Soviet regime tolerates religious activity and at the same time discourages it.

Officially, in Russia, no good stems from any source but the Communist Party. The party doctrine is that there is no God.

Intourist, the official and only travel agency of Russia, employs many young men and women as interpreters and guides. They are trained carefully to see that visitors hear and see what the Government responsible for Intourist wants them to hear and see.

Twice while I was riding in an Intourist automobile, with an Intourist guide, we passed churches. On both occasions I asked the guides if they attended church. Each answered, "I do not believe in God."

NONBELIEVERS

When I asked one of these guides if her mother and father believed in God she replied, "No, my mother and father are Communists."

The first Sunday we were in Moscow members of our party volunteered to report to me what they heard and saw in the churches where they worshiped.

Ernest Barcella of United Press International attended Roman Catholic services in St. Louis Church.

"I was never so depressed in my life," he said when he returned to the hotel. "The congregation was very small and consisted almost entirely of very old women and a few old men. I saw no young people at all. Even the priests were old."

Another Roman Catholic service in a residence was attended by several members of our group. There, Bob Considine, the Hearst columnist, told me, the priest was younger and some young people were at mass.

Ray Scherer, NBC news commentator, went to a Russian Orthodox church. His report was like that of Ernie Barcella—there were no young people in the church, only old ones.

BAPTISTS CROWDED

The brightest picture was painted by Ralph McGill, editor of the Atlanta Constitution, who went to a Baptist service. The church was crowded, he said, with young and old people. The music, according to Ralph, was magnificent.

When I talked with old Russian hands about this I got three explanations.

One said the Baptist service was well attended because the Soviet hierarchy hasn't "lowered the boom" on that denomination.

Another said the Baptist attendance has picked up since Billy Graham's recent visit.

The third gave what seemed to me a logical explanation. When the last of the czars, Nicholas II, through the official church, appealed to the people to stop the revolution, he got no response. The excesses of the czars, of which there is ample evidence in Moscow museums, had alienated the people beyond redemption, and when the official church tried to stop them from overthrowing Nicholas, they rebelled against both czar and church.

ATHEIST MUSEUM

A museum in which exhibits which advocate atheism are displayed is recommended to tourists by the official Intourist guides. I didn't see it.

I'm sure that it's there, because I had the opportunity to talk with young people of Russia.

When we were in the air between Moscow and Sverdlovsk one of our party looked at his watch and remarked, "God being willing, we'll be on time today."

A young Aeroflot hostess, overhearing him, said, "God has nothing to do with it. If the weather permits we'll be on time."

Because I wanted to confirm what Ernie Barcella and Ralph McGill had told me, I spent the early part of our second Sunday in Moscow in shabby, rundown churches.

Without benefit of Intourist guide, I got a taxi driver to take me to the Baptist church. In front of the church was a Russian in his late twenties who approached me and said in English, "Welcome to our church. We are glad to have you."

EVERY PEW FILLED

I had been told at the hotel that the first service at the Baptist church was at 8 a.m. The young Russian who met me, explaining that he spoke English because he had studied in a seminary in England, told me that the first service would not start until 9 a.m. but that I was welcome to join the crowd in the church.

It was then 7:40 a.m., but I went with my escort—the young seminarian—to the balcony of the church. When he took me to a vacant pew I was amazed to find that the church was crowded—every pew filled, except the single one to which I was taken. A throng was in the center aisle.

"When did these people start coming into church?" I asked.

"The church was filled at 7 a.m. It is communion day, but we have seats for guests," he said. "You will sit where Billy Graham sat when he came to our church."

I explained that I could not remain for the 9 a.m. service but that I would like to sit for a few minutes to observe the congregation. Most of its members were old women—handkerchiefs on their heads. The seminarian was the only young person I saw.

Leaving the church, I asked him to explain to my taxi driver that I wanted to go to the St. Louis Roman Catholic Church.

NO ALTAR BOYS

The scene at the Catholic church, as Ernie had reported, was depressing. The priest was old, and there were no altar boys. I had to leave before the Mass ended, to attend Mr. NIXON'S final conference in Russia. Ernie told me that old men performed the services of acolytes.

Bob Considine, who is a Knight of Malta, told me that young people want to go to St. Louis—but if they go they or their parents are forced out of whatever jobs they may hold.

The old people can't work. They can afford to go to church.

Defense Education in Action

EXTENSION OF REMARKS

OF

HON. ED EDMONDSON

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 24, 1959

Mr. EDMONDSON. Mr. Speaker, exactly 1 year ago yesterday, on August 23, 1958, the House approved the conference report and sent to the President, H.R. 13247, which was signed into law on September 2, 1958, and became the National Defense Act of 1958. Mr. Speaker, this program could well be one of the most significant achievements of the 85th Congress, or for that matter of any Congress in recent years, for it strengthens one of the greatest and most important lines of defense we have in this era of the cold war and this age of spectacular and fast-moving developments in science.

With the launching of the first Russian sputnik, this country and the rest of the free world were shocked into the bitter realization that in some of the most urgently important phases of education and science, the Soviet Union had

not only reached our level but had surpassed us.

This rude awakening, unpleasant as it was, brought forcibly home to us that our freedom and our very survival were at stake. Accordingly, we immediately undertook a crash program, stepping up by a tremendous degree our then-existing activities in the field of guided missiles, and in the field of space and astronautics.

Mr. Speaker, while I recognize fully the vitally urgent need for stepping up our actual programs in national defense and believe they should be increased, I also should like to point to the fact that such programs as undertaken under the National Defense Act of 1958 strike at something basic and fundamental to our future, and is perhaps as important in the long run as the present defense program itself. This is true because this act looks to the long-range future, and is helping to prepare our youth and our schools to provide us with the brains, the technical knowledge, and the ability to cope with the scientific problems of the future. Mr. Speaker, the program under the National Defense Act is now underway, and it needs to be strengthened even more, but it is starting out to do a wonderful and most critical job and needs and deserves all the support that we can give.

As an example of how this program works, and of how it is being received across the Nation, I should like to point to an article appearing in the Bartlesville (Okla.) Examiner-Enterprise for Thursday, August 20, 1959. This article, which was written by Harry Culver of United Press International at Oklahoma City, describes the impact on the State of Oklahoma of the first 6 months during which the National Defense Act program got underway. I commend this article as excellent reading for every American who is interested in the workings of one of the finest programs established in recent years as a result of legislation passed by the Congress. Mr. Speaker, I should like to insert this article in the RECORD at this point:

DEFENSE EDUCATION ACT IMPROVES STATE SCHOOLS

(By Harry Culver)

OKLAHOMA CITY.—The National Defense Education Act got off to a million-dollar launching its first 6 months in Oklahoma, the State department of education reported today.

Under the act, which didn't get into operation until early this year, 340 school districts in 75 counties have already started improvement programs, principally in the field of science.

"It has really given science training a real shot in the arm," said Dr. Oliver Hodge, State superintendent of public instruction.

POINTS UP RESULTS

While the full effect will take years to measure, Earl Cross, administrator of the program for Oklahoma, pointed to these concrete results already appearing:

Many small and middle-sized schools have added physics, chemistry, and foreign languages to their curriculums.

Four to six schools are expected to teach Russian this coming year.

A spot check of 26 schools showed a 1,300-percent increase in the amount spent for laboratory equipment.

FUNDS MATCHED

Cross said he has been amazed and gratified by the response and results, which have been financed by only a handful of dollars in relation to the millions spent on common school education in Oklahoma.

Under the act, Oklahoma is expected to receive $844,000 per year for 4 years to buy equipment and facilities for improvement in science, mathematics, and foreign languages.

This amount must be matched dollar for dollar by the local school district.

The first Federal grant to an Oklahoma school was authorized March 9, 1959. Between then and June 30, $532,000 in Federal cash was approved for schools in every county of the State except Cimarron and Jefferson. Matched locally, this provided for a $1,062,000 program.

STRESSES MATH, LANGUAGE

Hodge said the $312,000 left over can be added to the current fiscal year's fund. This will make possible a $2.3 million program for the 1959–60 school year.

Cross said science projects received priority the first year. The coming year, equal emphasis will be given to mathematics and foreign languages.

"The science laboratories in most Oklahoma high schools were in a deplorable condition," Cross said. "Moreover, the elementary science curriculum had amounted to little more than reading text materials."

He said most schools were so poorly equipped that first year expenditures went for very basic equipment, and for remodeling that included such items as running water, electricity and gas for laboratories.

"SEVEN UP" CONGRESS

In the mathematics field, purchases have included TV sets, films, slide rules, measuring instruments and geometric figures to "liven up" courses.

On the language front, money has gone for tape recorders, disk records, reference reading material and film. The step-up in this program is shown by approvals for 1959–60 for a $30,000 project at Enid and a $75,000 project at Midwest City.

While this fiscal year has barely started, 114 schools have already applied for $217,000 in Federal money for the coming term.

Hodge said Oklahoma is far ahead of most States in starting the program because the administrative machinery was set up in the Sooner State even before the Federal money because available.

WISE SPENDING PROMPTED

He said the act has provided a terrific incentive to improve training. And Cross pointed out the local dollar-for-dollar matching requirement encourages a school to spend its money wisely.

Cross said a random check of 25 schools showed they spent $1.24 per pupil for laboratories in 1957–58 and $16.54 in 1958–59.

Ardmore boosted its expenditure from $1,061 to $28,000, Bethany from $135 to $3,044, Clinton from $576 to $6,234, Duncan from $813 to $19,030, Vinita from $350 to $5,024, Beggs from $44 to $1,000, Lawton from $710 to $22,882, Elk City from $259 to $6,430.

A separate phase of the act sets up $72,000 per year in Federal funds for testing and guidance. Sixty-seven districts in 42 counties received $69,000 in Federal funds under this program up to June 30.

"Obviously," Cross said, "conditions more conductive to learning will soon prevail in most Oklahoma public schools."

Itinerary of Annual Official Tour of the Fourth District of Indiana

EXTENSION OF REMARKS

OF

HON. E. ROSS ADAIR

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 24, 1959

Mr. ADAIR. Mr. Speaker, with the adjournment of the 1st session of the 86th Congress, I am preparing for my annual official tour of the Fourth District of Indiana, to meet with the constituents I am privileged to represent.

This year I am planning to visit a number of the post offices in the district and will be available for conference and interviews at each of these places. I believe this will be convenient for persons who desire to discuss legislative or governmental matters with me.

These official tours of the district are always most helpful. They afford a first-hand opportunity of obtaining views of constituents on the most important legislative issues of the day and at the same time of furthering the understanding between the people and their Representative in Congress.

Upon the completion of the tour, I will then have my district office—room 925, Lincoln Tower, Fort Wayne—open to carry on my official duties while I am home between sessions of the Congress. Meanwhile, my office here—room 1511, House Office Building—will be open as usual for the conduct of official business.

I cordially invite my friends and constituents to call upon me for whatever service or assistance I can render with respect to their problems relative to legislative or governmental matters, either while I am on the tour or in my office.

The itinerary of my official tour is as follows:

October 14, 9:30 a.m.: Post office, Ossian.

October 14, 11 a.m.: Post office, Bluffton.

October 14, 2 p.m.: Post office, Decatur.

A Bill To Make Civil Service Retirement Available to ASC Employees on a Voluntary Basis

EXTENSION OF REMARKS
OF
HON. STEVEN V. CARTER
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 24, 1959

Mr. CARTER. Mr. Speaker, today I introduced a bill in the House of Representatives which proposes to extend to the employees of the agricultural stabilization and conservation committees the opportunity to come within the purview of the Civil Service Retirement Act. I am joined in the introduction of this bill by the other Democratic Members of the House from Iowa, the Honorable MERWIN COAD, NEAL SMITH, and LEONARD WOLF.

All of us have, in recent weeks, received considerable mail from ASC people in our congressional districts of Iowa in which they have protested a ruling by the Iowa State ASC Committee making retirement mandatory at age 65. As you know, Mr. Speaker, the retirement age under civil service is specified at 70 years of age.

It seems to me somewhat shortsighted to force these men into retirement at age 65 when they have accumulated such a wealth of experience and when they still have several years of valuable service they could render to the program. Furthermore, such a mandatory ruling fails to take into account a man's individual capabilities and makes chronological age the only criterion of his value and effectiveness in his profession.

I want to emphasize that this bill would not force people to come under civil service retirement who do not desire to do so. This is intended to be purely a voluntary matter. The proposed piece of legislation is designed simply to empower the Secretary of Agriculture to prescribe and issue such regulations as may be necessary to make civil service retirement available to the persons desiring to take advantage of it.

I wish to point out that the Department of Agriculture has no policy which will prohibit a man in the ASC service from working until the age of 70 years.

I should add that my understanding of this matter is that the State committees are presently authorized to request and obtain an employee's resignation for reasons of unfitness or inability to perform his duties. Therefore, such a bill as I have proposed here would not preempt any prerogatives that the State comittees now have in the area of personnel management. The purpose of the bill is simply to establish certainty as to retirement from ASC service where such certainly does not now exist. Judging from my mail, the ruling by the Iowa State Comittee has had an unsettling effect on the morale of ASC employees, and it is simply my wish to restore that morale and at the same time make it possible to utilize the professional capabilities of ASC employees to the fullest extent.

The text of the bill follows:

H.R. 8774

A bill to bring employees of the agricultural stabilization and conservation county committees within the purview of the Civil Service Retirement Act

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) for the purposes of the Civil Service Retirement Act, employees of the agricultural stabilization and conservation county committees shall be held and considered to be employees of the Government of the United States.

(b) The Secretary of Agriculture is authorized and directed to prescribe and issue such regulations as may be necessary to provide a means of effecting the application and operation of the provisions of such Act with respect to such employees.

SEC. 2. Notwithstanding any other provision of law, annuity benefits under the Civil Service Retirement Act resulting from the operation of the first section of this Act shall be paid from the civil service retirement and disability fund.

The Trouble With Steel

EXTENSION OF REMARKS
OF
HON. WALTER NORBLAD
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 13, 1959

Mr. NORBLAD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an excellent editorial from the Oregonian on the steel strike. I commend it to all Members to be read by them:

[From the Oregonian, Aug. 21, 1959]

THE TROUBLE WITH STEEL

Steel management and the Steelworkers Union are alike in claiming that Secretary of Labor James P. Mitchell's factual report on the strike favors their case. A careful reading of this document, however, will cause the American public to cry out, in the words of Shakespeare's Mercutio, when mortally wounded, "A plague o' both your houses."

Beginning in World War II, with the big steel formula, and continuing thereafter—sometimes with the help of big Government, sometimes by union-management negotiation, sometimes after strikes—management and union have jacked up wages and profits until these are out of line with industry generally.

One consequence has been to open the doors to importation of Japanese, British, and German steel, to destroy the competitive position of American steel in foreign markets, and to encourage the displacement of steel by aluminum alloys, plastics, and other products now on their way to giving the steel industry real competition in automobiles, appliances, and other goods.

Steel management did not show much outward concern with halting inflation before it took its stand before this strike. Our belief is that steel is much more concerned now with the future of the industry, from the standpoint of competition, than it is about inflationary wage and price increases. But the union leadership refuses to heed the warnings, although steel hourly and monthly earnings are the bellwether of industry.

A notable section of the report shows that although there has been only a slight rise in the number of production workers in steel, there has been a substantial increase (50 percent, or 34,000, in the first half of 1959) of research, administrative, professional, and clerical workers in steel. This anticipates improvements in technology and output per man-hour, which are essential if steel is to maintain its economic importance.

Steel imports now exceed steel exports, for the first time. The Japanese, particularly, have drastically lowered their prices. The British steel industry made a 2 percent reduction. Other steel countries are working toward an invasion of the American market. Aluminums and plastics are moving ahead.

The best thing that could happen to the steel industry would be a wage and price freeze, as previously pointed out on this page. Instead of encouraging the adamantine union, the Mitchell report should give the membership a clear view of the hazards ahead, even though high steel profits are evident this year. The steel strike should be settled quickly on the basis of minimum changes, if any. Whether it likes it or not, basic steel may be forced to reduce prices to hold its position in the marketplace.

Bridging the Wide Missouri

EXTENSION OF REMARKS
OF
HON. QUENTIN BURDICK
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 24, 1959

Mr. BURDICK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution adopted by the Kulm Lions Club of Kulm, N. Dak., pointing out the necessity of a bridge across the Missouri River:

"Whereas public interest has been directed to the necessity of a bridge across the Missouri River somewhere between Mobridge, S. Dak., and Bismarck, N. Dak.; and

"Whereas two bridges across the Missouri in South Dakota have been declared surplus since they had to be replaced by longer bridges because of Oahe Reservoir, and that these bridges have been suggested for relocation upstream from Mobridge, S. Dak.; and

"Whereas the distance between Mobridge, S. Dak., and Bismarck, N. Dak., is approximately 140 road miles, and that a point on the Missouri in Emmons County west of the city of Linton would be approximately half way between Mobridge and Bismarck, and that the stretch between these two cities is the longest stretch on the Missouri River without a bridge in either North or South Dakota, and that a public free bridge between these two points would be for the benefit and convenience of the public: Now, therefore, be it

"Resolved by the Kulm Lions Club, representing the merchants and professional men of the city of Kulm, N. Dak., That we go on record urging and requesting the Federal Government in cooperation with the State of North Dakota, to construct a bridge across the Missouri River at some point in Emmons County west of Linton, N. Dak.; be it further

"Resolved, That copies of this resolution be forwarded to the State highway commissioner, U.S. Representatives DON L. SHORT and QUENTIN BURDICK and U.S. Senators MILTON R. YOUNG and WILLIAM LANGER."

The foregoing resolution was adopted at the regular monthly meeting of the Kulm Lions Club, held on August 18, 1959.

HAROLD LUCK,
President.
GOTTLIEB SCHOCK,
Secretary.

Russians Grim Generally, Enjoy Fun at Right Time

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 24, 1959

Mr. BOGGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the third in series of articles written by George W. Healy, editor of the New Orleans Times-Picayune, who accompanied Vice President NIXON on his recent trip to the Soviet Union:

RUSSIANS GRIM GENERALLY, ENJOY FUN AT RIGHT TIME—PROVE CORDIAL WHEN OCCASION OPPORTUNE

(By George W. Healy, Jr.)

MOSCOW.—Life in the capital of Russia is neither all drab nor all gay.

The report that Russians seldom smile is fiction. They are grim at work and on the streets, generally, but at the right times and in the right spots they have their fun. Some American tourists in Russia seldom smile.

Tourists now traveling from the United States to Russia must move under the auspices of Intourist, the official and only Soviet travel agency. Guides employed by the agency serve as companions and interpreters for the tourists. Theoretically, payment, in advance, to Intourist of a fee of 300 rubles per day entitles the tourist to room, food, Intourist guide services, and 3 hours' use of an automobile per day.

I saw some tourists who had been in Moscow 2 weeks without obtaining use of an Intourist automobile. They got the guide service all right, but had to hire taxis because when they asked for Intourist cars they were told that all had been engaged in advance.

When 11 other newspapermen and I made our first trip to the Kremlin, where Vice President NIXON was making his first official calls, we were accompanied by an Intourist agent. While we were waiting at the Russian equivalent of the White House, within the Kremlin walls, I suggested that I'd leave the group—and the guide—and take a walk through the central area of Moscow on my own.

UNGUIDED STROLL

Ray Scherer, the television and newsman, advised against it. Without an interpreter, he said, I might have difficulty.

I walked alone across Red Square and past the Moscow Hotel. Between the Moscow Hotel and the Nacional Hotel I met Bill Hearst, the publisher, who was making his third visit to Moscow. He also was out for a stroll without Intourist guidance.

Using his directions, I had little difficulty finding several shops and making my way to the Hotel Ukraina, where our party was quartered. Incidentally, this hotel looks like the Singer building.

On the walk through downtown Moscow I received no smile from a Russian. The women who were walking, most of them on the heavy side, all had big bags in which they seemed to be carrying results of shopping and a week's wash. Without exception, they were in a hurry—staring straight ahead and walking fast. There were few men on the streets at the time, shortly before noon.

I then got the impression that Russians don't like to smile. It was a wrong impression, for a few afternoons later when Arnold O. Beckman, the California instruments manufacturer, and I went to the Russian agricultural and industrial exhibition—an elaborate permanent installation—every Russian we saw seemed to be having a good time. They paid little attention to us unless we bumped in a crowd. Then they were cordial.

After we caught up with the Vice President, who had gone to the exhibition from the embassy, we saw a real demonstration of cordiality. Walking with the Vice President through the exhibition grounds was like crossing Canal at Royal at noon on Mardi Gras. He wasn't exactly mobbed, but he was close pressed by hundreds of Russians who smiled and waved at him.

Russians can be and are gay when the occasion is appropriate.

Russians like night life too, in addition to the ballet; and an incident in the night club of Praga restaurant, very much like scores of night clubs in the United States, created something of a sensation.

The time we visited this night club was our first evening in Moscow. The band was alternating between American music, with plenty of Dixieland and Strauss waltzes.

There were two parties of Americans in the restaurant, Tom Deegan, the New York railroad and public relations man, was host to one party. Tom should be remembered in New Orleans as the man who brought the Duke and Duchess of Windsor on Mardi Gras, 1950. Merle Oberon, the motion picture actress, and her husband were hosts at the other American table.

All others in the night club, which is sizable, were Russians.

ATMOSPHERE CHANGES

Russians danced with Russians and remained with Russians and Americans danced with Americans until Mrs. Robert H. Montgomery, who writes as Ruth Montgomery, and I did a Charleston. Russians stopped dancing to stare—and then started to try to do the old dance themselves.

A young Russian, well dressed, without tie, came to our table and asked Mrs. Montgomery to show him the step. She did, and thereafter Russians and Americans got "buddy buddy."

Richard Davies, an escort for the vice president's party, told me that an incident of this kind would have been unheard of 5 years ago. Dick Davies lived in Moscow from 1951 to 1953, when, he said, Russians did not speak to Americans in public places.

The first two things about Russia that seemed unusual were these: at this season there's little darkness, and men don't step aside to let women enter elevators or buses.

In July and August it is light enough to play baseball, without artificial illumination until 10 p.m. and it's light again at 3 a.m. I didn't stay up until 3 a.m., but know that it's light at that hour because I didn't pull the curtains on my hotel window the first night in Moscow.

Bootstrap for Indians

EXTENSION OF REMARKS
OF
HON. E. Y. BERRY
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 24, 1959

Mr. BERRY. Mr. Speaker, under leave to extend my remarks, I wish to insert in the RECORD two very fine editorials on my program, "Operation Bootstrap, reservation style."

Following is the editorial from the Arizona Republic, Phoenix, Ariz.:

[From the Arizona Republic, Aug. 17, 1959]

BOOTSTRAP FOR INDIANS

Puerto Rico, once "the poorhouse of the Caribbean," now boasts the second-highest standard of living in Latin America. It ranks in sixth place as a customer of American goods. Since 1940, the annual per capita income of the islanders has increased fourfold and life expectancy has jumped nearly 20 years.

This miracle of economic growth is attributed to Operation Bootstrap, a far-reaching plan started in 1946 to industrialize the Puerto Rican economy and diversify its single agricultural crop of sugar. The heart of Operation Bootstrap is long-term tax exemptions to new industries and long-term leases of plants to industries that will move to Puerto Rico.

Representative E. Y. BERRY, a Republican Congressman from South Dakota, visited Puerto Rico last year and examined the results of Operation Bootstrap. He was so impressed that he now wants to apply the same sort of program to American Indian reservations, which are certainly among the most depressed areas in the United States.

Mr. BERRY represents 30,000 Indians living on four Sioux reservations in South Dakota, but his plan would extend to reservation Indians everywhere, including Arizona. It would give industries moving onto Indian reservations complete exemption from Federal, State, and local taxes for 10 years.

Representative BERRY points out that the U.S. Government now is spending about $180 million a year on Indian welfare programs. The amount undoubtedly will increase, since four out of five Indians on reservations cannot get jobs. However, if industries could be lured onto the reservations by tax exemptions, the average Indian would "gladly swap a Government relief check for a weekly pay check," says Mr. BERRY.

Arizona's Navajo Indians, in the Four Corners area, are enjoying the first fruits of an economic boom, due to gas, oil, power, and uranium developments. But industrialization has been slow on the Navajo as on all other reservations. If tribal councils could offer tax concessions, as proposed in the Berry bill, the basis would be laid for a Puerto Rican-type development on Indian reservations.

Congressman BERRY calls his project "Operation Bootstrap, Indian style." It has been endorsed by Indian tribal chairmen, Indian agency superintendents, church groups, and mission priests. It deserves the closest study by Congress at the soonest possible time. Certainly the United States owes as much to its first citizens, the Indians, as it does to its oldest Territory, Puerto Rico.

From my home State of South Dakota, the Mitchell Daily Republic has commented favorably on the proposal as follows:

[From the Mitchell (S. Dak.) Daily Republic, Aug. 18, 1959]

INDIAN-STYLE BOOTSTRAP

West River Congressman E. Y. BERRY reports enthusiastic response to his bill (H.R. 7701) "Operation Bootstrap, Indian-style," patterned after a successful Puerto Rican plan by which that commonwealth vastly improved its social and economic position.

BERRY hopes that approval of his measure will bring about similar improvement for American Indians.

Puerto Rico's Operation Bootstrap, as reported in Congressional Quarterly, is designed primarily to industrialize and diversify the island's rum-and-sugar economy by encouraging new industry to locate there.

Back in 1950 Congress passed a bill exempting Puerto Rico from U.S. individual and corporate income taxes, excises, estate and gift taxes and permitted the commonwealth to retain proceeds from its customs duties.

As a result, Puerto Rico was able to exempt new industries from municipal, corporate, partnership and personal income taxes for 10 years; from taxes on dividends or profits for 7 years, and from taxes on property from 5 to 10 years.

The Commonwealth government will sell or lease a plant on a long-term basis to new firms and offer them technical assistance. These exemptions go to industries never in operation in the island prior to June 2, 1947, to 34 specified industries ranging from animal feed to tinware manufacture, and to tourist and commercial hotels. Under this plan 600 industries have located in Puerto Rico.

Other changes made by Operation Bootstrap include its rise from a burden to the U.S. Treasury to sixth place as a major customer of American goods. The island now buys more from the United States on a per capita basis than Canada. In the past 20 years, Puerto Rico has increased per capita income fourfold. Life expectancy has increased nearly 20 years and infant mortality has been halved.

Patterning a plan for American Indians from Operation Bootstrap can work wonders on reservations where it is impossible to support, without Federal relief, the increasing population, BERRY believes.

His measure would authorize tax exemptions on Indian reservations the same as were allowed in Puerto Rico; it would authorize Indian tribes to set up corporations empowered to construct plants to sell or lease to industrial firms on a long-term basis, subject to the approval of the Secretary of Interior. The plants could be built with tribal funds, Federal loans, or through commercial loans to tribal corporations.

Industries moving onto reservations would receive complete exemption from Federal, State and local taxes for 10 years, the right to amortize property eligible for depreciation on a 5-year schedule, a deduction for 5 years from any Federal tax in the amount equal to three times the annual welfare payments paid to an Indian prior to his industrial employment, and Government aid in conducting on-the-job training for Indian employees.

BERRY contends that most Indians on relief "would gladly exchange a Government relief check for a weekly paycheck."

"Operation Bootstrap, Indian-style" would be a step in the right direction. Training and employment for the Indian people on their own reservations could lead to the elimination of Federal relief program, could improve their health and living conditions, could make them an economic asset instead of an economic liability. It deserves serious consideration.

The Expanded Highway Program

EXTENSION OF REMARKS
OF
HON. RUSSELL V. MACK
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 20, 1959

Mr. MACK of Washington. Mr. Speaker, at the time General Eisenhower became President of the United States in 1953, the National Government was collecting about $850 million a year from the Federal gasoline tax. It was expending $550 million of that gasoline money on highway construction and diverting about $300 million to use for other purposes including foreign aid.

President Eisenhower felt that all Federal gasoline revenues should go into building more, better, and safer roads for the motorists who pay the gasoline taxes. President Eisenhower recommended that be done.

In the Republican Congress of 1954 this was accomplished by Congress providing grants to the States for highway building purposes of $850 million a year or just about the amount of the gasoline tax revenues.

The result was a substantial speedup in highway construction.

But the President did not believe even this $300 million a year increase in road funds was enough to do the road building job that must be done to provide the Nation's growing millions of motorists the roads they require.

THE EXPANDED HIGHWAY PROGRAM

Great as was the advance made in the first years of the Eisenhower administration in increasing highway building it was not great enough to satisfy the President's desire. He named a Commission to study the highway problem—the Clay Commission. The Commission recommended the building of 37,000 miles of the Interstate Defense Highway System into four-lane divided highways that would connect and serve nearly all cities of great population in the Nation. The Congress backed up the Commission's recommendation.

Under the leadership of Chairman GEORGE FALLON, of Maryland, of the House Subcommittee on Highways, legislation was drafted and enacted to fulfill the Commission's recommendations.

It is said, and I think correctly so, when this highway program is completed in about 16 years the American motorist can drive from the Canadian border, north of Bangor, Maine, to the Mexican border, south of San Diego, Calif.—a distance of about 4,000 miles—on a four-lane divided highway on which there is not a single road crossing or a single traffic light.

The same freedom from cross traffic over four-lane divided highways will prevail on many other highways running east and west and north and south across the Nation.

Most cities will be bypassed, the roads going around and not through the towns.

Instead of the $550 million a year spent in 1953 and previous years and the $850 million spent in 1954 and again in 1955 on highways, the National Government now is spending in excess of $3 billion a year on building more, wider and safer highways. This is in addition to what the States spend.

WHO WILL PAY FOR THE ROADS?

Who will pay the cost of these new roads?

There has been some increase, of course, in the tax on gasoline and upon tires to finance this gigantic expanded highway program.

The road program, however, in the long run will pay for itself. Everyone using these highways will escape great wear and tear on their tires and cars. They will be safeguarded from being involved in accidents that usually involve expensive automobile repair bills and often even more costly doctor, hospital, and medical bills.

Each year about 40,000 Americans are killed in traffic accidents. The Safety Council estimates that the four-lane divided highways with no cross traffic will cut these fatal accidents in half. Also, the motorists by traveling over wider and better alined highways will be able to bypass cities and will save much time in getting from place to place.

ROADS PROGRAM HELPS PROSPERITY

The great road program the Eisenhower administration and the Congress has developed during the past few years also is playing an important part in keeping employment high, unemployment down, and adding to the general prosperity of the Nation.

Tens of thousands of American workers are finding employment in helping to build the new and additional highways.

In addition, other thousands obtain employment in the factories and businesses engaged in supplying the materials required in highway construction, such materials as cement, gravel, steel, lumber, and plywood. Still others gain work in factories engaged in producing roadbuilding equipment. Because of the highway program, there is less unemployment than there otherwise would be.

As in all great adventures, everything has not gone in the enormous roadbuilding program as expected.

Too much emphasis, for one thing, has been given to taking care of big city needs first and letting the building of roads in rural sections go until later. The result has been that in the first years of the program too much money has gone into buying costly rights-of-way for highways and not enough into actual construction. Most of this, however, is now behind us and we can expect highway construction to go forward much more rapidly.

How enormous this highway program really is can be understood by a look at what the program is doing for our State of Washington.

In 1953 and previous years Washington State received about $8 million a year of Federal aid for highway building. Under the first Eisenhower road program, started in 1954, Washington began receiving $12 million a year of Federal funds for roads. This year, and in the years ahead, Washington State will receive grants in excess of $50 million a year for highway building. Our State of Washington is receiving six times as much Federal money now for roads as it did a brief 7 years ago when President Eisenhower first came into office. Similar increases have been made to all other States.

America's expanded highway program unquestionably is the greatest public works undertaking in all the history of mankind. It should be continued to completion at the present rate and level of construction. By doing that the greater safety of American motorists will be insured and prosperity and employment will be kept at a high level.

Labor Bill Fight Leaves No Heroes

EXTENSION OF REMARKS
OF
HON. JEFFERY COHELAN
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 24, 1959

Mr. COHELAN. Mr. Speaker, among the commentaries on the recent House action on labor reform legislation, the following article by Columnist Marquis Childs which appeared in the August 21 edition of the Washington Post is one I wish to include in the RECORD under permission to extend remarks:

LABOR BILL FIGHT LEAVES NO HEROES
(By Marquis Childs)

No matter what the final outcome in the dispute between House and Senate over labor reform legislation, the political wounds opened in the Democratic Party will be long in healing. The result, it is generally agreed, has been to widen the split between the liberal-labor wing and the conservative southern wing of the party.

A smouldering resentment remains, with the unhappy conviction that presidential ambitions took precedence over the welfare of the party. As to the welfare of the Nation, it was obscured by the fierce, knife-throwing factionalism that tore the House apart as the tough Landrum-Griffin bill was passed.

Politically speaking, it now appears that if a labor bill is finally adopted at this session—coming out of the Senate-House conference—the credit will go largely to Senator LYNDON B. JOHNSON, the majority leader. To put it another way, the leading Democratic presidential aspirant in the Senate, Senator JOHN F. KENNEDY, of Massachusetts, will get at best a mark of passing on labor legislation.

The suspicion is strong in the House that JOHNSON planned it that way. If the Kennedy-Ervin bill, as approved by the Senate, had been matched by a moderate bill in the House, then JACK KENNEDY would properly have been identified as the father of labor reform.

The suspicion of LYNDON JOHNSON goes to the fact that 17 of the 21 Democrats from Texas in the House voted for Landrum-Griffin. At the same time they were, in effect voting against their leader, Speaker SAM RAYBURN, who had staked his reputation and prestige on stopping the so-called tough bill and putting over the moderate Elliott bill. A switch of 15 votes would have killed Landrum-Griffin. Why, House Members who got badly battered in the fight are asking, could not the great and powerful LYNDON JOHNSON have exercised some authority with the delegation from his own State?

It must be said, however, that opinion in Texas tends to be strongly antilabor, and the volume of mail pouring in on Texas Congressmen was overwhelmingly for a strong bill.

If organized labor made just about every mistake that could be made, overplaying the hand in an outrageous way, the northern wing of the party with its strong labor element will nevertheless have at least a veto at next year's Democratic convention. The Republican-southern Democratic coalition with Texas in the vanguard, so ably led by Republican leader CHARLES HALLECK, has left an indelible mark.

When the shouting of the victors has died down, the effect of this coalition on political fortunes next year may be more significant than anything else to come out of the controversy. By their victory the Republicans blunted an issue which in the past they have exploited to the hilt—the charge that organized labor runs Congress and dictates the kind of legislation that is to be passed.

Not only President Eisenhower, who will not be running for office next year, but Vice President NIXON, campaigning for the Presidency, and his closest allies in the Government did yeoman work for a victory that the National Association of Manufacturers claims as its own. NIXON met wavering Republican Congressmen at breakfast on the morning of the test. His able and loyal lieutenant, Attorney General William Rogers, provided help in the big administration push.

It may be, of course, that the crime and corruption exposed by the McClellan committee had conditioned the public, including many trade union members, to accept what has been widely propagandized as a strong bill. But, quite possibly, there may be some early disillusion over just what has been achieved.

The comment of James R. Hoffa of the Teamsters Union, target of the most violent feeling, should not be overlooked. Hoffa said that with only minor changes his union could live with the bill passed by the House.

This bears out what Senator KENNEDY has been saying about the "tough" Landrum-Griffin bill. That is, that it will not substantially affect the big, powerful labor unions such as the Auto Workers and the Teamsters. But it penalizes smaller unions and the task of organizing, particularly in the South, will be all but impossible.

Perhaps, in view of this, the laurels of victory now being distributed will fade rather rapidly. By 1960 they may be as dust and ashes.

The Nation's Financial Troubles Similar to Those of Michigan

EXTENSION OF REMARKS
OF
CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 20, 1959

Mr. HOFFMAN of Michigan. Mr. Speaker, thinking a suggestion from an able Michigan State senator—because the Nation's problem is similar—might give me an answer which would be helpful here, I wrote to my home senator, the Honorable Edward Hutchinson, of Fennville, Mich., who, for 13 consecutive years, has ably served the State, as both representative and senator, asking why Michigan, a prosperous industrial State, was in trouble financially. I received the following-answer:

THE SENATE,
STATE OF MICHIGAN,
Lansing, August 13, 1959.

Hon. CLARE E. HOFFMAN,
House Office Building,
Washington, D.C.

DEAR CLARE: You have asked me why Michigan, a prosperous industrial State, is in its present financial difficulty.

The reason is this: Michigan has not been living within its means. The present tax structure, unduly charged as a patchwork, is essentially geared to the State's economy. When times are good and the economy expands, so do the dollars of tax increase. When the economy contracts with recession, so do the dollars of tax decrease.

The trouble in Michigan is that Governor Williams and his administration failed and refused to reduce expenditures during the recent recession. He was directed to do so by the legislature but ignored the law.

Now the legislature is called upon to exact more of the people's goods, not alone to balance a new budget but to pay a deficit as well.

To accomplish this purpose, Republican senators propose a penny increase in the use (sales) tax. House Democrats, in Michigan's divided legislature, insist on writing into our tax system the philosophy of an income tax. They want just a little—a foot in the door. Each side is strong enough to block action. Neither side is strong enough to take action.

In Michigan, our economy is as fluctuating as automobile production. We need a stability in our tax revenues. Sensitive as our present tax structure is to the economy of the State, we would suffer even a greater feast or famine situation if our State revenues were tied to an income tax.

The Federal income tax system has been made to work successfully, only because the Federal Government has unlimited constitutional borrowing power. Michigan has no constitutional power to borrow money. Its operation is wholly dependent on tax collections. We Republicans maintain that changes in our tax system should be to provide a greater stability of tax revenues, and a State income tax in any form would defeat that principle.

Sincerely,

EDWARD HUTCHINSON.

Inter-American Development Bank

EXTENSION OF REMARKS
OF
HON. ELIZABETH KEE
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 20, 1959

Mrs. KEE. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include copy of my newsletter which was released today.

KEENOTES BY REPRESENTATIVE ELIZABETH KEE, OF WEST VIRGINIA

WASHINGTON, August 24, 1959.—Quite often Congress passes significant legislation which is largely if not completely ignored by the press and the public. A case in point is the Inter-American Development Bank which was recently created by Congress with a capitalization of $1 billion.

The United States will provide $450 million of the capital. Latin American nations will provide $550 million and will be represented on the governing board.

The significance of the new Bank lies in the fact that it marks an entirely new departure in our economic relationship with friendly nations to the south. Economic aid, in the form of direct grants and gifts, are to be played down. Instead, our Latin neighbors will look to the new Bank for loans to provide the capital necessary for economic development.

The United States is prone to forget just how important Latin America is to this country. Trade between the two areas runs into the hundreds of millions each year. Also, it is important to our national security to make sure that Communist regimes do not gain a foothold in the Western Hemisphere.

All of our neighbors to the south, with the possible exception of Mexico, are experiencing dangerous economic difficulties. All of them need to expand trade and to speed up industrial development. The United States cannot provide all of the capital that is

needed. Even if we could, it would not be good policy to do so. The countries themselves need to feel they have a vital stake in their own developmet programs.

The new Bank will fill this great need. It is going to be a businesslike operation. Borrowing nations will have to come up with sound programs which bank officials can accept as having a good chance of paying off.

This is a cooperative venture. Direct grants or gifts are too one sided to be completly effective.

This shift of emphasis in our economic aid program in Latin America is significant. I hope it will point the way to a gradual elimination of the economic aid program on the present basis.

Also, this year Congress approved another far reaching international financing plan which attracted very little attention. This was the International Development Association which is to be an adjunct of the World Bank.

It is hoped this new Bank can put to useful, productive work much of the $3 billions in foreign currency which the United States has acquired since the end of the war. It would work like this: Country X applies to the World Bank for a loan of $50 million. The World Bank feels it cannot loan but $30 million. The new organization would then make a secondary loan of $20 million, almost all in foreign currency of various kinds which can be used to buy materials in all parts of the world.

The new organization should make it possible for the World Bank to greatly step up its operations. And the more the Bank can loan, the less will be the need for direct grants of money by the United States to underdeveloped nations struggling to build a sound economy.

The people are getting tired of Congress voting billions each year for gifts to foreign countries. The new loan programs offer a sound, workable alternative and they should be much more successful. It puts our economic relations on a sound, businesslike basis and should in the long run help end the annual drain on our Treasury.

We've Done This Right

EXTENSION OF REMARKS
OF
HON. CLEMENT J. ZABLOCKI
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, August 24, 1959

Mr. ZABLOCKI. Mr. Speaker, one of America's outstanding correspondents, Ernest K. Lindley, has made an excellent summaton of his findings in Asia during his recent tour. While many individuals are looking at minute details of a particular program in a particular country, Mr. Lindley has brought into focus some of the fundamental accomplishments not only of our own program but of the activities of the Asians themselves. I am happy to insert his column that appears in the magazine Newsweek for August 24, 1959:

WE'VE DONE THIS RIGHT
(By Ernest K. Lindley)

The favorable turn of the tide in free Asia is not due exclusively to reaction against the Communist policies and deeds which I cited last week. Side by side with more realism about the Communists I found on my recent tour a better understanding of American purposes and, more widely than before, friendly attitudes toward us. In talks with Asians from one end of the continent to the other I sought the reasons for this. Some are rather general, a few specific. Among the more important:

1. Time and experience have gradually convinced many doubting Asians that American policy really is anti-imperial, that it sincerely seeks to help the free peoples of Asia preserve their independence and achieve a better life. For a time many Asians tended to lump us with their former European masters. Increasingly, they have come to see us as a distinct breed (however, Asian feelings about Europeans, have been improved by Britain's enlightened colony-into-commonwealth policy and, recently, by the free choice that De Gaulle gave the French colonies). There is also less of a tendency to regard American capitalism as a form of imperialism. Most Asian governments now want the help of American private capital and management, although not all have taken the steps necessary to attract them.

2. Our policy of extending economic and technical aid, with no political strings attached, to the neutralist countries has improved their attitude toward us.

3. Year by year, there are more Asians who have had part of their education or training in the United States or under American guidance in their own countries. There are now scores of thousands of them—military officers, public-health experts, agricultural specialists, teachers, all manner of occupations. Overwhelmingly—a few go sour—they are friendly to us and give others a sympathetic view of America.

4. With the passage of time and the completion of some projects which took several years, the results of our economic-aid program are more visible and more widely appreciated. We have made mistakes (I will discuss these in a later column) but overall our aid program is a success.

5. Our defensive alliances and military-aid program have helped to generate confidence and stability, especially in the front-line countries. Generally there is a good, comradely relationship between Asian officers and the Americans who work with them. SEATO is increasingly valued even in some of the nations which for various reasons have not joined.

6. We further reassured our friends by two actions last year: Sending troops into Lebanon and supporting Nationalist China in the Red assault on the offshore islands. Our Asian allies sometimes wonder whether we will come when needed. Evidence that we will bolsters them. They find reassurance also in the SEATO military exercises, in which Western forces take part.

7. Our refusal to recognize the Peking regime is paying better dividends, now that the commune system and Tibet have shocked so many formerly neutralist Asians.

8. Many more individual Americans and Asians have come to know and like each other. Most Asians like American informality. Americans find that most Asians, when approached as equals and in a friendly way, respond cordially. Gradually we have built up a corps of people who understand the various Asian peoples and have won their confidence. Officially we are well represented. We have sent some misfits in the past and undoubtedly have some in Asia now. But on this last tour I encountered only a few and they were in minor posts. With two exceptions—one a gifted and respected semipro, Ellsworth Bunker, in India—every American Ambassador in Asia is a career officer. In some places a politician with a flair for public relations might do better than a professional diplomat. But we have a competent lot of Ambassadors in Asia, and some are very, very good. USIS has many very capable and experienced men, and I was favorably impressed with scores of other official Americans I met.

It is time to discard the ugly fiction that we have bungled in Asia. We have made mistakes but, on the whole, our policies are sound, reasonably well executed, and productive of heartening results.

A Time for Maturity

EXTENSION OF REMARKS
OF
HON. J. CARLTON LOSER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, August 24, 1959

Mr. LOSER. Mr. Speaker, a timely message on individual responsibility was delivered by the president of one of the leading educational institutions in Tennessee, David Lipscomb College, to the graduating class of George Peabody College for Teachers, in Nashville, Tenn., a few days ago. Under leave granted to extend my remarks in the RECORD, I am including an editorial from the Nashville Banner which contains excerpts from Dr. Athens Clay Pullias' challenging address. I believe each Member of Congress will want to read the editorial, and it follows:

A TIME FOR MATURITY

Human progress is the sum of individual achievement, the contributions of men measuring with mind and heart and hand to the challenge of individual responsibility; not herded as sheep, or goaded by collectivists, into a pattern of intellectual conformity called mass thinking.

That vital concept of individual responsibility was the timely message of Athens Clay Pullias, president of David Lipscomb College, addressing the Peabody College graduating class—the warning that when individualism is in peril the future welfare of mankind is endangered, and that the only answer to this threat is mental and spiritual maturity.

One could note that it was that maturity of great minds that grasped the realities of individual worth and dignity—and of that principle founded a system of government recognizing unalienable rights. It accented the freedoms which brought into existence great institutions to enhance, by individual preparation and opportunities, the betterment of all mankind. And again, this age is the beneficiary of its labors.

Yet, as Mr. Pullias warned, in spite of this: "Changes of our time have led to a breakup of the foundation of values—including the moral and the ethical. A worldwide atmosphere of fear prevails * * * (and) finally and most serious is the threatened destruction of the individual by the State, the machine, the organization and general spirit of collectivism in our time. The individual is in peril."

That individual being is the basic unit in society. Achievements of the past and the threats to our future have meaning only in terms of the individual. The meaning of life itself—as he eloquently pointed out—is centered in the individual person, not in the state, or in some unfeeling social organization. "A nation makes war—but it is the individual boy who dies, and a lonely mother who weeps over his grave."

Every forward step by the human family in the long and painful climb out of the darkness toward the light has been taken by developing and freeing the individual person.

As he said, the most serious threat in modern life is that of destroying the dignity and value of the individual person. In the to-

talitarian state this destruction is accomplished directly by force; in the Western World it may come by more subtle processes—including the pressure for conformity, the leveling power of the group, the highly touted mass thinking.

"The only power which can save the individual from this destruction is for him to become the quality of person who can live with distinct purpose—free, strong, and fearless—at home with self, fellow man, and God * * * a mature person.

"Such a person can freely work together with other people of good will to promote the general welfare of mankind and the glory of man's Creator. But he will do so of his own free will and choice, not under the lash of group control."

That is the challenge to individuals in a free land—a message comporting with the ancient and fundamental spirit of America. It honors a creed founded in conscience which only the exchange of birthright for a mess of material pottage could disestablish.

Khrushchev Attacks Laos

EXTENSION OF REMARKS
OF
HON. W. J. BRYAN DORN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 24, 1959

Mr. DORN of South Carolina. Mr. Speaker, it is no accident that the Communists are stepping up their timetable of conquest in southeast Asia along with the Khrushchev visit to the United States. The facts in the following article should startle us into a realization of the real purpose of the Khrushchev visit:

FLOWERS FOR THE HOST
(By Joseph Alsop)

Nikita S. Khrushchev has now followed his acceptance of the President's invitation to the White House with an open display of contempt for his future host.

There is no other way to read the new Communist aggression in Laos. The situation there can become very serious, indeed, touching off another Far Eastern crisis of Quemoy-like intensity. If the Communist aggression is not repelled, moreover, all the neighboring countries—South Vietnam, Cambodia, and Thailand—will at once find themselves in danger.

Nonetheless, the indication of Khrushchev's contempt for President Eisenhower and the Nation he leads is probably the most disturbing feature of the very disturbing Lao trouble. On this point, the facts speak for themselves.

In brief, the President's announcement of the coming Khrushchev visit was made on August 3. Very nearly simultaneously, the attack on Laos began. The attack took the form of border crossings from Communist North Vietnam into Laos by Communist infiltration units trained and armed for the purpose by the North Vietnamese. Such obscure guerrilla movements in those jungle-clad mountains can hardly be precisely dated. Yet the major border crossings quite certainly began after Khrushchev's mid-July acceptance of the President's invitation, even if some occurred before the public announcement.

The timing of this opening of the attack on Laos is inescapably significant. Yet a good many people in this increasingly wishful city, and especially a good many of the people around the President who had pinned their hopes on the Khrushchev visit, are still trying to escape the meaning of this timing of the Laos attack. "It is Peking's enterprise, not Moscow's," they argue.

On this point, too, however, the facts speak for themselves. The attack on Laos was hardly underway, when Khrushchev received the organizer of the attack, the North Vietnamese Communist boss, Ho Chih Minh, for an extended state visit in Moscow.

While Ho was in Moscow, an obviously planned series of statements was issued. First, Ho's government in Hanoi blamed the trouble in Laos on the presence of a 150-man American mission to train the small Lao army. Then Mao Tse-tung's government in Peking virtually threatened war unless the U.S. military bases in Laos were instantaneously abolished. Finally Khrushchev's own Government in Moscow spoke out in clear terms, refraining from direct denunciation of the United States, but strongly supporting the North Vietnamese-Chinese Communist position in Laos.

From these facts, it may be possible to argue that the prime impulse for the attack on Laos came from Mao Tse-tung. But whoever was the prime mover, it is certainly not possible to argue that Khrushchev was anything but a knowing, willing accomplice in the Lao enterprise. The Ho visit to Moscow and the subsequent Moscow statement are the clearest proofs of Khrushchev's active complicity.

Khrushchev's purposes can be variously interpreted. The Communist interpretation was given by a high official who told this reporter, "It's the old tactic of the carrot and the stick." (When asked what was the carrot, he replied, "Why the Khrushchev visit"—which seems an unattractive sort of carrot.)

Khrushchev's aim perhaps is to extract from the President in the White House new terms for Asia as well as new terms for Berlin. In this, it must be added, Khrushchev is likely to have the indirect help of the British and Canadian Governments. Both are not merely summit-drunken but fixed in their idea as well that everything in Asia will be rapidly fixed up if we are just a little nice to Mao Tse-tung.

In any case the contrast between this time and last time is horrifyingly strong. Last time Khrushchev talked with the President of the United States, in 1954, he paid for his ticket of admission with the liberation of Austria and the dramatic though temporary restoration of normal relations with Yugoslavia. This time, crude threats to Berlin paid for the ticket; and as soon as the ticket was in Khrushchev's pocket, Laos was attacked.

No one who is not absolutely flannelheaded can see in this pattern anything but a display of the most profound, unalloyed and arrogant contempt. Whatever its sources, Khrushchev's contempt is a desperately serious political phenomenon. The sources need urgent investigation. But no search for sources is afoot, no doubt because careful search would reveal a distinguished soap manufacturer pouring out soft soap, which is still constricting the American defense efforts 2 years after the sputnik, under stringent orders from budget-obsessed higher authority.

Reply to the Carey Letter

EXTENSION OF REMARKS
OF
HON. JOHN H. RAY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 6, 1959

Mr. RAY. Mr. Speaker, under leave heretofore granted, I place in the RECORD a copy of my reply to the form letter sent to many Members of Congress by Mr. James B. Carey last week:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D.C., August 24, 1959.

JAMES B. CAREY,
President, IUERMW,
Washington, D.C.

DEAR SIR: I have your letter of August 18 regarding my vote for the Landrum-Griffin bill, H.R. 8400. You do not like my vote on that bill and, of course, I take no exception to your so advising me.

I take strong exception, however, to your suggestions that I voted to punish or repress or weaken all labor unions, or that I yielded to pressure from any business organization. Those suggestions have no basis in fact.

My vote was determined by my own judgment, exercised in the light of my own conscience as to what was needed to protect the public and particularly union members and their families and small business against such abuses of power, whether by management or union officials, as have been exposed in various committee hearings. The foregoing statement has special importance in connection with the provisions in H.R. 8400 which relate to the Bill of Rights, organizational picketing, secondary boycotts, hot cargo, and no man's land. Enactment of H.R. 8400 will not, in my judgment, interfere with any legitimate union activity of which I have been informed.

You may be sure that I studied the effects of H.R. 8400 before I decided how to vote upon it. In that process I carefully considered the views of all who had written to or talked with me about abuses of power by either labor officials or management, and I talked with union officials and everyone else who came in to discuss H.R. 8400. Some union members who live in my district think that H.R. 8400 does not go far enough to protect them against loss of their union cards—and that means their livelihood—without a fair hearing.

Many union members and their families live in my district and you may be sure I advised union officials who had talked with me as to how I would vote.

Members of unions in my district are good citizens. They will resent and reject, as do I, your notion that if unions are to be strong, their officials must be allowed to continue abuses of power of the kind which H.R. 8400 seeks to prevent.

Taken as a whole, your letter confirms the need for legislation such as H.R. 8400.

Yours truly,

JOHN H. RAY,
Member of Congress.

A Story of a Good Samaritan in the U.S. Air Force

EXTENSION OF REMARKS
OF
HON. GEORGE H. MAHON
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 19, 1959

Mr. MAHON. Mr. Speaker, an incident has been called to my attention which warrants recognition.

Last January the wife and four children of T. Sgt. Roy G. Cauthern were en route through the South Plains area of Texas to join Sergeant Cauthern in Seattle, Wash. On January 18 Mrs. Cauthern and her children were in an

automobile accident. Mrs. Cauthern was hospitalized at the base hospital at Reese Air Force Base, Lubbock, Tex.

Maj. John W. Arnett, base administrative officer at Reese, learned of the predicament of the mother and four children, and he and Mrs. Arnett took the four children, ranging in age from 1 year up, into their home and clothed them, fed them, and kept them together until the airman was able to obtain leave and come to Reese Air Force Base.

The Arnetts have a couple of youngsters of their own, but they insisted upon keeping the four Cauthern children together, feeling that this would contribute to their welfare and to the convalescence of the mother in the hospital.

It makes one feel good to know that we have people in our country and in the armed services who have not forgotten the old virtues of thoughtfulness and sacrifice. It is good to live in a country which produces people like Major Arnett and his wife. I quote in part a letter of appreciation written through Sergeant Cauthern's commander to Lieutenant Colonel Mays and to Maj. John W. Arnett:

DETACHMENT 1,
14TH AVIATION DEPOT SQUADRON,
U.S. AIR FORCE, APO 942,
Seattle, Wash., March 12, 1959.

Subject: Letter of appreciation.

To: Commander, Detachment 1, 14th Aviation Depot Squadron, APO 942, Seattle, Wash.

1. I wish to express my appreciation to the commander, Reese Air Force Base, to Lieutenant Colonel Mays, base hospital commander, to Maj. John W. Arnett, base administrative officer, to Captain Range, base hospital, and to the other personnel of Reese Air Force Base for the hospitality you showed to my family, and to me, when my wife was injured on January 18, 1959, while en route to Seattle, Wash., to join me at my present assignment.

2. Major Arnett's taking my children into his home until I arrived and until my wife was able to depart, Lieutenant Colonel Mays personally greeting me at the hospital, Major Arnett's offering me the use of his private car while I was at Reese Air Force Base, his personal coordination of the rescheduling of my family's MATS' flight out of Seattle, and the many other courtesies shown to me while I was at Reese Air Force Base was treatment I had previously thought reserved only for very high-ranking officers.

3. It gives me a sense of pride in being in the Air Force to have been associated with the commander, Reese Air Force Base, and the personnel of his command.

ROY G. CAUTHERN,
AF14034171, Technical Staff Sergeant, Detachment 1, 14 Aviation Depot Squadron.

Mr. Carey's Contribution—Arrogant—and Stupid

EXTENSION OF REMARKS
OF
HON. J. ARTHUR YOUNGER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 24, 1959

Mr. YOUNGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include editorials from the August 21, 1959, editions of the Washington Post and the Washington Evening Star, respectively, which represent both a liberal and conservative journalistic appraisement of James B. Carey's threatening letter to the Members of Congress who voted for the Landrum-Griffin bill:

[From the Washington Post, Aug. 21, 1959]

MR. CAREY'S CONTRIBUTION

James B. Carey's letter to the 134 Republican and 95 Democrats who voted for the Landrum-Griffin bill in the House of Representatives was obviously written in anger and ignorance. His anger can be understood, but, as president of the International Union of Electrical, Radio, and Machine Workers and a vice president of the AFL–CIO, he should have been aware of how Congressmen respond to threats or anything suggesting threats. His naivete on this point may serve to stiffen the labor reform bill that the conference committee is hammering out and may swing dozens of votes to that measure in the final test.

Mr. Carey might have learned a lesson from the gas lobby, the utilities lobby, or Ambassador Hanihara, who represented Japan in Washington during the twenties. Ambassador Hanihara and the Coolidge administration were eager to dissuade Congress from enacting a Japanese-exclusion law, and they seemed to have a good chance of doing so until the Ambassador inadvertently referred, in a letter to Secretary of State Hughes, to the "grave consequences" which such a law would bring about in the relations between Japan and the United States. The Ambassador was merely forecasting what did in fact happen, but his words were interpreted as a threat and Congress voted the exclusion law almost unanimously.

It makes little difference whether Mr. Carey deliberately sought to intimidate Members of the House. His letter had a ring of arrogance that irritated friends as well as foes of labor. It marked for political liquidation all legislators who did not bow to the dictates of the unions on this issue regardless of how well they may have served their districts and the country in general. Such a crude and tactless challenge almost forces Congressmen who voted for the Landrum-Griffin bill to stand by it in order to prove their independence. And many citizens may be expected to cite the letter as confirmaiton of their belief that labor is riding too high.

Of course none of this is cause for a punitive attitude on the part of the conference committee. If there is reason, as we think there is, to modify some provisions of the Landrum-Griffin bill so as to avoid unjust restrictions on union organization in certain areas, Mr. Carey's offensive behavior ought to make no difference. But the inevitable result of his bluster—perhaps intended to impress members of his union—is to make objective consideration of the labor bill far more difficult.

[From the Washington Star, Aug. 21, 1959]

ARROGANT—AND STUPID

It is an arrogant exercise in attempted intimidation that is contained in the letter from James B. Carey, AFL–CIO vice president and head of the International Union of Electrical, Radio, and Machine Workers to the 303 House Members who voted for the Landrum-Griffin labor reform bill. Mr. Carey promises (threatens) that "we shall do all in our power" to see that political retribution comes to those who so voted.

Obviously, Mr. Carey overlooks first of all the fact that approval of the Landrum-Griffin bill in the House reflected a strong and deep public sentiment in favor of some restraint upon the labor racketeering and corruption that have been revealed so clearly in recent months. And apparently he overlooks also the likelihood that public sentiment "at the ballot box" is very apt to end up on the side of those who are target of such heavy-handed efforts at political blackmail. Mr. Carey's letter will do no good for organized labor, and may punish his friends in Congress (as well as those whom he threatens) by picturing them as bending to his will by "voting the right way."

White House Issues Text on Flag of the United States of America, Its Use and Background, Issued in Connection With Proclamation by President Eisenhower on Admission of Hawaii as the 50th State

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 5, 1959

Mr. DOYLE. Mr. Speaker, by reason of unanimous consent heretofore granted me so to do, I am pleased to present the text of a statement issued Friday, August 21, 1959, by the White House giving the background history of the flag of the United States of America. This official statement was issued in connection with the addition of the 50th star to the flag of the United States on the official admission of Hawaii as the 50th State of the Union.

This statement is so informative and pertinent to the development of the flag of the United States as the symbol of our beloved Nation now that two additinal stars have been added to the blue background of our national emblem on account of the admission of both Alaska and Hawaii as the 49th and 50th States, respectively, that I am sure the within text, as issued by the White House will not only be of interest but of historical value to all Americans.

Furthermore, Mr. Speaker, I commend to all interested that they obtain copies of Public Law 829 of the 77th Congress and Public Laws 107 and 396 of the 83d Congress. These, I am informed, may be obtained from the Government Printing Office.

WHITE HOUSE TEXT ON FLAG LISTS ITS USE AND BACKGROUND

(Text of a statement issued Friday by the White House giving background on the history of the flag. The statement was issued in connection with the addition of a 50th star to the flag on the admission of Hawaii as a State.)

THE NATIONAL FLAG

In connection with the admission of Hawaii as a State of the Union, the President today issued an Executive order adding the 50th star to the Union of the flag. The new flag will supersede the 49-star flag which was prescribed on the admission of Alaska as a State of the Union.

By law, the new 50-star flag will become the official flag of the United States on July 4, 1960, the birthday of the Union. Display of the new flag before that time would be

improper. However, it would not be improper to display the 48-star flag or the 49-star flag after that date; with limited exceptions agencies of the Federal Government will continue to display the 48-star flag and the 49-star flag so long as they remain in good condition and until existing stocks of unused flags are exhausted. It is appropriate for all citizens to do the same.

Following is certain information with respect to the historical and symbolic aspects of the national flag:

History of national flag

Before we became a Nation, our land knew many flags. Long ago, the Norsemen probed our coastal waters sailing under the banner of the black raven. Columbus carried a Spanish flag across the seas. The Pilgrims carried the flag of Great Britain. The Dutch colonists brought their striped flag to New Amsterdam. The French explored the continent under the royal fleur-de-lis. Each native Indian tribe had its own totem and insignia. Immigrants of every race and nationality, in seeking a new allegiance, have brought their symbols of loyalty to our shores.

During our Revolution, various banners were used by the not-yet-united colonies. A green pine tree with the motto, "An appeal to Heaven," was popular with our young navy. The rattlesnake's warning "Don't tread on me," was displayed by aroused colonists along the Atlantic seaboard. The Moultrie liberty flag, a large blue banner with a white crescent in the upper corner, rallied the defenders of Charleston, S.C., in 1776. The Bunker Hill flag was a blue banner with a white canton filled with a red cross and a small green pine. The flag of the maritime colony of Rhode Island bore a blue anchor under the word "Hope." Strikingly similar to the Stars and stripes was the flag carried by the Green Mountain Boys of Vermont at the Battle of Bennington on August 16, 1777.

When Washington took command of the Continental Army at Cambridge, Mass., in 1776, he stood under the Grand Union Flag which continued to show a dependence upon Great Britain. The canton of this flag was filled with the crosses of St. George (England) and St. Andrew (Scotland).

The first Stars and Stripes was created by the Continental Congress on June 14, 1777. This date is now observed nationally as Flag Day.

In this flag the 13 stars, representing a constellation, were arranged in a variety of designs. The most popular—with the stars in a circle so that no State could claim precedence over another—is known as the Betsy Ross flag, in honor of the seamstress who is supposed to have sewn the first one.

As the American frontier expanded, two new States were added to the Union, and these were incorporated into the flag. This meant that 2 stars and 2 stripes were added to the design—making a total of 15 each. It was this flag that withstood enemy bombardment at Fort McHenry, Md., September 13–14, 1814, and inspired Francis Scott Key to write "The Star-Spangled Banner."

Later, when other States were added to the Union, the Congress, feeling that more stripes would blur the basic design, returned to the original 13 red and white stripes.

Since 1818, each new State has brought a new star to the flag. This growing pattern of stars could be said to reflect the growing dimensions of America's responsibilities, as the 13 stripes reflect the constant strength of our country's traditions.

The 50 States and the dates of their entry into the Union:

Alabama, December 14, 1819.
Alaska, January 3, 1959.
Arizona, February 14, 1912.
Arkansas, June 15, 1836.
California, September 9, 1850.
Colorado, August 1, 1876.
Connecticut, January 9, 1788.
Delaware, December 7, 1787.
Florida, March 3, 1845.
Georgia, January 2, 1788.
Hawaii, August 21, 1959.
Idaho, July 3, 1890.
Illinois, December 3, 1818.
Indiana, December 11, 1816.
Iowa, December 28, 1846.
Kansas, January 29, 1861.
Kentucky, June 1, 1792.
Louisiana, April 30, 1812.
Maine, March 15, 1820.
Maryland, April 28, 1788.
Massachusetts, February 6, 1788.
Michigan, January 26, 1837.
Minnesota, May 11, 1858.
Mississippi, December 10, 1817.
Missouri, August 10, 1821.
Montana, November 8, 1889.
Nebraska, March 1, 1867.
Nevada, October 31, 1864.
New Hampshire, June 21, 1788.
New Jersey, December 18, 1787.
New Mexico, January 6, 1912.
New York, July 26, 1788.
North Carolina, November 21, 1789.
North Dakota, November 2, 1889.
Ohio, March 1, 1803.
Oklahoma, November 16, 1907.
Oregon, February 14, 1859.
Pennsylvania, December 12, 1787.
Rhode Island, May 29, 1790.
South Carolina, May 23, 1788.
South Dakota, November 2, 1889.
Tennessee, June 1, 1796.
Texas, December 29, 1845.
Utah, January 4, 1896.
Vermont, March 4, 1791.
Virginia, June 25, 1788.
Washington, November 11, 1889.
West Virginia, June 20, 1863.
Wisconsin, May 29, 1848.
Wyoming, July 10, 1890.

Customs and usage as to flag of the United States

Laws have been written to govern the display of the flag and to insure a proper respect for it. Custom has decreed certain other observances in regard to its use. As a symbol of the Nation, standing for our heritage of liberty and justice, the flag is naturally held in highest honor by all citizens.

In recent years, the Congress of the United States of America has drawn together "The existing rules and customs pertaining to the display and use of the flag." These can be found in Public Law 829 of the 77th Congress and in Public Laws 107 and 396 of the 83d Congress. Copies may be obtained from the Government Printing Office.

Cash on the Barrelhead

EXTENSION OF REMARKS
OF
HON. STEVEN B. DEROUNIAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, August 24, 1959

Mr. DEROUNIAN. Mr. Speaker, the following article by David Lawrence, as published in the New York Herald Tribune of August 24, 1959, should make interesting reading for all concerned:

CAREY NOTE TO LEGISLATORS RECALLS LEWIS' SPENDING

(By David Lawrence)

WASHINGTON, August 23.—When the labor union bosses raise money to contribute to the campaigns of Members of Congress, must those who are elected disregard their personal convictions on the merits of proposed laws and do the bidding of the groups that furnished the funds? This issue seems to have been projected by James B. Carey, one of the top leaders of the AFL–CIO, whose recent letter to Members of Congress has caused a stir. He expresses gratitude to those who voted as labor wanted and wrote in bitter sarcasm to those who, having accepted campaign contributions from labor interests, voted against their wishes on the Landrum-Griffin bill.

Mr. Carey threatens reprisals at the ballot box and apparently the labor unions will withhold contributions next time from those Members of Congress who refused to consider a campaign contribution as a bribe.

JOHN L. LEWIS' VIEWS

There is nothing unusual about Mr. Carey's letters to Members of Congress. He should not be criticized as being alone in his viewpoint. For what he has written is in line with CIO policy for years. Indeed, John L. Lewis, while active in the CIO, was characteristically frank about the meaning of a contribution from laboring men to the campaigns of candidates for office.

When the late President Franklin D. Roosevelt, having accepted big contributions from labor unions for his 1936 campaign, said in the midst of a strike in 1937 something that the labor union leaders didn't like, Mr. Lewis declared publicly:

"It ill behooves one who has supped at labor's table and who has been sheltered in labor's house to curse with equal fervor and fine impartiality both labor and its adversaries when they become locked in deadly embrace."

PAID CASH FOR FAVORS

In a biography of Mr. Lewis written by Saul D. Alinsky and published in 1949 by G. P. Putnam & Sons, the author tells of an interview with the labor leader during the Roosevelt regime. Mr. Lewis is quoted as having said:

"Everybody says I want my pound of flesh, that I gave Mr. Roosevelt $500,000 for his 1936 campaign, and I want quid pro quo. The United Mine Workers and the CIO have paid cash on the barrel for every piece of legislation that we have gotten.

"We have the Wagner Act. The Wagner Act cost us many dollars in contributions which the United Mine Workers have made to the Roosevelt administration with the explicit understanding of a quid pro quo for labor. These contributions far exceed the notions held by the general public or the press. Is any one fool enough to believe for one instant that we gave this money to Roosevelt because we were spellbound by his voice? It is common knowledge that we spent approximately three-quarters of a million dollars in the 1936 campaign. And you might be interested to know that the $500,000 direct contribution wasn't my price, but was the figure named by the White House, and I was given approximately 48 hours to get that money.

OTHER EXPENDITURES

"Certainly there was a quid pro quo—the right for labor to organize. But there was more than that. The sums we spent in 1936 were not only cash contributions that were made to the Democratic Party, but also were money expended in terms of salaries for organizers and other personnel who worked full time organizing and electioneering for Roosevelt. Radio time purchased, billboards, handbills, literature and all other paraphernalia that are part and parcel of the process of being elected President of the United States didn't come gratis."

The same interview reveals that in 1938 when the tensions between Mr. Lewis and Mr. Roosevelt had eased off somewhat and the Democratic President was trying in primary contests to "purge" certain Southern

Democratic Senators who appeared also to be antilabor, the United Mine Workers chief rendered a helping hand. Again Mr. Lewis is quoted in the Saul Alinsky book as follows:

"Where did the money come from that Franklin D. Roosevelt siphoned into those Southern States to try to bolster up the fight against the anti-New Deal Senators? Where did the money come from?

MINERS PAID

"I'll tell you where it came from. Right here, from the coffers of the United Mine Workers of America. It came by request of the President of the United States through one of his trusted aids. You tell this to the President, and if he questions it, and I'm certain that he will not, you may inform the President that I am perfectly willing to name names and sums, chapter and verse, to satisfy any slight amnesia that there might be on this particular issue.

"You ask me for gratitude in terms of an administration that we have literally poured our life's blood into supporting. You wonder that I do not express the feeling that one should have for a great champion of labor. I say that labor's champion has to a large extent here been a bought and paid for proposition. There is nothing we should be grateful for when we paid cash on the barrelhead at the price demanded for it."

PHILOSOPHY UNCHANGED

So the philosophy of the money raisers in labor's ranks hasn't changed much in the last 20 years since John L. Lewis spoke. In the 1958 congressional campaign when the labor unions boasted that a majority of the House of Representatives was elected through their help, the Federal records show a relatively small sum was contributed. Big amounts were, however, donated largely to State organizations which do not come under the Federal laws requiring the reporting of contributions. It is estimated that labor raised approximately $10 million. Much of it was spent to uphold laws compelling workers to forego their civil rights and join unions.

Soviet Line Unchanged in 12 Years, Healy Finds

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 24, 1959

Mr. BOGGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the fourth in series of articles written by George W. Healy, editor of the New Orleans Times-Picayune, who accompanied Vice President NIXON on his recent trip to the Soviet Union:

[From the New Orleans (La.) Times-Picayune, Aug. 12, 1959]

SOVIET LINE UNCHANGED IN 12 YEARS, HEALY FINDS — CITES EHRENBURG-KHRUSHCHEV STATEMENTS

(By George W. Healy, Jr.)

Moscow.—The Soviet party line regarding freedom of information, so far as my personal observation is concerned, hasn't changed since shortly after World War II.

At the end of that war, Ilya Ehrenburg was the editor of Isvestia, one of the two powerful official organs of the Soviet Government and Communist Party. The editor's chair now is held by the son-in-law of Nikita S. Khrushchev.

Mr. Ehrenburg, on official invitation, visited the United States. One of his stops was New Orleans.

RAPS ADVERTISERS

Driving one day he noticed several billboards on which were war messages sponsored by various advertisers.

"You shouldn't do a think like that," said he. "Think of letting some capitalist advertiser run a message for the government. It's disgraceful."

"How would you do it?" I asked.

"We would put up our own government billboards," said he. "Why ask people to buy war bonds or join the Marines? Tell them what to do."

My brief conversation with Mr. Khrushchev at the U.S. exhibition in Moscow was reminiscent of the conversation with Ehrenburg a dozen years earlier.

HEALY MEETS NIKITA

Vice President RICHARD M. NIXON and Mr. Khrushchev had argued and debated in the modern home. Then they had exchanged pleasantries in the formal opening of the exhibition.

After the formal opening, the Soviet boss and the Vice President walked into the "glass house" of the exhibition, followed by their official parties. Again they started a debate, this time about free speech and free criticism of governments. Mr. NIXON argued for the virtues of free expression; Mr. Khrushchev dissented. A stable government, it was Mr. Khrushchev's position, should not tolerate public criticism.

Seeing me in the group behind them, Mr. NIXON asked Herbert Klein, his special news assistant, to have me step up and meet Mr. Khrushchev.

Introducing me, he said, "This is George Healy, the past president of the newspaper editors in America. His newspaper criticizes our administration when it thinks we are wrong, as do other newspapers. We think they have a right to criticize us. We also are confident that they will commend us when they think what we have done has been good. I believe George will tell about good things he may see in Russia. He and I are strong for a free press."

Mr. Khrushchev acknowledged the introduction, shook hands with a trace of a smile, said a few words to me in Russian and resumed his argument with Mr. NIXON.

WOULDN'T BALK NIKITA

The interpreter's translation of what he had to say in reply to Mr. NIXON's comment about a free press wasn't fast enough for me to catch it before Mr. Khrushchev hurried to the modern American kitchen exhibit.

From what I have learned in a quick look at Russia, I'm not sure I'd publicly criticize Mr. Khrushchev if I wanted to stick around in Moscow.

To be proclaimed the best disciplined people in the world, Russians—particularly the residents of Moscow—have less respect for police orders than any people I've seen.

COMMAND NOT ENOUGH

Police stopped people from literally running over the party of Vice President NIXON on the day of the opening of the U.S. exhibition in Moscow. But they didn't stop them by ordering them back. They stopped them by physically forcing them back.

When the Vice President was leaving the exhibition grounds, after N. S. Khrushchev and his heavy escort had departed, a crowd assembled around him at the exit. Some members of the crowd asked for autographs—others apparently wanted tickets to the exhibition.

One crowd attracts another, and this was the case here.

A police line was formed to prevent the second crowd from forcing its way into the cluster around Mr. NIXON. A human chain was set up between the two crowds.

WOMAN, 60, DEFIANT

One woman, about 60, anxious for an autograph or a closer look at the Vice President, slipped under two policemen's arms.

Just as she reached the fringe of the cluster around Mr. NIXON a policeman who had not been in the human chain caught her left wrist. He gave her a pull, yanking her toward two policemen, each of whom got a grip on her arm and gave her a tremendous jerk. She spun twice, back through the human chain into the crowd.

She apparently was neither hurt nor resentful. The pull and the jerk were just part of the day's life of a disciplined Russian who doesn't propose to listen to policemen.

As far as it is from New Orleans, Moscow is no place at this season to try to hide from New Orleanians or other old friends.

On our first visit to the exhibition grounds in Sokolniki Park one of the first persons I saw was Rose Kahn, fashion editor of the New Orleans States-Item. That evening, at the dinner tendered by Ambassador and Mrs. Llewelyn Thompson my seating was at the table with Arthur Davis, New Orleans architect, and Mrs. Davis and with Angier Biddle Duke, the former ambassador to El Salvador, who has spoken in New Orleans several times, and Mrs. Duke. In the exhibition is a presentation of the Thomy Lafon school, planned by the Curtis-Davis architectural firm.

William Nichols, editor of This Week magazine, and Mrs. Nichols were in our section at the official opening of the exhibition.

House Antitrust Subcommittee Study Leads to $50 Million Telephone Reduction

EXTENSION OF REMARKS
OF
HON. ROBERT W. KASTENMEIER
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, August 24, 1959

Mr. KASTENMEIER. Mr. Speaker, the House Antitrust Subcommittee headed by the distinguished gentleman from New York [Mr. CELLER], who is also chairman of the parent Judiciary Committee of which I am proud to be a member, is to be highly congratulated for its comprehensive and scholarly investigation of certain competitive aspects of the American Telephone & Telegraph Co. This was part of a study of the consent decree program of the Justice Department's Antitrust Division, including a thoroughgoing examination of the oil pipeline decree, as well as the A.T. & T. decree.

The constructive and painstaking approach taken by this subcommittee has now been quickly followed by action of the Federal Communications Commission affecting the pocketbook of every telephone user. Flowing directly from the Antitrust Subcommittee's investigation was a recent FCC directive reducing long distance telephone tolls by a total of $50 million.

Mr. Speaker, it is this kind of legislative surveillance by House committees and cooperation with them by adminis-

trative agencies that is a continuing credit to our form of government and way of life. An article in the current Democratic Digest and an article which appeared in the July 25 issue of the New York Times amplifies the background of this most important event to American telephone users, and under unanimous consent I include these articles in the Appendix of the RECORD:

[From the New York Times, July 25, 1959]

PHONE RATE SLASH ON LONG-DISTANCE ORDERED BY FCC—REDUCTION TOTALING 50 MILLION A YEAR APPLIES TO CALLS OF MORE THAN 300 MILES—A.T. & T. SCORES RULING—SEES GOOD RESEARCH, GOOD MANAGEMENT PENALIZED—REVISION DUE IN FALL

(By Richard E. Mooney)

WASHINGTON, July 24.—The Federal Communications Commission has ordered that long-distance telephone rates be cut by $50 million a year.

The Commission announced today that the Bell System would revise its rates effective about September 15. The cut applies only to calls of more than 300 miles.

Two months ago the Commission was criticized by the House Antitrust Subcommittee for failure to act on its own staff's recommendations for rate investigations and reduction. It was also under attack for failure ever to set standards for measuring the adequacy of telephone rates.

The subcommittee, whose chairman is Representative EMANUEL CELLER, Democrat, of Brooklyn, based its report on an investigation last year into the 1956 settlement of the Government's telephone antitrust suit by consent decree.

PENALTY IS ASSAILED

Frederick R. Kappel, president of American Telephone & Telegraph Co., which is the capstone of the Bell System, issued a statement here on the FCC action. He said that his company was being penalized for good research and good management.

"While earnings on our interstate long-distance business has improved in recent years," he said, "they are lower than they should be and well below earnings of business generally."

He attributed the improved earnings to "technical advances by Bell telephone laboratories, especially on very long circuits; efficient management, and more long-distance calls."

He said that the FCC directive "ignores the long-range interests of the public," which require added investment by the system to improve the quality of service, and add facilities needed for growth and national defense.

"These assignments call for financial strength," he said.

The last long-distance rate change was a $65 million increase in late 1953, which amounted to an average 8-percent increase in toll charges.

There was no estimate available as to what percentage of reduction would result from the $50 million cut. It is not possible to compute it from the 1953 increase because the volume of business has risen.

The actual amounts of reduction will be known soon, when A.T. & T. files with the FCC its new rate schedule, designed to accomplish what the commission has ordered.

A few examples of present long-distance rates from New York to cities more than 300 miles distant are: 95 cents to Portland, Maine, $1.50 to Chicago, and $2.50 to Los Angeles. Those are station-to-station daytime rates, subject to the 10-percent Federal tax.

SCOPE OF RULING

The reduction applies only to normal telephone service. That is, it does not apply to such things as private tielines.

The FCC's action was made known in a brief statement issued in the late afternoon. The Commission said that the order resulted from discussions that the Commission had initiated.

The Commission said that it had telephone rates under continuing review.

The House subcommittee, during its investigation, heard testimony from FCC staff officials to the effect that they had filed at least six memorandums with the Commission in the 1956–57 period on the fact that the rate of return on long-distance service was greater than 6½ percent. At least twice, the subcommittee report said, the staff recommended investigations looking toward rate reduction.

The significance of 6½ percent stems from the 1953 rate increase, which was designed to raise the rate of return to that level.

[From Democratic Digest, September 1959]

CELLER'S PRODDING CUTS PHONE RATES

A $50 million a year cut in long-distance telephone rates, starting this month, is directly traceable to the doggedness of Representative EMANUEL CELLER, New York, and other Congressional Democrats in putting the heat on the Federal Communications Commission.

The FCC had treated the American Telephone & Telegraph Co. and its Bell System like long lost brothers. The Eisenhower administration was in office less than 9 months when the Commission, without public hearings, granted Bell an increase of about $65 million a year in long-distance rates. Frieda Hennock, a Democratic member of the FCC dissented vehemently (and wasn't reappointed when her term ran out). "This is the first general interstate telephone rate increase in the history of this Commission," she wrote. "In passing upon the reasonableness of such a sizable rate increase without sworn testimony and evidence subject to cross-examination, I believe that the Commission is abdicating its responsibilities."

That rate increase was designed to bring Bell's profits on its interstate operations to 6½ percent, although the FCC has never bothered to determine what would be a proper profit. In any event, Bell's interstate profits soared well past 6½—to 7.7 in 1955, to 7.8 in 1956, for example. The Celler subcommittee computed that in 1955–57 long-distance users were charged $159 million more than was needed to produce a 6½ percent return. This year A. T. & T. split its stock three for one and raised its dividend.

Between June 1955 and October 1957 the FCC's own staff called its attention six times to the phone company's fat profits, and at least twice recommended strongly that action be taken looking toward a reduction. Nothing happened.

Then Representative CELLER's Antitrust Subcommittee of the House Judiciary Committee began poking into the conduct of the FCC, as part of an investigation of peculiar goings-on in the Justice Department with regard to consent decrees. In that connection it brought out the extraordinary story of how Herbert Brownell, when he was Attorney General, took A.T. & T. by the hand and showed it how to go about getting a toothless consent decree that left it in full control of its monopolistic subsidiary, Western Electric, and never mind the antitrust laws. (The Pentagon, under Charlie Wilson, helped out on this pretty little game, letting A.T. & T. people ghostwrite the Defense Department's recommendations that Justice go away and not bother Bell.) But all that is another story.

The point here is that in the course of the consent-decree inquiry the Celler subcommittee dug out the facts about the FCC's ever so casual dispensing of rate increases.

Last May Congressman CELLER dispatched the chief counsel of his subcommittee to see FCC Chairman John C. Doerfer. Several parleys ensued, and finally the FCC announced the rate cuts that go into effect this month—the first reduction in long-distance charges in 13 years. A.T. & T. stockholders needn't fret, since an FCC official is quoted as estimating that the profit on long-distance calls, even with the rate cut, will run from 6.7 to 7 percent.

Moral: never underestimate the value of the patient and unspectacular digging by Democratic Members of Congress and their staffs.

James B. Carey: Humorist

EXTENSION OF REMARKS
OF
HON. PAUL B. DAGUE
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 24, 1959

Mr DAGUE. Mr. Speaker, a rereading of the letter I received last week from Mr. James B. Carey, president of the International Union of Electrical, Radio & Machine Workers, confirms my original conclusion that the man is a humorist. The very fact that Mr. Carey sets out to intimidate those who voted for the Landrum-Griffin bill marks him as either a man with a sense of humor or as one who is so naive that he thinks Congress will grovel in the face of his awesome threats. Of course, there is the possibility that Mr. Carey is just another arrogant labor leader who is inclined to use his muscles rather than his head but I really do not think so.

In any event I have dignified his outburst to the extent of the following reply:

AUGUST 24, 1959.

Mr. JAMES B. CAREY,
President, International Union of Electrical, Radio & Machine Workers, Washington, D.C.

DEAR MR. CAREY: Thank you very much for your letter of August 18. I am having it reproduced for circulation among my constituents in order to acquaint them with the ill temper and bad manners of certain labor leaders, which would seem to further justify our support of the so-called Landrum-Griffin labor reform bill.

Incidentally, I am amazed that you are so poorly informed in regards to the voting habits of the people of my district. In each campaign in which I have sought reelection the leaders of organized labor have hit me with everything in the book. That I have been victorious each time attests to the conservatism of the voters rather than to my popularity.

Again my warmest thanks for the best piece of campaign material I have ever received.

Very truly yours,

PAUL B. DAGUE.

It has always been my firm conviction that the leaders of organized labor have been completely out of step with the thinking of the people in the Ninth Congressional District of Pennsylvania. Public reaction, however, to such bald threats as made by Mr. Carey is, in my opinion, accurately reflected in the following editorial which appeared in the Daily Local News of West Chester, Pa., on August 21, 1959:

THREATS

The type of letter received yesterday by Members of the House who voted for the

Landrum-Griffin labor reform bill warning them that labor union members will try to throw them out of office represents the kind of thing that should not be countenanced in this country.

Representatives are chosen to represent all of the people and not the interests of simply one group of constituents. No Member of the House in recent weeks could mistake the sentiment of the people as a whole in regard to the need for curbing certain labor leaders of whom James R. Hoffa is a fair example. Because the public demanded effective labor legislation at this session of Congress, the Landrum-Griffin bill was approved by a margin of 178 votes.

Every House Member who supported that bill received a letter yesterday from James B. Carey, AFL-CIO official, warning them of what union members intend to do because they voted for what the union considers "punitive repressive" labor legislation.

Every properly registered citizen has the privilege of going to the polls at election time and voting for the candidate which he feels is best qualified for the office to be filled. Once elected, the official must be free to vote for legislation which he feels best serves the welfare of the people as a whole. He must be free to do this without fear of threats or reprisals. Otherwise, he could not possibly represent the people as he should.

It is also the privilege of every citizen to keep in touch with elected officials so that they may know how they (the people) feel in regard to current legislation. Officials welcome such contacts. But no official welcomes the kind of communication that has reached supporters of the Landrum-Griffin bill. In effect it said—because you voted for that bill, we're out to get you.

One Representative termed the letter "bitter and ill tempered," and in a reply wrote: "Please do not insult me by threats." That probably pretty well summed up the feelings of the 229 House Members who were the targets of Carey's letter.

The Honorable PAUL B. DAGUE, who represents Chester and Lancaster Counties in the House, told the local News last night when he feels that he must bow to corruption in the ranks of union labor then his effectiveness as a Member of the House is over. Representative DAGUE supported the Landrum-Griffin bill on the first vote when it squeezed through with only 28 votes to spare. He was also in the "aye" column on the final vote. His stand in regard to the kind of labor legislation needed to deal with corruption is thus a matter of record.

James B. Carey also sent letters to 201 other House Members who saw fit to vote against the bill, pledging them his support. That is his privilege. But letters which breathe of intimidation and mailed to representatives who voted in the interests of the national welfare, have no part in a Nation which believes in a free and representative government.

Reds Use Visitor To Give Credence to Party Line

EXTENSION OF REMARKS

OF

HON. HALE BOGGS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 24, 1959

Mr. BOGGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the fifth in series of articles written by George W. Healy, editor of the New Orleans Times-Picayune, who accompanied Vice President NIXON on his recent trip to the Soviet Union:

[From the New Orleans Times-Picayune, Aug. 13, 1959]

REDS USE VISITOR TO GIVE CREDENCE TO PARTY LINE—EXTEND FAVORS TO MAKE PEOPLE RESENT TOURIST

(By George W. Healy, Jr.)

Moscow.—Tourists in Russia have it better than the home folks in several respects. But let the tourist beware.

Unwittingly, the American visitor may easily be used to give credence to the Soviet party line—that westerners, particularly Americans, are selfish, bloated aristocrats.

There are many ways in which visitors seem to be getting the better of things in Russia.

When Vice President RICHARD M. NIXON made news, that news could be sent to the outside world by correspondents traveling with the Vice President without passing through censorship. However, correspondents stationed in Moscow, including American correspondents, had to submit to the usual cable or wireless censorship.

VODKA RUBLES CHEAPER

The official rate of monetary exchange is 4 rubles for $1. That's what everyone must pay for lodging, meals, and other necessities. But if the tourist wants to buy vodka, go to nightclubs and indulge in other luxuries, he can buy all the rubles he wants at 10 for the dollar. Not black market—legal.

The Sunday we made our second visit to the Kremlin there were no fewer than 10,000 people in double file in a line that extended four or five blocks outside the tomb of Lenin and Stalin.

Did we wait in line?

No. I'm ashamed to say, we didn't.

RUSSIANS STAND HOURS

We were Americans, not Russians, and the Russian Intourist guide insisted that we not go to the end of the line but accompany him to the head. It took us less than 10 minutes to get in and out of the tomb. Many Russians had to stand for 3 or 4 hours to see the bodies of their heroes.

Considering the party line that Americans are plutocrats, what could be more effective than for the Intourist Agency to extend favors to visitors from the West that would make rank and file Russians dislike them?

What would irritate a Russian more than to be kept in line while North Americans were escorted to the head of that line and quickly passed through the tomb in the Kremlin?

Because I wanted to be "on my own," I made minimum use of the guides. The one who took me to a food store gave me the notion that North Americans should regard special favors from Intourist agents in the light of "Greeks bearing gifts."

LINEUPS EVERYWHERE

Everywhere in Moscow, it seems, Russians queue up to pass through the tomb, to buy tickets to the U.S. exhibition (which Soviet officials seem to be limiting to the number of tickets bought by Americans to the Soviet exhibition in New York) and even to buy food.

The particular guide who took me to a food store found about a dozen Russians ahead of me in line at the canned goods counter. The guide told me that I could make my way to the head of the line to buy the caviar that I wanted. I said I'd prefer to wait my turn.

He remarked, "That's good. You'll make friends here."

Obviously, if you make friends by waiting your turn in line with 12 Russians at the food store you don't make friends by permitting guides to take you to the head of the line of 10,000 Russians at the Kremlin.

These are just a few of the incongruities apparent to the casual observer.

The Soviet Government denounces the American Government from day to day—but insists that American, and other, visitors be given privileges that the Russian people do not enjoy.

THEY USE BILLBOARDS

The Soviet Government denounces advertising as a crass weapon of evil capitalism but uses billboards by the hundreds—particularly in outlying areas—to advertise what it claims to be the advantages of communism.

No phase of U.S. Government is exempt from criticism by Soviet officials.

Civil defense proposals were a special target of F. R. Kozlov, first deputy premier of the Soviet Union, in one of his talks with members of the Vice President RICHARD M. NIXON's party.

"You talk about building shelters under your buildings to protect you from bombs," he said. "That's ridiculous. The subways I saw in New York are lousy. Why don't you build subways like we have—good subways and deep subways. You could improve your subways and provide bomb shelters at the same time."

If the fashion show at the U.S. exhibition impresses the Russians, there is a billion-dollar market waiting for some manufacturer.

MEN DON'T WEAR TIES

None of the Russian men at a supposedly fashionable party which we attended wore a tie; and, I was informed by lady members of our group, none of the Russian women wore a girdle.

Kindness is not a nonopoly of the people of any country.

Finding a taxicab in downtown Moscow after a party breaks up is just about as hard as getting a taxicab on Broadway when the shows end.

Several of us were in the predicament of having to walk a couple of miles back to the Ukraina Hotel when an occupied taxi passed us. The occupant, observing our situation, halted the driver and had him back up to where we were standing. The lone passenger, a young man, spoke little English and we little Russian, but we managed to communicate that we wanted to be driven to the hotel.

When we reached the hotel we asked to be permitted to pay all or part of the fare. Our new-found friend refused. Nor would he give us his card or his name.

The Need for a Youth Conservation Corps

EXTENSION OF REMARKS

OF

HON. ELIZABETH KEE

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 20, 1959

Mrs. KEE. Mr. Speaker, on June 17 I introduced H.R. 7777 to establish a Youth Conservation Corps, a bill which is very similar to the one approved by the Senate last week. I hope, Mr. Speaker, that we can secure action in the House on this measure during the present session of Congress.

Mr. Speaker, I would like to call your attention and that of our colleagues in the House to an editorial entitled "Youth and the Land" which was published on Thursday, August 20, 1959, in the Washington Post:

YOUTH AND THE LAND

The plan approved by the Senate to establish a Youth Conservation Corps similar to

the depression-born Civilian Conservation Corps deserves to be judged in broader terms than its opponents, including the President, have apparently employed so far. Their objections to the cost of the venture need to be considered, of course, but we cannot for a moment believe that the expense would be anything like the astronomical scare figures cited by Senate Republicans. Indeed, is it not possible that the plan would result in some real—if not bookkeeping—economies?

The proposal is to enlist volunteer boys from 16 to 21 years of age for work in the national parks, forests, and wildlife refuges at basic pay of $60 a month. "Make work" ought, of course, to be avoided—but considering the enormous public land holdings and the growing public demands upon national park facilities this ought not to be difficult. An efficiently administered program should increase the value of the parks and refuges in a most economical way, at the same time affording exceptional opportunities for young men to learn useful skills and to round out their own mental and physical development in a wholesome atmosphere. We think the plan could be a happy blending of two of the country's greatest assets—its land and its youth—and that the measure ought to be enacted.

Russian Versus American Military Code of Justice

EXTENSION OF REMARKS
OF
HON. LeROY H. ANDERSON
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 24, 1959

Mr. ANDERSON of Montana. Mr. Speaker, the military forces of the world's two greatest nations have been changing their codes of military justice. This action has been a direct result of the Korean conflict. I believe the following news review of an article by Major Denis A. Cooper in the Air Force Judge Advocate General Bulletin is of much interest. It follows:

WASHINGTON.—The principle that the accused is presumed innocent until convicted by evidence beyond a reasonable doubt is considered "obsolete dogma of bourgeois law" by the Soviet Union. Red servicemen are unaware that the American serviceman enjoys the shield of presumption.

These are the key points made by Maj. Denis A. Cooper, Headquarters, USAF, in his article on military codes of conduct—United States and Russia—in the July JAG Bulletin. The new issue of the publication, put out by the Air Force JAG, was distributed this work.

Major Cooper in comparing the two "codes" says that the Soviets, as did this country, developed its code following experiences learned from the Korean war:

"The U.S.S.R. * * * appears to have watched the performance of some of our military personnel during captivity as well as their courtmartial trials after liberation." He said Soviet leaders were struck by the newly discovered necessity for new rules of behavior for a soldier in captivity and that modern but barbaric methods of warfare, revived by their own allies in Korea, had outdated their earlier code of military justice.

In their new code, Cooper said the Soviets laid down the following punishments for crimes of their servicemen taken prisoners:

1. Confinement from 3 to 10 years for voluntary participation "in works of war significance or in any project which he knows may result in prejudice to the Soviet Union or its allies, if it lacks the elements of treason against one's country * * *."

2. Confinement for from 3 to 10 years for violence to fellow POW's or "cruel treatment of them, if committed by a prisoner in the position of a superior * * *."

3. Confinement for 1 to 3 years for commission of acts intended to harm other prisoners * * * for mercenary motives or in order to secure benevolent treatment for himself by the enemy.

The new publication contains separate articles on (1) applicability of the Hiss Act to court-martialed persons, (2) evolution of the Toth Doctrine, and (3) limitations on retired Regular officers when contracting with the Government.

Maj. Gen. Reginald C. Harmon is Air Force's judge advocate general. The JAG Bulletin is published bimonthly to provide a means for exchange of ideas and information of the JAG department.

It also discusses important legislation and special cases.

The July issue reports on General Harmon's "preventive law" program, which is designed to keep servicemen out of trouble by informing them in advance of legal pitfalls.

Welcome to Grand Master of California—An Address by Imperial Sir George E. Stringfellow, Imperial Potentate, June 29, 1959

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 5, 1959

Mr. DOYLE. Mr. Speaker, by reason of unanimous consent heretofore granted me so to do, I am pleased to present the text of an address by Imperial Sir George E. Stringfellow, imperial potentate of East Orange, N.J., on the occasion of Grand Master Phil Myers being created a Shriner on June 29, 1929:

WELCOME TO GRAND MASTER OF CALIFORNIA

Good evening Illustrious Les White, gracious and effective illustrious potentate of Al Malaikah Temple, under whose auspices tonight's dinner is being held. Good evening Most Worshipful Grand Master Myers and good evening to all the others who are assembled in the Town House in Los Angeles to honor the great Masonic leader of California who was recently elected to membership in Al Malaikah and who was created a noble of the Ancient Arabic Order of Nobles of the Mystic Shrine a few hours ago.

A word about Al Malaikah Temple. Seventy-one years ago this month Al Malaikah was chartered as the 40th Shrine Temple of North America. Today, Al Malaikah is second in membership and ranks very high in the councils of the 166 temples. Al Malaikah has provided the Shrine with three of its most outstanding imperial potentates, in the persons of Fred A. Hines, 1910–11; Leo V. Youngworth, 1929–30; and Harold Lloyd, 1949–50. All of these nobles did much to elevate Al Malaikah from the 40th position in membership to second. All of these nobles did much to spread the gospel of the Shrine not only in sunny California but throughout North America. The Shrine owes them a debt of gratitude which it can never repay. I now refer specifically to my good friend and colleague, Imperial Sir Harold Lloyd, who in his modest and effective manner placed the Shrine in the show windows and who currently is rendering a great service to our fraternity as chairman of the wills, bequests, and gifts committee and as a member of the board of trustees of the Shriners Hospitals for Crippled Children.

I indeed regret that I cannot be with you tonight to personally welcome the most worshipful grand master of Masons of California into membership in our fraternity, but I believe our friendship, established in the sacred precepts of Freemasonry is of such strength that he will accept my welcome, as head of our fraternity, from across the continent.

At the conclusion of my remarks I shall leave for Atlantic City to attend the 85th session of the imperial council which will begin its deliberations next week. It is my hope that I may be privileged to greet the grand master and other officers of the Grand Lodge of Free and Accepted Masons of the great State of California at this year's imperial council session.

I believe the Shrine has a destiny within the framework of our human society. The destiny of the Shrine, as I conceive it, is to provide fraternal relaxation among men of honor and integrity who already have experienced the intellectual and emotional rituals of Freemasonry and the rites; men who have learned that in Masonry and the rites there is hope for a better tomorrow.

The responsibility and destiny of Freemasonry is (as I conceive it) to perpetuate the principles of freedom and dignity of the individual for which our Masonic forefathers fought so valiantly. Our lives, our fortunes, and our honor are indelibly tied to the "Apron of Freedom" which is the theme of our 1959 session and which will be on display in Atlantic City as a symbol of Masonic honor.

Brother Myers and I have discussed the need of greater unity in Freemasonry—not uniformity, but unity.

There is need for the rites, as well as basic Masonry. There is need for the Shrine and all the constituent Masonic bodies which stem from the Blue Lodge. Since Freemasonry was introduced into North America, great men have served our fraternity. To mention a few—there was Washington, Franklin, Hancock, and Pike. They made their contributions to a better way of life through our fraternity. It is a historic fact that our way of life was largely created in the atmosphere of Freemasonry.

Dr. Walter M. Fleming, an eminent Mason, conceived the idea that there are times when Masons should get together just for the fun of being together. Doubtless it is that thought that prompted your meeting in Los Angeles tonight. Fleming wrote the ritual for the Shrine which is now on display in the Shrine rooms in the George Washington Masonic Memorial in Alexandria, Va.

Our way of life today faces an organized attack by a godless philosophy called communism. If it should succeed, our fraternity would be the first to be destroyed. There is no group of men in North America who are better qualified to meet this attack than Freemasons and, in my opinion, we will be unworthy of our heritage if we do not meet the challenge. The challenge is being met in a modest way behind tiled doors. Let us say publicly that the purposes of Freemasons of America have not changed from that of the members of St. John's Lodge of Boston who assembled in the Green Dragon Tavern, painted their faces and dumped the tea in Boston Harbor.

I am conscious of the fact that partisan politics has no place in Masonry or the Shrine. I submit that communism is a conspiracy to destroy our way of life and if we are worthy of our liberty, we will not be diverted by the assertion that Masonry and the Shrine should stay free of politics while this conspiracy destroys our liberty.

Worshipful Sir, I hope you are as happy today on being created a Shriner as the 800,-

000 Shriners are to welcome you into our fraternity.

Good night to one and all, and may God bless and keep you well and happy.

Soviet Jets Used by Nixon Party Held Inferior Type

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 24, 1959

Mr. BOGGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the sixth in series of articles written by George W. Healy, editor of the New Orleans Times-Picayune, who accompanied Vice President NIXON on his recent trip to the Soviet Union:

SOVIET JETS USED BY NIXON PARTY HELD INFERIOR TYPE—LENINGRAD FOUND MORE ATTRACTIVE THAN CAPITAL

(By George W. Healy, Jr.)

LENINGRAD.—Because the Soviet Government declined to permit U.S. jets to travel around Russia, members of Vice President RICHARD M. NIXON's party used planes of the official Russian airline, Aeroflot, for flights within the Soviet borders.

The party, greatly augmented by Russian, French and British news correspondents who joined us at Moscow, was assigned three Aeroflot TU–104B jets for the journeys to Leningrad, Novosibirsk and Sverdlovsk.

These planes cruise at about 500 miles per hour, compared with the 555 miles per hour averaged by our Pan American 707–321 transport on the record flight from New York to Moscow.

The Russian planes are powered by two jet engines built into the backswept wings. The American plane has four jet engines, suspended slightly below the wings.

Actually, the three Russian planes assigned to us were bombers. They are capable of quick conversion from passenger transports to military use. They have their bomb bays and their bomb hatches ready for action.

Cabins of these three planes were less comfortable than that of the 707–321. Ventilation is inadequate, and when the planes were on the ground—at this season—the heat was intense. Moreover, they carried their own house flies—even at 30,000 feet.

Each TU–104B carried approximately 100 passengers, 3 on one side of the aisle and 2 on the other.

STRAIN ON BELTS

They come in fast for a landing, or—in the language of aviators—"very hot." Their jet engines apparently are not reversible, because braking is supplied by release from their tails of two parachutes. When the parachutes open, passengers and crew have a sensation of "Whoa." It's a sudden strain against seat belts.

After leaving New York the Nixon party, or parties, established the practice of applauding loudly as the wheels touched ground on each succeeding landing.

Applause on one of the Russian jet landings was very sparse. The pilot hit the runway hard, and as the plane bounced several members of the party shouted, "I'm not going to clap for that one."

Leningrad, in my opinion, is a far more attractive city than Moscow. The latter is monotonous, except for the skyscrapers erected during Stalin's regime; and most of them are grotesque.

Comparing Leningrad with Moscow, it seems to me, is like comparing New Orleans with one of America's new oil cities. Leningrad is mellow and has a distinct character.

Its people, reflecting Nordic influence, also are attractive and seemed to me better dressed than those in Moscow. Buildings along the Neva River, which flows through Leningrad to the Gulf of Finland, have real charm.

My most interesting assignment in Leningrad was to board the icebreaker *Lenin* with Vice President Nixon, Vice Adm. Hyman G. Rickover, Dr. Milton Eisenhower, and 11 other newsmen. We went aboard to inspect the vessel which the Soviets say will break ice through use of atomic power.

HEALY FIRST CHOSEN

With 300 newsmen on hand, including Russians, North Americans, British, French, and others, there just wasn't enough room on the *Lenin* for all correspondents to go aboard. A pool of 12 men was formed, 6 representing morning newspapers or electronic media and 6 representing afternoon newspapers or electronic media.

Through the luck of the Irish, when a drawing was made for the pool my name came out No. 1.

Admiral Rickover spoke briefly with the pool members before we boarded the ship. He understood that the Rusians expected her to break ice to a depth of about 8 feet while steaming at 2 to 3 knots.

We had been told by the Russians that no photographers would be permitted aboard. No Western photographers were allowed on the ship, but her decks were swarming with Russian photographers when we climbed abroad. I thought they were newspaper photographers, but one of my colleagues said he suspected some of them were police.

ENGINE DISCUSSED

At any event, the inspection party held a discussion with its Russian hosts before going below deck.

Engines of the ship apparently are just like the engines of any modern steam-turbine electric ship. Sole difference is that the energy or heat to make the steam for the *Lenin* is to come not from coal or oil but from an atomic reactor. At least, that's the way this layman understands it.

The *Lenin's* engines were operating when we went aboard, but they weren't driven by atomic energy. A pipe carrying steam from a landside installation crossed the wharf to the *Lenin's* engineroom.

Because I know very little about an atomic reactor and because it was very hot below decks, I excused myself from the inspection party after we passed through the engineroom.

Just to see whether it could be done I climbed alone to the bridge. Three officers there seemed not at all startled to see me. None, however, spoke English, and I spoke no Russian beyond a few phrases.

OFFICER DIDN'T KNOW

When I returned to the main deck the first officer was standing at the boarding ladder. He spoke a little English. I asked him if he would tell me about the ship.

In reply to my question about the thickness of ice which the *Lenin* might break, he held up his thumb and middle finger and said, "We don't know if she'll break ice this thick or"—raising his hand high above the deck—"ice this thick. We just haven't tried her. She's a new ship."

The Soviets have made great propaganda capital of the building of the *Lenin*—having exhibited motion pictures showing how she is expected to perform.

The only unusual thing about the *Lenin* which impressed me was the extensive use of plywood in its construction. Doors, wardroom ceiling, furniture and other equipment of the ship is made of plywood. Metal shortage may be an explanation, or there may be some other reason.

NO AIR CONDITIONER

No evidence of any air conditioning was apparent, but then there's probably no justification for an icebreaker to be air conditioned. Certainly not when she's in service.

As a member of the icebreaker news pool, I was expected to speak to all the newsmen at a briefing after we returned to the Europa and Astoria hotels.

Anything I had to say, of course, was anticlimax when Admiral Rickover made his report.

He believes the *Lenin* is good for what is expected of her—but represents no advance in the reactor art.

Philosophy of a Maverick

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, August 24, 1959

Mr. PORTER. Mr. Speaker, our colleague, BILL MEYER, of Vermont, calls them as he sees them. He is the first Democrat to win national office from Vermont in more than 100 years. His philosophy is courageous and refreshing. He has many friends among his colleagues. We appreciate his sincerity. We appreciate his concern for peace and his willingness to take action on his behalf.

I commend to the attention of my colleagues a fine article about BILL MEYER appearing in Labor on August 15, 1959, which under a previous consent is included at this point:

[From Labor, Aug. 15, 1959]

"MAVERICK" HOUSE MEMBER CALLS PEACE THE BIG ISSUE

"I see great dangers for any country whose prosperity is based on a war economy, like ours," declared Congressman WILLIAM H. MEYER, Democrat, Vermont, leaning back behind his desk, as he talked with a reporter for Labor this week.

Tall, husky and soft-spoken, Meyer created a minor sensation when he won Vermont's lone House seat last November. He was the first Democrat to win National office from the Green Mountain State since 1850.

Moreover, MEYER was identified as a pacifist. Actually, he says, he is not one. Instead he sounds more like an old-fashioned antimilitarist. Meyer is distinctive also in his resolve to speak out his full views, let the chips fall where they may.

Labor sought out the Vermonter this week to find how much effect he thinks this maverick-style approach has had in the session of Congress nearing its end.

MUST NOT DRIFT TO WAR

"To me," MEYER said, "the question of war and peace is the important issue today. That's why I entered politics. I say that we dare not let ourselves drift into war by hoping passively for peace while lacking the courage to work for it.

"In this session," he continued, "I've many times felt discouraged, as though I were working for a lost cause. But I think I've had some effect. I believe I've encouraged some fellow members to take more action on peace questions. Maybe I've made Congress think more."

MEYER estimated about 20 Congressmen agree personally with most of his "radical"

views on foreign policy, and about 50 agree with some of them. But few House Members, he indicated, have been willing to speak up.

"This whole place," said MEYER, "is pervaded with the idea that a Congressman's first job is to get reelected. Therefore, many of the things Members would like to do they don't do, because of the great political risk. But I feel that if you compromise right away, you'll get out of the habit of taking a stand."

COULD KILL DEMOCRACY

On foreign policy, MEYER said he believes that "we can't rely almost entirely, as now, on military deterrence, because it will probably result in the disaster of nuclear war." He believes that neutral zones should be created through mutual United States-Russian withdrawal of forces from world areas of friction.

He said he favors admission of Red China to the United Nations. He also favors halting nuclear weapons tests and a big push for mutual disarmament. Some national defense is needed now, MEYER said, but he recalled that a war economy "was the background of Hitlerism, too. It could kill American democracy and lead to a military dictatorship here."

On other issues, MEYER said, his stand generally resembles that of other progressive Democrats. For example, he noted, there aren't too many union members in Vermont. "But," he said, "three out of four times I would probably vote in a way organized labor would call favorable—because of my own views of what's right."

MEYER, a 44-year-old forester by profession, concedes that his independence—and his party label—may make it hard to get reelected. "They say being this way is no way to have a political career," he remarked. "But I must be true to myself."

Poison in Your Water—No. 157

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Monday, August 24, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the RECORD an article appearing in the Portland (Oreg.) Journal of May 25, 1959, entitled "Dirty River Once Stank, Killed Fish":

DIRTY RIVER ONCE STANK, KILLED FISH

(By Watford Reed)

The Willamette River supplied water to cities along its banks early in the century.

By 1944 it was so foul that it stank.

Up to 1912 or 1914 swimming meets were held in Portland harbor. That ended when towns on the Willamette dumped in their sewage without treatment.

So it was that Portland, Salem, and Oregon City had to build expensive water projects high in the mountains, take over broad areas of watersheds and forbid human entry.

Industry grew as population increased, and by 1926 pollution was so bad in the low water months of the late summer and fall that there was no oxygen in the water in Portland harbor. Fish died when they reached the harbor.

Shortly before the United States entered World War II, the State game commission dramatized the situation by lowering a cage of lively fish into the harbor while newsmen watched. Within a few minutes the fish were dead—suffocated by lack of oxygen.

A group of men sat on a raft in the river at Portland for days as a stunt to spur the city to meet its quota in a war bond drive. The men's only complaint:

"The stench of the rivef makes us feel sick."

In 1944, two Oregon State College engineers made a survey and reported:

"Pollution in the Willamette River system is a State shame. This magnificent river is in part an open sewer in which tremendous quantities of untreated human sewage and industrial wastes are disposed. Pollution, along with other detrimental activities, has depleted a world-famous commercial and game fish fauna."

No fewer than 51 outfalls discharged raw sewage into the Willamette at Portland and 11 into Columbia Slough.

In the 1930's, several attempts were made to get an antipollution law through the State legislature. All failed.

In 1938, advocates of clean rivers put an initiative on the ballot to set up the Oregon sanitary authority. The voters approved by a 3 to 1 margin.

In 1944, Portland voters approved a $12 million bond issue and a charge for the use of the sewers. Other cities followed suit under the prodding of the sanitary authority.

At the end of the war, only 4½ percent of the sewage that entered the Williamette had any kind of treatment. Not a single town on the main stem had a treatment plant.

Nor was any treatment given industrial waste.

By the end of 1957, almost 94 percent of the sewer-using population of the Willamette Basin was served by sewage treatment plants. Eighty public and semi-public such plants were in operation.

Industry cooperated in several ways. Some paper mills dug lagoons and poured their waste sulfite liquor into them for dumping into the Willamette at high water stages when it would do no harm.

The Crown Zellerbach mill at Leba .on began to evaporate and burn waste liquor.

Publishers Paper Co. at Oregon City, lacking ground for lagoons, gives away waste liquor for use as a road binder. Because of it, miles of dirt roads no longer are dusty in the summer.

Long tanks that look like oversize silos—each containing 120,000 gallons of sulphite liquor—are pushed on barges to the Columbia River, where the papermill waste is drained into the bigger stream. This process, praised at first, now has begun to arouse criticism because of industrial pollution of the Columbia.

Portland and other Willamette Valley cities have spent a king's ransom—more than $30 million—to clean up their stream.

Yet the State sanitary authority reports pollution only 16 percent less than it was in 1939.

The reason is twofold: Increasing population and growing industry.

In the words of Kenneth Spies, deputy State sanitary engineer:

"We haven't seen the end of either."

Industrial wastes have increased by 41 percent since 1950 and 93 percent since 1939, and the sewered population has increased by 73 percent.

A joint study by the sanitary authority and the pulp and paper industry brought out estimates that the five papermills on the main stem of the Willamette would have to reduce their pollution loads by 74 to 83 percent to maintain five parts of dissolved oxygen per million in Portland harbor—the minimum needed for fish life. They have reduced their pollution by an average of 67 percent.

Spies says: "The effluents of these five papermills were primarily responsible for the serious oxygen depletions which occurred in both the South Santiam River and lower Portland harbor in 1957."

Friendliness to Visitors Rises Far From Moscow

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES

Monday, August 24, 1959

Mr. BOGGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the seventh in a series of articles written by George W. Healy, editor of the New Orleans Times-Picayune, who accompanied Vice President NIXON on his recent trip to the Soviet Union:

[From the New Orleans Times-Picayune, Aug. 15, 1959]

FRIENDLINESS TO VISITORS RISES FAR FROM MOSCOW—GREETING IS ENTHUSIASTIC AT NOVOSIBIRSK

(By George W. Healy, Jr.)

NOVOSIBIRSK, SIBERIA.—The greater the distance from the Kremlin, the greater the show of affection by the Russian people for the people of the United States.

This is the observation of an amateur diplomat after a week in Russia.

Whereas the reception given the party of Vice President RICHARD M. NIXON, was on the chilly side in Moscow and warm in Leningrad, the reception given him and every member of his group in Novosibirsk was really hot. It was enthusiastic.

This city, 2,000 miles east of Leningrad, is less than 75 years old. It got its start when the Trans-Siberian railroad was under construction, in 1893. Now it is the largest city in Siberia, larger than New Orleans—with a population of about 900,000.

At the moment Novosibirsk is pushing a "balance agriculture with industry" program.

INDUSTRIAL ADVANCES

Its mayor, or his equivalent, who greeted us, emphasized that Siberia no longer deserves the bad name it bore for many years. Siberia, he insisted, is no longer a place for outcasts to be sent to die in salt mines.

A glimpse of this city and the nearby countryside supports the mayor's contentions.

Its traffic on the Ob River, which looks about like the Ohio at Louisville; its new hydroelectric plant 12 miles above the city; its machine stamping plant, which uses planning equipment and hydraulic presses made in the United States and Great Britain and sent to Russia in the days of lend-lease, and its other mills are impressive.

However, not one of these physical assets was as impressive to me as were the people of Novosibirsk. To use a word frequently uttered by Mrs. Nixon, they were "tremendous."

Very few Americans have visited this Siberian city of cold winters and hot summers. Among the few was Senator ALLEN J. ELLENDER, who came here several years ago.

CROWD JAMS STREETS

The Nixon party probably was the largest group of Western visitors ever received in Novosibirsk and the city really turned out. It was like Third Street in Baton Rouge on inauguration day.

Probably the finest building in Novosibirsk is its opera house or ballet theater, and when the Vice President went there for a presentation of "Swan Lake," the plaza in front and the streets on the sides were jammed.

Graciously, Mr. NIXON left the theater between third and fourth acts to speak to the crowd. I remained outside the theater after he returned to his seat.

Within minutes I was surrounded by thousands of interested or curious Russians, many of whom had never before been close to a North American. A young man pushed his way to my side, said he spoke a little English and offered to try to interpret for me.

I said I'd be happy to try to answer any questions about America.

ANSWERS QUESTIONS

The first was: "Why do you have to pay a doctor for medical service in your country?"

My reply was to the effect that people with means pay for medical service in the United States and that fine hospitals were available to give free treatment to those who cannot afford to pay.

The second question was: "Why do some young men and women in your country fail to get an education because they have no money?"

I explained that, in my opinion, any young man or young woman in the United States who desires an education can get it. I pointed out that many members of our party had worked their way through college.

As many questions were put to me and many answers given, my volunteer interpreter would brief the crowd.

CROWD OPENS WAY

When I saw that my bus was about to leave the front of the theater I asked that the crowd give me a lane to return to the bus. Very respectfully, the Russians stepped back, and I shook hands with 40 or 50 of them on my way to the bus.

My volunteer interpreter followed me to the bus, telling me that several members of the crowd, while shaking hands, had said, "We want to be your friends."

I gave him my card and asked him to write his own name and address for me. Although I had been cautioned that Russians and Siberians would be hesitant to establish any means of communication with members of our group, he quickly wrote his name, address, occupation and place of employment. He said he would like me to send him two articles from New Orleans.

If they'll go through the mails, he'll get what he asked.

Traveling behind the Iron Curtain, particularly beyond the Ural Mountains, with the Vice President of the United States is not all caviar and vodka.

IN OFFICIAL PARTY

When the official Nixon party was organized, two newspapermen were included for transportation to and from Europe and Asia by jetplane. Edwin Russell, publisher of the Harrisburg, Pa., Patriot and Evening News, was one. I was the other. Both of us qualified as members of the official party by virtue of our membership on the President's advisory commitee for the U.S. exhibition in Moscow.

However, neither Ed Russell nor I traveled in the same plane with the Vice President, except on the leg of the journey between Warsaw, Poland, and Keflavik, Iceland. On this leg the Vice President rode the press plane. The listing of the official party carried an asterisk after our names—indicating that we were traveling on the plane or planes which carried the news correspondents.

This was entirely proper, because had we traveled with the Vice President and stayed at all times with him and other members of the official party, we doubtless would have had advantages the other newspapermen on the trip did not enjoy. Ed and I wanted to cover the story like the others, and that meant that we should take the same chances and treatment as the other correspondents.

We may have made a mistake, but I doubt it.

The official party, with the exception of us two, was quartered everywhere in comfortable, almost luxurious dachas—or country homes. In two places we visited, quarters for the newsmen were primitive.

CONGESTION GROWS

Our accommodations in Moscow were average, with each man or woman given a single room and bath. At the Europa Hotel in Leningrad we started to quadruple. My assignment with with three other newsmen to what had been a parlor and bedroom suite. When we reached Novosibirsk, the congestion was real. I shared a room with seven other correspondents—with no running water.

The Russians apparently got mixed up on all room assignments, because Mr. and Mrs. Walter Ridder of the Ridder newspapers found themselves assigned to a room with two men; and Jinx Falkenburg, representing Newsday, found herself assigned to a room with seven men. After a reshuffling, rooms for men generally were occupied by six or eight men, and two rooms used by the women were occupied by four or five women in each case.

Standing in line, in 17th place, waiting to shave at a down the hall cold water tap in hotel No. 2 at Novosibirsk, I was joined by James "Scotty" Reston of the New York Times, in 18th place.

"Pretty rough, isn't it?" I said to "Scotty."

"You're just learning again how it is to be a reporter," he replied. "You editors just get too soft."

Then, as an afterthought "Scotty" added, "I wish a certain official of your State could see you here. He'd ask, 'Who's crazy now?' "

To have the opportunity to be a reporter again and to meet the fine people of Novosibirsk was worth any discomfort we experienced—many times over.

Ed Russell and I would do it again—with 20 in a room, if they could be crowded in—which they couldn't in hotel No. 2.

Milton Eisenhower, after our departure from Novosibirsk, spoke to me about the rough time he was having—sleeping in luxurious quarters but having to get up at the same time as the rest of us.

"What we've got is rougher," I said to him, "but I'm sure it's a lot more fun."

Cross Country With the On-to-Oregon Cavalcade—XIII

EXTENSION OF REMARKS

OF

HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Friday, August 14, 1959

Mr. PORTER. Mr. Speaker, the on-to-Oregon cavalcade is back home in Oregon. The following daily accounts of the wagon-train journey takes the adventurers from near Baker, which is in Representative ULLMAN's district, to The Dalles, still a part of the Second Congressional District, the largest district in our State. The trip through AL's constituency is warmly described by author Rudy Roudebaugh of Drain:

[From the Drain (Oreg.) Enterprise, Aug. 6, 1959]

WAGONEERS WELCOME ICE IN BLUE MOUNTAINS AFTER IDAHO HEAT WAVE

(By Robert "Rudy" Roudebaugh)

July 26, Sunday: Had church services at 8:30 and spent rest of day passing out letters and answering questions.

July 27, 5:05: All ready to go and Roy is just starting to harness. 5:10: Heading west and crossing Alder Creek. Doc got one new shoe on his left front foot yesterday. 5:37: Left the valley and going up the Blue Mountains. 5:59: At Oxman, not even a wide place in the road. 7:29: There are big rocks all over the hills with short sagebrush and small cedar trees spotted on the hillsides. 7:40: Pleasant Valley (motel, cafe, service station). This valley is about one-quarter mile wide and 2 miles long. Hay and cattle raised here. 8:40: Going down hill and I'm using the brakes. 9:10: Stopped to water. Doc and Jan didn't drink very much as it's cool, making traveling easy. 9:24: We are on our way again. Janell got off to ride in an Army Jeep.

10:58: Entering Baker, population 9,529. 11:02: Baker County sheriff posse came to escort us in. Free pop was given to us by the Beefburger Fountain and Cafe. 11:26: Crossing the Powder River. 11:35: Recrossing the Powder River. 11:44: We are camped at the city park at Baker, elevation 3,440. The lunch was served by the JCettes. At dinner we were personal guests of the Livestock Association. I met an old friend from Lexington, Ed J. Nauenburg. He is now living in Baker. It was cold last night with a real strong wind. Ki and I had about 3 hours rest yesterday which is something if you don't believe us ask Andy. Janell, Ki, and I were on KBKR ratio station for about an hour this evening. You folks will be hearing it as the tape will be sent to Eugene.

July 28, 4:30: Pancake feed at old town in Baker, sponsored by the historical society. 5:05: All hooked up and ready to roll. There was dew on the grass and it was pretty cold. We are waiting on Roy. 5:52: Betty Herizi rode with me this morning. Ki and Janell never even got up for breakfast. 5:57: Crossed Powder River heading south on Cambelle Street on Highway 30. Logging trucks are all heading for the woods. The Baker Valley is about 30 miles wide and about that long. Mostly hay and grain grown here with cattle and sheep raised. 6:51: Can see timber in the south hills. Powder River follows the north foothills. 7:39: A load of 15 pine logs just passed us. The cattle along here are mixed shorthorns, Angus, whiteface. 8:38: Stopped at Haines, population 325, and watered. Was served coffee and cookies (special guest) and went through the Hitching Post Museum. 9:37: Leaving Haines and Roxie Cutting from Nehama is riding with us.

11:18: Crossed 45th parallel which is halfway between the Equator and North Pole. Most common tree through here is pussy willow.

11:36: Entering Union County and crossing North Powder River. 11:49: Entering North Powder River, population 425. Making camp at the high school. We have a big welcome sign here that says, "Oregon Centennial Wagon Train—North Powder Welcomes You in 1959—Come Again in 2059." Lunch was served to us by the North Powder Grange. They will also supply us with dinner.

July 29, 5:50: Ready to roll. Ki is on cook shift and (naturally) this was the best breakfast I've had since I've been on the trip. North Powder is supported by sawmills, beef cattle. Our feed and grain was donated by North Powder Grange. 5:57: Rolling out across Powder Valley.

We had ice all around us last night. It was a big change after the heat. Doc got one new shoe on his left rear foot. 8:15: Leaving Powder Valley. 8:26: At the summit and small pine trees on each side of us. 9:12: Met by the 4–H Riding Club. 9:58: Going down through a canyon. It has warmed up some. 10:02: Stopped to water. Jan and Doc each drank a pail of water. 10:18: Going west again. 10:34: We dropped off into Grande Ronde Valley. 11:30: Met by the LaGrande Maverick Riding Club. We must have about 100 riders with us now. 11:35: Queen Darlene and two princesses Pat and Karen of Joseph, Oreg., Rodeo.

12:10: Entered La Grande, home of Eastern Oregon College. 12:46: Arrived at armory. Lunch was served by the Salvation Army. Ki and I were invited to Neil Anderson's for the afternoon to bathe and rest. Neil is the sports editor of the paper here. Dinner was by the Lions Club.

July 30, 5:58: Perched up here on the wagon seat like a big ape and ready to take off. We had breakfast this morning by the Union Chamber of Commerce. 6:10: Rolling through the Grande Ronde Valley. Ki is still on cook shift. 6:28: Going through a grove of small pine trees. The sun is out and there is a small breeze. 6:42: Crossed the Grande Ronde River and going up a canyon with rocky hills on each side. 7:08: Crossed over the Grande Ronde River for the last time. Still in the canyon with pine trees on both sides. 7:16: Crossed 5 Point Creek. This part of the highway is under construction. 8:10: We have just pulled a long grade and stopped to rest for 15 minutes. 8:43: Hit the new superhighway, three lanes each way.

10:10: We dedicated the new highway. The Blue Mountain Boys came out to meet us. 10:31: We are camped at Strickland Flats. This place is just like any place a mile from Drain. We felt just like we were home. Mr. and Mrs. Lyle Hill were here to visit us this evening. We had a nice visit.

July 31, 5:36: Ready to go and leave Strickland Plate. 5:48: Finally pulling out. 7:30: Crossing railroad overpass going into Meacham, population about 50. It is a small place with a general store, post office combined. It's in the heart of the Blue Mountains, also the summit. 8:19: Emigrant Springs State Park. 9:03: Umatilla Indian Reservation. 3:59: Going over Deadman Pass. 10:42: Arrived at camp at the Umatilla Reservation.

August 1, 5:50: All ready to go. 605: Headed for Pendleton. We have five riders to ride in with us already. 6:22: We are coming into the wheat country; a little timber in the draws. 8:07: Came down a 7-mile hill. I guess Ki can breathe now as we are at the bottom. My brakes weren't too good, but didn't have any trouble. Wonder what happened to the National Guards, they aren't out to escort us. 8:45: Waiting at truck scales to take care of the traffic. 9:00: Here we go again. 9:54: Leaving Umatilla Indian Reservation. The Pendleton wagon just got in the lead. Population 15,174.

10:03: Entering Pendleton. Here is the Main Street cowboys of Pendleton to meet us. This is the oddest shaped town we've been in. 10:22: The band is out to greet us. It's a big deal here. 11:57: Entered the rodeo arena. Lunch served to us by the Ladies Pioneer Club and a beef dinner by the Veterans of Foreign Wars. Mr. and Mrs. Merlin Allen of Waitsburg, Wash. (old home Yoncalla), were here to visit us; also Bob Cellers and wife Ginger were here last evening.

[From the Drain (Oreg.) Enterprise, Aug. 13, 1959]

WAGON TRAIN MEMBER "HUNG" FOR HOSS STEALING IN EASTERN OREGON

(By R. "Rudy" Roudebaugh)

Theda Clemens (Honalin) of Pendleton was a visitor of the Drain wagon. She wants some of her friends in Drain to write her at 116 S.E. 10th, Pendleton, Oreg. Joe Huckins and family from Portland were also visitors.

August 3, 5:49: All hooked up. 6:03: Leaving Round-up City. Going by Empire Machine Co. Biggest piece of equipment for sale is a D–7. 6:14: Crossing Umatilla River. We are in Umatilla County. 7:16: Just pulled up a 4-mile hill, 8-percent grade and the oil is slick. The mules are having a time standing up.

This is rolling country with wheat as main crop. It's about to be harvested. 10:14: Stopped to water Doc and Jan. They drank a pail apiece. We can see Mt. Hood from here. It's right straight north of The Dalles. 10:28: On the road again. 11:57: Crossing the Umatilla River again. We are hitting irrigation area—raising corn, alfalfa. 12:22: Making camp at the Ervin Mann ranch south of Stanfield 6 miles. Made 24 miles today. The Chamber of Commerce of Hermiston gave a banquet for us. There was a speaker there from Walla Walla on Oregon history.

August 4, 5:22: Ready to roll. We had about 4,000 people around here last night. Ki is on cook shift today. 5:57: Crossed a small river, but didn't get the name. Its pretty windy and cold this morning. Lots of beef cattle grazing along here. Can still see Mt. Hood today. 6:55: Going over a little rise about a mile long. Nothing but sagebrush on each side of the road. 7:14: At junction of Highway 207. 7:26: Crossed over Butler Creek. Hay and corn is raised along here. Corn is used for ensilage. 7:34: Lost nut on left front wheel, but it was found before the wheel fell off. 8:27: Entering Umatilla Ordnance Depot. 8:38: Entering Morrow County, leaving Umatilla. 10:04: Stopped to water, Doc and Jan drank a half a pail apiece. 10:16: Westward again. This area here reminds me of the sand hills of Nebraska except there is sagebrush here. 11:22: Queen Sheron and her court, Judy, Susy, Janet, Joan, from Heppne Rodeo, rode out to escort us into town.

12:24: The sheriff came out and picked up Gail Carnine for hoss stealing. He had to stand trial and was hung by the neck as punishment (all mock of course). You will probably see it on television. Got our first glimpse of the Columbia River. 12:42: Made camp at Boardman public school on the football field. Lunch was served by all different club in Boardman. Dinner given by the Hug Water Melon Association.

August 5.—We had breakfast at Joe Patone's Hitching Post Cafe. The queen and her court also had breakfast with us and rode to H Junction with us. 5:57: Waiting for Tex, he's decided to ride today. 6:07: Heading west. The trees through here are locust, cottonwood, poplar, and willow. The crops grown here are alfalfa, wild hay, corn for ensilage. Doc had his shoe reset on left rear foot. They seem to raise lot of Hereford cattle around here. 7:32: Going through a small desert, rocky, with sagebrush along the Columbia River. 9:40: Leaving Morrow County, entering Gilliam County. 9:50: Left the new Highway 30 and now on old Highway 30. 9:50: Crossed Willow Creek, and stopped to water. 10:16: Heading up a canyon. There doesn't seem to be any breeze and its pretty stuffy. Second Lieutenant Domly is riding with me. He is the officer in charge of escorting us. 12:05: Camped on the George Shane and Sons ranch, 3 miles east of Arlington. He also donated the grain for us. Smokey Swape donated the hay (he's from Arlington). We were all given hotel rooms for baths and had dinner at the Pheasant Cafe, all donated by the chamber of commerce. Jan got a new shoe on her right front foot.

August 6, 5:45 and all hooked up. 5:57: Headed for home once again. We didn't have breakfast at camp this morning, we will stop at Arlington for breakast with a choice of three cafes, all on the chamber of commerce. 6:57: Entering Arlington, population 680. We have had our breakast and ready to roll again.

8:02: Leaving Arlington. We have a rock ledge on one side of us and the Columbia River on the other. The river is between two railroads; it looks odd for two trains to run along side each other with the water between them. 10:11: Bialock, it's a small place and they seem to raise a lot of peaches here. 10:36: Philippi and family are here to take us to our camping spot. They are the people that own the ranch we will stay on. 10:48: Stopped to water and met John and Evelyn Lindol, friends of Wally and Ida Dysert of Drain. 11:05: Here we go again. It's really warmed up. 12:09: We have arrived at camp.

Ray Stratton and his Drain Black Sox team stopped to see us today on their way home and said they'd see us in Independence. Arlington will be under 20 to 40 feet of water in 6 years. It's such a pretty little town and old homes and young and old orchards will soon all be gone. The residences will be moved about half a mile up a hill. I guess I better mention why this all is going to happen; they are building a dam to be called John Day Dam, and this townsite will be flooded.

August 7, 5:53: All hooked up. 6:01: We are rolling homeward. Jan got two new shoes; right rear and left front. 6:26: We are going through rocky country. The rocks look like they have been burned.

Last night Ki visited the ruins of an old Indian village where it has been dug up and sifted for relics. She found two arrowheads. She was really impressed with this place. 8:27: Leaving Gilliam and entering Sherman County and crossing the John Day River. Janell just got out of bed and Ki and Jean Marshall from Roseburg just went back into the wagon for a nap.

8:21: We just heard the terrible news about the Roseburg explosion and fire. There is some wind this morning, but the sun is hot and it doesn't do much good. 9:05: Passing by the site of the John Day Dam. They have already started working on it on the other side of the river. 9:22: Just made a pull over a hill. 9:43: Entering Rufus. The farming area around here is one-half mile wide and 2 miles long. Doc and Jan had a ball last night. I never tied them up and they wandered all over. At 3 o'clock in the morning I had to get up in my shorts and feed and water them. They wouldn't leave me alone until I did. You see I sleep with my head on the tailgate within easy reach of anyone or animal. 11:50: We are pulling up over second rock ledge over the river and are wondering how the pioneers ever made it. They must have disassembled the wagons and lowered them piece by piece consuming many days. 11:04: Going through Briggs Junction. 11:15: Entering Briggs. 11:25: Stopped to make camp along the Columbia River.

Made 21 miles today. 11:27: We are stopped in front of the city hall. The president of the chamber of commerce is giving a welcome and accomplishment speech. This town is the end of the Oregon Trail.

August 8, 5:50: All hooked up and ready to roll. 6:01: And we're on our way. Last night we had a real surprise. Judy and Al Hollaman showed up. Friday night we had a family-style dinner given us at the Frontier Cafe at Rufus by Sherman County Club. The Dallas Industrial Club started out with us today, so we are well escorted. 6:45: Fulton Junction. 7:14: Entering Wasco County and crossing the Deschutes River. Leaving Sherman County.

Here comes a real Indian chief to meet us and take us to their village. Had a brief ceremony at the Indian village. 7:32: Leaving the Indians and on our way again. As we came through, Ki was given a pair of Indian beads and jar of something. 8:51: Jean Marshall crawled in the back of our wagon so she could get some sleep. Janell is

riding with Judy and Al. 9:08: Ki and I are looking up a rock ledge above 400 or 500 feet and wonder what's holding some of the rocks up there. Mount Hood sure shows up today with timber lying below that we have been looking for now for 4 months. 10:16: The Dalles Dam entrance. 10:29: Fifteenmile Creek. We are now crossing it. We just went by a fruit stand and they came out and gave each of us a basket of cherries. 11:06: The Dalles, population, 11,250.

11:48: As we were coming into the city park to camp we had a real steep hill to climb. The blacktop was so slick none of the wagons could make it. Guess what? A Jeep came to the rescue.

United States Steel Battles School Taxes

EXTENSION OF REMARKS
OF
HON. LEONARD G. WOLF
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 24, 1959

Mr. WOLF. Mr. Speaker, under leave to revise and extend my remarks, I wish to insert into the Appendix of the RECORD an article by the distinguished columnist Drew Pearson. It seems to me that the United States Steel Corp. has much explaining to do if the statements of Mr. Pearson are correct:

[From the Washington Post, Aug. 24, 1959]

UNITED STATES STEEL BATTLES SCHOOL TAXES

(By Drew Pearson)

Not all the facts were told in Secretary of Labor Mitchell's revealing figures on steel profits and steel wages. What he didn't tell—and perhaps didn't know—is the battle of the giant United States Steel Corp. against school taxes at local levels.

To get the full story you have to go to Montgomery, Ala., and Morrisville, Pa. In each case United States Steel lined up its legal and lobbying might against better education, despite the fact it's just netted the biggest profit, during the last 6 months, in history—a quarter of a billion dollars. Here are two chapters in the story:

Pennsylvania chapter: In rural Bucks County, Pa., on the banks of the Delaware, United States Steel acquired 4,000 acres of farmland, built one of the biggest steel mills in the world, and upped school enrollment from 20,000 pupils in 1950 to over 50,000 in 1958. In Falls Township, where the Fairless plant is located, school enrollment increased by 943 percent.

To take care of the increase, Falls Township built 239 new classrooms in 5 years. Nearby Bristol built 263 classrooms.

To pay for them Falls Township borrowed so heavily that it now pays interest at the rate of $689,275 a year. In 1950, before the Fairless plant was built, the town had no debt. Now 14.5 percent of the cost of the schools goes for interest on the debt. Meanwhile, taxes in the county have been increased 100 percent.

Taxes on the United States Steel property, however, have not been increased. The huge, sprawling plant is assessed at $23 million though it cost around $600 million. The U.S. Government even gave United States Steel a tax writeoff of $200 million.

But efforts to increase local taxes for United States Steel have been stalled. For 5 straight years the school board has appealed the low tax rate, and for 5 straight years the Bucks County commissioners have appeared to favor United States Steel.

The commissioners are: John T. Walsh, chairman, Democrat; Adolph Andrews, Democrat; and Thomas R. Lewis, Republican. They also serve as the board of assessment and review of taxes. Thus they themselves sit in review of their own assessments.

Because of this the school board appealed to Judge Edwin Satterthwaite, Republican, to force United States Steel to produce costs. But Judge Satterthwaite ruled that it would cost United States Steel too much.

NOTE.—Bucks County, onetime stronghold of Senator Joe Grundy, high-tariff Republican, has voted for the GOP since the Civil War—until 3 years ago when it went Democratic. A lot of voters now say they don't see much difference.

Alabama chapter: Down in Alabama, United States Steel's Tennessee Coal and Iron Division operates the biggest steel plant south of the Mason-Dixon line. Gov. John Patterson took it on in a bitter fight. In order to improve Alabama schools, Patterson proposed a sales tax of 1½ percent on new machinery, also a reduction of the consumers' 3-percent sales tax to 2½ percent.

Arthur Wiebel, president of United States Steel's operations in Alabama, has potent friends in the Alabama Legislature. He used those friends. He also came out with a public statement attacking the sales tax on machinery. Governor Patterson didn't backtrack. After a protracted legislative debate, he won.

DEFENSE EXCESS PROFITS

Congressman ALFRED SANTANGELO, the New York City Democrat who has already sparked the investigation of the munitions lobby, is now doing some personal investigation of his own. He has unearthed the fact that some of the biggest defense contractors owe Uncle Sam money on excess profits taxes and are refusing to pay.

Yet the Defense Department is heaping new profits on these same companies. Naturally the Congressman wonders how much the retired admirals and generals who work for these corporations have to do with this nose-thumbing of the Treasury.

Careful probing by the Congressman has unearthed the fact that a total of $105 million in excess profits taxes is due the Government. But a battery of high-priced tax attorneys are resisting payment every inch of the way.

"These recalcitrant companies are led by North American Aviation," says SANTANGELO. "It owes the taxpayers $29 million of excess profits through 1953–55. Yet in 1958 the Defense Department awarded North American contracts totaling $647 million and in the first half of 1959 contracts totaling $570 million.

North American has hired 27 retired military officers.

Other contractors against whom 1953–55 excess profits claims have been filed and who are still resisting payment are Boeing Aircraft, $27.5 million due; Fairchild Engine, $2 million; Lockheed Aricraft, $12 million; Martin Co., $9.7 million; Douglas Aircraft, $12 million; and Grumman Aircraft, $8.5 million.

All these companies continue to get huge slices of defense business.

Can We Do Less?

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, August 24, 1959

Mr. PORTER. Mr. Speaker, the Christian Science Monitor speaks out for a continuation of the cessation of atomic tests. It points out that the Soviet Union has promised that it will not be the first to resume testing and it asks, "Can the United States and Great Britain do less?"

Under a previous consent here is the text of an editorial from the Christian Science Monitor for August 13, 1959:

[From the Christian Science Monitor, Boston, Mass., Aug. 13, 1959]

PROLONG THE HALT IN TESTS

A cessation of atomic tests is already in effect. Unless one of the atomic powers is cheating, testing has been in abeyance since last fall. Continuation of this halt and the speedier development of ways to guarantee it are feasible targets for public pressures at this time.

The Soviet Union has now promised it will not be "first to resume testing." Can the United States and Great Britain do less? Are the risks involved in refraining from testing greater than those of a resumption? It seems to us that the answer to both questions must be No.

When the United States halted testing last October President Eisenhower indicated that it might be necessary to resume unless negotiations for a test ban produced agreement on an effective inspection system within a year. Progress on such a system has been made at Geneva. But the conferees are still stalled on some aspects of inspection.

One hitch was caused by discovery that underground blasts were more difficult to detect than had been believed. Now Washington has rather belatedly announced steps to offset this difficulty with more sensitive measures of detection. This useful move should be urgently pursued.

Pressure should also be applied to get action at Geneva on proposals to overcome differences between Soviet and Western representatives over the number, composition, and procedures of inspection teams. One hopeful suggestion from Prime Minister Macmillan would permit some reduction in the number of inspections but make them unexpected. Any inclination to cheat would face the risk of exposure by a surprise visit of international inspectors.

The nature of the Soviet system and its power to maintain secrecy impel the Western atomic powers to extra care to insure effective policing of any ban. However, there is reason to believe that Moscow has a real interest in limiting the nuclear club and a test ban is a first step.

France is already knocking imperatively at the door, with major nuclear tests scheduled within a few months. China is expected to insist on having its own atomic arsenal. A British-Soviet-American agreement to conduct no more tests and to set up an inspection system might not dissuade other nations from pushing their own tests. But whatever leverage it did provide would be far more than is now available.

Moscow knows that American policy on tests has been at a disadvantage because of divided counsels. The Pentagon feels that more tests are needed to perfect small atomic weapons and missile warheads. It has the backing of one group of nuclear scientists. Others have looked more favorably on a test ban. For a year and a half this second group has had the ear of the President. But so far American policy has not expressed the boldness and urgency required by the situation.

If the nuclear club is to be limited and vital progress made toward arms control, time is of the essence. A reasonable program would be to continue the holdback on new tests while more vigorously exploring every possibility of detection and effective inspection. This is a minimum basis for any effort to persuade France and others to join the standstill on tests.

Appendix

Education: The Federal Role

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, August 25, 1959

Mr. HUMPHREY. Mr. President, on Thursday evening, August 20, I had the privilege and honor of addressing the national convention of the American Federation of Teachers, meeting in Minneapolis, Minn.

Because of the attention directed in this address to legislation now pending before the Congress, I ask unanimous consent to have printed in the Appendix of the RECORD my address, entitled "Education: The Federal Role."

There being no objection, the address was ordered to be printed in the RECORD, as follows:

EDUCATION: THE FEDERAL ROLE

(Address by Senator HUBERT H. HUMPHREY before the National Federation of Teachers, Minneapolis, Minn., August 20, 1959)

Ladies and gentlemen, it is a singular privilege to be asked to speak to you tonight.

You know, I always feel at home with teachers. After all, I'm a sort of refugee from a classroom. And in the realm of public affairs, I honestly try to carry on what you begin in the classroom.

I salute you as teachers; I salute you also as an important and articulate part of the American labor movement. It is heartening to find teachers who say, as you do, "our strength is our affiliation with the AFL–CIO." And it is heartening that the teachers in their embattled struggles, from Calumet to New York, have had the support of the labor movement, which for years has been in the forefront of the struggle for public education as an essential requirement for political and economic democracy.

This is more than just a matter of mutual aid among those who work for a living, regardless of the color of their collars. Teachers in their fight for professional standards and for their rights as employees are also fighting the battle of the community for better schools. In this they have earned the support of all of us.

Within the labor movement your union has been a symbol of the importance of education and social progress, and a powerful force against the corrupting influence of those who have betrayed the labor movement from within. Congress will act this year to eliminate corrupt practices without crippling legitimate union activities. In treating the disease of corruption in unions, we do not want to prescribe a treatment that maims the patient in trying to cure the diease.

Many years ago, when I worked in the field of workers' and adult education, I learned to appreciate all the more the crucial importance of public schooling in our democracy. I learned that the decisions of men and women as citizens, as voters, as union members rested in large part on the basic education they received in our schools.

This is true even more today than it was 20 years ago. For all the importance of science and technology in our educational system, in our lives and in our progress and survival as society we will stand or fall by our ability to cultivate human beings and train citizens. In the crucial competition for the preservation and triumph of freedom, we will stand or fall by our quality as a nation of citizens. This is the true meaning of educational systems to which you are devoting your lives. If you succeed, we cannot fail.

The greatest asset of any education system—along with its students—is not the classroom, nor the laboratory, the library nor the playing field. Its greatest asset is its teachers.

And, by the same token, an educational system cannot rise above its teachers. Through them flows the essence which a society imparts to its children.

The perilous world in which we live today forces us to reappraise both the educational structure and the educational tasks of our American society. We know that we are not doing as well as we can.

But to do better, we must understand clearly why we need to do better.

There is of course the direct competitive challenge of the Soviet Union. In fact, the very fact of Premier Khrushchev's forthcoming visit to the United States is a vivid demonstration of what a determined and well-financed educational drive has done to take a backward nation to a position of enormous strength and prestige in the world.

Among those of us most concerned with the massive challenge to our society from the Soviet Union have been our own scientists and engineers. Dr. Edward Teller and Adm. Hyman Rickover have repeatedly warned us that Soviet advances in science and engineering threaten actually to surpass achievements in our country.

It is not merely a question of what we ought to be doing in education. It has come down to a categorical imperative: We must consider education in terms of the life and death struggle among nations.

It should be sufficient to emphasize that we should set higher priorities on education because it is the right thing to do—because education is an indispensable means for enriching the lives of people—for raising the levels of human capabilities and for deepening understanding.

Yes, we are falling behind the efforts of other nations; and, equally important, we are falling behind our own needs, our own potentials. We are fall behind our own ideals.

Our own true needs and purposes, everywhere in the world, are to fulfill the real traditions and promise of America. As we do this, we grow stronger everywhere. As we fail to do this, we grow weaker everywhere.

I do not intend to discuss with you what you ought to teach, or how you ought to teach. These are questions of the greatest public importance, to be determined professionally within your profession. They are not within the scope of Government. The prime responsibility of Government is to marshal effectively the material resources of the Nation so that what ought to be taught can be taught, taught well, and taught to every American—taught to every American up to the highest level of education he can attain.

I have no doubt that, if we can provide the material means, the education system and particularly its teachers can shape the content of education to express our highest intellectual and moral values.

In saying this, I do not imply that the quantity of education can take the place of quality. But quantity is everywhere a precondition of quality. When there are not enough classrooms and teachers, when teachers are grossly underpaid, when many students of ability are excluded from the educational process through lack of means, to talk only about quality of education without reckoning its costs and accepting responsibility for meeting those costs would be a fraud.

On the contemporary scene, my friends, our quantitative defaults in education are surcharged with qualitative defaults. When we say, as a nation, that we cannot afford to be better, that it would be "inflationary" to spend more for education, we are not talking sound economics. We are talking nonsense, and worse, downright immorality. We are saying that we value frills and luxuries more than the goods and services most vital in our lives. And when our productive resources of manpower and machines, if fully used, could give us both the essentials and the luxuries, the moral default of idle resources becomes even more apparent.

I know that all of you here are familiar with this default. But evidently, the Nation at large is not, or it would take arms in righteous indignation. And so I trust you will bear with me, while I bring a few facts to the strengthening of your cause.

You all know the dimensions of our classroom shortage in the public schools of the United States.

The number of classrooms built was not much more than those required to accommodate increased enrollments and replace classrooms abandoned as unfit or obsolete. A 200,000-classroom shortage today would be a conservative estimate.

To eliminate this shortage within 5 years, to replace classrooms abandoned and to cover new enrollments of more than 1.2 million students a year, requires about 107,000 new classrooms yearly during the next 5 years. This would require a 5-year construction program of about $4 billion.

The States and localities, despite heroic efforts, have in recent years been able to expend about $2½ billion a year for classroom construction. If, by the greatest efforts, they should average about 3⅛ billion annually over the next 5 years, they could build 82,000 classrooms a year. This would still be about 25,000 short of the minimum need. By 1965 we would still be about 125,000 classrooms short.

If the Murray-Metcalf bill were enacted, and if funds thus made available were apportioned by the State and localities between capital outlays and teachers' salaries in accord with customary patterns, there would be about $900 million available for classrooms each year for the next 4 years. This would just about close the gap.

Second, as to the shortage of public school teachers and the inadequacy of their pay.

In the spring of 1959, the consensus among leading educators was that the shortage of teachers in our public schools was about 140,000. Of this, about 40,000 were needed

to reduce the student-teacher ratio to workable levels. And about 100,000 were to replace teachers with insufficient training.

The task over the next 5 years, if realistically faced, is to recruit about 60,000 teachers a year to meet accumulated and accumulating needs, plus about 70,000 new teachers each year to replace those leaving the public school system. With this level of entrants into the teaching field, provided they are of high standard, it is estimated that the current qualitative shortage might be substantially eliminated 5 years hence.

It has been found impossible to recruit qualified teachers at this rate at prevailing levels of teachers' pay. Average pay in the public schools is now estimated at $4,775; nearly one-fifth of all classroom teachers receive less than $3,500; and only one-fifth receive as much as $5,500. If we want the number and quality of teachers we need, we must be prepared to pay for them.

For the sake of justice, as well as for the sake of recruiting qualified teachers, we need to increase teachers' pay in the public schools over the next 5 years about 50 percent. Such an advance would bring teachers' salaries close to parity without advancing pay in other comparable areas of work.

States and localities cannot carry all of this increased burden, even if they expand their efforts more rapidly in the years ahead than in recent years. The Federal Government, with greater resources of national revenue, must act in the national interest to assert the priority of the Nation's education system. To do this, Federal contributions toward teachers' pay will need to become an established part of the finance base for education.

Enactment of the Murray-Metcalf bill, of which I am a sponsor, would go a long way toward meeting the needs.

As we look to our school system to lay the base of a competent and informed citizenry, so we look to our colleges and universities for the development of our intellectual leadership. And here, too, we are falling short.

The task of education in a democracy is to develop every intellect to the utmost of its capacity. It is a national disgrace that perhaps as many as 150,000 of our most gifted young people are barred from college because they cannot afford the cost.

The Defense Education Act of 1958 only scratches the surface of the need. At the time it was passed, I protested vigorously but in vain against its niggardly terms and grudging conditions. This is why I have proposed my students' aid bill, with appropriations for scholarships rising gradually to $184 million a year by fiscal 1963. I have also proposed tax credits, up to $450 a year for parents paying college tuition and fees.

Federal funds are also needed to assist the expansion of physical plants at colleges and universities, and for related purposes.

My friends, what are the main objections to an expanding educational program along these lines? Especially, what are the objections to the Federal participation which is essential to this expansion?

The first objection is an offspring of the spirit of segregation. My views on this subject are known to you all. I am happy that the AFT has taken a similar view. As a one-time teacher, I share your pride in your firm advocacy of the advancement of school desegregation. I do not see how anyone who is true to the vows of this profession can take any other position. I note, too, that it has cost you the support of some who would otherwise be your adherents. This is something else that you and I have in common.

The second objection is that Federal aid would mean Federal interference in the education process. In fact, by providing Federal grants to the States, which then could use the money for either classroom construction or teacher salaries, we can restore local control. How much control over education does a local school district have when it is bonded to the limit, operating on split shifts in aging, inadequate buildings with underpaid teachers who do not have minimum teaching qualifications? The legislation I have introduced to give Federal aid to States for school construction and teacher salaries expressly prohibits any Federal control. In 1950, as chairman of the Senate School Construction Subcommittee, I sponsored the bill which became law and now provides money for school construction in areas where families in Federal service put too heavy a burden on local school facilities. Since that time Congress has appropriated more than $1.8 billion for construction and operations of schools in such areas. There has never been the slightest hint of Federal control in the administration of this money.

The third objection is that we cannot afford the cost. This merits close attention, because of the fog of cultivated ignorance on this subject.

What is the Federal Government now spending for education? The amount proposed in the President's original budget for fiscal 1960 comes to only $2.68 per year for every man, woman, and child in the United States. It comes to only about six-tenths of 1 percent of the total proposed Federal budget. It comes to less than one-tenth of 1 percent of the estimated total output of goods and services of the United States.

This is indeed a sad commentary upon our scale of national values, as registered by the budget of the Government of all the people.

We are told, however, that there are so many other essentials in the Federal budget that there is room only for a token payment toward our educational needs. This is far from the truth. The truth is that, as we have the needs, so too we have the resources, if we will but use them.

There is no true economy in neglecting the greatest priorities of our national needs, among which education ranks very high. It has not been sound economy, even by the narrower and more traditional economic tests. The same restrictive thinking which has neglected the great priorities has led to policies which have repressed our general rate of economic growth.

The slowdown in the rate of economic growth since the end of the Korean war has meant idleness of men and machines which has cost the country tens of billions of dollars. As a consequence, tax revenues of Federal, State, and local Governments, during the period 1953–58 along, were $30 to $35 billion less than they would have been under conditions of full employment and normal economic growth. With these additional revenues, we could have met the great priorities of our national needs, without budgetary deficits or inflation.

Those of us who have urged policies for economic growth for the past 3 or 4 years have been scoffed at, laughed at, and chastised from the highest official places. Now I am glad to see that we have made some converts in those same places. The Cabinet Committee on Price Stability for Economic Growth, under the chairmanship of the Vice President, which at the end of June was sounding the alarums of inflation, now, less than 2 months later, has discovered that the "inflation" has been brought under control after all and solemnly proclaims the importance of economic growth. Now that we have converted them, I hope they succeed in converting those who make the budget and the economic policies of the Government.

We should know, by now, that we cannot protect the Federal budget by neglecting the needs of the Nation.

So, where should we go from here—and how?

Where would the money come from to do this job?

There are those who say that we should cut back on nonessentials, at at least on luxuries, in order to get the things we need most. If this were necessary, I would favor it.

There are those who say that we should raise tax rates or impose new taxes to support these essential programs. If this were necessary, I would favor it.

I would vote for either of these if that was the only way to get the schools and other things we need so greatly. But this approach seems to me to neglect the productive power—the new technology—which is the hallmark of America.

We cannot afford, in the space age, to divide scarcity. We need instead to plan to share abundance. Our needs are not for one kind of public service, but for many. Our needs are for more public services, as well as for more private economic progress.

What makes democracy stronger than totalitarianism is not superior power to suppress one kind of progress in order to attain another. Our greater inherent strength, the great strength of democracy, is in the ability of free people to plan and use their free system, to sustain their values and serve their needs more fully than the totalitarians. We do not seek to excel them in the taxes which the state, in one form or another, imposes. We can excel them in the energies which we voluntarily release and put to use in the service of all men.

But this voluntary release of our energies requires purposefulness and planning. It requires a concert of action at all levels, private and public, local, State, and Federal.

If we attain this concert, we can activate and maintain the 5-percent average annual growth rate urged by the Rockefeller report and other competent studies. This growth rate would yield us, for the period 1958–64 as a whole, about $400 billion more of national output than would result from the low average annual growth rate of less than 2½ percent from 1953 through 1957.

It would yield about $70 billion in Federal, State, and local revenues, at existing tax rates. In Federal revenues alone, the yield would be more than $50 billion.

On this basis, we could not only do the education job; we could also enlarge social security, improve health services, clear slums and redevelop urban areas, expand national security efforts, and participate in international economic cooperation on a worthy scale—and without inflation.

A Federal budget geared to these tasks, in a fully expanding economy, while it would increase in dollars, would steadily shrink in relation to the total economy. The budget would thus become less burdensome, easier to balance, and less inflationary.

We have the resources to meet our needs—and then some. The only question is whether we use them or let them languish. The only question is whether we can expand our thought, expand our action, expand our concept of private and public responsibility, to the challenge of the times.

We live not only in the space age of missiles, but also in the space age of economic and technical capabilities. We must lift our vigor and our courage to space-age proportions.

As we do so, our goal is not to outstrip another country or another society. Our goal is to realize, fully and freely, the best of ourselves.

Our aim is not to outstrip an adversary. It is to show the world what a free society is capable of, not only in material things but in the riches of mind and spirit which have been the greatness of democracy.

Our task is to make ourselves strong, not to fight a war but to prevent one—not to flaunt our strength, but to show that the strong can be also wise and patient and firm and persistent in the pursuit of peace.

The Food Stamp Plan

EXTENSION OF REMARKS

OF

HON. JOHN M. SLACK, JR.

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 25, 1959

Mr. SLACK. Mr. Speaker, under leave to extend my remarks, I wish to extend the strongest possible endorsement for the amendment of Public Law 480 to include the food stamp proposal submitted by Representative SULLIVAN. From the human standpoint, I fail to see how there can be valid objection to this proposal. I have no quarrel with the operations of Public Law 480 itself. Presumably it has met a need to the satisfaction of a majority of my colleagues during recent years. At this point, however, a new need has arisen, and this is a domestic American need which should be closest to our hearts.

I believe most of us are familiar with the facts of the case, the millions of Americans who now receive surplus agricultural commodities, and the relationship between those millions and the number of millions of Americans who are chronically unemployed, the victims of technological advance in industry.

Some of us may be less familiar with the human conditions created by the need to subsist for periods of a year or more on a diet of three or four surplus commodities, as has been the case in the past. Careful inquiries among the long-term unemployed in certain depressed communities in my District have established to my satisfaction that families in these circumstances are receiving less than half of the necessary quantities of nutrients required to sustain health.

Ever since the opening of this session I have been very much disturbed by these findings, and particularly by the implications of those findings as applied to the children of needy families. In our deliberations since January we have discussed hundreds of bills and resolutions which were aimed at some improvement in the social, economic or political conditions prevailing in our country. In the climate of a growing wave of material prosperity, however, we have not undertaken to deal with the problems of those who do not presently share in improved economic conditions.

Area redevelopment legislation appears to be stalled, and this is a development which I believe we will have cause to regret. The number of areas with surplus labor is growing, rather than declining. The number of needy persons receiving surplus agricultural commodities is increasing. The number of communities whose industry is failing to keep pace with technological advance is also growing. One day we must deal effectively with this situation. For the moment, however, we must, as a minimum acknowledgment of our responsibilities to fellow human beings, act to make available to the needy at least such foods as will maintain a dietary standard sufficient to maintain sound health. If we do not, these needy will become a progressively greater charge on their communities and on this Government.

Many of us have submitted bills calling for the appropriation of funds for the purchase of a wide range of foods for distribution to the needy. None of these bills has received committee consideration, and prospects for them are bleak. The food stamp plan is another approach to the same problem. For those who doubt that it will work, I say, we have no choice but to try it, in lieu of the failure of this Congress and the administration to offer anything else.

There are some 75 Members of this House who represent districts in which there are located depressed areas, and in which the distribution of surplus agricultural commodities is an important economic and political factor to be reckoned with. I cannot speak for all of them, but for myself, I congratulate the gentlewoman from Missouri [Mrs. SULLIVAN] for the skill and determination with which she has led the fight to bring this proposal before us, and for the dignity and patience with which she has borne defeats during several previous efforts to accomplish this same purpose.

Futile Farm Control

EXTENSION OF REMARKS

OF

HON. LYNDON B. JOHNSON

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Tuesday, August 25, 1959

Mr. JOHNSON of Texas. Mr. President, the task of finding the most practical and effective farm policy possible for this country is difficult. I do not believe that it is impossible.

Recently, the Fort Worth Star Telegram, of Fort Worth, Tex., published an interesting editorial entitled "Futile Farm Control." It is with the examination and study of all points of view that reasonable men arrive at the best possible solution to a problem, and this editorial represents a significant and important view.

Mr. President, I ask unanimous consent that this editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Fort Worth Star Telegram, Aug. 18, 1959]

FUTILE FARM CONTROL

A major factor in the frustration of efforts to end the agricultural surplus problem in this country by acreage allotments has been the increased proficiency of the modern American farmer. When his planting areas have been reduced, he simply has got busy and found ways of getting the same or bigger yields from less land.

The solution to this problem, however, is not merely to order more drastic acreage cuts. Or at least that seems to be one inference that can be drawn from some facts picked up by a group of Texas ranchers making a tour of Scotland. The Texans have been amazed at the high standards of cultivation and the unbelievable productivity of the land tilled by the Scotsmen. "You just don't waste land here," one of the Texas visitors marveled. "I should say it has twice the productivity of ours."

Another Texan estimated that the British farmer must be getting as much out of each 300 acres as the Texas farmer gets out of a thousand. In northeast Scotland, the group saw wheat that was expected to yield 100 bushels to the acre, whereas 50 bushels is considered excellent in Texas. And this despite the fact that the Scotsman's soil has been under cultivation without interruption for 400 to 500 years.

Of course, in the case of Britain, the high productivity is essential because of the scarcity of land on which to grow food to supply the huge and ever-increasing number of mouths. But there can be little doubt that the American farmer would react with a similar stepup in production if an artificial shortage of land were created in an effort to cut down on the burgeoning surpluses.

With this information at hand, it should be clear that the farm problem can never be solved by acreage controls, and the sooner the puzzle is approached from another angle, the better will be the hope of finding an answer.

Greed, Waste, and Extravagance

EXTENSION OF REMARKS

OF

HON. NEWELL A. GEORGE

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 25, 1959

Mr. GEORGE. Mr. Speaker, the more one learns of the manner and the methods by which defense contracts are entered into and of the greed and selfishness on the part of the contractors as well as the failure on the part of the Pentagon representatives to consider the taxpayer, the more one wonders if the United States is not traveling in the same direction and to the same ultimate end as did Rome centuries ago.

An editorial, Mr. Speaker, appeared in the Lawrence Daily Journal-World on July 18, 1959, which points to just a small item of waste in the overall defense program, which I include with my remarks:

[From the Lawrence (Kans.) Daily Journal-World, July 18, 1959]

A CLOSER LOOK

There is a lot more tragedy than mere unemployment in this matter of the Callery Chemical Co. and its high-energy fuel contracts with the Federal Government. In view of the events of the past week, one finds himself wondering more than ever just exactly how much tax money—real big tax money—the Government wastes each day, let alone each week, month, or year, through sheer foolishness.

The past week saw officials of the Callery Chemical Co. plant here forced to sever about 100 from its 180-employee payroll. Reason: Government contracts are expiring ahead of schedule and, until the local plant can achieve full-time commercial operation, there won't be enough work.

This is bad, for the people involved and their community. But the local plant was built by the company, at company expense, thus the firm will try to get it into all-out commercial production as soon as possible.

Though the worker total will be much smaller than anticipated for a while, the plant won't be abandoned and will continue to shoulder its burden of the tax load.

But take the case of the recently completed and dedicated $38 million high-energy fuel plant the Navy built at Muskogee, Okla. While Callery is the operating contractor there, the plant was built with Federal funds, produced by tax money, expressly for the Navy.

Word is that the Defense Department is having a special agency study the current fuel needs to see if the country needs both the Muskogee plant and Model City, N.Y., Air Force plant, which was recently built at a cost of $45 million. Neither is now producing at more than 50 percent capacity. The question is whether one plant can handle the work for both and then expand when and if the need arises. A decision is due in a month or so.

If the study shows it would be better to have one plant instead of two in operation, the United States will have either a $38 million or a $45 million plant—and a shiny new plant, to boot—standing idle. This could be one of our greatest all-time monuments to stupid planning and wasteful spending. If something like this doesn't arouse the taxpayers and make them express themselves to their Senators and Congressmen, nothing ever will.

Excuses? There are some, as you always get in Government affairs.

Federal officials say the contracts for both plants were let several years ago when it was anticipated the fuel would be needed by the Navy and Air Force. Subsequently, it has developed that the Navy has found diminishing usage for this kind of fuel.

If this has been a progressive thing, and the Navy has been getting more and more aware that its fuel needs would be less and less, why did it allow the Muskogee plant to be completed? Was it too proud to announce that the plant was not needed and should be halted, and that demands could be met at some other plant? Or was it simply a case of having the money and the overwhelming compulsion to spend it?

Some people are funny. They get money, and it burns holes in their pockets. As people try to climb Mount Everest "because it's there," so do some people—especially Federal people—seem to try to spend as much money as they can * * * "because it's there."

Further irritation is provoked by the announcement that transferring the Muskogee plant to the Air Force would be in keeping with the Navy's current policy of gradually getting out of the boron fuel production business. The Lawrence Callery plant was the first to feel the sting of this decision, and locally it was a big sting. Now comes word that the local wound could well appear as little more than a pinprick if the Muskogee plant is mothballed due to foolish planning.

One can look at the Sunflower Ordnance Works on standby here, then take into account that there are similar plants in readiness around the Nation, and wonder why Federal agencies, military or otherwise, don't take better advantage of such facilities instead of building new ones like those at Muskogee.

The best answer to such a question came some time ago when a Journal-World reporter talked to a top eastern executive. At the time there was a good chance Sunflower might be reactivated to meet certain military needs and the executive had been contacted to see if he could shed any light on the subject.

"I'll be the first one to admit that Sunflower could be used for a lot of things they're doing now," the informant said frankly. "The trouble is that it seems everyone in the Government wants his own little pet project and doesn't want to use any facility that might have been used by somebody else. So instead of adapting existing facilities at a lesser cost, they spend a lot more for a new facility just for the pride of having their own special pile.

"There probably are a lot of uses that could be made of Sunflower, but you see it has a handicap to overcome. It has been an Army installation. For some reason, branches like the Navy and Air Force feel this has contaminated it.

"They seem to think it could be below their station to take secondhand something that the Army has had, a sort of a hand-me-down, as it were. So what do they try to do? Out of foolish pride and rivalry they try to get the money to build their own plant. The taxpaying public is stuck for the bill."

And some of us wonder why Government expenditures continue to rise, and our tax bills zoom into orbit right along with them. This, of course, has given rise to the currently popular question: Which will reach the moon first—the national debt or a rocket?

So what are we going to do about it?

Neely Named to Football Hall of Fame

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Tuesday, August 25, 1959

Mr. JOHNSON of Texas. Mr. President, Jess Neely came to Texas in 1940 as head coach and athletic director of Rice Institute in Houston. He has made a reputation of excellence for himself not only in Texas but throughout the country. In the Southwest, where the best in football is generally the prevailing standard, Jess Neely has a reputation for developing teams just a little bit better.

Last weekend, the Helms Athletic Foundation Hall of Fame in Los Angeles named Jess Neely to its membership. No football coach still active in America today has as many victories on his record as Jess Neely.

I ask unanimous consent to have printed in the Appendix of the RECORD a news story from the Houston Press of August 22, 1959, on Jess Neely's election to the Hall of Fame.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

NEELY NAMED TO FOOTBALL HALL OF FAME—HELMS FOUNDATION HONORS OWL COACH, JIM TATUM, RED SANDERS

(By Bob Rule)

The illustrious coaching career of Rice Institute's Jess Neely was crowned with its greatest honor today when he was named to the Helms Athletic Foundation Hall of Fame.

Announcement of Neely's election came from Los Angeles, site of the international sports shrine, established in 1948.

Honored along with Neely were four other coaches and six players. Included among the coaches honored are Henry R. (Red) Sanders of UCLA and Jim Tatum of North Carolina, both of whom died suddenly in the last year.

Also picked were Warren Woodson of New Mexico A. & M., a 28-year veteran of coaching, and Adam Walsh, who coached for 25 years at Santa Clara and Bowdoin.

The players honored were Frankie Albert (Stanford, 1939–41), Benny Friedman (Michigan, 1924–26), Edgar Garbisch (Army, 1922–24), William Hollenback (Pennsylvania, 1906–08), Nile Kinnick (Iowa, 1937–39), and Harry Smith (Southern California, 1937–39).

In the 12 years the Football Hall of Fame has been in existence, a total of 61 coaches and 61 players have been honored.

On the two lists are the greats of the past. Neely joins such coaching immortals as Bob Zuppke, Fielding H. Yost, Glenn S. (Pop) Warner, Amos Alonzo Stagg, Knute Rockne, and many others.

He also joins the two men who influenced his football career most—Dan McGugin of Vanderbilt, his head coach in college, and Wallace Wade, under whom he played, and coach at Vanderbilt and Alabama.

Neely received the news of his election today in characteristic fashion.

"Well, if you hang around long enough," he quipped, "I guess they feel like they have to do something for you. But I certainly do appreciate it."

No football coach still active in America today has as many victories on his record as Neely, who'll start his 20th season at Rice this fall and his 33d year as a head coach.

His teams at Southwestern of Memphis, Clemson, and Rice have won 176 games, lost 129, and tied 14. Included in those totals are four bowl victories and a single defeat.

Virtually every major honor his profession can bestow has come to the Rice Institute coach. He only recently served as president of the American Football Coaches Association and now is a member of the powerful football rules committee.

With this season, Neely will establish a new Southwest Conference record for the most consecutive years as head coach at a member school.

When he completed his 19th year last season, he tied the record held by Dutch Meyer of TCU, who previously had been voted into the Helms Hall of Fame.

"That's not exactly the type of record I'm interested in," Neely laughed yesterday. "Won and lost records are slightly more important."

Neely has served as both head coach and athletic director at Rice snice 1940, when he came from Clemson College in South Carolina, and under his direction Rice's athletic facilities have become among the Nation's best.

The 70,000-seat football stadium, one of the most beautiful in the country, is one of the city's showplaces and the 6,200-seat fieldhouse is one of the best in the conference.

Both have been completely paid for out of athletic receipts, a tribute to Neely's executive ability.

The Rice coach is energetically preparing for the start of the 1959 season in just 10 days.

"I believe we'll have another good team," he says.

Values of Reclamation

EXTENSION OF REMARKS
OF
HON. B. F. SISK
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 25, 1959

Mr. SISK. Mr. Speaker, recently there have appeared in newspapers of Washington, D.C., articles reporting questions raised on this floor and in the other body about the worth of the Federal reclamation program, and particularly, how it relates to surplus crops.

Similar questions have been raised editorially—I believe by writers not completely informed.

In the Western States we know the value to our areas and to the Nation of this great program and we have able spokesmen to state those values, men who are thoroughly familiar with the actual workings of reclamation projects. On August 9, 1959, the Sacramento Bee and other McClatchy newspapers serving the Central Valley of California presented editorially what I consider to be an able and clear answer to these questions, setting forth true facts about reclamation and surplus crops and the values of the reclamation program. I am submitting this editorial for the information of the Members and, I hope, the enlightenment of those who have questioned the consistency of these programs.

The editorial follows:

[From the Sacramento Bee, Aug. 9, 1959]

RECLAMATION PROJECTS YIELD WIDE VARIETY OF ESSENTIAL BENEFITS

In this drought year of 1959, when the main rivers of California would be a series of dry sandbars were it not for projects such as the Shasta and Folsom Dams, it is no less than amazing that there are those who are critical of the western reclamation program.

A recent Washington, D.C., Post editorial deserves note because it reflects the astigmatic view shared by many in the East that the Federal program should be reexamined on the ground it brings more land into agricultural production while the Nation has large surpluses in wheat, corn, cotton, etc.

This is totally fallacious and shows a lack of knowledge of the true nature and overall purposes of these projects.

A quick answer, of course, is to point out the fact the crops largely produced on lands irrigated by those big Federal dams are not in surplus and are not under any Government program. That in itself should be enough but there is much more to the story.

These great multipurpose projects provide a vast variety of benefits aside from irrigation.

They provide flood control. Without Shasta, Folsom, Friant, and other dams, California would have been subjected to a series of catastrophic floods during the last decade. The floods which did occur happened because projected dams had not been built.

They produce electric power. They aid navigation. They hold back the salt water from the sea which otherwise might spell ruin for the fabulously rich Sacramento-San Joaquin Delta. They provide recreation for the people. And of extreme importance, they give many communities dependable supplies of domestic and industrial water.

Without the reclamation projects the great development of the West would have been seriously restricted. For example, without its allocation of 390 million gallons a day from Colorado River water stored behind Hoover Dam, Los Angeles would have reached the maximum of its population and industrial growth some time ago.

To a large extent the reclamation projects in California have not added significant acreages to agricultural production.

They have provided surface supplies to already producing lands which had been irrigated by pumping but which were threatened with extinction due to the failure of the underground supplies.

And in some cases the introduction of reclamation water has made it possible to transform land formerly devoted to grains, which are in surplus, to the production of fruits and vegetables, which are not.

The Post says it is time Congress gave thought to retiring land from cultivation instead of adding more. And by inference one could gather the Post believes it might be a good thing to let the area to be served by the proposed San Luis project dry up.

It is hard to imagine anything more foolish. If ample water were provided much of the land growing grain and cotton inevitably would be turned to orchards and vegetable crops.

But even were cotton to be the chosen crop, the Post's point still falls flat. The San Joaquin Valley produces a long staple cotton which is in much demand, and the per acre yield is from 5 to 10 times that of some cotton-growing sections of the South.

If there is need to retire cotton land from production, it certainly would make more sense to retire some of the poor and tired land in the South than to let the extremely fertile acres in the San Luis area revert to a desert, which they will without San Luis water.

Moreover, in respect to the Federal San Luis project, while it is designed primarily for irrigation, it also is to be an integral part of a bigger plan to transport water to southern California where it will be needed for domestic and industrial purposes a little more than a decade hence.

The Post is generous enough in its appraisal to say the reclamation projects for the most part pay for themselves.

They do, and more. Not only do the users pay for the projects but the great developments which spring from these projects contribute vastly to the economy of the Nation in general and to the Federal Treasury in particular in the way of taxes.

For one to say the reclamation program is a case of the Government putting out money to produce surplus crops on which the Government must put out more money is missing the point at both ends. Such a statement either is due to ignorance or is rank misrepresentation.

Puerto Rico Does Not Want To Be a State

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Tuesday, August 25, 1959

Mr. WILEY. Mr. President, in the New York Times magazine of August 16, 1959, there appeared an interesting article by Luis Muñoz-Marín, the Governor of Puerto Rico, which is entitled "Puerto Rico Does Not Want To Be a State."

I suggest that this article is good reading for pretty nearly everybody. It starts out with the idea that probably if one of our Senators or Representatives had his way, he would introduce a bill for Puerto Rican statehood; but Luis Muñoz-Marín, the Governor of Puerto Rico, demonstrates quite clearly in this article why they are satisfied with the status in which they are.

I ask unanimous consent that this article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PUERTO RICO DOES NOT WANT TO BE A STATE

(By Luis Muñoz-Marín)

SAN JUAN, P.R.—Puerto Rico, now a vigorous self-governing Commonwealth within the American political system, would be smothered if some of its misguided stateside well-wishers, like Senator DENNIS CHAVEZ of New Mexico and Representative VICTOR ANFUSO of New York, had their way. They have introduced or proposed to introduce bills for Puerto Rican statehood. The bills have no chance of approval in Congress, and only minority support in Puerto Rico.

Recently, in the lobby of a Washington hotel, an old friend greeted me, "Well, Governor, pretty soon we should be seeing you up on the 'Hill' as a Senator from the 51st State." He meant it as a high compliment to Puerto Rico, and I was touched by both his warmth and enthusiasm. In the wake of Alaskan and Hawaiian statehood, a similar status for Puerto Rico seemed logical, simple, and desirable to him. He melted into the milling crowd of the lobby before I had an opportunity to outline to him the great complexities of Puerto Rico's circumstances, which make statehood neither logical nor desirable for Puerto Rico or the United States.

When I say that it is far better for Puerto Rico to remain a Commonwealth, it is with no insensitivity to the high honor which statehood implies. Nor is it because we seek independence—we definitely do not. Nor does it mean we are content to be less than a federated state—because, definitely, we are not less, but only different. Nor is it because we do not wish to share in the common expenses of the Federal Union, of which we are a part in a new way—since Puerto Rico is now proposing a formula by which it would begin to pay into the Federal Treasury as its economic growth allows it to do so.

Puerto Rico's history has been far different from that of Alaska and Hawaii, and the understandable tendency to speculate on possible statehood for Puerto Rico after the rapid accession of Alaska and Hawaii can lead men of good will far astray. Puerto Rico was a populous island with a long history and a well-defined culture when it first came into the American orbit in 1898 following the Spanish-American War. Alaska and Hawaii, on the other hand, were sparsely settled and ripe for colonizing from the mainland.

Alaska and Hawaii became incorporated territories, clearly destined for cultural integration and eventual statehood. Puerto Rico's special circumstances were early recognized when it became the first unincorporated territory, which implied that it would not be slated for statehood. At the same time it would have been obviously contrary to the American spirit that Puerto Rico should remain a colony forever.

Economic factors were very different, too. Both Alaska and Hawaii have been for many years notably wealthier than Puerto Rico is even now after 14 years of rapid economic progress since the end of World War II. The net annual average income of Hawaii, and probably of Alaska, is more than $1,800, very little below the 1957 national average of $2,027. Puerto Rico's per capita income of $470 is still less than half of that of the lowest income State of the Union, Mississippi. Puerto Rico has little land in relation to population, no fuels, no significant mineral resources. That is why we have called the program by which we progress Operation Bootstrap.

These economic and cultural factors have, since 1898, made Puerto Rico's political evolution unique, and clearly different from that of Alaska and Hawaii. Indeed, as late as 1940, many sober, informed men in the United States considered Puerto Rico's economic and political problems insoluble, and were resigned to Puerto Rico's being a dependent poorhouse on a kind of permanent dole from the Federal Treasury, a place where poverty and hopelessness would constantly churn up social and political instability.

It took a double-barreled attack on these problems in Puerto Rico itself to lead to the relative prosperity of today, and to the visible social and political health and vigor of the island. First came the attack on poverty, temporary foreclosing political debate. Only when Operation Bootstrap was well under way did Puerto Rico address itself to finding a political status which answered the needs of its special relationship with the United States and its own economic and cultural circumstances.

To those who forget that peoples are the creators of political formulas and not their slaves, Puerto Rico seemed to have no way to turn. Continued existence as a territory or colony was impossible. The corrosive effects of colonialism, even a benevolent colonialism, could no longer be accepted, especially in the post-war period. Neither dignity, nor the swift course of history, nor common sense, nor the American tradition, would permit the continuation of such a system in the American context.

In contemplation of the inevitable end of colonialism, a sterile debate had raged for many years in the island between adherents of independence and those of statehood. The great majority of Puerto Ricans rejected independence on two counts: Puerto Rico's economy was by then so integrated with that of the United States that separation would have meant economic suicide and, equally important, Puerto Ricans had developed a deep and genuine attachment for their fellow U.S. citizens and for U.S. political institutions.

The great majority also rejected the possibility of statehood as totally unrealistic. Economically, statehood then would have meant another form of ruin for Puerto Rico—and still would, as we shall see in a moment.

The circumstances called for the same kind of political pioneering which created the Original Thirteen States themselves—a new projection which would be in the spirit of the 20th century, taking due recognition of the mutual interests of both the United States and Puerto Rico. The concept of a self-governing commonwealth had been foreseen as long ago as 1912 by Henry L. Stimson, then Secretary of War under President Taft. With far-sighted statesmanship Stimson observed that he saw no inconsistency between U.S. citizenship for Puerto Ricans and the ideal that Puerto Rico should have, when ready for it, completely autonomous local government within the American system.

This is essentially what happened when Puerto Rico became a Commonwealth in 1952. The official Spanish translation is Estado Libre Asociado—Associated Free State: Puerto Rico, in the generic sense of the term, is a new kind of state. Puerto Ricans are United States citizens, sharing with their fellow citizens in the continental United States a common defense, a common foreign policy, a common market, a common currency and the operation of practically all Federal laws. Puerto Ricans differ from other Americans in that they do not vote in national elections, have no voting representation in Congress, and have, on the other hand, autonomy in directing their local affairs, including the collecting and spending of their own taxes.

Nearly 7 years after its hopeful inception, how is the Commonwealth doing? It is doing remarkably well, I am happy to report. Operation Bootstrap has raised the per capita income from $121 in 1940 to today's $470. Living standards have virtually doubled in 15 years, perhaps the most rapid economic advance in any underdeveloped region in the world.

Certain development has been dramatic enough to attract high officials, technicians and students from all over the world to study our methods. Nearly 9,000 visitors from 107 different countries—from Nepal to Saudi Arabia, from Morocco to Bolivia—have studied how we have raised life expectancy from 46 years in 1940 to 68 years today, how we are rapidly winning the fight against illiteracy and how a whole people can be raised, in a few years, from despair and deepest poverty to relative prosperity and dynamic purposefulness.

The creation of the Commonwealth had political as well as economic lessons for the world. It was a notable achievement, in the postwar era, to end a colonial relationship in such a constructive, fruitful manner, devoid of the bitterness and violence which characterized the end of colonialism in many parts of Asia, the Near East and Africa. Puerto Rico clearly gave the lie to the persons (Communists and others) who are always ready to raise the cry of "imperialism" against the United States. It was patently impossible to square imperial evploitation with a people who are self-governing, who sent 40,000 of their sons into the Armed Forces during the Korean conflict (90 percent of them volunteers) and who are so effectively dramatizing the quality of U.S. democracy to thousands of earnest observers from all over the world.

The dignity of self-government has not only engendered an explosion of energy in economic affairs in Puerto Rico but has seen a lively ferment in cultural realms as well. No one who has visited Puerto Rico recently can be immune to the feeling that "things are happening." The Casals Festival, lively drama, ballet, opera, and symphony orchestra seasons are all part of the energized local scene. Puerto Rican painting and writing are in obvious renaissance. A people with new pride and new confidence and new creativity are clearly on the march.

In the light of this progress, it may seem strange that the sterile debate regarding possible statehood at any time in the foreseeable future should have been revived in Puerto Rico. Certainly persons who make any serious study of Puerto Rico's economics are aware that statehood, at this time, or for many generations to come, would mean a fatal crash for the island. It would be like a fully loaded airplane about to be airborne having half of its motors suddenly stopped.

Federal taxes would about double the already high taxload that the Commonwealth must impose upon itself in order to keep its public works and public services in line with its rapid economic development. Federated statehood would mean either breaking the back of the taxpayer and thus making further economic development impossible or cutting the public services so drastically that their decay would constitute a bottleneck for private enterprise and economic development.

There has been nothing automatic about Puerto Rico's progress to date. Only hard, uphill work has brought it about. And, while this progress has been notable enough to attract interest in many countries, our living standards, as I have indicated, are still far below those of the mainland United States.

The Federal Government has long been cognizant of the different economic situations of Puerto Rico and the harsh handicaps imposed by a population concentration of 658 persons per square mile in a mountainous island with virtually no resources. Never, since Puerto Rico was first associated with the United States, has the Federal Government applied Federal taxes here. This was to give the island a chance of economic development as well as to honor the principle of "no taxation without representation." Without this to compensate for the other disadvantages I have mentioned, Puerto Rico would still be in deepest poverty.

Most Federal grants-in-aid apply in Puerto Rico. These grants, like those allowed to the States, are apportioned on the theory that they will benefit the United States as a whole. Matching funds for building certain roads and for hospital construction are cases in point.

The United States tariff is collected in Puerto Rico on foreign imports—which, by the way, are few, since most of our trade is with the United States—but the receipts go into the Commonwealth treasury after the cost of collection is deducted. In this way American manufacturers are protected from foreign competition while the Puerto Rican treasury is benefited. This is important because Puerto Rico is one of the world's greatest per capita consumers of United States products, spending $700 million a year on them. The Federal excise tax on Puerto Rican rum, while it serves to protect American distillers, also reverts to the Commonwealth.

On the other hand, our association with the United States imposes some penalties on the Puerto Rican economy, for which our treasury is not compensated. Under the Sugar Act of 1946, for example, Puerto Rico loses considerable potential income by being denied the right to refine more than 11 per cent of its own sugar production. In addition, shipping rates between Puerto Rico and United States ports are artificially high because they are governed by the coastwise shipping laws confining cargoes to American vessels. While these laws have the legitimate objective of subsidizing United States shipping for defense purposes, in practice they place a heavy share of this defense load on Puerto Rican consumers.

From the United States point of view, the accession of a State unable to pay Federal taxes except at the cost of economic ruin is obviously inconceivable. Puerto Rico, which as a Commonwealth is a showcase of American democracy before the world, would, as a federated State, become exactly the opposite: an economy in shambles, having to be kept alive by a WPA type of charity, with a people far more hopeless than during the worst of the great depression.

Nor has the United States the desire or interest to force the cultural assimilation of Puerto Ricans in Puerto Rico. Indeed, the fact that Puerto Ricans are probably the most bilingual people in the hemisphere, with deep understanding of and ties to both their fellow U.S. citizens and their Latin neighbors, has made Puerto Rico a valuable meeting place for people and ideas at a time when Latin America is in a state of far-reaching flux. Its unique position has been an undoubted asset for the United States in sensing changing currents in Latin America, and in translating its hemisphere policy into action.

But even now, however limited our means, Puerto Rico wants to make it clear that it intends to begin contributing to the Federal Treasury as its economic circumstances permit. There is now a bill before Congress whose purpose is to define the permanent association of Puerto Rico with the United States. One principle is clearly established: That Puerto Rico wishes, of its own accord and within its abilities, to help shoulder the Federal burden by contributing money to the Federal Government and by performing some functions in Puerto Rico now underwritten by U.S. taxpayers.

Puerto Rico is not looking for a free ride. On the contrary, it is just as anxious to carry its share of the financial load as its sons were to risk their lives in Europe and Korea—as a matter of pride and dignity, as our contribution to the whole.

When the strident chorus of nationalism begins to fade in Europe, Asia, Latin America, and Africa, some ingenious formula may permit the rational regrouping of new and old sovereign units on a sounder economic basis, just as the United States and Puerto Rico found a workable formula. The world

has become too small, too complex, too interdependent to permit indefinite political fragmentation at the price of widespread poverty. Where blind insistence on rigid, 19th-century-style sovereignty exists in defiance of economic logic, new forms of federalism are called for. Puerto Ricans are proud that they are contributing to the American political system a new form of federalism.

In dedicating the Puerto Rico Supreme Court Building, Chief Justice Earl Warren expressed this in words that remind us of the creative political genius of the United States:

"In the sense that our American system is not static, in the sense that it is not an end but the means to an end—in the sense that it is an organism intended to grow and expand to meet varying conditions and times in a large country—in the sense that every governmental effort of ours is an experiment—so the new institutions of the Commonwealth of Puerto Rico represent an experiment—the newest experiment and perhaps the most notable of American governmental experiments in our lifetimes."

A new way of abolishing colonialism has been born.

Bill To Raise Membership Limit in the House Should Be Enacted

EXTENSION OF REMARKS
OF
HON. BASIL L. WHITENER
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 25, 1959

Mr. WHITENER. Mr. Speaker, on August 18, 1959, I introduced a bill, H.R. 8715, to provide that the permanent membership of the House of Representatives shall be 438 Members in the 88th Congress and each Congress thereafter.

Under the provisions of my bill the temporary increase of two seats authorized by the acts admitting the States of Alaska and Hawaii would be made permanent. In addition, another seat would be added to provide for the additional Representative Hawaii will gain under the reapportionment of House seats that will be necessary as a result of the 1960 census. This procedure is in keeping with the precedent we have followed upon the admission of new States to the Union.

In the August 24 edition of the Twin City Sentinel, Winston-Salem, N.C., there appears an editorial containing a very fine analysis of my measure. With the belief that the contents of the editorial will be of interest to my colleagues, under unanimous consent I insert it in the Appendix of the RECORD, as follows:

BILL TO RAISE MEMBERSHIP LIMIT IN THE HOUSE SHOULD BE ENACTED

During the late President Taft's administration New Mexico and Arizona, the 47th and 48th States, were admitted to the Union. As the new States were entitled to representation in Congress, the size of both houses was increased. For the much smaller Senate this involved no problem. But the House, in which representation is based on population, had been steadily growing larger following the census years. So after the admission of the two new States, Congress in 1911 set the permanent membership of the House at 435 members. This was done to prevent the House from becoming too large and unwieldly.

Ever since then, the representation of the various States in the House has been manipulated in accordance with the population figures shown by each decennial census, with the total membership remaining constant. Thus every new representative gained by North Carolina in the last four or five decades has meant losses in representation by other States.

Now two more new States, Alaska and Hawaii, have been added to the Union. In addition a number of States, especially California in the West and Florida in the South, have realized almost sensational population growth since 1950. This means that these States will gain several new representatives after the 1960 census. Meanwhile, permanent representation must be provided for the States of Alaska and Hawaii. One seat has been temporarily assigned each of these new States, but Hawaii is probably entitled to two on a population basis.

If seats for the new States as well as the seats gained by the faster growing States must all be provided under the present limitation of 435 seats, some of the slower growing States may be rather hard hit. So Representative BASIL WHITENER of North Carolina has introduced legislation to boost the membership of Congress to 438. This would take care of the new representation for Alaska and Hawaii. It seems designed primarily to prevent further losses of southern seats in the House.

Even with the enactment of the Whitener legislation North Carolina is expected to lose one Representative after the 1960 census, since its population growth, estimated at about 10 or 11 percent for the current decade apparently is below the national average. But eliminating the necessity of providing seats for the new States within present limitations might assure this State that it would not lose over one Representative. Conceivably if current population estimates are off base, it might prevent the loss of a Tar Heel Representative.

In any event, the Whitener legislation is very moderate and probably should be enacted. It would follow the 1911 precedent of resetting the total membership of the House after the admission of new States. It carries with it the possibility that no further changes on this account will be called for within the foreseeable future. (Puerto Rico may come in someday, but that day seems a long way off.)

It would not add appreciably to the present size of the House. And it might prevent a number of States on the population border line from losing a Representative (and consequently, an important electoral vote).

No Time To Relax—Focus in Laos

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Tuesday, August 25, 1959

Mr. JAVITS. Mr. President, is the important news in Laos the several improprieties that have been alleged in the administration of our foreign aid to that border kingdom or is it the increasing Communist threat to the independence of a small nation which has just attained its freedom?

Obviously the latter is the case and we must look to see that foreign aid funds are sufficient to the task. This is the lesson of how we will show that Premier Khrushchev's visit means to us no time to relax.

I ask unanimous consent that an editorial from the New York Times of August 21 on the matter of mutual security appropriations which will be considered by this body shortly, may be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

NO TIME TO RELAX

In the face of a noticeable growth of a new "Geneva spirit" of relaxation due to Premier Khrushchev's impending visit, the 10-man committee of prominent citizens headed by former Assistant Army Secretary Draper warns that the Communist leopard has not changed his spots and that we cannot cope with him unless we keep the free world strong. To that end the committee urgently recommends that the United States, in addition to its nearly $40 billion Defense Establishment, provide at least $2 billion a year in military aid to our allies and friends.

After studying the problem for 9 months the committee holds that Soviet Russia is still bent on controlling the world, that it is growing in economic power faster than the United States, and that the free world can meet the challenge only if it unites in national and individual dedication to freedom, and in hard and constructive work and thought rather than in a search for more comfort and leisure.

This warning is in line not only with the best thought of our military leaders but also with the word brought back from Moscow by Vice President NIXON to the effect that "strength is the only thing the Russian leaders understand," and that a position of strength offers the only hope for reaching agreements with the Soviets. This means both economic and military strength, which, in the foreign field, means continued economic and military aid.

The committee has already recommended various economic aid programs, including a billion-a-year lending program which the Eisenhower administration has sought to realize in the Development Loan Fund within the mutual security program and in the projected billion dollar International Development Association and the Inter-American Development Bank that would enlist other nations in helping underdeveloped countries to strengthen their economy. Now the committee concentrates on military aid, and its warnings are obviously addressed to Congress.

Congress is fully aware of the importance of military strength, and in the matter of our own Defense Establishment gave the President 99.95 percent of what he requested. But when it comes to so-called foreign aid, which buys no votes and contains no local boondoggle but buys more defense at cheaper cost, Congress invariably puts on political blinders. President Eisenhower has requested a total of $3.9 billion for mutual security, including $1.6 billion for military aid, which is $400 million below the committee's recommendation. But in authorizing the program Congress cut down the total by $353 million and the military aid by $200 million. And the House has cut actual funds for the program to $3.1 billion and military aid by another $100 million.

President Eisenhower has appealed to the Senate at least to restore the House cuts, which, if permitted to stand, would seriously damage the country's international position. The Draper committee report powerfully supports this plea.

These Days—Undesirable Police Force

EXTENSION OF REMARKS
OF
HON. H. ALLEN SMITH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 25, 1959

Mr. SMITH of California. Mr. Speaker, in my opinion, the recent editorial by George E. Sokolsky entitled "These Days—Undesirable Police Force," is excellent and, accordingly, I desire to bring it to the attention of the Members of the House.

The editorial follows:

[From the Washington Post, Aug. 22, 1959]

THESE DAYS—UNDESIRABLE POLICE FORCE

(By George E. Sokolsky)

What is altogether undesirable in this country is a national police, but many who agree to this proposition often advocate measures which must logically bring such a body into existence. J. Edgar Hoover, Director, the FBI, has always resisted the efforts of well-meaning persons to load down the FBI with the functions of the local police.

When a bomb is thrown at a building with the object of destroying it, this is a matter for the local police. During the past year or two, some synagogues and church buildings have been bombed or defaced. There can be little question but that some "hate" organization is responsible for this manifestation of ill will. There are many "hate" groups and they hate different things, although some of them have now reached a degree of antipathy that they hate everything that is different from what they are. There is also no question but that the willful destruction of property is a criminal act, punishable in our courts under existing law.

Representative CARLTON LOSER, of Tennessee, has introduced a measure, which has been approved by the House Judiciary Committee and which would, as worded, require the FBI to investigate any type of fire or explosion or bombing, including labor disputes, if there is a possibility that those perpetrating the act crossed State lines. This would enlarge the functions of the FBI beyond its capacity, either as to manpower or as to budget. It would also delegate to the FBI a task which is strictly local and which the local police anywhere in the United States should be able to handle if they attend to their business and are not fearful of local pressure groups.

The danger of developing a national police force is greater than the danger to the Nation of some bigot managing to evade the local police. The bigot who permits himself to destroy life or property will sooner or later be discovered and punished; however, the national police force can become a permanent institution. It is true that the people of this country have confidence in Hoover and recognize that he does not permit the FBI to be used for political purposes or to suppress opposition to those in power. However, Hoover will not always head the FBI and a national police force could be used by an unscrupulous person for deleterious purposes if he were so disposed.

As the legislation is written, the language is so broad that persons concerned with bombings would expect the Bureau to intervene in every case to discover whether Federal law applied, even if the bombings were the product of gangsters' wars.

Furthermore, it would seem that the FBI is already concerned with the bombing of churches or synagogues because of its duties in protecting civil liberties. One of the liberties which all Americans enjoy is the right to worship God in whatever way each individual chooses or not to worship at all. The denial of religious liberty is the denial of the constitutional right of any person living upon American soil. Therefore, no new legislation is really required to permit FBI intervention in a case involving the bombing or defacing of a church or a synagogue. That duty is already theirs.

It is important that the role of the local police be preserved. The primary responsibility for the protection of life and property must rest with the local authorities. The tendency to drag the Federal Government into every phase of American life has not proved out over the past 20 years.

It is not wholesome for local police forces to develop undue dependence upon the FBI which has no function in labor disputes, contested local elections, gang wars, etc.

Many new problems arise each year, some out of the usual disturbed social conditions after wars, some out of household maladjustments in a transitional period. Such matters as the bombing of churches and synagogues are undoubtedly due to the social changes arising out of integration of Negroes in the South, some persons organizing to withstand the law.

Under present jurisdiction, such questions are limited to the States and local communities and there they should remain, unless there is absolute evidence of violation of constitutional rights of individual citizens whose civil rights are to be preserved.

Settlement of the Current Steel Strike

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Tuesday, August 25, 1959

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial which appeared in the August 20, 1959, issues of the three McClatchy Newspapers of California, the Sacramento Bee, the Modesto Bee, and the Fresno Bee, edited by that fine newspaper man, Walter P. Jones. Entitled "Compulsory Arbitration Is Realistic Instrument," it discusses proposals for settlement of the steel strike and recommends that the public should be recognized as a third party directly involved in such disputes.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Sacramento (Calif.) Bee, Aug. 20, 1959]

COMPULSORY ARBITRATION IS REALISTIC INSTRUMENT

U.S. Senator ESTES KEFAUVER's commentary 6 months ago on steel industry-union quarrels over a new contract has become a casualty of time and long forgotten, perhaps, but it remains one of the few truths which have emerged out of all the gobbledegook given voice in regard to this year's strike.

KEFAUVER had proposed to David J. McDonald, president of the United Steel Workers of America, that the union limit its demands if the steel industry would pledge not to hike prices. In reply McDonald told the press he wished KEFAUVER would "keep his nose out of my business." And KEFAUVER retorted:

Mr. McDonald's language dramatizes my position exactly. The price of steel is not just Mr. McDonald's business. It is not just the business of Mr. Roger Blough, chairman of the United States Steel Corp. It is the business of the people.

Exactly. It is the business of the people. And suddenly the people have rediscovered an old truth—that they are defenseless in crises of this scope, even though in the end they will have to foot the bill.

Congress, needled by growing concern by the people, is thinking in terms of giving the public recognition as a third party directly involved. For example, Senators JACOB K. JAVITS, of New York, and GEORGE D. AIKEN, of Vermont, say the Nation needs to find some new techniques for "asserting the public interest."

They propose factfinding.

The Nation already has factfinding and factfinding. And still the public is defenseless. Why, pray tell, shy away from the only realistic instrument Congress could create for disputes involving great public interest—compulsory arbitration?

Here are two fundamental truths: A strike or a lockout in an industry of steel's importance to the economy, regardless of how justifiable, works a grave injury to the public good; in the end, are not the public rights far greater than the rights of either disputant?

The same arguments used against compulsory arbitration could be voiced as rationally against compulsory regulation of industry and labor. The Nation determined, in another hour of crisis, that one corporation should not hog all industry and it created the Sherman Antitrust Act. Was this an infringement upon private rights or a builtin protection for the people?

In another hour the Nation—whether wisely or not—enacted the Taft-Hartley Act when it suspected labor was abusing some of its powers. Was this an infringement upon rights or did Congress have the public good in mind?

Society has outgrown the jungle. Or it should have. We are a people governed by law, dedicated both to private and public freedoms. The rights of labor, the rights of management must be jealously protected. But so must the rights of the people.

Anything short of this is kowtowing to special interests in the mistaken image of protecting freedoms. If the day ever comes when Americans cannot live happily under law written for the greater good of the greater number, then on that day will a precious piece of America die.

Seapower Still Vital

EXTENSION OF REMARKS
OF
HON. CLARK W. THOMPSON
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 25, 1959

Mr. THOMPSON of Texas. Mr. Speaker, at this time when there are so many varying thoughts on the part of those accredited with expert caliber touching the merits of conventional and atomic warfare, it is, indeed, interesting—and gratifying—to have the views of a well known and experienced naval officer on the subject.

Reference is made to the article by Capt. Frederick L. Oliver, U.S. Navy, re-

tired, distinguished naval correspondent of the Christian Science Monitor, appearing in the June 10, 1959, issue.

Captain Oliver has long been a student of Naval strategy and geopolitics, and is well qualified to speak with authority.

Whatever force for destruction modern weapons may possess, the basic usage of the seas must continue to serve the needs of mankind, as Captain Oliver, in his brief, but illuminating and timely discussion discloses.

The article follows:

[From the Christian Science Monitor, June 10, 1959]

SEAPOWER STILL VITAL

(By Capt. Frederick L. Oliver, U.S. Navy, retired)

Few nations throughout the world are today so self-supporting that they can afford to dispense with foreign trade. And foreign trade is largely seaborne, which means cargoes carried in ships traversing the sea lanes which crisscross the oceans.

Oceans cover about 73 percent of the surface of the earth, and from time immemorial have provided highways over which moved the raw and finished materials on which nations have depended for their economic existence.

The need of a nation to utilize the sea lanes depends in great measures on its requirements. A manufacturing nation may require raw materials; an agricultural nation, manufactured goods. But whatever the dependence, an interruption of its seaborne trade can spell disaster to a country.

Strategists long since recognized the vital influence of seapower on national issues in which ocean-borne traffic entered. The Phoenicians, Greeks, and Romans in turn exploited the advantages presented by maintaining adequate seapower. By securing command of the seas, narrow as they were in their day, these nations dominated their world.

Over a period of a great many years, Great Britain's seapower was the keystone in the success of that nation in becoming and remaining a world power.

At no time in history has the importance of holding command of the sea been more forcefully demonstrated than in both world wars. During these hostilities, the very existence of nations depended on who controlled the sea lanes.

Now the Soviet Union's growing appreciation of the importance of control of the seas enters a picture which is further complicated by a rapidly increasing array of new weapons. No nation has better reason to know the importance of holding command of the sea than has Russia. Loss of this control in 1904 paved the way for Japan's victory over Russia's Army and Navy in the Far East.

Lack of access to the oceans of the world was a disadvantage under which the Russian Empire labored for centuries. This disadvantage has continued to exist. So it is small wonder to find that Soviet strategy today has gone into the matter of seapower with a thoroughness that is disquieting to the Western Allies.

Czarist Russia's military efforts were centered in its army. Its Navy was a secondary consideration, with a morale which reflected the inferior position to which it was relegated. A search of history will disclose that the Muscovite Navy had few victories to offset its numerous defeats, the most ignominious being at the hands of Japan's Navy at Tsushima in 1905.

Under the Soviet regime, its navy made little progress until after World War II. Since then it has assumed a prominent role in the Soviet Union's plans.

Communism's avowed goal is world domination. Every move made by the Soviet Government is planned to strengthen its openly acknowledged policy of preparing itself to assume the role to which it aspires.

The growing Soviet fleet is specifically designed to further Communist plans. Foremost among Soviet aims is attaining the means for denying the free world unrestricted use of sea lanes.

For this purpose the Soviets are building a modern navy. Although it comprises a large number of efficient submarines, destroyer and cruiser construction has not been neglected. According to information released by the U.S. Navy, since 1950 the Russians have outbuilt the United States 6 to 1 in submarine tonnage, 9 to 1 in destroyer tonnage, and 14 to 1 in cruiser tonnage.

In view of this striking growth in Soviet naval strength, it is wise to take a look at the foreign import needs of the United States. Contrary to general belief, our country is far fram being self-sustaining. Many years ago we did not have to import much save a few necessities, but needs have changed with the times, and today we lack sufficient amounts of some 66 out of 77 strategic raw materials which go into making today's complex weapons and other means for carrying on a modern war.

For instance, many raw materials vitally needed for producing essentials such as telephones, electronic gear, automobiles, tanks, aircraft and ships, must come from overseas in much greater quantities than is generally realized.

Some idea of these needs can be gathered from a few statistics. We import 75 percent of our bauxite and 80 percent of our asbestos requirements; 90 percent of the cobalt, antimony, and manganese we use; and 95 percent of the tin and chrome needed. In addition the time is in sight when most of our iron ore supply must be imported.

The above and many other needed strategic raw materials flow into the United States over more than 60,000 miles of vital sea lanes, traveled by thousands of merchant vessels. Air transportation cannot begin to fill the needs, nor are submarines able to carry more than a trickle of special materials.

How can it be made certain that the required supplies will continue to be received?

There is but one answer: The U.S. Navy must be maintained in such strength that it will be able to maintain its command of the sea against virtually all opponents.

Special Report on Labor Legislation by Representative Joseph E. Karth

EXTENSION OF REMARKS

OF

HON. EUGENE J. McCARTHY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, August 25, 1959

Mr. McCARTHY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the recent newsletter of my distinguished colleague from Minnesota, Representative JOSEPH E. KARTH.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

SPECIAL REPORT ON LABOR LEGISLATION

WHAT THE PRESIDENT DIDN'T TELL YOU ABOUT THE GRIFFIN-LANDRUM LABOR BILL

On Friday, August 14, the House of Representatives passed the Griffin-Landrum labor bill, H.R. 8400. This bill has gone to a House-Senate conference committee which will attempt to iron out the differences between the Senate passed Kennedy-Ervin bill, S. 1555 and the House bill.

In the past 2 weeks my office has received hundreds of telegrams, letters, and cards expressing opinions on various measures dealing with labor reform legislation. My mail ran as heavy for the Griffin-Landrum bill as it did against that proposal.

As you might expect, those favoring the Griffin-Landrum proposal were mostly businessmen, executives, and professional people. Most of the mail opposing this proposal originated from labor union officials and men and women who are working people. Most of the letters asking for the Griffin-Landrum bill did not cite the need for a "strong labor-management bill"—rather they mentioned only a strong labor bill.

Almost every letter which was directed to me asking for strict Federal control over the affairs of unions, used James Hoffa and the charges against teamsters as the basis for the urgent need for legislation.

On Friday, August 7, I wired James R. Hoffa and asked him to resign his union offices. I sincerely feel that the enemies of labor unions are using him as an excuse to panic Congress into passing an antiunion measure. I am sorry that Hoffa did not accept my suggestion to quit and perform a real service for the labor movement whose interest he professes to want to advance.

A TRUE LABOR-MANAGEMENT REFORM PROPOSAL

Previously, I introduced a labor-management bill, H.R. 8540, which I am sure would have accomplished the avowed purpose of getting rid of crooks and racketeers, but not destroying the legitimate, free, democratic trade unions.

Everyone knows my background as a local union officer and as an international representative for the Oil, Chemical, and Atomic Workers. I have negotiated labor contracts with huge companies such as the Minnesota Mining and with small companies such as the Sweney Paint Co.

I believe I know what is involved in labor-management negotiations better than most any Member of Congress. I also believe that my experience qualifies me to determine what type of legislation will correct abuses and what provisions will actually be damaging to unions and business and might do serious harm to the functioning of a free, economic society.

THE GRIFFIN-LANDRUM BILL

Let me cite just a few examples of why I could not support the Griffin-Landrum bill.

1. It will discourage, if not stop altogether, responsible people from running for union office. Because of wording in the law, a local union officer can easily be booby-trapped into court action while conducting his union's legitimate business. He must then bear all legal defense costs himself, lose wages for the time he is in court and must wait until acquittal before his union can even offer to reimburse him. Many small locals could never afford to pay his costs in any event.

2. By giving State courts jurisdiction in a labor dispute involving small business, the Griffin-Landrum bill can lead to real trouble. For example, a St. Paul building contractor, who cannot qualify as being in interstate commerce under NLRB rules, may well find that if he wants to do business in Wisconsin, Illinois, Iowa, or the Dakotas he will

have to check all the State laws, and municipal and county ordinances that may affect relations with his employees. Should he run into legal trouble he might find himself as defendant before a justice of the peace or a municipal judge completely unfamiliar with any phase of labor law. The bill I supported provides specifically that the National Labor Relations Board must handle cases of this type, thereby giving a clear understanding to business and labor as to the laws under which they must operate.

3. This bill imposes undue expense on the small union in its harsh reporting requirements. Only by having the Secretary of Labor review some 40,000 cases can any of them be granted exemption. In my opinion, a proper provision would authorize the Secretary of Labor to demand a report only if he has been informed of abuses or improper procedures.

4. The Griffin-Landrum bill has completely inadequate reporting provisions for employers, thus failing to get at the Sheffer-man-type middleman. Any true reform bill should include safeguards against such foul operations.

5. The Griffin-Landrum bill has a bonding provision which eliminates all but five bonding companies, both within and outside the United States. (These companies are those who bond Federal employees.) If for some reason the five companies should refuse to bond a union officer or employee he could not hold office. It seems to me all legitimate bonding companies should be, eligible. It appears that special interests have been introduced into this bill.

6. The Griffin-Landrum bill outlaws all hot cargo contracts, even those which have nothing to do with teamsters. This will greatly encourage the unscrupulous employer who is making products under sweatshop conditions. In effect, it will make a union man handle products which are being made under conditions that undermine his economic standards, and foster business-wrecking, cutthroat competition. In some cases it could force a worker to go through legitimate picket lines.

7. The Griffin-Landrum bill outlaws all organizational and recognition picketing by an uncertified union under conditions which give no recognition to the many cases where organizational picketing is a vital necessity in a union's legitimate organizing efforts.

In provisions such as this, one can readily see why the southern Congressmen were so eager to join with the Republicans to pass this bill. The South has been looking for means to stop union organization, so that they can continue to lure northern industry to a land of cheap labor. The southerners are not mainly interested in labor reform; they are interested in cheap labor, and the Griffin-Landrum bill will be one more assurance, along with their right-to-work laws, segregation laws, and poll taxes to keeping it that way.

8. The Griffin-Landrum bill makes no provision for voting by economic strikers. Failure to cover this, again points out that eliminating the cause of abuses was not uppermost in the minds of those who want the Griffin-Landrum bill.

9. The Griffin-Landrum bill does not give the Secretary of Labor or the Attorney General the right to bring action against union officers who discriminate because of race, creed or color. Why? Republicans and southern Congressmen joined to defeat such an amendment. Does this indicate they really want to protect the rights of the poor worker?

In addition to these points, I believe that passage of the Griffin-Landrum bill as it now stands will result in legal harassment that will break many unions because of the costs of litigation. You might call the bill a "full-employment" measure for lawyers and a complete confusion bill for small business.

I hope the conference committee will correct the unworkable and unjust provisions of the bills passed by the Senate and the House. If they do not, and these provisions become the law of the land, I predict that the public will be clamoring for repeal within 2 years.

Schenectady Little Leaguers Headed for 1959 World Series

EXTENSION OF REMARKS
OF
HON. SAMUEL S. STRATTON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 25, 1959

Mr. STRATTON. Mr. Speaker, the other day I had occasion to invite the attention of my colleagues to the fact that the Schenectady Little League baseball team had won the New York State championship for 1959 and was headed for the regional playoffs. Since that time I am happy to announce to the Members of the House that the Schenectady team has not only won the regional palyoffs, but is now slated for the 1959 Little League World Series to be held in Williamsport, Pa., on Thursday, August 27. This is the third time that a Schenectady Little League team has played in a world series, and this fact alone is a credit both to the boys themselves, and to their parents, their coaches, and their trainers.

Because of the fine work which the Little League baseball team organization does in fostering principles of good sportsmanship, I am happy to bring this latest development to the attention of the Members of the House and, under leave to extend my remarks, I include an article from the Schenectady Gazette of Monday, August 24, describing the game in which the Schenectady team won the right to appear in the 1959 world series. Also included is an article from the same paper discussing the background of this award:

SCHENECTADY LITTLE LEAGUERS IN SERIES AGAIN—PLAY CANADA TUESDAY AT WILLIAMSPORT

(By Harry Shave)

WILLIAMSPORT.—Schenectady's Little Leaguers, who presented their hometown with its third Little League world series contender for its sesquicentennial birthday celebration Saturday, arrived here at the birthplace of Little League yesterday. Saturday at Staten Island, Schenectady defeated Bridgeport, Conn., 6–2 for the right to represent the eastern region in this international affair which starts tomorrow.

While Billy Neidel, Schenectady hurler, was scarttering four of six Bridgeport hits, the bespectacled righthander had plenty of help from his teammates' bats. The big blasts from Schenectady's "quiet ones" came from Tommy Dinola, who hit a solo homer in the first inning and Dbugie Wilkins, who drove in two runs with another homer in the fifth inning.

Neidel meanwhile, found Bridgeport his pie for most of the way. He went the full distance, fanning nine batters in the process. In gaining his sixth tourney victory, Neidel was in trouble only when two outs away from the ticket to Williamsport.

In the sixth, when Bridgeport got its two runs and spoiled Neidel's bid for another shutout, the opposition got a double and a home run off Neidel. With one out in the sixth via the strikeout route, Ron Conte doubled to left center and power-hitter Lou Cedrone parked one in the centerfield stands among the TV-decreased crowd of over 7,500 for the two runs.

Little Ken Stewart worked Neidel to a shaky 3–2 count but the Dorp righty got him out swinging for the second out in the sixth inning. The game was a closed book after Neidel promptly fanned Johnny Donoghue for the final out.

This win gave Schenectady an 11–0 tournament mark, the most number of games any team coming here can boast.

After Tommy Woods grounded out and Stan Stringham flied to left to lead off Schenectady's first inning, Dinola cleared the stands in right field to give Neidel a one-run cushion.

Shenectady, showing its keen infield defensive ability, checked Bridgeport in its half of the first. Stringham got the important third out with two men on when he made a fine play at second base on Stewart's grounder.

Schenectady got two more runs in the second for a 3–0 advantage. Starter Donoghue, looking for his fourth tourney win, lost control in the second, hitting both Bob Romph and Billy Jahnel. But the big damage was done when Neidel dribbled one to short and on the attempted putout at third, the ball wound up touching the railing on the dugout, under a Little League rule, both runners were given two bases, thus Romph and Jahnel scored.

One of the gems in the Schenectady infield shone again in the Bridgeport second. With one man on and two outs, first baseman Mike McGarry missed the tag on the runner going down to second on Cavaaliere's grounder. Cooly, and with no effort, he beat the runner to first to retire the side.

Schenectady left two men on in the third but also chased Donoghue in favor of plucky Frank Deltoro. The little Bridgeport redhead got himself out of a one-out, two-on situation in the fourth.

However, Schenectady tagged him for three more runs in the fifth. That was when Wilkins homered over the centerfield fence after Dinola singled and McGarry reached first on an error. Deltoro was promptly relieved by Pete Halecka. Both Chet Godlewski and Jahnel got hold of Halecka pitches but fine infield play by Bridgeport prevented any damage as Schenectady again left two stranded.

In the consolation game at Staten Island Saturday, Chester, Pa., broke a scoreless game wide open in the fifth with a nine-run outburst to whip Barre, Vt., 9–0.

After being outfitted Monday in their new World Series suits, Schenectady opens the finals with a 2 o'clock engagement with Quebec, Canada, Tuesday. This game will be the first ever played at the new Williamsport Little League series site.

The second game on opening day pits Latin America against Hamtramck, Mich. Wednesday's lineup will see California going against Alabama in the first game and Oahu, Hawaii, meeting the European champions. Semifinals are set for Thursday, the consolation on Friday and the game for all the marbles is slated at 3 o'clock Saturday afternoon.

Schenectady-Bridgeport box score:

Schenectady	AB	R	H	Bridgeport	AB	R	H
Wood, ss	4	0	0	S'va'gi, rf	3	0	0

DOUBLE HONOR FOR LITTLE LEAGUE KIDS

(By Harry Shave)

Schenectady Little Leaguers not only won a monumental trophy for its eastern regional supremacy; our 14 little gentlemen were presented with an unprecedented honor at the awards banquet Saturday night at Staten Island. The youngsters were given another team trophy by their hosts—the Wagner College trophy for conduct on the campus.

The award is given to the one team of the four regional finalists which cooperates the best, conducts itself best, and shows the best deportment. In making the presentation to Trainer Lindy Buonome and Capt. Stan Stringham, the island hosts stated: "We were not in any way swayed by the fact that you boys won the championship; your conduct is most deserving of this honor. You are one of the finest, if not the finest, Little Leaguers we have ever had here on this campus."

Some kind of proud history is being made by our bunch from Schenectady. On almost eight counts this 1959 team has honors:

No. 1: Schenectady has earned an unprecedented third crack at Little League world series championship.

No. 2: Schenectady is one of eight teams in the first truly international affair—teams from Hawaii, Latin America, and Europe giving it the international aspect.

No. 3: Schenectady was the first team in regional history to receive both the championship trophy and the trophy for good conduct.

No. 4: To Schenectady goes the honor of being one of the two teams to initiate the new Little League ballpark here.

No. 5: Schenectady is the first team in Little League history to have two brothers, years apart, in world series play. Chuckie Neidel, first baseman with the pennant-winning champs of 1954, and Billy Neidel, present team's ace pitcher.

No. 6: Schenectady has a manager, Mike Maietta, setting a record. He's the first manager to get three teams this far in Little League history.

No. 7: Schenectady goes into its opening game with 11 straight tournament wins—a feat no team here can boast.

No. 8: It's ironic that a Schenectady team has made it here during the year its hometown is celebrating its 150th birthday.

(A fitting birthday present from 14 youngsters.)

Schenectady passed up an airplane trip here by vote of its boys. A 9-hour ride on a $43,000 bus brought us here during a hanging drizzle, skies in Pennsylvania are threatening here today (Sunday). Little League head shrinkers on the national level spend a lot of time studying the strain on little league boys in tourney play. The kids are having a ball—it's the adults who are suffering. Watching tourney games at this level is like having the first half of a telephone number daily double going at Saratoga and sweating out the second half.

Fran Maietta takes on added duties as we progress along this trail. She laundered and pressed our pretty well-beaten and meager clothing allotment, soothes the weary elders with an amazing amount of good humor, makes the hotel reservations, and comes up with some sterling off-hour activities, regulated to quiet seared nerves of the adults.

Little League Commissioner Bill Fitzgerald, first little league fan to lose his voice. It's down to a whisper now after shouting on our kids in the regional. Many of the adults here agree with us that our kids don't exactly fathom just what a tremendous job they have accomplished. To the kids, it seems, all this is just a matter of playing baseball and knocking off a bunch of other kids on the ball diamond.

Dougie Wilkins had struck out twice, in the first and third innings, before he walloped his three-run homer against Bridgeport. It wasn't until he saw his late-arriving parents that he clobbered the ball. His parents had just come into the stadium when Doug was awaiting his turn at bat.

Outfielder Jimmy Bennett was erroneously charged with two errors in the semifinal game at Staten Island. Scorers missed a change in the lineup. Former pro basketball players here—Karl Heiner and Dick (Clubby) Bennett watched the games on the island.

Cenci said: "Mike has everything to win the series—pitching, power, hitting, speed, and a strong defense." Cenci said that Schenectady's defense "is so smooth you don't always notice how hard some of the plays being made are."

Suggestions for the Khrushchev Tour

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Tuesday, August 25, 1959

Mr. NEUBERGER. Mr. President, the Oregon Daily Journal for August 21, 1959, has published an editorial entitled "Suggestions for the Khrushchev Visit." The Journal, which is circulated in my home city of Portland, Oreg., supports my recommendations for the qualities inherent in America which the Russian dictator should be invited to see and observe for himself.

I am grateful that the editors of the Journal have decided there is some merit in my suggestions. I ask unanimous consent that this editorial from the Oregon Journal be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SUGGESTIONS FOR THE KHRUSHCHEV VISIT

Senator RICHARD L. NEUBERGER has made a sensible proposal on sights to be shown Nikita Khrushchev when the Russian Premier visits the United States next month. Here's the list of things which the Oregon Senator believes should be included in the Soviet leader's American itinerary:

1. The National Institutes of Health at Bethesda, Md., where skilled medical researchers are seeking the answer to diseases which afflict Russians as well as all other members of the human race.

2. A typical American grammar school anywhere in the land, so he may know for himself that American children are not different from the children of his own vast nation.

3. The Grand Canyon of the Colorado, because no human being can see that spectacle without feeling awe at the handiwork of Him who created Russians and Americans and all other peoples.

4. A religious service at some small rural church in the American hinterland, so he may at least experience the spiritual atmosphere which moves the people of the United States.

5. A town meeting in which all the citizens of an American community are equal participants in the local government.

As NEUBERGER suggests, these things might move the powerful visitor from Moscow a whole lot more than the sight of belching factories, roaring missiles, and mighty machines.

"Let us show him the gentler, more compassionate and more human side of America," said NEUBERGER in presenting his proposal to the Senate.

It would, indeed, be too bad if the Russian leader's tour included only those things which emphasize the materialistic side of our free society with nothing to indicate the sincere desire of our people for a better life for all the world.

A Negro Mob Versus Two Policemen

EXTENSION OF REMARKS
OF
HON. FRANK E. SMITH
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 16, 1959

Mr. SMITH of Mississippi. Mr. Speaker, under unanimous consent, I include an editorial from the Delta Democrat Times, Greenville, Miss., which speaks for itself and merits the attention of all thinking citizens:

A NEGRO MOB VERSUS TWO POLICEMEN

A mob is a mob, whether its members are white or black and whether it erupts in Mississippi or Missouri or anywhere else.

That ought to be plain to all. But we doubt seriously that the NAACP will denounce the St. Louis Negro mob of 1,000 whose near-victims were not law violators but law officers.

Nor has the NAACP given any protest about similar incidents in New York City, Minneapolis, Boston, and even Memphis. And it is this onesidedness of that organization's concern for justice, its silent toleration of the Negro's record of violence in the cities of the North which make its activities suspect even among the most moderate southerners.

The two white detectives whose lives were saved from the mob only by the arrival of police reinforcements and trained dogs were pursuing a Negro thief in a Negro section. The attack came after they fired at the fleeing man, who escaped. Surely this would be worthy of NAACP attack even if it were the first such incident, which it is not. But don't hold your breath until it happens.

Nixon Leads Presidential Poll in New Hampshire

EXTENSION OF REMARKS
OF

HON. NORRIS COTTON

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Tuesday, August 25, 1959

Mr. COTTON. Mr. President, every 4 years, national attention is focused upon the State of New Hampshire, which is the first to hold its presidential preference primaries.

At the present time, much is being heard about polls. To those of us who wish to see Vice President RICHARD M. NIXON nominated and elected President of the United States, it is most gratifying to learn that a poll of New Hampshire, taken recently by Opinion Research Corp., of Princeton, N.J., shows Mr. NIXON a 74 percent favorite in our State for the Republican nomination.

An article in the Boston Sunday Herald of August 23 gives the details of this poll. On behalf of my colleague, the senior Senator from New Hampshire [Mr. BRIDGES] and myself, I ask unanimous consent to have this article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

POLL PUTS KENNEDY OVER ROCKEFELLER—NEW HAMPSHIRE REPUBLICANS MAKE NIXON TOP CHOICE NOW

Vice President RICHARD M. NIXON is the overwhelming choice of New Hampshire Republicans for the presidential nomination, with Nelson Rockefeller a poor second.

If the presidential election were to be held today, New Hampshire would go for Nixon over Kennedy, but for Kennedy if Rockefeller were the Republican candidate. Either Republican could defeat Stevenson.

NINETEEN HUNDRED AND SIXTY CAMPAIGN COULD CHANGE RESULTS

These are the outstanding findings of a sample survey of New Hampshire voters just completed by Opinion Research Corp. of Princeton, N.J. A total of 584 voters from 59 areas throughout the State was questioned, to provide a selection representative of the State's entire population.

The researchers warned that their survey, made from July 26 through August 5, does not take into account the effects of campaigning between now and the 1960 elections. In particular, they point out that a candidate who knows he is running second probably will devote more effort than one who is well ahead.

A surprising finding of the survey was that only a few of the Granite State voters said they preferred NIXON because he had done a good job with the Russians. His experience was by far the major factor. Asked their reasons for a preference for the Vice President, 36 percent of the Republicans interviewed and 36 percent of the Independents answered, "Because he is experienced." Only 4 percent of the Republicans and 16 percent of the Independents cited his "good job with the Russians," despite the fact that he was on his Russian tour at the time the survey was made.

SEVENTY-FOUR PERCENT FOR VICE PRESIDENT NOW

The survey showed that if a Republican presidential preference primary were held today with Nixon, Rockefeller, Lodge, Stassen, Case, and Goldwater the names on the ballot, the Vice President would receive 74 percent of the votes.

Rockefeller would be second with 11 percent, and Lodge third with 9 percent.

In a showdown between NIXON and Rockefeller, 80 percent of the Republicans selected for the survey chose NIXON, 15 percent Rockefeller, and 5 percent could not make a choice.

HOW DO REPUBLICANS IN NEW HAMPSHIRE RATE ROCKEFELLER AND NIXON AS PERSONALITIES?

One of the factors influencing voter preference among candidates is their rating of the man as an individual, in addition to his capabilities as on officeholder.

On this score, Republicans in New Hampshire rate NIXON and Rockefeller about equally well, 54 percent giving NIXON a very favorable rating and 50 percent giving Rockefeller a very favorable rating.

Thus, the edge that NIXON has over Rockefeller, at present, among Republicans is due to the influence of factors other than those relating to personality.

The question: "Here is a list of men who have been mentioned as possible presidential candidates for the Republican Party in 1960. Which one would you like to see nominated as the Republican candidate for President in 1960?"

The vote of Republicans

	Republicans	Those who said they voted in the 1958 Republican primary
	Percent	*Percent*
Nixon	74	70
Rockefeller	11	11
Lodge	9	10
Stassen	3	4
Could not say	2	2

The question: "And who would be your second choice?"

The vote of Republicans

	Republicans	Those who said they voted in the 1958 Republican primary
	Percent	*Percent*
Rockefeller	28	26
Lodge	28	28
Nixon	14	15
Stassen	11	9
Case	1	1
Goldwater	1	3
None of these	11	12
Could not say	6	6
Total	100	100

The question: "Here's an interesting experiment (hand respondent scalometer). You notice that the 10 boxes on this card go from the highest position of plus 5—or something you like very much—all the way down to the lowest position of minus 5—or something you dislike very much. Please tell me how far up the scale or how far down the scale you would rate?"

All voters[1]

[In percent]

	Nixon	Rockefeller	Harter	Kennedy	Stevenson
Very favorable	46	41	42	48	16
Favorable	24	25	31	26	26

Very unfavorable	3	4	1	3	15
Do not know him	4	4	8	3	3
Total	100	100	100	100	100

[1] Voted in 1956 plus a proportion (34) of those too young to vote in 1956 but now old enough. The proportion of new voters used is based on postelection studies of voting participation in elections of the last decade.

Independents asked to choose from among the six Republicans the man they would most like to see the GOP nominee were for NIXON—54 percent. Lodge was second, named by 16 percent of the Independents, and Rockefeller third with 13 percent.

In a showdown choice between NIXON and Rockefeller, 62 percent of the Independents preferred the Vice President, 23 percent the New York Governor, and 15 percent could make no choice.

Thirty-nine percent of the voters who were questioned were Republicans, 28 percent Democrats, 31 percent Independents and 2 percent alined in none of the three groups. Fifty-two percent were women; 48 percent men.

In religion, 53 percent were Protestant and 44 percent Catholic. Thirteen percent were in the 21-29 age group, 45 percent 30-49, and 42 percent 50 or older. By occupation of chief wage earners, the percentages were: Professional and business 20; white collar 10; manual 50; farmer 3; nonlabor force 16; undesignated 1. All were civilians.

The question: "Here is a list of men who have been mentioned as possible presidential candidates for the Republican party in 1960. Which one would you like to see nominated as the Republican candidate in 1960?"

The vote of Independents

WHO RUNS STRONGER AGAINST KENNEDY IN A TRIAL HEAT FOR THE PRESIDENTIAL ELECTION—NIXON OR ROCKEFELLER?

At this time, NIXON is a stronger candidate against KENNEDY than is Rockefeller.

In a "trial heat" of KENNEDY versus NIXON, NIXON got the vote of 56 percent of the total voting population sampled. In contrast, Rockefeller received 39 percent of the vote in "trial heat" between him and KENNEDY.

Excluding the "Undecided" and "Other" vote the comparative strength of NIXON and of Rockefeller against KENNEDY is as follows:

	Percent
Rockefeller	42
Kennedy	58
Total	100
Nixon	58
Kennedy	42
Total	100

WHOM DO VOTERS BELIEVE CAN BEST HANDLE MAJOR PROBLEMS FACING THE NATION TODAY—NIXON OR ROCKEFELLER?

The following table shows the proportion of all voters who said that NIXON, or Rockefeller, would do the most effective job of handling each problem:

	NIXON	Rockefeller
	Percent	*Percent*
Dealing with Russia's leaders	75	13
Keeping the United States out of world war III	57	10
Dealing with the threat of inflation and increases in the cost of living	44	28
Keeping the country prosperous	41	26
Preventing tax increases	40	18
Racial integration in the schools	40	13

The question: "Which of these two men, NIXON or Rockefeller, if elected President, do you think would do the most effective job of handling these problems?"

All voters

[In percent]

	Nixon	Rockefeller	No difference	No opinion	Total
THE PROBLEM					
Dealing with Russia's leaders	75	13	4	8	100
Dealing with the threat of inflation and increases in the cost of living	44	28	14	14	100

Preventing tax increases	40	18	24	18	100
Keeping the United States out of world war III	57	10	22	11	100
Racial integration in the schools	40	13	24	23	100

WHO RUNS STRONGER AGAINST STEVENSON IN A TRIAL HEAT FOR THE PRESIDENTIAL ELECTION—NIXON OR ROCKEFELLER?

At this time, NIXON is a stronger candidate against Stevenson than is Rockefeller, although both NIXON and Rockefeller received a majority of the vote in preference to Stevenson.

	Percent
NIXON	74
Stevenson	26
Total	100
Rockefeller	67
Stevenson	33
Total	100

The question: "Suppose the choice for the presidential nomination in the Republican Convention narrows down to RICHARD NIXON and Nelson Rockefeller. Which one would you prefer to have the Republican Convention select?"

The vote of Republicans

	Republicans	Those who said they voted in the 1958 Republican primary
	Percent	*Percent*
NIXON	80	80
Rockefeller	15	16
No opinion	5	4
Total	100	100

The vote of Independents

	Independents Percent
NIXON	62
Rockefeller	23
No opinion	15
Total	100

WHAT ARE THE MOST IMPORTANT REASONS FOR PREFERRING NIXON, OR FOR PREFERRING ROCKEFELLER, AS THE REPUBLICAN CANDIDATE?

The most important reasons for preferring NIXON given by those who named him as their choice for the Republican nomination, both among Republicans and Independents, refer to the experience he has had.

In contrast, those who preferred Rockefeller were more likely to express a general liking for him.

Major reasons given for preferring

	Republicans	Independents
NIXON:	*Percent*	*Percent*
He is experienced	36	36
He has had experience as Vice President	19	16
He is doing a good job as Vice President	13	13
Have heard more about him	10	17
He has done a good job with the Russians	4	16
Rockefeller:		
General preference expressed no specific reason given	28	23
He is capable, can do a good job	17	12
He is doing a good job as Governor	11	9
He is a sound businessman, knows financial problems	6	12

The question: "Suppose the presidential election were being held today. If (name of candidate) were the Democratic candidate and (name of candidate) were the Republican candidate, which would you like to see win?"

If "undecided" respondents were asked: "As of today, would you lean more to (name of candidate), the Democrat, or to (name of candidate), the Republican?"

Voters [1]

	Percent	Percent
Kennedy and lean Kennedy	54	58

Detroit Common Council Supports Minimum Wage Legislation

EXTENSION OF REMARKS

OF

HON. MARTHA W. GRIFFITHS

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 25, 1959

Mrs. GRIFFITHS. Mr. Speaker, the following resolution was adopted by the Detroit Common Council. I wholeheartedly support this resolution:

Whereas the present Federal minimum wage of $1 an hour is inadequate to provide a bare subsistence in the United States today; and

Whereas, more than 20 million Americans lack the guarantee of even this inadequate figure and we are without any legal limitation on their hours; and

Whereas these shocking facts constitute a grave threat to our national economy, a challenge to our moral standards as a people and a peril to our reputation as democracy's showcase throughout the world; and

Whereas the existence of underpaid and overworked wage earners is a particular danger to the well-being of the people of Detroit. Unless a national minimum wage standard is established by Federal law, Detroit industries which pay a decent wage scale will suffer unfair economic competition from those in other communities which pay their employees low, substandard wages and are thus able to undersell our industries; and

Whereas there is now before Congress the Kennedy-Morse-Roosevelt bill (S. 1046 and H.R. 4488) which would greatly ameliorate this problem by raising the Federal minimum wage to $1.25 and include nearly a million additional workers under the protection of the Fair Labor Standards Act: Therefore, be it

Resolved by the Common Council of the City of Detroit, That we hereby memorialize the Members of the 86th Congress of the United States to enact S. 1046 and H.R. 4488, a bill which would increase the minimum wage and extend protection to nearly 8 million additional workers; and be it further

Resolved, That certified copies of this resolution be forwarded to the Speaker of the House of Representatives, the President Pro Tempore of the Senate, the Members of Congress representing Detroit and the U.S. Senators representing Michigan.

Adopted as follows: Yeas: Councilmen Lincoln, Patrick, Rogell, Smith, Van Antwerp, and President Beck, 6. Nays: None.

Hidden Scandal in Vietnam Program

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, August 25, 1959

Mr. HUMPHREY. Mr. President, we have been hearing a great deal these days about alleged corruption and mismanagement in the mutual security program in Vietnam. I support the Senate investigation of these widely publicized charges. I believe in rooting out any corruption or mismanagement.

But I think the proportion is important, too. For this reason I ask unanimous consent that an article entitled "Hidden Scandal in Vietnam Program," which appeared in the August issue of Economic World, published by the Committee for International Economic Growth be printed in the Appendix of the RECORD.

I think this article will help lend perspective to the current controversy.

There being no objection, the article was ordered to be printed in the RECORD as follows:

HIDDEN SCANDAL IN VIETNAM PROGRAM

The most spectacular charges against the mutual security program have a way of coming to light at this particular season of the year—as the Congress moves toward final votes on appropriations to carry on the program.

This year has been no exception. During the last days of July, officials of the State Department and the International Cooperation Administration were on the carpet before a Senate committee—denying sensational charges of waste, incompetence, and scandal in the administration of the program in Vietnam—and explaining that certain mistakes have been made. The hearings may lead to investigations in the field and further reports—perhaps to new charges and countercharges.

In the meantime, here is what happened:

Starting on Monday, July 20, the Scripps-Howard newspapers began a series of six articles by Albert Colegrove which was introduced in the Washington Daily News with the front-page headline "Fiasco in Vietnam: Our Hidden Scandal" and which began with the statement: "The American aid program in little free Vietnam is an outrageous scandal."

The general tone of this and succeeding articles is indicated by Mr. Colegrove's references to "wasted millions"; to "forking over bundles of American cash"; to "reckless, foolish, made-in-Washington policy"; to officials who "looked piously at the ceiling when the money melted away"; to American "bureaucrats who have tucked the damning facts away in secret files" and "desk-bound captains of Government furiously shifting official papers from 'in' basket to 'out'"—and who otherwise reside in "cozy bachelor apartments" or "spacious family villas" when they are not sipping gin and tonic at French-type sidewalk cafes in the "Paris of the Orient."

"The true story of this fiasco," wrote Mr. Colegrove, "has been hidden from the American public, which is paying for it."

THE SENATE INVESTIGATES

Senator MANSFIELD promptly called for special hearings before a subcommittee of the Senate Committee on Foreign Relations.

The U.S. Ambassador, the mission chief and the head of the Military Aid Advisory Group to Vietnam flew in from Saigon to testify.

Hearings began on July 30. The more specific charges made by Mr. Colegrove and the replies by U.S. officials are summarized below:

1. That the United States contributed $71 million toward the care and resettlement of 600,000 refugees who fled from Communist North Vietnam after the country was split by the Geneva truce, and that 3 years later $22 million of this money was still unaccounted for, including $8 million alleged to have been burned in a fire in 1955.

Answer: Nearly a million refugees from the north have been resettled and integrated into the Vietnam economy. With 5,000 to 10,000 refugees arriving daily, the United States, French, and Vietnam Government—plus American private agencies—pooled funds and resources to distribute relief before an accounting system could be developed. Some $10 million of these funds cannot now be accounted for. The $8 million cash reported to have been burned was not money but receipts lost in a fire started by a battle between Communist and government forces.

2. That 14 radio towers costing $28,500 were bought over 3 years ago by the United States and "have never been seen."

Answer: In 1956 the United States bought 10 radio towers for Radio Vietnam at a cost of $11,000. They are all installed and in operation. Late in 1958, the United States financed an additional 14 towers which arrived in Vietnam in May and are now in a warehouse in Saigon. Sites are being prepared for eight of them, three others are in the process of negotiation, and three more remain to be selected.

3. That the former Director of Radio Vietnam "burned his books in the alley" before he was apprehended for filching $446,000 in U.S. funds which are still unaccounted for.

Answer: The former Director of Radio Vietnam overspent his budget, requested $446,000 in additional funds from the Government of Vietnam, and was dismissed for incompetence. No funds are missing.

4. That the next Director of Radio Vietnam insisted on air-conditioning the Saigon studios, ordered $27,000 worth of equipment, and paid a contractor in advance for alterations—upon which the contractor "skipped the country."

Answer: There have been delays in preparing the studios for installation of air-conditioning equipment. The government of Vietnam dismissed one contractor and hired another to finish the job which is now expected to be completed in a few months, at which time the equipment will be installed.

5. That Radio Vietnam has three different teletype reporting devices, none of which is used.

Answer: This is true—the result of a "series of mistakes in judgment" by U.S. personnel.

6. That we are "buying jeeps, tanks, guns, tractors, even whole radio networks for an infant farm-economy" with "only 300 trained technicians by its own Government's count."

Answer: The U.S. aid mission has provided technical training for 38,000 Vietnamese and the Military Assistance Advisory Group has trained 33,000 in the military organizations. One of several Vietnam technical societies has over 300 members.

7. That American officials draw $400 to $800 a year in addition to salaries to offset the "fictitious high cost of living in Saigon."

Answer: U.S. military personnel stationed in Saigon receive a 10 percent "cost of living" allowance. This allowance for civilian personnel was discontinued in October, 1957.

8. That "these same officials get up to $319 a month in so-called hardship pay" when "the average Government worker enjoys more luxurious living and fewer tensions than 90 percent of his tax-paying fellow citizens will ever achieve."

Answer: By act of Congress civilian personnel serving in Vietnam receive an additional 20 percent in salary because it is considered a hardship post. Living quarters are provided by the Government in accordance with the law. All Americans living in Saigon have household servants. The United States pays less in rent for its officials than any of six Western embassies surveyed recently. In the first 6 months of this year, 1561 out of the 2400 civilian Americans suffered from dysentery, hepatitis, and other illnesses—counting only those who received treatment at the U.S. dispensary. On July 8, 1958 two Americans on an official mission were killed by a bomb thrown by a Communist.

9. That Americans do almost all their food shopping at the "fantastic horn of plenty"—the U.S. commissary—to the annoyance of local merchants.

Answer: A survey in February 1959 showed that Americans were buying 75 percent of their meat, 83 percent of their fruit, and 70 percent of their vegetables from local merchants.

10. That an American businessman representing "hundreds of U.S. companies" reported the case of a bridge contract awarded to a firm even though the engineering specifications were inadequate; and that a complaint to the aid mission brought a reply which was paraphrased to mean: "Don't bother us; we only hand over the money; how it's spent is no concern of ours."

Answer: The businessman's complaint was investigated. The specifications for the bridge were reviewed by an American bridge engineer who found them adequate. The contract was awarded to the lowest bidder.

POINT OF AGREEMENT

Mr. Colegrove and Government witnesses were in agreement on at least one point—a paragraph in his series of six articles which said:

"True enough, we have accomplished our main mission. We have kept Vietnam from Communist conquest and from economic collapse."

An Organization Liberal

EXTENSION OF REMARKS
OF
HON. HERMAN TOLL
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 25, 1959

Mr. TOLL. Mr. Speaker, Tuesday, August 25, 1959, is the first anniversary of the death of the Honorable Charles M. Finley. He died while serving his second term as councilman in the city of Philadelphia. He represented the ninth councilman's district of the city of Philadelphia with great devotion to the people of the district and to the city.

Charlie Finley, as he was affectionately called, was widely known in the city, the State of Pennsylvania, and in the Nation. He was friendly to people in all walks of life and was well regarded by members of both political parties and also by independent voters. He was an organization man and represented the 50th ward in the county committee of Philadelphia for a great many years. He had also represented the sixth senatorial district in the Democratic State Committee for many years, and was a member of its policy group.

In addition to his splendid organizing ability, which developed a highly successful political organization, and his allegiance to the city, State, and National Democratic organizations, he was also popular with independent voter groups and from time to time agreed with positions which they supported, when he felt that it was for the public benefit.

He was very devoted to the development of La Salle College and lent his efforts to support the enlargement of the college and its prestige.

He was a strong supporter of public libraries—and succeeded in acquiring two new city owned libraries for his district—which rapidly became the most heavily used branch libraries in Philadelphia.

He was greatly interested in the spare time problems of the people of his district and obtained for his constituents three new recreation centers, the substantial improvement of one and the purchase of ground for another.

He was especially zealous in his protection of the property rights of his constituents and intervened on their behalf frequently to preserve residential neighborhoods. He served as chairman of the city council committee on municipal zoning development and zoning with

great distinction. The whole city benefited by his intelligent administration in municipal development and zoning problems.

His death was a great loss to his community, to his friends, relatives and colleagues, and to his wife, to whom he was devoted. He left his mark upon the public as a man who was a politician, in the best sense of the word, a liberal, and an outstanding citizen.

Blockading Civil Rights

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Tuesday, August 25, 1959

Mr. JAVITS. Mr. President, it seems that history is repeating itself in civil rights. At the beginning of the year the President submits a modest proposal, it is criticized by some partisans as being too weak, the congressional year marches on with little being done and then, when an effort is mobilized near the session's end, the cries go up from the opposition that more time and deliberation must be given to the radical civil rights proposals at hand. The Civil Rights Act of 1957 has been constructive in its application and has fortified our constitutional form of government, our individual liberties, and our national well-being, notwithstanding the dire predictions during the lengthy debates 2 years ago. There can be no cogent reason for further delays in consideration and enactment of meaningful civil rights legislation.

I ask unanimous consent that an editorial from the August 21 New York Times which bespeaks the views of many in the Nation who look to the Congress for action on civil rights, prompt and effective, may be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

BLOCKADING CIVIL RIGHTS

The time has come—in fact, is well past—for action on civil rights in both the Senate and the House in Washington and for public identification of those who are responsible for inexcusable delays.

Last February President Eisenhower sent to Congress a seven-point program to further the progress already made in securing equal rights for all Americans. The proposals were moderate indeed. They included extension of the life of the Civil Rights Commission for 2 years, making obstruction of desegregation court orders a Federal offense, preservation of election records and the right to their inspection by the Attorney General, aid to communities in solving desegregation problems, and a Commission on Equal Job Opportunities under Government Contract.

Six months have now passed and no bill along these lines has yet been cleared for action either in the Senate or the House. Formidable roadblocks, manned by those who are opposed to any further civil rights legislation, are standing in the way.

In the Senate Judiciary Committee its chairman, Democratic Senator EASTLAND, of Mississippi, and the southern Democrats on the committee are stalling off making a report which a majority of the committee wants. And they are doing so in spite of a plea from their Subcommittee on Constitutional Rights that a civil rights measure be promptly sent to the floor of the Senate and in spite of Senate Democratic Leader LYNDON JOHNSON'S pledge that such a bill will be passed before the present session ends.

The House Judiciary Committee finally approved a diluted version of the President's program a couple of weeks ago—one which left out desegregation aid to communities and the Commission on Equal Job Opportunities which the President had called for. This bill must be cleared by the Rules Committee before it can go to the floor of the House. But Representative HOWARD W. SMITH, Democrat, of Virginia, chairman of the committee and bitter foe of civil rights, seems to be in the extraordinary position of being able to block any such action, with the backing of southern Democrats and some Republican members of the committee.

This sort of fiddling with basic human rights that are part of the American ideal does no credit to Congress or to those who engage in it or tolerate it. We cannot believe that such conduct is good politics any more than it is good morality.

Land Office of the State of New Mexico

EXTENSION OF REMARKS
OF
HON. JOSEPH M. MONTOYA
OF NEW MEXICO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 25, 1959

Mr. MONTOYA. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to challenge an insertion placed in the March 10, 1959, CONGRESSIONAL RECORD Appendix by my esteemed colleague and friend, Congressman LEE METCALF, of Montana. Articles which he quotes are not only without basis of fact in many respects but, in my opinion, wholly uncalled for with respect to the land office of the State of New Mexico and the present commissioner of public lands, Murray E. Morgan. I honestly cannot believe that LEE METCALF knew of the untruth and gross injustice of these articles concerning our land office because I know him to be a man of integrity and sincerity.

May I quote from one of the articles:

A few States are doing a conscientious job of managing their lands, but the administration of State lands in New Mexico is among those having the weakest record, and in New Mexico the land is administered by an elected land commissioner who generally is representative of the livestock interests.

Mr. Speaker, nothing could be further from the truth. Mr. Morgan, the present commissioner, is a former newspaper editor and publisher. His predecessor was a businessman. In fact, of the 16 land commissioners who took office in New Mexico, I doubt if over 2 were ever associated with livestock interests. I have known Murray Morgan quite well for many, many years and I certainly consider him to be a judicious, conscientious, fair, and honest man. My convictions most certainly are borne out by the overwhelming majorities he has enjoyed in both of his races to the elective post of land commissioner.

Mr. Speaker, I contend strongly and with unequivocal basis in fact that the administration of State lands in New Mexico has been a shining example of efficiency, economy, and honesty. In House Report No. 1778 to accompany H.R. 5992 in the 80th Congress, 2d session, New Mexico was specifically cited as a "good example" of how well the States had proven their ability to administer public lands.

In the report our House committee stated:

The evidence is conclusive that private interests operating under State controls have been eminently more successful in developing our oil resources than under Federal control. The State of New Mexico furnishes a good example. There are 11,500,000 acres of State owned lands in New Mexico, while the Federal Government owns in excess of 34 million acres. At the present time over 6 million acres of State lands, or 52 percent are under lease for oil and gas exploration, while only a little more than 2 million acres of Federal lands, or about 6 percent are under lease for oil and gas exploration.

In the five public land States producing oil and gas, the Federal Government owns approximately 36½ percent of the acreage but produces only about 13 percent of the oil and gas produced in these States. The 1946 total production from these lands was approximately 62 million barrels, while the production from State and privately owned lands in the same States was in excess of 380 million barrels. Thus, it will be seen that in these five "public land" States, where Federal and State owned lands are in direct competition with each other, development has been much faster and production has been much greater under State regulation than under Federal control. The total annual production of oil from the vast federally owned domain in 1946 was less than 12 days' production of the Nation. It must be conceded that the Federal Government has made a pitiful showing with respect to the development of public lands for oil and gas purposes.

Mr. Speaker, in the 83d Congress, Senate Report No. 133, to accompany Senate Joint Resolution 13, refuted the "oil grab" charge of the opposition to State ownership of the tidelands by saying:

For years the charge has been made, and it is still being made, that those who believe that the States themselves are best qualified to own and manage the lands and resources within their State boundaries are somehow participating in an "oil grab" as "stooges" of the oil industry. Nowhere in the long and voluminous record is there a scintilla of evidence even remotely substantiating such a charge.

The record of New Mexico's administration of the public lands entrusted to her keeping by Congress speaks for itself and is a matter of pride for the State and a matter of satisfaction to those beneficiary institutions who benefit from the revenues derived from these lands.

New Mexico administers her 13 million acres of State lands on 2½ percent of the revenue from those lands. The Federal Government administers its lands on 10 percent supplemented by additional appropriations by Congress. Last year New Mexico averaged a return of better

than $2 an acre from her 13 million acres of land, while the Bureau of Land Management averaged less than $1 an acre from the lands it administers. I would like to point out at this time that New Mexico, like other Western States, was prohibited from selecting lands known to be mineral in character, and that this remarkable record of earnings is in spite of this fact.

New Mexico, at the present time, through economical administration and efficiency of operation, has accumulated the sum of over $155 million in its permanent funds for beneficiaries of the State land office. Besides this it has over the years given the beneficiaries over $125 million for current operating budgets and the program has been so carefully handled that none of the permanent funds have ever been lost.

Mr. Speaker, may I also point out that unlike the complicated and seemingly slow procedures in the Federal oil and gas lease field, our New Mexico State Land Office has the reputation of expeditious and uncomplicated administration of such important matters. Our State oil and gas leasing procedures are on a strictly competitive basis on known geological structures and the leasehold interest can be depended upon, once it is established pursuant to land office directive. The same is true with respect to sale of State lands for in New Mexico everyone has an equal chance pursuant to advertising and public auction sale to the highest bidder. Seldom, if ever, would there by any possible cloud on title once the land office has completed the sale or issued a lease.

In short, Mr. Speaker, I believe that the record of performance of our State land office clearly refutes any charges that it is in consort with special groups or that it is operating in an inefficient manner.

Increased Civic Participation in NATO Consultations

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Tuesday, August 25, 1959

Mr. KEFAUVER. Mr. President, I have often stated my belief that Government officials—even Senators—do not possess all the wisdom in the world. Indeed, our very system of responsive and responsible government is based in this assumption. In order to meet successfully the domestic and international problems of today, we must tap the intellects and energies of our individual private citizens.

For these reasons, on the international scene, in addition to supporting increased cooperation among our NATO allies' governments, I have also urged increased intercourse among these countries' private citizens.

Mr. Leo Burson, a Memphis delegate to the Atlantic Congress in London last June, is an excellent example of the value of increased civic participation in our NATO consultations. Mr. Burson was one of several Tennesseans who helped to effect the success of the Congress, and he has made some interesting observations on the meeting since he returned with his family.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article that appeared in the Memphis Hebrew Watchman of June 18. This article should serve to point up the important role that spirited private citizens such as Mr. Burson can play in our continuing quest for a just world peace and understanding between nations.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Hebrew Watchman, June 18, 1959]

BURSON RETURNS FROM NATO CONGRESS

Leo R. Burson, a Memphis delegate just back from the NATO Atlantic Congress meeting in London lightened the hearts of Memphis mothers by stating categorically that "There seems little likelihood of major East-West war in the next 10 years." Mr. Burson gave as the basis of his reasons the following world developments:

1. The development of the hydrogen bomb.
2. The death of Stalin.
3. The Hungarian Revolution, which demonstrated the unreliability of the East European satellites.

In summarizing the achievements of the Atlantic Congress, Mr. Burson stated that "Six major principles guided our thinking:

"1. The NATO military alliance has, in its first 10 years, preserved the peace of Europe.

"2. Nevertheless, great changes have taken place in this decade that make essential increased cooperation among Atlantic nations in all fields.

"3. No military alliance can endure unless supported by close political and economic cooperation.

"4. The time is ripe for these nations to build an Atlantic community with responsibilities extending to military, political, economic and scientific fields.

"5. The Atlantic nations are interdependent with the other nations of the free world. All these nations want peace and the preservation of their own conception of life. All have a common interest in the development of economic activity and social improvement throughout the world; all people have a common stake and status in a free world.

"6. The Atlantic community has a duty to help less developed countries to help themselves."

Mr. Burson was a U.S. spokesman on the all-important political policies committees. He was coauthor of the negotiation resolution which was adopted by the full of Congress and 2 days later laid the foundation of Secretary of State Herter's pronouncement to Gromyko that the Western Powers would not continue negotiations under the shadow of any ultimatum issued by Gromyko or Khrushchev. The negotiations resolution as adopted is as follows:

"While the primary need is to maintain and develop the cohesion, military security, and economic capacity of the Atlantic countries, because the worldwide Communist threat seems likely to be no less during the second 10 years of NATO than it was in the first, the Atlantic powers are nevertheless urged to undertake continued negotiations with the governments of the Communist bloc for the settlement of differences while rejecting duress, threats, and any kind of ultimatum."

Mr. Burson was accompanied on the trip by his wife, the former Josephine Wainman, their daughter, Linda, 17, and son, Charles, 15.

Mr. Burson said "I feel much good was accomplished at the Congress and expect to see many future, favorable results from it."

Before attending the Congress, they visited Norway, Sweden, Holland, West Berlin, East Berlin, and France.

Interest Ceiling on Government Securities

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 25, 1959

Mr. PELLY. Mr. Speaker, the following letter which appeared in this morning's New York Times deserves the thoughtful reading of all Members of Congress:

To the EDITOR OF THE NEW YORK TIMES:

The surprise decision of the House Ways and Means Committee to shelve the President's request for removal of the archaic interest rate ceiling on Government bonds should not be dismissed lightly. It is doubly inflationary and it will cause an increase in the servicing cost of the national debt.

The decision is inflationary because it will force the Treasury to refinance over $100 billion of the national debt in short-term securities over the next year. With growing business prosperity the demand for short-term Government securities on the part of nonfinancial corporations will subside, and the Federal Reserve will be compelled to provide extra reserves, beyond the monetary requirements or real economic growth, to enable commercial banks to absorb an ever-larger amount of short-term Government securities.

In addition, the indefinite duration of the statutory interest-rate ceiling will generate further inflationary expectations, with the corresponding increase in the velocity of circulation of currency, and thus still more potential inflation. As an accompanying result there will be added pressures on the yields of outstanding long-term Government securities and on all interest rates.

The decision of the House Ways and Means Committee, if it is not reversed promptly, will accomplish exactly the opposite of its intention.

ADMINISTERED INFLATION

There will be attempts at exonerating the committee's responsibility for the inflationary consequences of its decision. It will be argued that our new inflation is of administered or cost-push kind and therefore unrelated to the national debt management and beyond the reach of monetary policy.

The argument does not hold water. The administered or cost push theory of prices deals only with one set of forces that act on the price level. It is not a general theory, and even in its partial relevance it has not yet been fully developed and demonstrated.

But even if one assumed that all inflation stemmed from cost push forces and corresponding price administration, national debt management and monetary policy would still be relevant in relation to the price level. We have no public policy to deal directly with wage and price administration.

RESTRAINT ON PRICES

The steel industry is a telling case in point. When cost push forces press on prices, monetary and fiscal policies are the only available price-level restraints to be used as public policy for general welfare. Faced with anti-inflationary monetary and fiscal policies, the cost push forces in our economy must depend on offsetting increases in the velocity of money or, if velocity is checked too, they are saddled with the responsibility for the resulting unemployment.

By forcing our national debt management and monetary policy systematically to over-expand the supply of money, the House Ways and Means Committee's decision has not only caused the resurgence of a potential demand-pull inflation but has also removed the only existing public policy checks on the cost push forces in our economy.

Congress must find a way to correct the dangerous monetary situation before it adjourns. The political leadership that permitted the hasty House committee decision must be made aware of the fact that general economic literacy is not so low that people will fail to detect the source of the grave consequences that will follow if the interest rate ceiling on long-term Government bonds is not removed now.

CYRIL A. ZEBOT.

WASHINGTON, *August 22, 1959.*

Creation of International Development Association

EXTENSION OF REMARKS
OF
HON. A. S. MIKE MONRONEY
OF OKLAHOMA
IN THE SENATE OF THE UNITED STATES

Tuesday, August 25, 1959

Mr. MONRONEY. Mr. President, there appeared in the Washington Post and Times Herald of today, August 25, 1959, a very timely and interesting editorial entitled "The IDA Makes Headway." I ask unanimous consent that this editorial may be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE IDA MAKES HEADWAY

It is highly gratifying that under the leadership of Treasury Secretary Anderson negotiations have progressed rapidly toward creation of an International Development Association to assist underdeveloped countries. The Governors of the World Bank will consider the matter further at their September meeting, and it is possible that a specific plan will be laid before Congress next year regarding American participation.

The proposal for this new international lending agency has grown out of the resolution submitted by Senator MONRONEY in February 1958. The purpose of IDA would be to supplement the established lending activities of the World Bank and of individual member nations with a new international source of loans repayable on longer terms at lower interest rates and, when warranted, in local currencies.

Many of the emergent nations of Asia and Africa have found it impossible to qualify for the hard-currency 6-percent loans of the World Bank. The IDA would not only help to meet their needs, but encourage wider participation in such an assistance program by the other industrial nations which would subscribe capital to the institution. If the project continues to be pushed vigorously, as it should be, the IDA ought to be in business in 2 years.

The Two Faces of Khrushchev

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 25, 1959

Mr. LANE. Mr. Speaker, Khrushchev, the Red dictator, has been invited to visit the United States.

This startling fact should warn the American people to be on guard.

The object of this master conspirator is to confuse the White House, and to lull our people into a sense of false security by creating the illusion that peace is just around the corner.

William Randolph Hearst, Jr., with Bob Considine and Frank Coniff, know the real Khrushchev. For their interviews with him and their reports of the way he operates, they have won the Pulitzer Prize and the Overseas Press Club Award.

As a public service, they have started a series of articles about "K" in the Hearst newspapers.

The chapter headings in the first article are revealing: "Has Vast Knowledge of United States," "Shot Them Without Trial," "He'll Be Jolly Good Fellow," "They Wanted Bigger Game," and "Khrushchev Surprised Them."

To prepare the American people for the worst, I include for reprint in the RECORD the first article in this series, published in the Boston Sunday Advertiser, on August 23, 1959. It is appropriately titled: "The Khrushchev I Know: Coarse, Bold, Adroit, Tough, Ruthless":

THE KHRUSHCHEV I KNOW: COARSE, BOLD, ADROIT, TOUGH, RUTHLESS

(By William Randolph Hearst, Jr., with Bob Considine and Frank Conniff)

A historic, Pulitzer Prize winning interview by the Hearst task force with Nikita Khrushchev gave the world its first clear picture of his emergence as the master of world communism.

Now, with the Soviet Premier scheduled to visit the United States, William Randolph Hearst, Jr., and his reporting colleagues present an authoritative, searching analysis of the man, his politics, personality and problems.

They tell you what to expect during his visit and provide the facts you should have in understanding has actions and his motives during his stay here. This is the first of a series of articles which will continue in Monday's Boston American.

I first met Nikita Sergeivitch Khrushchev at central party headquarters, Moscow, on the bitter morning of February 5, 1955. I last talked with him at the American exhibition in Sokolniki Park a few minutes after his stormy scene with Vice President NIXON near the kitchen of our model house, last month.

Over that 4-year span I encountered him a number of times at diplomatic receptions (which he can make very informal) and spent two very long private interview periods with him, accompanied by members of the Hearst task force. The first of these reports, by Kingsbury Smith, Frank Conniff, and myself, won the Pulitzer Prize. The second, with the present task force, won the Overseas Press Club of America's award for best foreign correspondence.

I cite the above simply as a means of presenting our credentials as reporters who have more than a reference-room knowledge of the important subject involved.

You are going to meet this man Khrushchev whether you want to or not. From the moment he sets foot on our native soil September 15 until his departure, he will be all but impossible to escape or ignore.

His rough, calculating peasant's face will stare frankly at you—as if sizing you up—from your newspaper and your television set. His words, no matter how provoking, ill informed or ill advised, will be faithfully recorded and reported by a small army of newsmen. He'll be talking to you, or at you, from all available platforms, ranging from the podium in the General Assembly of the United Nations all the way to a tree stump in an Iowa cornfield.

It is better to know something of this man. To dismiss him as a braying jackass, given to bouts with the bottle, is in our estimate a dangerous evasion. To quake and quaver at his sweeping boasts that he could annihilate us is equally foolish.

Therefore, this and the articles which follow in the Hearst Newspapers during the coming week constitute an honest effort to describe and perhaps even explain, this simple-looking but in many ways complex world leader. In effect, we're going to try to tell you "what makes Nikki run."

HAS VAST KNOWLEDGE OF UNITED STATES

What follows is a distillation of impressions gained through personal and sometimes rough contact with Khrushchev, talks with such soaring authorities as Sir Winston Churchill, Chancellor Konrad Adenauer and Prime Minister Harold Macmillan, briefings by our Embassy people in Moscow and Warsaw, and our own studies.

Khrushchev likes to recall his youth as a simple swineherd, then as a mine boy. But this self-taught man possesses a statistical knowledge of America's industrial and agricultural strengths and weaknesses that will astonish President Eisenhower.

He filled countless little and often humiliating roles during his slow but sure ascent to his dictatorship, including the role of court jester and wild gopak dancer for such influential patrons as Stalin, Kaganovich, Bulganin, and Mikoyan. But once in control, past favors meant nothing. He banished men who made him.

In his historic down-grading of Stalin before the 20th Party Congress in 1956, Khrushchev cried beratingly, "Even if the disastrous tactics of the opposition made it necessary to purge them, it was scarcely necessary to exterminate tens of thousands of Communists."

This was a reference to the big purge of 1937. Khrushchev helped make it big. On Kaganovitch's recommendation, Stalin sent Khrushchev to Kiev, to clean out dissension in the Ukraine, and gave him the title of general secretary of the party at the Ukrainian capital. His first act was to call a meeting of the top 120 members of the Ukrainian Government. When they had assembled, Khrushchev signaled for NKVD goons to enter the hall. He had arranged a simple ambush.

SHOT THEM WITHOUT TRIAL

As Khrushchev read off the names of his fellow Ukrainians, each man was roughly seized and carried off under arrest, then shot without trial. Khrushchev had bagged all the local leaders except Parnas Lyubtchenko,

an accomplished surgeon who headed the People's Council of Commissars in the Ukraine. Lyubtchenko detected that he was being lured into a trap and sped to his villa, where for 4 hours he and his wife held off NKVD forces under Col. Ivan Serov (destined to head Khrushchev's security police years later when Khrushchev ordered the murder of Lavrenti Beria). Lyubtchenko and his wife, running out of ammunition, blew their brains out with their last two bullets rather than face the type of "justice" Khrushchev was meting out to his countrymen.

But this will not be the face he turns to America. His buoyant manner, robust sense of humor, earthy outlook, mastery of the prophetic proverb and corn of personal charm will make him an intriguing visitor to many who prefer to take him at his face value. He'll talk peace morning, noon and night, and with such warmth that the unwary might come to believe it is an invention of purely Russian character.

HE'LL BE JOLLY GOOD FELLOW

He'll talk of peaceful coexistence, too, and the need of more United States-Soviet trade and cultural exchanges. He'll have many and probably amusing comments to make on American women, labor-saving devices, creature comforts and luxuries—some of them all but reminiscent of Will Rogers. At 65, the one time machinist's apprentice and roistering street fighter will wear out all but the strongest young aids assigned to him by the State Department and his own Embassy.

He'll disappoint many who expect him to act the grim part of Communist boss and dictator of a colossal intrigue against mankind's freedom. There will be times during his visit when you may actually catch yourself saying, "This fellow's not dangerous. He's a regular guy."

He'll also disappoint many who expect or hope that he'll arrive with an olive branch clamped in his teeth and be simply overwhelmed by our cluttered capitalistic life of cars, good housing, appliances, freedom of speech and religion, forests of TV antennas and the like. Unless the man has changed a lot since the last time I saw him, he'll sound off on anything that doesn't suit him. No matter what he is shown he will be prone to remark that they do it better in the Soviet Union. You can say almost anything about N. S. Khrushchev—except that he is predictable.

Khrushchev may look as "square" as his suits. Russian intellectuals laugh at his brogue, which still smacks of an unlettered day when he spoke neither Russian nor Ukrainian but a coarse patois that borrowed from both. He could hold his belly and laugh uproariously when a kindly foreign Ambassador attempted to tell him how to act when he called on Queen Elizabeth II at Buckingham Palace.

But no man of any discernment can doubt that he is one of the ablest and most adroit political figures of this century, or perhaps any other era.

He came to the fore so swiftly, as far as the world at large in concerned, that people still have trouble spelling his name, and not too many wholly comprehend the incredible scope of his personal power. One day he was a blurred face in the second or third row of group pictures featuring Stalin, Molotov, Mikoyan, Bulganin, Zhukov, Malenkov, Kaganovich, Voroshilov. The next day (as history is measured) there he was, front and center—undisputed—his enemies scattered to the four winds of the U.S.S.R.

THEY WANTED BIGGER GAME

I witnessed some of the first rumblings of this volcanic political explosion that aforementioned day in February 1955, when Kingsbury Smith, Frank Conniff, and I trooped into his Moscow office.

Frankly, we were looking for bigger game: Molotov, let's say, and Malenkov. We were in Leningrad and on our way out of the country when we learned that Bulganin had succeeded Malenkov as Premier and would see us at the Kremlin. We rushed back.

Khrushchev was "filler" material while we hunted down the bigger names. Certainly, he had been a secretary of the Central Committee since 1949 and first secretary since September 13, 1953. This was the particular job from which Stalin had ruled despotically over his empire for 30 years.

But we were prepared only to have our ears bent by a torrent of dialectics, be gassed by the foggy gobbledegook the party spokesmen dote upon. We knew his background, his years as a party hack, dutiful stooge, willing accomplice and his slow climb to his present position in the days following Stalin's death.

KHRUSHCHEV SURPRISED THEM

Khrushchev surprised us. Ten minutes after our interview began an assistant quietly entered the room and told him he was wanted on the phone. Khrushchev cut him off as with a sabre. "Nyet," he almost shouted, his little eyes blazing. He would take no calls, and we gathered the impression that that meant calls from any of his apparent superiors.

The questioning stayed on party matters for a time, but Khrushchev grew restless. We started to ask questions in fields in which he had no known knowledge or authority. On a question concerning the foreign policy of the Soviet Union we expected him to say, in effect, "You'd better take that up with Molotov." Or, on trade questions, it would have seemed natural for him to refer us to Mikoyan, or on military matters to Marshal Zhukov.

Not Khrushchev. He had all the answers and spoke them in a big, bold voice that should have warned us—an actually did—that there was much greater power here than met the eye. In truth, we were witnessing the emergence of a man who, in the light of his nuclear arsenal and method of delivering war-heads, wields more unobstructed power than any individual in history.

New York City Looks to Its Housing Policy

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Tuesday, August 25, 1959

Mr. JAVITS. Mr. President, the mayor of New York has designated a distinguished citizen of New York, J. Anthony Panuch, to make a survey of city policy and organization on housing problems. Mr. Panuch, an attorney, brings to the task considerable experience in administration and governmental reorganization. The experience of New York's housing programs have been so valuable in national legislation as to make them a matter of common interest to the whole country.

I ask unanimous consent that the New York Times editorial of August 21 commenting on this appointment, may be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE CITY'S HOUSING TOPSY

Mayor Wagner has taken the unusual step of going outside the administration, even to the point of enlisting a Republican, for the direction of a survey of city policy and organization on housing problems. He has chosen for this task J. Anthony Panuch, a New York lawyer experienced in administration and governmental reorganization.

Mr. Panuch is asked to develop and submit to the mayor by February 1 "specific recommendations for a comprehensive city policy and program for housing and urban renewal, including correlation of the city's functions, policies, programs, plans, and operations in the field of publicly aided private housing, slum clearance, tenant relocation and neighborhood conservation." He will propose organizational realinements and legislation if necessary.

Among the city agencies or officials operating in this area now are the city housing authority, the slum clearance committee, the urban renewal board, the department of buildings, the city planning commission, the controller's office, the deputy mayor and his assistant, and the bureau of real estate.

Ordinarily this is an assignment that might have gone to the city administrator, Charles F. Preusse. He would undoubtedly have done a good job on it. However, in our opinion it will be beneficial in this case to get a detached, objective inquiry from the outside, completely free of association with the personalities involved, that will look at the problem of agencies that have, to a degree, grown up like Topsy. More correlation seems to be needed, but the case is as yet unproved for one monumental agency of government that will take over all housing action.

While the mayor spared the city administrator this housing job, he gave him only the day before another task of backbreaking size, determination of the feasibility of surveying the whole network of social and welfare services in the city, both private and public. The assumption is that, after consultation with the many agencies that are interested, a broad survey will develop.

Here is a splendid opportunity not only for elimination of duplication, for more effective approach, but also for improvement and enlargement of service to meet unsatisfied needs, as in the area of our aging population. So we shall have, beginning simultaneously, two studies of large importance to the people of New York, and both in good hands.

A Resolution That De Witt Clinton Be Suitably Honored

EXTENSION OF REMARKS
OF
HON. WILLIAM T. MURPHY
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 25, 1959

Mr. MURPHY. Mr. Speaker, I call attention to the Members of the House to a resolution I have introduced today that De Witt Clinton, one of our great statesmen, be honored by placing his portrait on a revenue stamp, bond, or similar document.

For decades millions of our citizens have carried the picture of an American statesman in their pockets every day.

Almost daily that picture has traveled everywhere on earth—into private homes, into schools and universities, into factories and offices, into royal mansions and national parliaments, on to athletic fields, and on to this earth's bloodiest battlefields. I would say that it is the world's most traveled face. That picture was a portrait-in-miniature and it appeared on revenue stamps on all cigarette packages that are taxed for revenue. And that small picture was a portrait of De Witt Clinton, a New York statesman and one of the most gifted of the Founding Fathers of our Republic.

It is with a certain degree of sadness, that, as a member of the Foreign Affairs Committee, I must look to the withdrawal of that portrait from circulating among our foreign friends. De Witt Clinton's picture will not make these universal tours as the U.S. Internal Revenue stamp, class A 20 of series 125 has been dropped this summer from all cigarette packages. In a peculiar way, it will be a loss to the free world as that great American face, framed in blue, preached in his own silent fashion of the dignity and of the opportunities to be had and cherished under the democratic ways of life.

To the host of people who were interested enough in his identity to investigate and make a simple research of his life, De Witt Clinton's career and deeds provoke admiration for our country that could inspire his memorable achievements for her and his fellow men. For incredible, indeed, was this life based on self-sacrifice, service to others, and idealism. And what a pity it will be to let his memory disappear into that shadowy land of almost complete obscurity.

A hasty epitome of his career discloses only too well the solid worth of De Witt Clinton's contributions to the infant democracy that was the America of his day. As a young boy outside of Newburgh, N.Y., he had to do a man's work on the family farm as his father was away fighting as an officer in the patriots army seeking American independence. With the war over and won, De Witt could pursue his studies in a nearby academy. Later he enrolled at Columbia College and graduated from that institution receiving his diploma from the hands of George Washington, the President of the United States. Thus, he is among the first graduates of the now Columbia University, honor man of his class, and he was the graduation speaker—talking for a half hour in Latin on the values of liberal arts.

De Witt Clinton later studied law and was admitted to the State bar in 1790 at the age of 21. His uncle, George Clinton, was called the father of New York State because he was elected the first Governor and served for six successive terms for a period of 18 years. It was but natural, therefore, that De Witt Clinton should turn to politics and he became his uncle's secretary. Later he was elected to the State legislature, then to the senate of the State. In 1802 he was U.S. Senator representing New York here in our Capitol. Resigning his duties in Washington, he ran for mayor of New York City. He was elected mayor and 11 times he was returned to that post by his people. In 1812 he ran for President of the United States and was defeated by James Madison in a close election. Subsequently, he was elected Governor of New York three times and he died while in that office.

In a letter of introduction to President Jefferson when De Witt first went to Washington as U.S. Senator, his uncle wrote, among other things—

> This is my nephew * * * you will not find him without gifts of mind * * * and in politics, his motives are ever pure.

These may be the clues to De Witt Clinton's popularity with the electorate, his many sided gifts and his purity of intentions in their use. They truly made him an outstanding statesman. As a writer—W. R. Alger—once said:

> True statesmanship in the art of changing a nation from what it is, into what it ought to be.

De Witt Clinton seemed to be ever guided by this principle. As a young legislator in New York he helped to overthrow the system of allowing the Governor to propose all names for office holders, and instituted a general replacement of the defeated party members by the members of the party victorious in the elections. As U.S. Senator Clinton, he introduced the 12th amendment to the Constitution to prevent the recurrence of the tie votes for President as in the case of the 1800 elections. As mayor of New York City he promoted public education, city planning, city fortifications, public sanitation, and relief of the poor. He constantly advocated the removal of political barriers on Roman Catholics, the abolition of Negro slavery, and the softening of the severity of punishment for debtors.

When Governor of New York he never forgot the needs and the potentialities of the city he served so well. Nor did he forget the potential greatness of his native State. In 1815 he presented a memorial to the New York Legislature about the construction of a canal that would join the Hudson River to Lake Erie. This was to be the Erie Canal—an amazing dream and a colossal undertaking for that era. The ordinary canal of that day was 30 miles and the Erie Canal was to be 364 miles long. He foresaw the benefits to the people settled in the Middle West. He foresaw his own State grow with great strides through this canal. Towns and cities would be expanded, new ones would rise and agriculture, commerce and manufacturing would increase and wealth would pour into his State from all directions. And his beloved New York City would grow to unbelievable size and become the metropolis of the Nation.

Two years later the bill authorizing the building of the canal was passed. As canal commissioner and Governor, De Witt Clinton unceasingly pushed this project, notwithstanding the constant bitter and unremitting harassments from political enemies and foes of the canal.

Eight years passed and in 1825 the canal was a reality and Governor Clinton had triumphed. In the next 9 years it paid off the State's entire cost with interest—the amount of $8½ million. It cut freight rates from Buffalo to Albany from $100 a ton to $15 a ton, and travel time from 20 days to 8 days. The land boom along its right-of-way alone justified its existence, and the population of New York City soon tripled itself and more.

De Witt Clinton could have gone to greater national prominence; he could again aspire to the Presidency but for the loyal affection and support he held for a man who had flowered forth on the national scene. He loved and advocated the deepest support for Andrew Jackson for President of the United States. He would never oppose him. Sufficient for him were the daily sacrifices and services he could render his people in New York. And these services were multiform. He was completely interested in the arts and sciences, living out the theories he ennunciated on his graduation day. He was interested in education and followed the system of John Lancaster. He was founder and president of the New York Historical Society, president of the American Philosophy Society, and president of the American Science Association. His was a many-sided genius and an intellectual sea that seemed to touch every shoreline of thought.

His uncle, Gov. George Clinton, once wrote of him that his motive in politics were pure. Nothing so proved the point better than those last days of his life. Although seriously ill in bed, he left that sick bed because as Governor he had a duty to perform for justice sake. A condemned criminal had asked for a review of his case and Governor Clinton felt that justice lay on this poor man's side. As a result of this action, De Witt died suddenly soon afterward and he died in debt, leaving his family in want. He who had done so much for his people through sacrifices, service, and idealism, had left nothing for his own burial, and like his Master, he was buried in another man's tomb. Surely his was pure public service, honest statesmanship; he never commercialized his dignity as a public servant by compromise.

As humanity divides itself today into "lifters and leaners" with so many all too willing to lean on others, it is refreshing to recognize a real lifter, a man always willing to shoulder the burdens of office without flinching, and a man who counts not the cost in serving others. Even American historians have been a little unkind to Mr. Clinton and few of our Americans are cognizant of his true greatness. We can at least thank the kind providence that kept his memory alive by a living picture even though it is small and so often taken for granted on a simple cigarette package. There was none so handsome in all Washington when he was here as U.S. Senator.

May we look forward to the day when that picture will appear on our postage, currency, or our savings bonds. As he now leaves those revenues stamps, let us at least take him into our hearts.

His deeds, his words, his genuis for public good and freedom must inspire us all—and most of all our neighbors living under oppression and in political darkness beyond the seas.

School Construction Legislation Needed To Provide More Classrooms for Expanding Pupil Population

EXTENSION OF REMARKS
OF
HON. JENNINGS RANDOLPH
OF WEST VIRGINIA
IN THE SENATE OF THE UNITED STATES
Tuesday, August 25, 1959

Mr. RANDOLPH. Mr. President, it is satisfying to me to learn of the action yesterday of the Subcommittee on Education of the Senate Committee on Labor and Public Walfare in recommending what the news services have called "a compromise bill proposing a billion-dollar, 2-year program of Federal grants to the States for school construction."

In a statement released Sunday, I expressed the opinion that Congress should not adjourn its present session without passing school construction legislation.

It was emphasized, however, that as a cosponsor of S. 2, and as a member of the Senate Committee on Labor and Public Welfare, which has jurisdiction over legislation in the field of education, I still believe in the need for a comprehensive measure which would include assistance for upgrading teachers' salaries, but I added:

It is not enough for us to merely say we're for legislation of this type. What is more important is that we bring to passage at least that part of the program which has good prospect of being enacted.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD at this point a news account of my statement by the Associated Press to its West Virginia member newspapers and published by a number of them in their editions of August 24, 1959.

There being no objection, the news accounts was ordered printed in the RECORD, as follows:

[From the Charleston (W. Va.) Daily Mail, Aug. 24, 1959]

SENATOR RANDOLPH WANTS FEDERAL SCHOOL AID BILL

Senator JENNINGS RANDOLPH, Democrat, of West Virginia, has called for immediate action to begin the attack on the long-range problem of the shortage of classroom space.

In an announcement from Washington, RANDOLPH said Sunday that Congress should not adjourn its present session without passing a school construction bill. He said he would reiterate that stand for consideration Monday by a Senate subcommittee.

RANDOLPH is a member of the Senate Committee on Labor and Public Welfare. That committee has jurisdiction over legislation in the field of education.

The West Virginia Senator said he supports a comprehensive measure which would include assistance for upgrading teachers' salaries.

"It is not enough for us to merely say we're for legislation of this type," RANDOLPH commented, "What is more important is that we bring to passage at least that part of the program which has good prospect of being enacted."

RANDOLPH said that opposition in Congress and from the Federal administration to parts of the comprehensive Federal assistance for education legislation would block what he called "the necessary program of increasing the number of classrooms for our ever-expanding school pupil census." He continued:

"We are all aware of the importance of the American custom of local responsibility and control of public education. But let us at least be clear in our understanding of the origins and the reasons for this tradition.

"The threat of Federal control is a myth, and the fear of it is spun from fantasy and a misreading of our history.

"The quality of education in the United States is a national issue, rather than a merely local one. And yet it is the only national problem that we have not attempted to solve on a national basis."

Khrushchev's Arrogance and Contempt for American Military Power Made Clear in Context of Invasion of Laos

EXTENSION OF REMARKS
OF
HON. JAMES C. OLIVER
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 25, 1959

Mr. OLIVER. Mr. Speaker, on August 18, I contributed a few observations pertinent to the impending visit of Premier Khrushchev of Soviet Russia to America, scheduled for September. These may be found on pages 14899–14900 of the CONGRESSIONAL RECORD of that day.

I stated that this visit of the Soviet dictator should be received with an attitude of passive nonacceptance, so far as any official recognition by Congress is concerned.

One of the basic reasons that I expressed for my position on this vital issue is that Khrushchev's visit will be enveloped in an atomsphere and environment of deceit and insincerity. This is already becoming obvious in the news reports from Laos where communistic aggression is pursuing the same old tactics of force and violence.

It is clearly manifest that Khrushchev has been completely advised of Red China's intent to take over Laos. Almost simultaneously with the President's announcement of Khrushchev's visit, the Laos aggression began.

Khrushchev's participation in these plans of Communist aggression cannot be pinpointed but the pattern is clear because it is only another move toward the same objective; namely, domination of the free world.

Khrushchev is one of the master minds in this conspiracy whose target is world power, calling for the subjugation of all who stand in the way.

Congress, remaining in session during the visit of this despot, and indicating passively its nonacceptance of his brand of merchandise by refusing to fraternize with him will fulfill its responsibility of representation of those in America who challenge the policy of diplomatic appeasement which is gaining ground among our current leaders.

Mr. Speaker, the recent column of Joseph Alsop in the Washington Post of August 25, and the letter to President Eisenhower by one of Maine's responsible citizens, Mr. Herman D. Sahagian, of Waterville, Maine, express in further detail my own sentiments.

FLOWERS FOR THE HOST

(By Joseph Alsop)

Nikita S. Khrushchev has now followed his acceptance of the President's invitation to the White House with an open display of contempt for his future host.

There is no other way to read the new Communist aggression in Laos. The situation there can become very serious, indeed, touching of another Far Eastern crisis of Quemoy-like intensity. If the Communist aggression is not repelled, moreover, all the neighboring countries—South Vietnam, Cambodia, and Thailand—will at once find themselves in danger.

Nonetheless, the indication of Khrushchev's contempt for President Eisenhower and the Nation he leads is probably the most disturbing feature of the very disturbing Laotian trouble. On this point, the facts speak for themselves.

In brief, the President's announcement of the coming Khrushchev visit was made on August 3. Very nearly simultaneously, the attack on Laos began. The attack took the form of border crossings from Communist North Vietnam into Laos by Communist infiltration units trained and armed for the purpose by the North Vietnamese. Such obscure guerrilla movements in those jungle-clad mountains can hardly be precisely dated. Yet the major border crossings quite certainly began after Khrushchev's mid-July acceptance of the President's invitation, even if some occurred before the public announcement.

The timing of this opening of the attack on Laos is inescapably significant. Yet a good many people in this increasingly wishful city, and especially a good many of the people around the President who had pinned their hopes on the Khrushchev visit, are still trying to escape the meaning of this timing of the Lao attack. "It is Peiping's enterprise, not Moscow's," they argue.

On this point, too, however, the facts speak for themselves. The attack on Laos was hardly underway, when Khrushchev received the organizer of the attack, the North Vietnamese Communist boss, Ho Chi Minh, for an extended state visit in Moscow.

While Ho was in Moscow, an obviously planned series of statements was issued. First Ho's government in Hanoi blamed the trouble in Laos on the presence of a 150-man American mission to train the small Laotian Army. Then Mao Tse-tung's government in Peiping virtually threatened war unless the U.S. military bases in Laos were instantaneously abolished. Finally Khrushchev's own government in Moscow spoke out in clear terms, refraining from direct denunciation of the United States, but strongly supporting the North Vietnamese-Chinese Communist position in Laos.

From these facts, it may be possible to argue that the prime impulse for the attack on Laos came from Mao Tse-tung. But whoever was the prime mover, it is certainly not possible to argue that Khrushchev was any-

thing but a knowing, willing accomplice in the Lao enterprise. The Ho visit to Moscow and the subsequent Moscow statement are the clearest proofs of Khrushchev's active complicity.

Khrushchev's purposes can be variously interpreted. The Communist interpretation was given by a high official who told this reporter, "It's the old tactic of the carrot and the stick." (When asked what was the carrot, he replied, "Why the Khrushchev visit"—which seems an unattractive sort of carrot.)

Khrushchev's aim perhaps is to extract from the President in the White House new terms for Asia as well as new terms for Berlin. In this, it must be added, Khrushchev is likely to have the indirect help of the British and Canadian Governments. Both are not merely summit-drunken but fixed in their idea as well that everything in Asia will be rapidly fixed up if we are just a little nice to Mao Tse-tung.

In any case the contrast between this time and last time is horrifyingly strong. Last time Khrushchev talked with the President of the United States, in 1954, he paid for his ticket of admission with the liberation of Austria and the dramatic though temporary restoration of normal relations with Yugoslavia. This time, crude threats to Berlin paid for the ticket; and as soon as the ticket was in Khrushchev's pocket, Laos was attacked.

No one who is not absolutely flannel-headed can see in this pattern anything but a display of the most profound, unalloyed and arrogant contempt. Whatever its sources, Khrushchev's contempt is a desperately serious political phenomenon. The sources need urgent investigation. But no search for sources is afoot, no doubt because careful search would reveal a distinguished soap manufacturer pouring out soft soap, which is still constricting the American defense efforts 2 years after the sputnik, under stringent orders from budget-obsessed higher authority.

HERMAN D. SAHAGIAN,
Belgrade Lakes, Maine, August 18, 1959.

President DWIGHT D. EISENHOWER,
The White House,
Washington, D.C.

DEAR MR. PRESIDENT: I am one of that vast body of American citizens appalled and ashamed by the thought that soon we of this great and free country will be called upon to act as host to a man, the dictator of the Soviet Union, Khrushchev, who instead of preparing to visit the Nation he someday hopes to bury, and whose children he foresees someday growing up under communism, ought rather to be standing before an international bar of justice answering for his crimes against humanity.

As an American of Armenian ancestry, as an American then whose parental nation today writhes in the agonizing grip of Soviet Russian communism, of which our guest Khrushchev is today the leading champion and exponent, I am unable to explain either to myself, or to my interested friends, how it has come about that last week we were asked by Presidential proclamation to observe Captive Nations Week, and that this week we are being asked to be civil to the captor himself.

The invitation tendered to the Communist leader merely underscores the obvious cynicism of the great American gesture in favor of those submerged nations [which] look to the United States, as the fortress of freedom, for leadership in bringing about their liberation and independence. * * * You cannot serve, sir, the great cause of freedom in one breath and genuflect before the tyrant with the next.

I can well imagine the utter terror, yes, the utter terror, that struck the heart of the people of the enslaved nations, of Armenia, of Poland, of Lithuania, of the Ukraine, of the other captive states, when they were told that their oppressor, Khrushchev, had been invited to visit the United States—the same United States—which they had heard over their clandestine radio waves, had just the past fortnight bowed its head in prayer for them, and had vowed to work for their liberation and independence; for Khrushchev's visit, to the 19 enslaved nations of the U.S.S.R., takes from the heart of the people another one of those threads of hope that have sustained them through the dark ages of Russian Communist domination and exploitation.

Khrushchev's visit to the United States of course will constitute a major cold-war victory for the Soviet Union since it will impart a cloak of respectability on the dictator of communism and also on the system and government he represents.

The visit will accord communism, the Soviet Union, and the Communist dictator billions of dollars of free publicity which otherwise could not be purchased. Our newspapers will be full of Khrushchev; every move, every gesture, every word, every whisper, will be recorded. And our guest will bluster around, kissing babes, like every American politician—running a campaign to elect communism in this country. God help us.

Some of us, sir, remember well the thought you expressed in your press conference several weeks back in which you said that you felt you shouldn't meet Khrushchev unless some encouraging progress was made at the foreign ministerial meeting at Geneva. What ever happened to Geneva, Mr. President?

The man we will press to our bosom, sir, is known by our Ukrainian colleagues as "Hangman of the Ukraine." I have been wondering if Americans find it a virtue to invite criminals and hangmen into their homes, that our National Government has invited Khrushchev to partake of our hospitality as a deserving guest?

For instance, I wonder exactly what would have happened if, sometime before World War II, the U.S. Government had announced that Adolph Hitler, the hangman of Buchenwald and Dachau, had been asked to visit us here in these United States as our guest. Hitler and Khrushchev are coequals, sir, for both are guilty of the direct crime of all—national genocide.

As specifically, I find it difficult to believe that a professional atheist, the anti-God himself, will be our guest, and that I am being asked to retain my composure as I observe this man, who, for instance, helped divest the great Church of Armenia of its dignity, piously course through the blessed cities of our Nation. "Religion," said his god, Lenin, "is the opiate of the people."

Has not the U.S. Government a brief on this man, this criminal, this Khrushchev, that it honors him?

Does not the Government know that Khrushchev played a leading role in the Red famine engineered by the Kremlin in the Ukraine to annihilate more than 4,500,000 patriotic Ukrainian peasants? That Khrushchev later directed the genocide of 10,000 additional Ukrainians at Vinnitsa, in order to suppress these freedom-loving people? That, though a Russian, he conducted the great purges in the Ukraine? That he was sent by Stalin after the last war to put down succeeding patriotic demonstrations in the Ukraine—a job which he did with a ruthlessness seldom paralleled in history? That he suppressed patriotic uprisings in Georgia, Poland, Armenia, and Hungary in 1956; sent the armies of his lackey China into Tibet, acted against the Ukrainian free underground in the Carpathia, and just recently, personally ordered massive units of the Red Army to enter Sovietized Armenia to suppress firmly tendencies to oppose governmental policies there—a movement incidentally initiated, on Soviet admission, by disgruntled former Americans who were duped by Communist propaganda into taking up residence in the U.S.S.R.

We have been told that Khrushchev has been invited here so that he might see for himself the full might and invincible spirit of America, and thus to restrain his "impetuousness" and thus ensure the peace.

Khrushchev knows and appreciates after his own fashion the greatness of America—and it is this greatness that constitutes America in Khrushchev's eyes the chief obstacles to the Communist dream of world revolution and world domination. There isn't a thing that Khrushchev will see or hear in this country that he or his intelligence has not already seen or heard. He comes here not to be impressed, but to impress.

I have read with a good deal of interest your personal admonition that America should not demonstrate in the presence of their "guest" to this country, but I know personally that many of our great organizations, as well as our nationality language, religious, and cultural groups are planning dignified demonstrations of protest of the presence in our midst of a man who should be shunned like the plague, rather than be elevated to the dignity of a human being, spotless, pure, and good.

My home will be trimmed in black throughout the days that Nikita Khrushchev is in the United States of America; for I shall pray for those who have fallen to the violence of this man—and to the vile system he represents.

Sincerely,

HERMAN D. SAHAGIAN.

(Copies to Senator MARGARET CHASE SMITH, Senator EDMUND MUSKIE, Representative FRANK COFFIN, Representative CLIFFORD MCINTIRE, Representative JAMES OLIVER.)

The New Housing Bill

EXTENSION OF REMARKS
OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Tuesday, August 25, 1959

Mr. KEATING. Mr. President, yesterday's New York Times contains an excellent editorial analysis of the second housing bill recently passed by the Senate. I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE HOUSING COMPROMISE

The more one looks at the fine print in the new compromise housing bill passed by the Senate after President Eisenhower's veto of the earlier bill, the more one is impressed by how far the managers of the bill have gone to meet the President's objections. To be sure, there is a little more money in the bill than was requested in the President's original program. But most of the objectionable features of the earlier bill have been dropped.

For example, there is no longer a requirement that the Federal National Mortgage Association purchase special assistance mortgages at subsidy prices. A proposed new program of special FNMA loans to mortgage lenders has been removed. The public housing authorization has been limited to roughly

the amount approved for most recent years. There is a special provision to make sure that slum-clearance funds will not all be absorbed by larger cities. The authority for still another and dubious extension of the term of repayment of ordinary Federal Housing Administration insured mortgages has been eliminated.

These are concessions of substance. Compared with the original bills introduced by Democratic housing managers in both House and Senate, and compared even with the bills that passed both Houses originally, the new bill has gone far more than halfway toward the administration's wishes. The House would do well to accept the Senate bill and send it to the President. He in turn would be hard put to it to justify another veto.

Unemployed Versus Unemployable

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 25, 1959

Mr. LANE. Mr. Speaker, some people are out of work because there is no demand at the moment for their knowledge or skill. Farmworkers, and others whose employment is seasonal become unemployed during periods of each year. Industries lay off help during fluctuations within the economic life of a particular enterprise, or during a general economic decline.

These people are out of work temporarily.

Heretofore classified as "unemployed," is another, separate and distinct group known as the unemployable.

We became conscious of their particular problems after World War II. The decline of some older, and unprogressive enterprises that were concentrated in one-industry communities, brought us face to face with the new challenge of chronic labor-surplus areas.

Most of these displaced workers were no longer young. They had been molded by occupations requiring little or no skill. When their jobs disappeared, they had little to offer the new growth industries that might move in to fill the economic vacuum of these distressed areas. In an age of increasing labor skill and labor specialization, they were unwanted.

They became known as the unemployables.

In our efforts to solve this human as well as economic problem, we are developing Federal legislation to assist in the recovery of these areas. Grants to encourage the building of modern plants and to provide the services needed by growth industries are essential. But if we overlook the employables, this assistance will not be productive or constructive. Putting it plainly, they need training in new job skills, in order to be of value to themselves, their families, and their communities. To focus thinking on this problem, I ask consent to reprint in the RECORD this recent editorial from the Evening Tribune, published in Lawrence, Mass.

UNEMPLOYED VERSUS UNEMPLOYABLE

With U.S. employment getting back to the record highs it established before the recession, we find a sharper light focusing on the "hard core" unemployed who have been out of work 15 weeks or more.

Some 900,000 fall into this category, and of them nearly 550,000 have been without jobs more than half a year.

The people in the hard core group are not faceless. Most live in areas that have become more or less permanent pockets of depression—coal mining sectors in Kentucky, West Virginia, Pennsylvania, once thriving textile producing communities in New England, and so on.

The bulk of the chronically unemployed are nonwhites. And for the most part the individuals in this hard core are unskilled workers, traditionally the last to be hired, usually left by the wayside in all but the great booms.

Congress has not yet been able to manage effective aid to distressed regions. But any program would seem limited in promise which did not contain plans for lifting these people out of their unskilled status.

In this increasingly mechanized age, to be unskilled may mean not only being unemployed but being unemployable.

Civil Defense Is Also Peacetime Preparation

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Tuesday, August 25, 1959

Mr. JAVITS. Mr. President, New York City has been recently visited by mechanical failures which resulted in depriving heavily populated areas of my home community of electricity. In our modern, complex, urban society this is a civic disaster of great magnitude. Fortunately, the civil defense organization in New York was able to meet the challenge of the emergency situation which resulted, proving again—to those who may still doubt—that civil defense is prepared to function not only during a military emergency but during a peacetime crisis as well. I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the New York Times of August 21 on this subject.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the New York Times, Aug. 21, 1959]

CIVIL DEFENSE ON THE JOB

While the police department took over the principal task of safeguarding lives and property in last Monday night's electric power failure in upper Manhattan, the emergency did provide a small test of the civil defense organization. Sixty-two auxiliary policemen, 22 wardens, and 53 rescue men on trucks were on the streets and in Central Park making themselves useful. The police commissioner's office reports that they responded promptly to call, and were helpful. More men were ready if needed. Civil defense equipment, such as mobile generators, was ready, and some went into use, as in hospitals and for floodlighting.

This was, of course, only a minor foretaste of what a real civil defense emergency could be, if real disaster struck the city. But it gave us something to think about, and was sufficient reason for a review of organization, equipment, sufficiency of funds, and adequacy of volunteer personnel. Civil defense was ready, apparently, for a small emergency. How big an emergency would it be ready for?

Why We Are Losing the Third World War

EXTENSION OF REMARKS
OF
HON. WILLIAM K. VAN PELT
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 25, 1959

Mr. VAN PELT. Mr. Speaker, under leave to extend my own remarks in the Appendix of the RECORD, I include an address by Peter Wheeler Reiss entitled "Why We Are Losing the Third World War." I was very much impressed by the sound thinking displayed in the speech, and I am sure the Members of the House will likewise be impressed.

The address follows:

WHY WE ARE LOSING THE THIRD WORLD WAR

(Address by Peter Wheeler Reiss, cum laude graduate of Marquette University)

Distinguished Rotarians and honored guests, recently in a letter to the editor appearing in the Sheboygan Press, I was referred to as "a very naughty boy" who yells "communism." Now, I am not sure whether or not this "very naughty boy" label fits me. but I am positive that I shall continue to yell "communism" as long as there are Americans who refuse to recognize the diabolical nature of this international conspiracy. But before I get into the heart of my topic, allowe me to tell a joke—not because I am a particularly good comedian, but because this form of introduction has been made mandatory by local 625 of the International Speakers Union, headed by Jimmy Coffa, of which I am a member. You see, we have a "closed shop."

Well, it seems that at the Teheran Conference in 1943, a picture was taken of Joe Stalin, Winston Churchill, and Franklin Roosevelt. After the picture had been taken, each man made a statement. Joe Stalin stressed that he was the leader of the great proletarian revolution, and that under him the proletariat would smash the imperialistic powers and would actualize the Communist goal, the classless society. Not to be outdone by Stalin, Churchill stated that God had decreed that he should lead the free world into a new era of peace and prosperity. When Churchill had finished, Roosevelt took his prepared speech, ripped it up, and threw it to the ground, saying bitterly, "Winston, I never decreed anything of the kind."

As you know, my topic is entitled, "Why We Are Losing the Third World War." Many of you may question this title; namely, you may say, "What world war?" This is a reasonable question, and I shall attempt to give a reasonable answer.

In my opinion, an intelligent definition of war is "that state of affairs which exists when a nation or group of nations carries out a systematic policy of conquest using force or the threat of force as a weapon."

Now, since 1939, the international Communist movement, under the leadership and control of the U.S.S.R., by using force or by threatening to use it, has gained control of 8 million square miles of territory (an area 2½ times larger than continental United

States, excluding Alaska) and has enslaved 800 million people (a population five times greater than that of our own country.)

From these figures, it becomes evident not only that world war III is going on, but also that we are losing it. Hence, we must proceed to find out why we are losing, for in order to correct our shortcomings, we must first understand what they are.

Our basic shortcoming has not been military weakness. This is illustrated by the fact that from the end of World War II until the early 1950's, the United States had a monopoly on the atomic bomb; yet in spite of this tremendous advantage, the Communists took over control of East Central Europe, Mainland China, North Korea, the southern half of Sakhalin, and the Kurile Islands. During this period of nuclear monopoly, we could have said, "Commies, free the people you have enslaved or suffer the horrible consequences." Instead, American mothers and fathers succumbed to Communist propaganda, and cried, "bring the boys home," as if it was logical to spill blood in order to defeat fascism and yet allow its twin brother, communism, to expand. This ostrich act on the part of American citizens brings out the real source of our failure in the third world war; namely, that the responsibility for the unfolding disaster does not rest with our leaders of the past 20 years, bad as they may have been—the blame for our gradual surrender to atheistic communism lies with individual American citizens, since in a free society, government is no better than the people it represents. When mothers and fathers cry "bring the boys home," a Congressman better do so, or he will soon find himself in a political graveyard.

This brings us to the vital question, what is wrong with Americans? The basic answer, in my opinion, is twofold; we are suffering from intellectual and moral decay.

Our deteriorating intellecutal standards can easily be seen in the average movie or TV program. Cowboys, sex, and crime are the usual subjects. But a more serious manifestation of our intellectual decay can be seen in the average American's ignorance of the nature and designs of communism. For instance how many Americans can define the term "dialectic" as employed by Communist philosophers? How many can recognize a Communist-front organization? How many realize that the Reds have sworn to smash us with their clenched fists, once we have been put to sleep by their electrifying peace overtures? Since most Americans aren't aware of these things and do little or nothing to fill these intellectual gaps, it is little wonder that the Reds are beating us to the punch.

However, a more basic cause for our gradual surrender to communism is the moral decay which is presently corroding the foundations of American society. We are getting soft. Materialism is becoming the national religion. The standard of living appears to be our sole yardstick for measuring the state of the Union. Drunkenness, divorce, and artificial birth prevention are looked upon as virtues in many social circles. Worse yet, God has been put in a closet. Besides being abstracted from public education, He is seldom referred to in conversation, unless of course the speakers employ the fashionable pastime of cursing.

Since we are turning away from our eternal end and devoting our attention to purely material considerations, it is little wonder that we are willing to compromise in the face of threats from a dangerous enemy; for it takes real courage, character, and belief in an enternal destiny to sacrifice for truth, justice, and religious principles.

These basic weaknesses have undoubtedly been observed by all of you. The next logical question then which presents itself is, what can be done about them?

First, on the intellectual front leading citizens like yourselves must become expert anti-Communists. In order to achieve this goal, I suggest that you read three books. The first is Louis F. Budenz's "The techniques of Communism," published by Henry Regnery Co., Chicago, 1954. This book will give you excellent insights into the nature of communism, since the author was a leading Red for many years, and hence is speaking from actual experience. The second book is Anthony T. Bouscaren's "A Guide to Anti-Communist Action," again published by Henry Regnery Co., Chicago, 1958. This book will show you how to become an active participant in the fight against communism. The third book needs no introduction. It is J. Edgar Hoover's "Master of Deceit," published by Henry Holt and Co., New York, 1958. This homework will not be as easy as reading a novel naturally, but it will be much more rewarding. Moreover, to preserve our freedom and to extend it to those behind the Iron and Bamboo Curtains, sacrifices must be made, and this is one of them.

However, since truth is useless unless one has the will to carry it out, the spiritual front, becomes the most important area for improvement and development. On the spiritual front, every intelligent American must be able to explain why he is Catholic, Protestant, or Jewish, and if he cannot come up with an answer, then he must look for the true religion. Once he has found it, he must live up to its principles. He must be courageous in defending his faith and anxious to spread it; for if one is indifferent toward religion, then the struggle between communism and the free world becomes a ball game between two second division teams; it really doesn't matter who wins.

Above all, let me stress that individual effort is the key to success in the fight against communism. One dedicated anti-Communist can influence at least five other people, each of whom can influence five more, and so on—until this chain reaction transforms America.

Once America has been transformed by such a campaign, then things like the Berlin crisis will no longer trouble us. Instead of talking about these matters at Geneva, we can ask the Commies embarrassing questions such as, why are they afraid to hold free elections in East Germany, Hungary, Poland, Czechoslovakia, Lithuania, Latvia, Estonia, Albania, Bulgaria, Rumania, North Korea, North Vietnam, Mainland China, and Russia itself? If they refuse to discuss these matters, then we can break off diplomatic relations with the Communist bloc, hence ending a very unsuccessful relationship and also terminating the espionage system which the Reds have built up around their Embassies in our country.

Meanwhile, we can promote guerrilla warfare in exposed Communist controlled areas, such as Albania, North Korea, North Vietnam, and China. American troops would not have to be used. The Greeks could cross the border into Albania, the South Koreans could slip into North Korea, etc. Now some of you may be saying to yourselves, "this guy is really in orbit—this would mean a nuclear war." In answering this objection, let me again refer to the example given to us by the U.S.S.R. The Commies have constantly taken chances when we could have crushed them. In order for either side to win, risks must be taken. Hence, we must start running plays on the Communist side of the 50-yard line, for a strictly defensive strategy is always tactically and psychologically disastrous. If we were to pursue the policy I have outlined, the U.S.S.R. would have two alternatives, nuclear or limited warfare, since I don't believe it would follow our "do nothing" example of past years. If the Reds resorted to nuclear warfare, their goal of world conquest would literally be smashed, since there would be little left of this planet to occupy. Thus, it appears that limited warfare would be their response, in which case our chance for a complete victory would be overwhelming, not because we are well prepared for this type of war (we need a lot of improvement in this area), but because with the help of effective propaganda the satellites would undoubtedly revolt, along with many in Russia, especially in dissatisfied areas such as the Ukraine.

This is not the only plan which might bring us victory in the Third World War. Probably at present or after you have done some thinking and reading on the matter, you can come up with a much better solution. But always remember the wise statement of Mao Tsetung, leader of Red China, "to compromise is to lose."

And also remember, that an organization like yours with its fine principles of service to community, church, and country, is especially well qualified to participate in such a campaign.

In conclusion, therefore, I urge each of you to become intellectually qualified and spiritually dedicated anti-Communists; for you have nothing to lose but the chains of an onrushing tyranny, and a free, peaceful, and happy world, under God, to gain.

Our Battle Against False Slogans

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, August 25, 1959

Mr. HUMPHREY. Mr. President, early in August the distinguished president of the International Association of Machinists, Al Hayes, was a keynote speaker at a joint conference on the aircraft, missile, and related electronics industry at Kansas City. He addressed more than 400 delegates representing his own union and the United Automobile Workers.

I ask unanimous consent that excerpts from Mr. Hayes' address as it appeared in the Machinist paper of August 13, 1959, be printed in the Appendix of the RECORD. The title of Mr. Hayes' address was "Our Battle Against False Slogans." It is an excellent address and one which deserves the attention of all of us who believe in social justice.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

OUR BATTLE AGAINST FALSE SLOGANS
(By Al Hayes)

I am sure it's not news to you that we face the most strongly organized opposition in our history. Organized wealth is stopping at nothing in an effort to put organized labor in its place, so that once again industry—including this industry that you here represent—can have the sole right to dictate the terms and conditions of labor.

So thoroughly have the opinion-forming media, the press, radio, TV, and the magazines distorted the truth about labor that today many people seem to believe the chief problem confronting union members is their union. The impression is abroad that if union members had no union they would have no problems.

This impression, false as it is, is being carefully spread, in an effort to develop a hysteria in Washington, in an effort to convert an essentially liberal Congress into an antiunion Legislature capable of exploiting tragic infiltration of crooks in a few unions to push through punitive class legislation that will strip our members of their power to defend their wage rates and their working conditions.

PROFITS AND WAGES

In the steel industry, the distortion is even more absurd. A conscious effort has been made to give steelworkers a guilt complex about seeking a small, well-justified wage increase. A long-term propaganda campaign has so thoroughly misled the public that they now frequently blame high prices on wage rates when, in fact, wage rates have little to do with prices.

I don't have to remind this audience that unit labor costs—not wage rates—influence prices. It's not how much a man earns, but how much he produces, that determines cost.

Somehow, the American people and the Canadian people have been led to believe that high corporation profits are the just due of stockholders—economically desirable and socially admirable. On the other hand, any increase in the wage rates of workers is considered socially unjust and economically undesirable. Higher interest charges by banks and insurance companies are cheered—even when paid by a Government that is admonishing everyone else to reduce their demands for Government funds.

We used to be told that increased purchasing power would help Americans consume the products of our farms and factories. Today we are told that increased purchasing power is inflationary even when our industry is working at less than capacity.

The situation is no more absurd than if we began to believe that night is day and that up is down. Perhaps if enough newspapers and magazines and politicians uttered these absurdities often enough, people would believe them too.

The propaganda barrage, which is today victimizing the steel workers, was not prepared for them alone. We must expect that when our negotiations begin in a few months, the aerospace industry will not be outdone. Then the barrage will be aimed at our members, as today it is aimed at the steel workers.

TRUTH ABOUT INFLATION

Because we must be prepared to meet the same false issue when our negotiations open, let me remind you of the truth about inflation.

The truth is that for 60 years retail prices, in the United States, have edged up on the average of 2½ percent each year. A 2½-percent price increase a year has been normal in the United States. If prices begin to go up faster than normal, we would have some reason for concern and some reason to question our policies.

The truth is that prices have not been rising faster than normal. Over the past 10 years, prices have been going up more slowly than normal. The actual average increase in retail prices over the past 10 years has been 1.8 percent. Instead of more inflation, we have been having less inflation.

The danger of inflation is a false slogan—coined by labor's enemies to talk us out of legitimate wage increases and to frighten away our friends.

FOREIGN COMPETITION

Of course, dangerous inflation isn't the only false slogan we will face. There is also the charge that we are making it difficult for American industry to compete with foreign producers, that if we continue to press for higher wages and other cost items—no matter how justified—we will make it impossible for them to compete.

The instinctive reaction of some management is to blame organized labor for most of our competitive problems.

Whatever the problem may be with foreign competition — and I am not going to belittle a very real problem — American industry will never be able to compete with the Japanese, with the Russians, or even with Germans on a basis of who can pay the lowest wages. That has never been the American way—I doubt it ever will be.

In the past, our industry has competed successfully, despite the fact that it paid the highest wages, maintained the best working conditions and just about the highest standard of living in the world.

Our industry has been able to compete successfully because wage rates do not determine prices. The labor cost in the price of any article is not the hourly wage rate, but the unit labor cost—the number of items the employees can produce or service in an hour.

American industry has dominated the world market because American labor is the most productive in the world — not because it is the cheapest, with the lowest standard of living.

In fairness, let me report to you that some executives agree with me on this. Recently, one—whom I shall not name—told me that after World War II, his company had licensed a Japanese firm to build one of its small planes, thinking the Japanese could best meet a growing demand in the South Pacific. This American company soon discovered that, despite what we would consider miserably low wage rates, costs of manufacturing this airplane were far higher in Japan than they were in the United States.

PRODUCTION IS KEY

Again I remind you that it is the unit labor cost, not wage rates, that influence the price of a commodity. Or, to put it another way, it isn't how much a man is paid but how much he produces that governs the cost.

Improved mechanization, increased ingenuity, and higher productivity are the methods by which we will best the foreign competition—not by reducing the American standard of living.

As a matter of cold fact, American industry has improved its position—wage wise—in the last few years. Wage rates in the United States have gone up proportionately less since 1950 than they have in West Germany, Britain, Norway, and France.

Using 1950 as 100 in the index, hourly earnings in manufacturing industries in the United States are now about 141. In West Germany, the wage index is 166; in Berlin, 165; in Norway, 169; and in France, 202.

They can't successfully blame what is happening in foreign trade on union wage rates. The facts do not support them.

Surely this moment in the world struggle for freedom, for dignity of the individual is no time to give us our fight for economic justice. The strength of the free world, the strength of democracy in the struggle against communism lies in the hope, the knowledge, and the health of free peoples.

Address by Hon. August E. Johansen

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 25, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Congressman AUGUST E. JOHANSEN, of Michigan, to the 93d annual banquet, State Camp of Pennsylvania, Patriotic Order Sons of America, at the Abraham Lincoln Hotel, Reading, Pa., Monday evening, August 24, 1959:

THE WAR WE ARE WAGING

Mr. Toastmaster, members of the State Camp of Pennsylvania, Patriotic Order Sons of America, distinguished guests, ladies and gentlemen, I am greatly honored by the invitation to address your 93d annual banquet, in this 112th year of the Nation's oldest patriotic society of native Americans. I doubly appreciate your invitation because I have been advised that it was extended on the suggestion of two gentlemen whom I regard very highly.

One of these gentlemen is a most distinguished Pennsylvanian, a great American, and one of this Republican's very favorite Democrats, the Honorable FRANCIS E. WALTER, chairman of the House Committee on Un-American Activities, on which I am presently privileged to serve.

The other is the brilliant, enormously hard-working and completely dedicated staff director of that committee, Mr. Richard Arens.

The fact that both of these gentlemen are members of the Patriotic Order Sons of America is a tribute alike to them and to the order.

I hope you will pardon one further personal reference. I am happy to report that I have a relationship to the great State of Pennsylvania which I believe can be regarded as advantageous both to me and to the Keystone State.

The obvious advantage which I can claim is that I am a native of Pennsylvania. The advantage which the State can claim is that I was removed therefrom early in my first year of life, thereby absolving Pennsylvania of any responsibility for subsequent developments in my career—political or otherwise.

Mr. Toastmaster, since the subject of my address "The War We Are Waging," has to do with the international Communist conspiracy, and with the resistance of America and Americans to that conspiracy, my remarks would scarcely be realistic or timely if they ignored a major development which has occurred since I accepted your invitation.

I refer, of course, to the August 3 announcement of the impending visit of Premier Khrushchev to the United States and the scheduled return visit of the President of the United States to Soviet Russia.

In broaching this matter I am mindful of two admonitions. I recall the words of Ecclesiastes, or "The Preacher" that there is "a time to keep silence, and a time to speak." Perhaps the order in which the two alternatives are listed is itself a broad hint as to the proper priorities. Nevertheless, Ecclesiastes did make it clear that there is "a time to speak."

Furthermore, I also recall the admonition and warning of Abraham Lincoln that "to keep silent when one has the duty to speak out is a sin."

I would not knowingly be guilty of irresponsible or inflammatory speech, particularly in a matter as grave as this. But I believe that there are circumstances in which silence likewise can be irresponsible. I further believe that public silence, if widely and generally imposed or acquiesced in, either as a matter of supposed expediency, or because of moral indifference, or a "father knows best" state of mind, or an atmosphere of blackmail threats, could go far toward snuffing out and suffocating the priceless flame of freedom and honest dissent.

Therefore, I have chosen to speak my judgment and my conscience on this matter again tonight, as I have already done on earlier occasions.

Let me sum up my views on the subject under three main points:

1. I believe the Khrushchev invitation was a grevous mistake. It is a step which I regret and deplore. Having said that, and except as this opinion has a bearing on my views of how we may deal most wisely, firmly, and effectively with the situation we now face. I see no useful purpose in belaboring that point. Let me say only this, that in my judgment Mr. Khrushchev himself had provided, long before the invitation was extended, the most convincing and compelling reason why such an invitation ought not to have been forthcoming.

In the same breath with his warning in 1956 that "we will bury you," Mr. Khrushchev also said, "If you don't like us, don't accept our invitations and don't invite us to come to see you." I have no doubt that the fact that the invitation to Mr. Khrushchev was extended in the face of this very blunt statement will be exploited to the utmost by Khrushchev and the leaders of international communism, in their propaganda efforts to equate the invitation, and all "courtesies" ensuing therefrom, with American approval—of communism, Soviet rule, Communist interpretations of "peace" as noninterference with nibbling subversion, and approval of the unsavory Mr. Khrushchev himself.

2. There is, as the old adage points out, no use crying over spilt milk. But it is immensely important in this business that we avoid spilling any more milk. I address that comment alike to the leadership of the Nation, to the over-cautious "let's don't do anything that will rock the boat" segment of the public and the public-opinion molders, and to those who are sincerely outraged by the invitation to, and the pending visit of, Mr. Khrushchev.

So far as the national leadership is concerned—including the State Department and some of the cooperative columnists and commentators who obligingly echo its views—I see a grave danger of overzealous efforts to "shush" expressions of disapproval of Mr. Khrushchev, and what he stands for, prior to and during his visit.

Certainly there must be every possible safeguard against violence or threat of violence. That is not only proper, but it is a major obligation of the Government and the American people. But any propaganda effort to regiment, overawe, or frighten the American people into silence is, both from the standpoint of principle and of the practicalities, a grievous blunder.

As an example of what I am talking about I refer to last Saturday's Drew Pearson column. Mr. Pearson claims that the State Department is worried that if there is "too much criticism" of Mr. Khrushchev's projected visit "he might do what he did regarding his proposed visit to Scandinavia." And then Mr. Pearson added—whether he was speaking for the State Department or Pearson probably isn't too important—"Cancellation of the Khrushchev trip to the United States after all the advance buildup would lead to seriously strained relations between the United States and Russia."

I seriously question the accuracy of that conclusion. I believe the statement falls into the same category as most of the arguments for a "peace at any price" approach to Soviet Russia. I believe Mr. Khrushchev will see to it that Soviet-American relations become "seriously strained" or somewhat thawed whenever he thinks either state of affairs will serve his purposes.

Be that as it may, I believe we are here treading on very dangerous ground for quite a different reason. I believe the line of argument advanced by Mr. Pearson, or the State Department, or whoever it is, involves the possibility of "seriously strained relations" between the American people and their Bill of Rights.

I see no significant difference between a blackout on American criticism of international communism, or of Mr. Khrushchev, or of Mr. Khrushchev's visit, on the grounds that such criticism might displease Mr. Khrushchev, and a blackout on such American criticism as a direct result of a demand or decree from Mr. Khrushchev. Furthermore, I don't believe Mr. Khrushchev himself would see very much difference, either.

Somewhere along the line we had better recognize the fiendish skill of Communist blackmail techniques and make it clear to all concerned that submission to such blackmail is too high a price even for a vague hope that world tensions will be relaxed.

If we are going to have anything really important to show Mr. Khrushchev, now that he apparently is coming over here, it is this: Evidence that we understand Communist methods and goals; that we are united as a free people—notwithstanding all of the diversities of free people—in our opposition to both the methods and goals of communism; and, most important of all, that we have a vigor of will and purpose adequate to meet and survive their challenge.

I suspect it is going to take more than the amiability and protocol of a sightseeing tour provided by our leaders, and more than tongue-tied politeness on the part of our people, to accomplish an effective and convincing showing on this score.

3. It is an American tradition and, in the final analysis a practical necessity, that only one voice can speak authoritatively for the Nation in foreign affairs. That is the voice of the President of the United States. That voice is truest, most effective, most powerful when it is evident to all the world—and particularly to those who represent peril to our country—that it speaks the sentiments and will of the overwhelming majority of the American people.

The record is clear that international communism in this present crisis seeks to drive a wedge between the people and their leadership, that it seeks to go over the head of the President of the United States to invoke what the Communist worker calls "public opinion for peace (and) peaceful coexistence * * * the most powerful political force in the world."

Even as international communism adopts this tactic—of which Mr. Khrushchev's visit is a major item—it does not hesitate to denounce the Nation's leadership, and the leaders of capitalism, as "merchants of death" and enemies of peace. That tactic must not be permitted to work.

Neither can those—and I am one—who have questioned the wisdom of the Khrushchev visit permit a difference of judgment on this matter to stand in the way of earnest hopes and prayers and earnest efforts to encourage and support firmness, courage and clarity in the words that the President of the United States will soon be speaking to our friends abroad, to the peoples of captive nations, to Mr. Khrushchev and the leaders of world communism, to the people of Soviet Russia, and I trust to the American people themselves.

A long time ago it was written: "If the trumpet give an uncertain sound, who shall prepare himself to the battle?"

May the President of the United States speak clearly and faithfully for the people of the United States in the days just ahead. At the risk of seeming presumptuousness, I hope that the President will, with discretion but great firmness and faultless timing, say something like this to all concerned:

"Eagerness to avoid war—if we think no deeper than this single desire—can produce outright or implicit agreement that injustices and wrongs of the present shall be perpetuated in the future. We must not participate in any such false agreement. Thereby, we would outrage our own conscience. In the eyes of those who suffer injustice, we would become partners with their oppressors. In the judgment of history, we would have sold out our freedom of men for the pottage of a false peace."

At the risk of seeming presumptuousness, I voice the hope that the President will courageously speak, both privately and publicly, for "an observance of human rights and an end to subversion organized on a worldwide scale."

At the risk of seeming presumptuousness, I venture the hope that the President will bring a firm and bold reminder to Mr. Khrushchev that "the American people feel strongly that certain peoples of eastern Europe, many with a long and proud record of national existence, have not yet been given the benefit of (the) United Nations wartime declaration (of the right of peoples to choose the form of government under which they will live)."

At the risk of seeming presumptuousness, I venture the hope that the President will impress the fact—as his best judgment dictates with respect to time and place—that (for 42 years) "the activities of international communism have disturbed relations between other nations and the Soviet Union" (by seeking) "throughout the world to subvert lawful governments and to subject nations to an alien domination (thereby adding) to distrust and therefore to international tension."

At the risk of seeming presumptuousness, I venture the hope that the President will not forbear to say to Mr. Khrushchev—in the complete candor of private conference if not in the glare of public discussion—that "in the aftermath of (the subjugation of Hungary by naked armed force) world respect for and belief in Soviet promises (sank) to a new low."

At the risk of seeming presumptuousness, I venture the hope that the President of the United States will emphasize, as earnestly as words can do, that "the Soviet Union has nothing whatsoever to fear from the United States * * * anywhere * * * in the world, so long as its rulers do not themselves first resort to aggression," but that "open measures of armed attack * * * would start a chain of circumstances which would almost surely involve the United States in great military action."

And because you may indeed by now think me unpardonably presumptuous in seeming to put words in the President's mouth let me say that every statement with regard to which I have expressed a hope is a statement which the present President of the United States has heretofore made, and in every instance made publicly, and in some instances made in the presence of Mr. Khrushchev himself.

We, the people, are not of little faith, Mr. President, with respect either to your leadership, or ourselves, or our cause. But we know the value of emphasis by repetition. We need to hear our own will and voice speaking through your voice.

We need, and we need urgently, the unifying and clarifying trumpet call of words telling us, telling Mr. Khrushchev, and telling the world once again that peace can be established "only if we stand uncompromisingly for principles." In the face of the smiles of communism, we need to discipline our own eager friendliness, our sometimes impulsive good will, and even our deep desire for peace.

We need to remind ourselves, to be reminded yet again by our leadership, and to remind those who appear to proffer the hand of friendship, that the smiles of communism

are belied today in the captive nations, belied in Tibet, belied in Latin America, belied in Laos, belied in Berlin, and belied by Communist activities within our own country.

We need to recall the words of Lenin that "as long as capitalism and socialism exist, we cannot live in peace; in the end, one or the other will triumph, a funeral dirge will be sung either over the Soviet Republic or over world capitalism."

We need to recall, even as he visits us with a display of amiability, that Mr. Khrushchev himself has said: "If anyone thinks that our smiles mean the abandonment of the teachings of Marx, Engles, and Lenin, he is deceiving himself cruelly. Those who expect this to happen might just as well wait for a shrimp to learn how to whistle."

We need to recall the boast of Dmitri Manuilski, onetime head of the Soviet delegation to the United Nations, spoken in the early 1930's:

"War to the hilt between communism and capitalism is inevitable. Today, of course, we are not strong enough to attack. Our time will come in 20 to 30 years. To win we will need the element of surprise. The bourgeoisie will have to be put to sleep.

"So we shall begin by launching the most spectacular peace movement on record. There will be electrifying overtures and unheard-of concessions. The capitalist countries, stupid and decadent, will rejoice to cooperate in their own destruction. They will leap at another chance to be friends. As soon as their guard is down, we shall smash them with our clinched fists."

And, finally, as a footnote to all this—and as a reminder that an early President of the United States enunciated the Monroe Doctrine—I point out the statement made last week by Gen. C. P. Cabell, Deputy Director of Central Intelligence, to the National Security Commission of the American Legion. I quote:

"The Communict Party of the Soviet Union also gives specific direction on what Latin American Communist Party action should be. For example, the Communist Party of Cuba, called the Popular Socialist Party, has been given guidance on how to penetrate and exploit the government of Fidel Castro. Primary targets for Communist penetration in Cuba are the agrarian reforms, trade unions, and the Army. These targets of the Communist Party of the Soviet Union are so important that back in May of this year they sent under alias to Cuba a Soviet intelligence officer, Vadim Kotchergin, as a member of a Soviet trade union delegation. His assignment was to give guidance to Cuban Communists. Kotchergin has since returned to Moscow."

To my fellow Americans, who offer the sincere but superficial comment that "talking is better than shooting," I offer the double observation: First, that there seems to be quite a little shooting going on today and, second, that no one knows better than the Communists that talk can be as deadly and fatal as bullets.

And, to my equally sincere and superficial fellow citizens who shudder at the prospect of "stalemate," I point out that the Communists themselves with their fondness for the word "nyet" seem much less apprehensive of a stalemate. And, I further point out that an equally firm American "no" holds no graver peril for us and, indeed, is infinitely safer than continued concessions and piecemeal surrender through appeasement.

We know from the record, Mr. President, and there is, I am sure, no occasion to remind you of the fact that "firmness in the right as God gives us to see the right," has been rewarded not once but many times in this administration by lessened pressures and tensions and by receding threats of armed force.

We have the faith that it will continue to be so and that in such firmness—rather than in the undisciplined longing for peace and eagerness to be friends on which the Communist leaders place their openly declared expectations of ultimate triumph—lies the surest and, indeed, the only hope for peace with justice and for the survival of free men and nations.

Passing of an Outstanding Woman: Miss Elizabeth A. Smart, Legislative Secretary of Women's Christian Temperance Union

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Tuesday, August 25, 1959

Mr. NEUBERGER. Mr. President, I doubt if I ever met an advocate of a cause who was more fair, more understanding or more gentle and kindly than Miss Elizabeth A. Smart, of the Women's Christian Temperance Union, who died last week of cancer.

Miss Smart was an educated woman of infinite patience, who represented the temperance movement with dignity, integrity, and fairness. She was never intolerant or antagonistic of those who disagreed with her. She never threatened, bullied, or attempted belligerence. A person of brilliance, she made no effort to display her learning ostentatiously. One never learned from Miss Smart herself that she was a distinguished member of the bar, the wearer of a Phi Beta Kappa pin, the author of many learned papers on government and the law. She rarely touted her own prowess.

I counted her as my friend, I shall alway recall with pride that she invited me to be the principal speaker several years ago at the annual memorial services held by the Women's Christian Temperance Union in Statuary Hall in tribute to the historic Miss Frances Willard, of Illinois. I doubt if Frances Willard, herself a person of courage and honor, could have had a more fitting admirer and devotee than Elizabeth Smart. Their qualities were quite similar and parallel in many respects.

Because Elizabeth Smart died of cancer, I shall think of her when I renew my efforts for a crash program of medical research which seeks the answer to the grim riddle of cancer. Having suffered from this disease myself, I have a particular interest in its conquest—especially when we know that it recently has claimed such useful lives as those of John Foster Dulles, Matthew M. Neely, Elizabeth A. Smart, and many others. Friends closer to Miss Smart than I was privileged to be, have told of the characteristic serenity and bravery with which she faced death.

Mr. President, in memory of Miss Elizabeth Smart, of the Women's Christian Temperance Union, of which she was the longtime and capable legislative secretary, I ask unanimous consent to have printed in the Appendix of the RECORD a sketch of her career and causes, which has been prepared at my suggestion by Clayton Wallace, executive director of the National Temperance League, Inc.

Members of the Women's Christian Temperance Union are fortunate, indeed, to have been represented here in our Capital for nearly two decades by this woman of refinement, education, and compassionate motives. All who knew her will continue to honor and respect her memory. Miss Elizabeth A. Smart was a remarkable and gifted person.

There being no objection, the sketch was ordered to be printed in the RECORD, as follows:

ELIZABETH A. SMART

Miss Elizabeth A. Smart, who had served since 1940 as legislative secretary of the National Women's Christian Temperance Union, died after a long illness in Washington, D.C., on August 16, 1959. Miss Smart had also been national corresponding secretary of the National WCTU in Chicago from 1948 to 1950 and consultant at the United Nations for the World WCTU.

A native of New York State, Miss Smart was admitted to the New York State bar, and was owner of the Washington County Post, of Cambridge, N.Y., her legal residence. She was a member of the American Academy of Political and Social Sciences, Washington County, and New York State Bar Associations, Women's Bar Association of District of Columbia, National Association of Women Lawyers, National League of American Pen Women, Phi Beta Kappa, etc.

Miss Smart was for several years the secretary of the National Temperance and Prohibition Council and was chairman of its legislative committee at the time of her death. She was active on Capitol Hill, spending much of her time in contacting Senators and Congressmen on behalf of temperance legislation. She was the author of the Washington Letter which appeared regularly in the Union Signal, giving complete information about bills relating to the problems of alcohol and narcotics and other legislative matters with which her organization was concerned. The Washington Letter was published from 1940 until the present time.

Miss Smart was deeply devoted to the cause of temperance and worked sacrifically for national legislation to ban liquor advertising, and for other measures to reduce drinking and encourage total abstinence. She was able and courageous in her crusade for beneficial laws. Elizabeth Smart will long be remembered as a kindly, conscientious, consecrated, and competent temperance leader whose life was a powerful influence for all that is good.

Panama Canal: "Make the Dirt Fly"

EXTENSION OF REMARKS

OF

HON. CLARK W. THOMPSON

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 25, 1959

Mr. THOMPSON of Texas. Mr. Speaker, because the history of the Panama Canal is a subject that tends to become engrossing whenever one has been thoroughly exposed to it, I am always

alert to new angles of its fascinating story.

The latest is an interesting excerpt from the book "Make the Dirt Fly", by Rose van Hardeveld, published in 1956 by the Pan Press, Hollywood, Calif., and reprinted in the August 19, 1959, issue of the Christian Science Monitor.

The indicated excerpt follows:

THE CANAL SHAPED ALL OUR DAYS AND NIGHTS

In the rotunda of the administration building at Balboa Heights, the murals done by W. B. Van Ingn, assisted by Berry and Remson, presently depicted the stage of the canal construction which we were now able to watch daily from our house on the very edge of the cut. A group of lithographs by Jas. Pennel, scattered throughout the building, also preserved many of these scenes for posterity.

The 6- or 7-mile gash from Bas Obispo through Empire on a workday was really an awe-inspiring spectacle. Between 40 and 50 huge shovels smoked and whanged at different elevations. Each shovel had its own short spur of track, then the track alongside for the dirt train.

The loosening and digging out of the dirt and rocks was a herculean task, but not much bigger than the disposal of that mass. On the average, 3,700 carloads a day were hauled out of that canyon. I had often wondered in the past which was harder for the housewife: cleaning vast quantities of dirt from a room or disposing of it after she got it out. What a feather in her cap if she could do as the canal diggers did, and use the refuse to form new land for new cities, or to put a solid floor into the ocean on which to build a wall to keep ships from being battered by the elements.

It was quite difficult to realize that there was other work than digging going in the canal construction. The big machine shops at Gorgona and the many men employed there composed another and still different unit of which I knew nothing beyond the fact that they took care of the machine repairs and such machine construction as was done on the zone.

On very infrequent passings-by on the train we could see the huge forms, and knew that thousands of feet of concrete were being poured for the locks. We knew that an immense dam was being constructed at Gatun.

We knew that the course of the Chagres was being changed, and the encroaching water was killing an entire forest. Yet to us, busy with our daily tasks on our particular end of the job, Colonel Sibert's work was hazy and distant, very important of course, but not nearly so absorbing as our work, it seemed to me.

I neglected my housework many times to walk to the edge of the cut to watch the progress of the work and visualize the day when ships would be moving past this very hill on which I stood. Nothing else seemed quite so important as this immense project moving gradually and steadily to completion.

Nearly all the women and children felt the same way, and we would usually encounter our neighbors at one vantage point or another when we responded to the irresistible attraction of the dramatic view. This was our life. All other things were subordinate.

To see water surging through this yawning canyon, ready to carry ships up and down its mighty locks, was the destiny toward which all our days and nights were shaped. (From "Make the Dirt Fly," by Rose van Hardeveld. Copyright, 1956, by Rose van Hardeveld, the Pan Press, Hollywood, Calif.)

Freedom Challenges Communism

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES

Tuesday, August 25, 1959

Mr. WILEY. Mr. President, for many years the United States and the free world have been attempting to break through the Iron Curtain. At last, there are some signs of success. The Nixon-to-Moscow trip cracked the Curtain. The upcoming Eisenhower-Khrushchev visits may serve to widen the crack, provided they can be held in a favorable climate, instead of amidst a rash of brushfire wars created by Communist aggression, such as is now occurring in Laos and Tibet.

The breakthrough, if it can be followed up on a wider scale, has provided an opportunity for Western ideas to get directly to the Russian people, undistorted by Communist propaganda or sponsorship.

Intermittently, we are receiving reports that, time after time, when Russians and Americans have an opportunity for discussion, the Russian people demonstrate an almost insatiable desire to learn more of progress in this country and of the conditions under which we live.

In instances where there have been clashes of ideas—that is, United States versus communism—the presentation of free world ideas have invariably made a tremendous impression upon the Russian people. This has been true of the Vice President's trip, of the U.S. exhibit in Moscow, and even in the experiences of U.S. youth at the Red-sponsored World Youth Festival in Vienna, Austria.

Recently, there have been an increasing number of newspaper reports of this situation: First, the Green Bay Press-Gazette, of Green Bay, Wis., published a challenging editorial entitled "When Communism Meets Free Speech," relating to the Youth Festival in Vienna; second, an editorial from the Christian Science Monitor entitled "Young Ambassadors," outlining the experiences of U.S. guides at the Moscow exhibit, and third an article in the Washington Evening Star entitled "U.S. Exhibit Visitors in Moscow Cannot Believe Our Labor Story."

I ask unanimous consent to have the editorials and articles printed in the Appendix of the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Green Bay Press-Gazette]

WHEN COMMUNISM MEETS FREE SPEECH

The Red-sponsored World Youth Festival in Vienna is running into a lot of trouble and all because its leaders have tried to keep up the pretense that it runs on democratic principles. Communist youth apparently haven't yet come to realize that their philosophy is successful only when there is no opposition.

The group is meeting for the first time in a free country, apparently with the aim of being liberal. But that immediately means a lessening of control. There are no tours of the wonders of the Communist systems as there were in Moscow last year, although a Soviet sponsored trip through Russia is planned to follow the convention. Defectors have been reported from a variety of satellite countries despite the careful screening processes given the youths. Disgruntled representatives, particularly from the United States, have moved out of the approved barracks where the word can be regulated.

The American problems started on board ship when other college students bound for Europe decided in an open forum that American representatives to the festival were helping Red propaganda machines. Then a Chicago group rose up in revolt against the New York Red-lining leaders although they quite naturally were not recognized as bona fide by the sponsors of the convention.

But the dangers of open debate have really boomeranged on the Reds. A seminar supposedly nonpolitical and dealing with the uses of atomic energy started out as a sneering attack on the United States by the official speaker, Prof. George Vinogradov of the Soviet Academy of Science. But he lost the floor when unable to answer a question by a listener and an American nuclear reactor engineer and then a Munich University law student took over. J. A. Ransahoff, who heads a firm of consultants on nuclear energy in Washington, pointed out how atomic energy has been put to peaceful uses. Then Armin Pollman refuted the Russian charge that the United States had supplied the West Germans with nuclear weapons. Poor Vinogradov never did get back to convince any doubters about the role Big Brother was playing in the atomic field.

The World Youth Festival has always been a Commie gimmick. But if a few more argumentative anti-Reds attend and the meetings are held in free countries, the advocates of the dictatorship of the proletariat are going to look even sillier. After all the losses by the free world in the propaganda war, it's nice to have won a battle.

[From the Christian Science Monitor, Aug. 19, 1959]

YOUNG AMBASSADORS

Guides at the U.S. Exhibition in Moscow have found that they are asked many more questions about themselves than about the exhibits. Soviet citizens, they discover, are more interested in simply talking to Americans and learning how they live than in examining the fine cars or automatic dishwashers.

The corps of 75 Russian-speaking guides, 20 to 35 years old, mostly college or graduate students, has worked long hours answering questions. They have developed patience and good humor in the face of heckling. They find reward in the attentive listening of groups curious as to costs of living, wage levels, reports of unemployment, opportunities for education, freedom of travel, racial problems, art, literature, and many other facets of life in America.

To be sure, the Soviet press has gone to great lengths to belabor the exhibits as unrepresentative and to magnify any untoward incident. In spite of this, the guides have made a good impression. It is probably only fair to say that the attendants at the Soviet Exhibition in New York found need of tact and poise, and also deserve credit for a hard job well done.

The exchange of such groups of people-to-people envoys is bound to erase many misconceptions on both sides, create a wholesome measure of respect, and find areas in

which Russians and Americans have common interests—quite outside the pros and cons of Marxism.

[From the Washington Evening Star]

U.S. EXHIBIT VISITORS IN MOSCOW CAN'T BELIEVE OUR LABOR STORY

(By Vladimir Chavrid)

(This is an excerpt from a report by a U.S. labor economist, Vladimir D. Chavrid, on his observations at the U.S. Exhibition in Moscow. Mr. Chavrid, who was born in Russia, was assigned to the exhibition by the Labor Department to answer questions about the worker's life in America.)

I wish there were 20 American labor economists here familiar with American economic life. All of them could be busy answering thousands of questions of how the American people, and especially the average American worker, live. For the average Russian the hunger for knowledge, for facts about Americans, must be far greater than his hunger for food.

The questions most frequently asked deal with unemployment, wages, hours of work, living conditions, social security, unemployment insurance, and many others in this general area.

The attacks on the American way of life have been quite frequent and severe since the beginning of the exhibition. For the last few days, however, these have ceased for some reason or other.

The report was written just prior to the announcement of Khrushchev's visit to the United States. To all of us, however, these attacks are one of the real indications of the success of our exhibition.

Do the Russian people believe what we tell them about America? After being here for several weeks and discussing with them our way of life, both at the exhibition and at other places, I am sure that the overwhelming majority believe what we tell them and what the exhibits show them.

At the Labor Department exhibit in the dome when some controversial matter develops between myself and some Russian professional propagandist, the crowd invariably will side with me rather than with him. These professional agitators invariably show up as soon as a sizable group of people begin to listen to my presentation.

For example the other day at the labor exhibit I was explaining to a group of some 50 Russians the American social security programs. The group was vitally interested. Immediately a professional agitator broke in and told the crowd that this social security program did not apply to Negroes or foreign-born persons, that opportunities for these people in America were very poor.

This was an excellent opportunity for me to tell the crowd about myself—how I came from Russia some 30 years ago and how I was able to obtain an education in the United States and also a responsible job in the Labor Department. The agitator kept breaking in that I had already answered his question, but the crowd kept saying I should tell about myself and other groups like myself in the United States.

Frequently the agitator becomes embarrassed and disappears. It may be of interest to know that as soon as the Russian visitors learn that I was born in Russia of modest parentage, they are extremely sympathetic and I could stay and talk there, as I often do, for as long as 4 hours at a stretch. It is often physically impossible to break away from the crowd.

When I leave the stand many continue to follow me asking questions that they might have been uneasy to ask in the presence of the professional agitators. Many thank me most profusely for answering their questions while others apologize for their professional agitators. It is literally impossible to stop and answer a single question of one Russian without attracting a crowd of 50 or more Russians within a few seconds. Such is the hunger for knowledge about the United States.

Text of the Two Public Laws of the United States of America Governing Rules and Customs Pertaining to the Display and Use of the Flag of the United States of America—Also Correct Flag Courtesy Suggestions Issued by Veterans of Foreign Wars (VFW) as Handy Reference for Pocket Use

---

EXTENSION OF REMARKS

OF

HON. CLYDE DOYLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 25, 1959

Mr. DOYLE. Mr. Speaker, by reason of unanimous consent heretofore granted me so to do, I am pleased to present the full text of the two statutory provisions of Congress governing the display and use of the flag of the United States of America.

On account of the coming into the Union of the United States of America of the two newest States, to-wit, the State of Alaska and the State of Hawaii, and the resulting addition of two stars to the flag of the United States of America, making a total of 50 stars therein, it appears very pertinent, appropriate, informative, and guiding to all concerned that these two public laws, to-wit, 829 of the 77th Congress and 107 of the 83d Congress, be now made available to yourself and all the Members of this great legislative body. No doubt they, as the case with myself, are receiving many inquiries in the premises.

Furthermore, the Veterans of Foreign Wars of the United States have appropriately published a very neat vest pocket size card entitled "Correct Flag Courtesy." And so, I am pleased to accompany the text of this card with this extension.

The above-mentioned matters follow:

CORRECT FLAG COURTESY

This is a reminder of how to properly pay tribute to the American flag. It has been specifically designed by the VFW as a handy reference that you can carry in your pocket at all times.

During the ceremony of hoisting or lowering the flag, or when the flag is passing in a parade or a review, all persons should face the flag, stand at attention, and salute.

Those present in uniform should render the right hand salute.

Men not in uniform, should remove their headdress with the right hand and hold it at the left shoulder, the right hand being over the heart.

Men without hats should salute in the same manner.

Women should place the right hand over the heart.

The salute to the flag in a moving column should be rendered at the moment the flag passes.

When the national anthem is played and the flag is not displayed, all present should stand and face toward the music.

Those in unform should salute at the first note of the anthem, retaining this position until the last note.

All others should stand at attention, men removing their headdress.

When the flag is displayed, all present should face the flag and salute.

HOUSE JOINT RESOLUTION 359

Joint resolution to amend Public Law Numbered 623, approved June 22, 1942, entitled "Joint resolution to codify and emphasize existing rules and customs pertaining to the display and use of the flag of the United States of America"

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That Public Law Numbered 623, approved June 22, 1942, entitled "Joint resolution to codify and emphasize existing rules and customs pertaining to the display and use of the flag of the United States of America", be, and the same is hereby amended to read as follows:

"That the following codification of existing rules and customs pertaining to the display and use of the flag of the United States of America be, and it is hereby, established for the use of such civilians or civilian groups or organizations as may not be required to conform with regulations promulgated by one or more executive departments of the Government of the United States.

"SEC. 2. (a) It is the universal custom to display the flag only from sunrise to sunset on buildings and on stationary flagstaffs in the open. However, the flag may be displayed at night upon special occasions when it is desired to produce a patriotic effect.

"(b) The flag should be hoisted briskly and lowered ceremoniously.

"(c) The flag should not be displayed on days when the weather is inclement.

"(d) The flag should be displayed on all days when the weather permits, especially on New Year's Day, January 1; Inauguration Day, January 20; Lincoln's Birthday, February 12; Washington's Birthday, February 22; Army Day, April 6; Easter Sunday (variable); Mother's Day, second Sunday in May; Memorial Day (half staff until noon), May 30; Flag Day, June 14; Independence Day, July 4; Labor Day, first Monday in September; Constitution Day, September 17; Columbus Day, October 12; Navy Day, October 27; Armistice Day, November 11; Thanksgiving Day, fourth Thursday in November; Christmas Day, December 25; such other days as may be proclaimed by the President of the United States; the birthdays of States (dates of admission); and on State holidays.

"(e) The flag should be displayed daily, weather permitting, on or near the main administration building of every public institution.

"(f) The flag should be displayed in or near every polling place on election days.

"(g) The flag should be displayed during school days in or near every schoolhouse.

"SEC. 3. That the flag, when carried in a procession with another flag or flags, should be either on the marching right; that is, the flag's own right, or, if there is a line of other flags, in front of the center of that line.

"(a) The flag should not be displayed on a float in a parade except from a staff, or as provided in subsection (i).

"(b) The flag should not be draped over the hood, top, sides, or back of a vehicle or of a railroad train or a boat. When the flag is displayed on a motorcar, the staff shall be

fixed firmly to the chassis or clamped to the radiator cap.

"(c) No other flag or pennant should be placed above or, if on the same level, to the right of the flag of the United States of America, except during church services conducted by naval chaplains at sea, when the church pennant may be flown above the flag during church services for the personnel of the Navy.

"(d) The flag of the United States of America, when it is displayed with another flag against a wall from crossed staffs, should be on the right, the flag's own right, and its staff should be in front of the staff of the other flag.

"(e) The flag of the United States of America should be at the center and at the highest point of the group when a number of flags of States or localities or pennants of societies are grouped and displayed from staffs.

"(f) When flags of States, cities, or localities, or pennants of societies are flown on the same halyard with the flag of the United States, the latter should always be at the peak. When the flags are flown from adjacent staffs, the flag of the United States should be hoisted first and lowered last. No such flag or pennant may be placed above the flag of the United States or to the right of the flag of the United States.

"(g) When flags of two or more nations are displayed, they are to be flown from separate staffs of the same height. The flags should be of approximately equal size. International usage forbids the display of the flag of one nation above that of another nation in time of peace.

"(h) When the flag of the United States is displayed from a staff projecting horizontally or at an angle from the window sill, balcony, or front of a building, the union of the flag should be placed at the peak of the staff unless the flag is at half staff. When the flag is suspended over a sidewalk from a rope extending from a house to a pole at the edge of the sidewalk, the flag should be hoisted out, union first, from the building.

"(i) When the flag is displayed otherwise than by being flown from a staff, it should be displayed flat, whether indoors or out, or so suspended that its folds fall as free as though the flag were staffed.

"(j) When the flag is displayed over the middle of the street, it should be suspended vertically with the union to the north in an east and west street or to the east in a north and south street.

"(k) When used on a speaker's platform, the flag, if displayed flat, should be displayed above and behind the speaker. When displayed from a staff in a church or public auditorium, if it is displayed in the chancel of a church, or on the speaker's platform in a public auditorium, the flag should occupy the position of honor and be placed at the clergyman's or speaker's right as he faces the congregation or audience. Any other flag so displayed in the chancel or on the platform should be placed at the clergyman's or speaker's left as he faces the congregation or audience. But when the flag is displayed from a staff in a church or public auditorium elsewhere than in the chancel or on the platform, it shall be placed in the position of honor at the right of the congregation or audience as they face the chancel or platform. Any other flag so displayed should be placed on the left of the congregation or audience as they face the chancel or platform.

"(l) The flag should form a distinctive feature of the ceremony of unveiling a statue or monument, but it should never be used as the covering for the statue or monument.

"(m) The flag, when flown at half staff, should be first hoisted to the peak for an instant and then lowered to the half-staff position. The flag should be again raised to the peak before it is lowered for the day. By "half staff" is meant lowering the flag to one-half the distance between the top and bottom of the staff. Crepe streamers may be affixed to spear heads or flagstaffs in a parade only by order of the President of the United States.

"(n) When the flag is used to cover a casket, it should be so placed that the union is at the head and over the left shoulder. The flag should not be lowered into the grave or allowed to touch the ground.

"SEC. 4. That no disrepect should be shown to the flag of the United States of America; the flag should not be dipped to any person or thing. Regimental colors, State flags, and organization or institutional flags are to be dipped as a mark of honor.

"(a) The flag should never be displayed with the union down save as a signal of dire distress.

"(b) The flag should never touch anything beneath it, such as the ground, the floor, water, or merchandise.

"(c) The flag should never be carried flat or horizontally, but always aloft and free.

"(d) The flag should never be used as drapery of any sort whatsoever, never festooned, drawn back, nor up, in folds, but always allowed to fall free. Bunting of blue, white, and red, always arranged with the blue above, the white in the middle, and the red below, should be used for covering a speaker's desk, draping the front of a platform, and for decoration in general.

"(e) The flag should never be fastened, displayed, used, or stored in such a manner as will permit it to be easily torn, soiled, or damaged in any way.

(f) The flag should never be used as a covering for a ceiling.

"(g) The flag should never have placed upon it, nor on any part of it, nor attached to it any mark, insignia, letter, word, figure, design, picture, or drawing of any nature.

"(h) The flag should never be used as a receptacle for receiving, holding, carrying, or delivering anything.

"(i) The flag should never be used for advertising purposes in any manner whatsoever. It should not be embroidered on such articles as cushions or handkerchiefs and the like, printed or otherwise impressed on paper napkins or boxes or anything that is designed for temporary use and discard; or used as any portion of a costume or athletic uniform. Advertising signs should not be fastened to a staff or halyard from which the flag is flown.

"(j) The flag, when it is in such condition that it is no longer a fitting emblem for display, should be destroyed in a dignified way, preferably by burning.

"SEC. 5. That during the ceremony of hoisting or lowering the flag, or when the flag is passing in a parade or in a review, all persons present should face the flag, stand at attention, and salute. Those present in uniform should render the military salute. When not in uniform, men should remove the headdress with the right hand, holding it at the left shoulder, the hand being over the heart. Men without hats should salute in the same manner. Aliens should stand at attention. Women should salute by placing the right hand over the heart. The salute to the flag in the moving column should be rendered at the moment the flag passes.

"SEC. 6. That, when the national anthem is played and the flag is not displayed, all present should stand and face toward the music. Those in uniform should salute at the first note of the anthem, retaining this position until the last note. All others should stand at attention, men removing the headdress. When the flag is displayed, all present should face the flag and salute.

"SEC. 7. That the pledge of allegiance to the flag, "I pledge allegiance to the flag of the United States of America and to the Republic for which it stands, one Nation indivisible, with liberty and justice for all," be rendered by standing with the right hand over the heart. However, civilians will always show full respect to the flag when the pledge is given by merely standing at attention, men removing the headdress. Persons in uniform shall render the military salute.

"SEC. 8. Any rule or custom pertaining to the display of the flag of the United States of America, set forth herein, may be altered, modified, or repealed, or additional rules with respect thereto may be prescribed, by the Commander in Chief of the Army and Navy of the United States, whenever he deems it to be appropriate or desirable; and any such alteration or additional rule shall be set forth in a proclamation."

Approved, December 22, 1942.

S. 694

An act to prohibit the display of flags of international organizations or other nations in equal or superior prominence or honor to the flag of the United States except under specified circumstances, and for other purposes.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 3(c) of the joint resolution entitled "Joint resolution to codify and emphasize existing rules and customs pertaining to the display and use of the flag of the United States of America", approved June 22, 1942, as amended (36 U.S.C., sec. 175 (c)), is amended by adding at the end thereof the following new sentence:

"No person shall display the flag of the United Nations or any other national or international flag equal, above, or in a position of superior prominence or honor to, or in place of, the flag of the United States at any place within the United States or any Territory or possession thereof: *Provided*, That nothing in this section shall make unlawful the continuance of the practice heretofore followed of displaying the flag of the United Nations in a position of superior prominence or honor, and other national flags in positions of equal prominence or honor, with that of the flag of the United States at the headquarters of the United Nations."

Approved July 9, 1953.

Francis Cardinal Spellman Praises Humanitarian Program for Social Welfare of Fraternal Order of Eagles

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Tuesday, August 25, 1959

Mr. NEUBERGER. Mr. President, on August 6 the Fraternal Order of Eagles, one of the most progressive and social-minded organizations in the United States, held their international grand aerie dinner in Toronto, Ontario, as part of their 61st annual convention. Because the Eagles always have stressed brotherhood among nations, it was appropriate that this convention should be held on the soil of our good neighbor to the north, Canada. I am proud, myself, to be a longtime member of the Eagles.

The principal speaker at the banquet was His Eminence Francis Cardinal Spellman, archbishop of New York. Cardinal Spellman stressed the theme of social responsibility and moral law. He discussed, eloquently, the Ten Commandments and demonstrated how the social welfare program of the Eagles has upheld the highest ethical concepts of the Ten Commandments. Because I have so long admired the Fraternal Order of Eagles, for their advocacy of such humanitarian programs as social security and jobs after 40, I would like to read to my colleagues this particular paragraph from the moving address by Cardinal Spellman:

You have shown constant and compassionate interest in the welfare of all—those innocents orphaned by the malice of men and those made fatherless by the guns of war; persons of all ages from the high chair to the rocking chair, the bedridden slowly wasting away, the neglected and the crippled desperately needing understanding and rehabilitation, as well as the healthy in body but sick in soul or in mind—all these have shared the strength of the Eagles, all have known the warmth of their deep, personal devotion and assistance. Deeply and humbly grateful am I for the signal honor you bestow upon me, you who are yourselves distinguished by courageous sacrifice in the service of your fellowman.

Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD the text of the address given at the 61st international grand aerie convention dinner of the Eagles in Toronto by Francis Cardinal Spellman.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS GIVEN AT 61ST INTERNATIONAL GRAND AERIE CONVENTION DINNER, TORONTO, ONTARIO, CANADA, AUGUST 6, 1959, FRATERNAL ORDER OF EAGLES, BY HIS EMINENCE FRANCIS CARDINAL SPELLMAN

Dear friends, there are no words richer or more meaningful than the Ten Commandments; and, there is one Commandment which I believe, if honestly lived by men could bring true happiness and a just and enduring peace to all peoples and all nations of God's earth. It is the most sacred and greatest declaration of all time, in which our Lord commands us fully and faithfully to love Him and Him alone, and plainly tells us that each is his brother's keeper: "Thou shalt love the Lord thy God with thy whole heart, and with thy whole soul, and with thy whole mind * * * and thou shalt love thy neighbor as thyself."

It is upon this commandment that your Fraternal Order of Eagles was founded, the humane organization whose members, for more than 61 fruitful years, have tirelessly, selflessly served the sick, the sorrowing, the maladjusted; the very young, the aged and the teenager. And the only measure of the Eagles' giving is the need of their neighbors—their brothers.

You have shown constant and compassionate interest in the welfare of all—those innocents orphaned by the malice of men and those made fatherless by the guns of war; persons of all ages from the high chair to the rocking chair, the bedridden slowly wasting away, the neglected and the crippled desperately needing understanding and rehabilitation, as well as the healthy in body but sick in soul or in mind—all these have shared the strength of the Eagles, all have known the warmth of their deep, personal devotion and assistance. Deeply and humbly grateful am I for the signal honor you bestow upon me, you who are yourselves distinguished by courageous sacrifice in the service of your fellowman.

Since I have known it was to be my privilege to be with you this evening I have meditated upon your many-faceted, merciful works, especially the preservation of our countries' youth. I do not say "guidance" because the difficulties of our youth daily become more acute until we are now faced with the task of actually saving our young people before we can effectively guide them.

The Ten Commandments award has unique significance when applied to the youth of our present day society, because the Commandments constitute a communication from Almighty God, a code of conduct given to us by our Creator. Actively to employ the commandments in our plans for the salvation of our children as God created and intended them to be, holds the only key to the achievement of a successful program of hope and help for today's children, the mothers and fathers of tomorrow.

In these perilous days the Biblical narrative of the Ten Commandments has special significance. You will recall how Moses went alone to the top of the mountain to receive this divine communication and how in his absence the people grew restive and created for themselves a god of their own, a golden calf. And they worshiped his graven image. You have raised the tablets of the commandments on the Clark County Courthouse lawn ever to stand a reproach to all those in our age who have created their own god whom willfully they worship while constantly endeavoring to convert our Nation's youth along the pathways of their own degraded, godless living. For adults to desert God is tragic, but to teach children to abandon Him constitutes a heinous crime, the brutal rape of souls.

There are many forms of this perversion and perhaps the most widespread and popular is the perversion of "freedom". When hypocrites apply this sacred term to contemptible schemes in order to prey on the weaknesses of unformed characters under the banner of "freedom of speech," or "freedom of the press," they are victimizing not only our children, but endangering our Nation's treasured heritage preserved for us by the precious blood of generations of our beloved sons, fathers, brothers and husbands.

Who can measure the damage to the souls of our youth when our freedoms are violated by traitors of true liberty and are twisted and wrought by them into weapons for our own destruction? Those who raise their voices in defense of the innocent, attempting to filter the moral smog from the atmosphere of today's degenerate, amoral society, in order to protect our young from the vipers who feed upon and fill their pocketbooks from the demoralization of our children, are often accused of witch-hunting and censorship. And censorship has become a repugnant word. But censorship there must be—censorship of conscience—fashioned in the spiritual mold of the Ten Commandments.

Pictures and books which corrupt and destroy the moral fiber and ideals of youth, these dangers must be eliminated if we are to discharge our sacred duties to our children. Thousands of dedicated men and women are striving by example and concerted efforts to protect and preserve our youth, our countries and our civilization from the fate of Sodom and Gomorrah, despite the determined efforts of vicious, venal enemies of youth, those evil men and women who deny the one true God and live in open defiance of His Ten Commandments.

When discussing moral problems endangering our children, people often limit themselves to the consideration of obscene material. Actually the problem is much wider in scope, striking at the very roots of man's allegiance to God. Perversions cause unspeakable evils, but equally disastrous is the failure of justice to enforce laws to prohibit these evils.

What then are we to do, what action shall we take to preserve and guide our children to godly living and love of neighbor? Shall we pass more laws to break, make more and longer speeches, cry "doom" in a louder voice? The time has long passed for such efforts as these. The only effective solution will be found when adults strive to live God's Ten Commandments conscientiously and constantly, making each and every one of us "his brother's keeper," which means too, keeper of his own soul. The Ten Commandments must be explained and demonstrated to our youth in the laboratory of daily living and the instructors must themselves be inflamed by love of God and neighbor, and thus by their own example save our Nation's children from degeneration and destruction.

For more than 61 years the Fraternal Order of Eagles has worked for the welfare of our youth. This is perhaps the most important of your manifold activities because the object of your concern in the preservation of the real wealth of our nations—the salvation of our children living in freedom under God.

These, dear friends, are my reflections on the credo expressed in your manual: "Freedom under God's law in our world is the Eagle's goal." May God bless your work. May He give you the strength to carry your ideals to yet higher peaks on the wings of your Eagle—God's Ten Commandments.

(Commenting on the visit of Mr. Khrushchev to President Eisenhower, the Cardinal concluded: "I think it would be a wonderful thing of Mr. Khrushchev would have an opportunity of reading, studying, meditating, and with an unusual, extraordinary grace of God, believing and practicing the Ten Commandments. I think it would be wonderful. What a tremendous transformation would take place in this war-ravished poverty-stricken, fear-enshrouded world. A miracle such as has not taken place since the time of Christ Himself would be worked and the hearts of suffering human beings everywhere would be uplifted. * * * I certainly shall pray that Almighty God will work a miracle to save our world from imminent threatening destruction.")

The Housing Compromise

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 25, 1959

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following editorial which appeared in the New York Times of August 24, 1959:

THE HOUSING COMPROMISE

The more one looks at the fine print in the new, compromise housing bill passed by the Senate after President Eisenhower's veto of the earlier bill, the more one is impressed by how far the managers of the bill have gone to meet the President's objections. To be sure, there is a little more money in the bill than was requested in the President's original program. But most of the objectionable features of the earlier bill have been dropped.

For example, there is no longer a requirement that the Federal National Mortgage Association purchase "special assistance" mortgages at subsidy prices. A proposed new program of special FNMA loans to mortgage lenders has been removed. The public housing authorization has been limited to roughly the amount approved for most recent years. There is a special provision to make sure that slum-clearance funds will not all be absorbed by larger cities. The authority for still another and dubious extension of the term of repayment of ordinary Federal Housing Administration insured mortgages has been eliminated.

These are concessions of substance. Compared with the original bills introduced by Democratic housing managers in both House and Senate, and compared even with the bills that passed both Houses originally, the new bill has gone far more than halfway toward the administration's wishes. The House would do well to accept the Senate bill and send it to the President. He in turn would be hard put to it to justify another veto.

Policeman Is West Virginia Historian

EXTENSION OF REMARKS
OF
HON. ROBERT C. BYRD
OF WEST VIRGINIA
IN THE SENATE OF THE UNITED STATES
Tuesday, August 25, 1959

Mr. BYRD of West Virginia. Mr. President, a recent edition of the employees' magazine of the Goodyear Tire & Rubber Co. contains an article about a West Virginia native who has become an outstanding authority on West Virginia history.

I ask unanimous consent that the article may be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

POLICEMAN IS WEST VIRGINIA HISTORIAN—MATHENY'S LIBRARY UNIQUE

(By Bob Hathaway)

H. E. Matheny leads a double life. On the job, he is a Goodyear policeman—off the job, he is a well-qualified history scholar.

His specialty is West Virginia history, and his library on the subject is better than any other—even those of the West Virginia Department of Archives and History and West Virginia University.

It consists of approximately 1,500 books with an auction value of $20,000.

More than 100 of his books are "unique," a term used by collectors to describe a book that is one of its kind and irreplaceable.

A native of Parkersburg, W. Va., Matheny came to Akron at age 15. He says that Parkersburg, in those days, was a "Saturday night town." Everyone from the surrounding countryside would put on his best clothes and go to town on Saturday evening.

Fifteen-year-old Matheny, after his first week in Akron, was feeling homesick. When the first Saturday night rolled around, he dressed up and headed for the center of Akron. Nothing was happening.

Assured that Akron was the dullest town in the world, he was even more lonesome for West Virginia. With nothing to do, he went into a book store and asked for a history of West Virginia—that started a hobby that has lasted and mellowed since 1925.

Matheny's collection includes books, manuscripts and printed materials of all descriptions. One volume, dated 1793, is a copy of the first book ever printed in West Virginia.

He has 10,000 file cards that cross-reference and triple index the material. Among the most interesting reading are his broadsides or posters designed for making public announcements.

Although many single items are worth $100 or more, Matheny's favorite volume is one that has little value to other collectors. "The Memories of a Little Girl" by Maggie Alice Matheny is a handwritten account by his mother describing a covered wagon trip that she made as an 8-year-old to Oregon and back.

Matheny has 31 county histories of West Virginia, each worth more than $25. He is one of four serious collectors in this field.

Matheny does not restrict his activities to collecting. The books that line the den in his home serve as references for numerous articles and stories he writes for West Virginia newspapers and popular magazines.

Recently Matheny completed a book titled, "Bishop Alexander Campbell, Editor, Printer, Publisher, and Bookseller." Publishing of the book is being sponsored by the Disciples of Christ Historical Society.

Campbell was one of those exceedingly dynamic men of the 1800's whose interests and influence ranged from farming to theology and whose life was perfectly suited to tickle the fancy of a biographer.

Many books and publications of all kinds that came from Campbell's publishing house are included in Matheny's library. Matheny's next literary effort will be a book on Civil War Gen. Thomas M. Harris, of Harrisville, W. Va.

Matheny started at Goodyear in 1928 in final inspection and went with the police department in 1942. His wife, Sceva, worked in the balloon room during World War II. They live in Uniontown.

Statement of Senator Richard Neuberger in Support of the Franklin Delano Roosevelt Memorial

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 25, 1959

Mr. ROOSEVELT. Mr. Speaker, the action taken by this Congress in approving House Joint Resolution 115, which authorizes the purchase of land and architectural competition for the erection of the Franklin D. Roosevelt Memorial, has been a most heartwarming experience for me and the members of my family.

I wish to take this means to thank my colleagues, and particularly the members of the Franklin Delano Roosevelt Memorial Commission, for making possible this everlasting tribute to my father.

Mr. Speaker, among those who took an active interest and part in this endeavor is my admired friend and colleague, Senator RICHARD L. NEUBERGER, of Oregon, a member of the Commission.

May I say I was most impressed by his clear presentation of the facts before the Senate Committee on Rules and Administration. And I might add, his remarks about Franklin Delano Roosevelt mean much to me and my family, as does the action of our distinguished majority leader, the Honorable JOHN W. MCCORMACK, who introduced the resolution during the early days of the session.

I deem it a personal privilege and honor, Mr. Speaker, to have the opportunity to insert in the RECORD the complete text of Senator NEUBERGER's statement of August 19, 1959, in support of the F.D.R. memorial.

STATEMENT OF SENATOR RICHARD L. NEUBERGER, OF OREGON, BEFORE SENATE COMMITTEE ON RULES AND ADMINISTRATION ON HOUSE JOINT RESOLUTION 115, AUGUST 19, 1959

Mr. Chairman and members of the committee, I appreciate the opportunity to appear today in behalf of House Joint Resolution 115, which is vital to the paying of an overdue tribute to a great American, Franklin Delano Roosevelt. As a member of the Franklin Delano Roosevelt Memorial Commission, I should like to review briefly the background and provisions of this legislation.

House Joint Resolution 115 was introduced January 9, 1959, by Representative JOHN W. MCCORMACK, a congressional member of the Roosevelt Memorial Commission. It was reported favorably by the Committee on House Administration on March 13, and was passed unanimously by the House on July 23, 1959.

The provisions of House Joint Resolution 115 are simple: It reserves a 27-acre portion of West Potomac Park near the Tidal Basin as a site for the proposed Roosevelt Memorial. It authorizes the Commission to hold a competition for design of the proposed memorial and authorizes not more than $150,000 to be appropriated for expenses in conjunction with the competition.

In considering this measure, these points should be noted:

Planning: In holding the competition, the Roosevelt Memorial Commission will consult with the Commission of Fine Arts, the National Capital Planning Commission, and the National Park Service. The proposed memorial will not be a "sore thumb" architecturally in the effective implementation of Washington, D.C., planning.

Indeed, the National Capital Planning Commission not only approved the Tidal Basin site for the proposed memorial, it raised the 10 acres originally recommended by our Commission to 27 acres.

In addition, the House Committee on House Administration, in favorably reporting House Joint Resolution 115 last March had this to say about the site selection:

"In recommending the passage of House Joint Resolution 115, the Committee on House Administration is of the opinion that no more appropriate site for the proposed Franklin Delano Roosevelt Memorial could be chosen than the one recommended in West Potomac Park. The erection of the memorial in that particular section of the Nation's Capital would be fulfilling the postwar goal and dream of the late President that the temporary buildings erected on the Mall and adjacent parklands, many of them dating back to the First World War, would be removed as soon as possible after the conclusion of World War II. Most of these temporary buildings still remain in this area although the purpose for which they were erected is no longer valid.

"The Committee on House Administration commends the Franklin Delano Roosevelt Memorial Commission for its painstaking efforts which have resulted in recommending that portion of West Potomac Park which lies between Independence Avenue

and the inlet bridge as a most proper location for this memorial."

The Advisory Committee to the Roosevelt Memorial Commission has recommended, and House Joint Resolution 115 specified, that the proposed memorial shall harmonize in all respects with the Washington Monument, Jefferson Memorial, and Lincoln Memorial. Chairman of this Advisory Committee is the eminent American architect Pietro Belluschi, who was formerly a resident of my State of Oregon and is now dean of the School of Architecture and Planning of the Massachusetts Institute of Technology. The other members of the committee, who will assist our Commission on conducting the memorial design competition, are similarly distinguished architects and planners.

Finally, the design chosen will be submitted to Congress for approval.

Financing: The $150,000 authorized by the resolution will be used for expenses in the conducting of the design competition and for cash prizes to winners of the competition. If architects had been retained to submit designs for the memorial, the cost would have been approximately the same, if not more.

Erection of the memorial itself is proposed to be financed through private subscription.

Mr. Chairman, these briefly are the cold details of this legislation. There are, however, more than just a few facts involved in the measure which the committee is considering today.

It is not sufficient to say that Franklin Delano Roosevelt served as President of the United States longer than any other man has served or likely will serve in the capacity. Neither is it sufficient to say that he guided our Nation through 12 of the most difficult years in our history—out of a great economic calamity and through most of the world's worst conflict. Words are not capable of carrying the meaning of Franklin Roosevelt's service to this land.

A monument cannot completely convey this meaning adequately. But it can indicate to future generations some of the depth of the respect and love of a grateful people for a great leader.

Mr. Chairman, the paying of this deserved tribute has been overly delayed. In the 14 years since the Nation mourned the death of Franklin Roosevelt, we have seen many men honored—not unjustifiably—for lesser service. Formation of the Franklin Delano Roosevelt Memorial Commission was authorized by Congress in 1955 for the purpose of proposing a memorial. The Commission has met and submitted three interim reports. We now come to the action phase.

The House has acted unanimously. As the days of the session of Congress wane, I need not stress the necessity for swift approval on the part of the Senate. I urge that this committee give rapid and favorable consideration to House Joint Resolution 115 in order that we may proceed with the overdue honoring of a great American.

Imbalance Seen in Tax Policy

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Tuesday, August 25, 1959

Mr. WILEY. Mr. President, my colleagues will recall that earlier this session I introduced a bill, S. 1885, proposing to establish a Hoover-type commission to carry out an overhaul of the tax system.

Today, the Nation is having money troubles. The Federal Government is having difficulty balancing its budget. State governments, too, are finding it increasingly hard to pay mounting bills. Local communities experience difficulty in locating sources of revenue to provide community services and meet other costs.

With these ever-greater demands on our available tax sources, it is increasingly important that we (a) avoid undue overlapping of Federal, State, and local taxes; (b) attempt to assure that the tax burden is equitably distributed; (c) make an effort to bring our tax laws up to date in relation to our changing economy; and (d) revise the tax laws to knock out special privilege clauses wherever these are not merited, and, insofar as possible, write new tax laws that would stimulate—not curb—economic progress.

As I understand it, the House Ways and Means Committee is now planning to undertake study on various aspects of the tax structure. This committee—as the taxwriting body of the Congress—has, for the most part, done a splendid job in its efforts to carry forward legislation for improving laws in this field.

In proposing a tax commission, however, I have felt that Mr. John Q. Public, too, should have a voice in the modification of our tax laws. As will be recalled, the proposed 12-member Commission would include at least 6 persons from private life.

Recently, the Christian Science Monitor carried a thought-provoking article entitled "Imbalance Seen in Tax Policy." Although I am not in agreement with all the conclusions reached in the article, I believe that this commentary by Mark E. Richardson on some of the defects in our tax system merits the attention of thoughtful men concerned with challenges we face in this field.

I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

IMBALANCE SEEN IN TAX POLICY

NEW YORK.—During the course of the maneuvering before congressional committees discussed in my first article, the executive branch of the Government has played a very strange part which is not generally understood by the taxpaying public.

The executive, through representatives of the Treasury Department and taxpayer groups, to the extent that they are organized, have presented opposing points of view on many proposed changes in tax law.

The congressional committee has considered the opposing points of view and drafted a statute giving effect to its decision between the parties. The taxpayer is through. He has either won or lost.

Not so with the Treasury Department. Resting in its hands is the right to draft the regulations which will control the administration of the law as written. Given the least confusion or ambiguity, the Treasury has an opportunity again to have its way even though it might not have prevailed before the committee.

Few taxpayers are conscious of the innumerable occasions when an apparent congressional intent has been perverted by regulation. Of course, the taxpayer has the right of ultimate recourse to the courts, but here he encounters doctrines of "presumption of right" pertaining to the Government's findings or of "protection of the revenues." This latter doctrine always means the protection of Government revenues—not of the individual taxpayer's revenues.

ECONOMY SHIFTS

Before summarizing any comments or suggestions for a better tax policy, there is one other important matter which has received very little attention.

During the early years of our income taxes, the rates were quite low, and the amounts applied to all classes of taxpayers were very similar. The corporate form of business enterprise was not as prevalent at the time of the enactment of the income tax, in 1913, as it is today. A much greater percentage of business than at present was carried on then by sole proprietorships, joint enterprises, and even trusts.

As the nature of our economy changed, the advantages and disadvantages of different forms of business became more important. Our tax structure did not keep pace with economic changes. The Internal Revenue Code today is full of provisions which vary so greatly in their application that sound business judgment must give way to tax expediency when a business is being formed, changed in nature or location, or liquidated.

A sometimes simple business decision to form a subsidiary or to combine two old companies now is influenced primarily by available exemptions, possible tax on the shareholders or unrealized gain, the effect or availability of carryovers and carrybacks, the treatment of tax purposes of intercorporate debt and dividends, available credits, ad infinitum.

IMBALANCE CRITICIZED

A very drastic change which might be made in our tax policy would be to reconstruct our tax law in order to eliminate the undue influence upon business decisions of the imbalance in tax applications.

Why should the income from any business—grocery store, delicatessen, pharmacy—be taxed differently if it is run by a sole proprietor than if it is run by a corporation owned completely by the same proprietor? More pertinently, why should such income be taxed once in one form and twice or more in another?

It would seem that income, for tax purposes, should be divided into three classes: income from personal services, income from investment, and income from the production, processing, or merchandising of commodities.

Investment income that represents distribution of income previously taxed should be exempt; that which represents a cost to others in determining their own tax should be taxed to the recipient. This type of income classification would not be nearly so complicated as those under which we now labor.

REVISION AWAITED

The tendency to rewrite the technical provisions of the code or to materially change them at each session of Congress is one which the Members of Congress ought to deplore rather than implement. It now is almost axiomatic that any change in the tax law necessitates the development of other changes at a rate approaching geometric progression.

While a recodification of the Internal Revenue Code has taken place several times in the last generation or so, a true reconsideration and rewriting of the code still awaits accomplishment despite all of the lip service paid to it. Once such a rewriting is accomplished, subsequent changes in rate

structure to meet considered budget requirements should be simple, without revision of the technical provisions.

Elimination of the "second chance" given to the Treasury to have its way would materially increase the confidence of taxpayers and expedite settlement of their tax liabilities. The drafting of regulations interpreting congressional enactment should not be vested in the executive branch.

LONG TENURE URGED

The Office of the Commissioner of Internal Revenue, a stupendous administrative job, should not be subjected to change every time there is a change in national administration: the Commissioner should have long tenure of office (possibly 15 years) and should be responsible directly and only to the Congress for drafting of regulations and the administration of the tax laws.

Removal from office should never be at the whim of the administration but only subject to provisions similar to those now applicable to the Comptroller General.

Above all other considerations, the tax rate structure should be so flexible as to be almost automatically adjusted upon the determination of the Federal budget requirements.

Changes in the budget as submitted by the executive branch of the Government should only be concurrent with changes in tax rates estimated to produce required revenues. The haphazard, independent development of appropriations and tax laws, without immediate conformation, should be stopped.

Carey Letter Is Unworthy of U.S. Labor Movement

EXTENSION OF REMARKS
OF
HON. ALBERT H. QUIE
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 24, 1959

Mr. QUIE. Mr. Speaker, along with many of my colleagues in the House of Representatives, I received a threatening letter several days ago from Mr. James B. Carey, president of the International Union of Electrical, Radio, and Machine Workers.

Because Mr. Carey resorted to outright intimidation, he has been justifiably criticized in the press and by many people, regardless of their views on labor reform legislation.

I am sure that, in addition, Mr. Carey received many answers to his letter from the Members of Congress he vowed reprisal against. As one such Member, I sent him my answer on August 20.

At this time, Mr. Speaker, under leave to extend my remarks, I insert in the RECORD Mr. Carey's letter and my reply:

INTERNATIONAL UNION OF ELECTRICAL,
RADIO AND MACHINE WORKERS,
Washington, D.C., August 18, 1959.

DEAR CONGRESSMAN: Only you know, in the privacy of your own conscience, whether you carefully considered the possible consequences of the Landrum-Griffin bill when you voted for it on August 13, 1959. If you did, and realized that it is a punitive, repressive measure intended to weaken all labor unions and thereby all working men and women, you have much to answer for. If you did not, and merely yielded to the pressures of the chamber of commerce and the National Association of Manufacturers, your guilt is perhaps even greater.

You should realize now, if you did not during the heat of battle, that this vindictive assault on the labor movement will, in the long run, prove to your constituents that you are less interested in individual rights and democracy than in property rights and the concentration of power in the hands of big business.

You may believe that you are safe in such action because organized labor is relatively weak in your district, and cannot call you to account for the damage you have sought to do to it. You may be right—at the moment.

We wish to assure you, however, that we shall do all in our power to prove to the working men and women in your district that you have cast your lot against them and they should therefore take appropriate action at the ballot box.

Very truly yours,
JAMES B. CAREY,
President.

AUGUST 20, 1959.

Mr. JAMES B. CAREY,
President, International Union of Electrical, Radio, and Machine Workers, Washington, D.C.

DEAR MR. CAREY: Throughout the day I have been rereading your threatening letter of August 18.

I can't tell you how sorry and disappointed I am to receive such a letter from a man who has been elected to a very high position in the labor movement. The letter is not only unworthy of you, but it embarrassed the great membership you are obliged to represent.

Up to now, the mail I received on labor legislation has been extremely helpful. The great majority of letters, cards, and wires were from people in the first district who favored the Landrum-Griffin bill. But I must say that the people who supported the Elliott and Shelley bills were just as kind and considerate as they could be in their letters to me.

People who are just as partisan in their opinions as you, Mr. Carey, were courteous, reasoned, and balanced in their judgments.

For example, until you wrote nobody implied that I was uninformed, stupid, or a tool of special interest groups. I was not threatened in any way until your letter arrived. The people who have disagreed with me have managed to tell me so without shaking their fists—in a spirit of the interchange of ideas, without resorting to abuse.

Since the Landrum-Griffin bill has passed, the response has been gratifying. Even folks who are still unconvinced that the Landrum-Griffin bill was the best we could do, share, in a sense, the belief of the Washington Post and Times Herald which says editorially today:

"We do not think the labor movement will suffer any real loss. * * * Nor will any union be killed by a reasonable compromise of the present Senate and House bills—unless it be some racket-ridden units that are a disgrace to organized labor in any event."

You did not ask me why I supported the Landrum-Griffin bill, but I believe you deserve to know why. I feel the bill provides the best means by which we can correct the abuses which exist in some areas of the country, and still remain true to the goal in not being punitive to the many unions which have been dealing fairly with their memberships.

Your letter is really unique, Mr. Carey, in that you have not given me your views on the important subject of labor legislation. Its purpose was to convey a threat. I am not, in any way, afraid of what you pledge to do to me because I believe that such a threat, underscored as it is with anger and revenge, will get nowhere.

But, if I may, I would like to give you a word of advice. You hold a very responsible position in the labor movement, and I am sure that the many fine people you represent are looking to you for leadership. You owe it to these people to be an effective spokesman for labor. Because you wrote the letter you did, you damaged your effectiveness greatly. I believe that you owe your constituents—the rank and file electrical, radio, and machine workers—a great deal. You might begin repaying their confidence by exercising the reasoned, temperate leadership they have a right to expect.

Sincerely yours,
ALBERT H. QUIE,
Member of Congress.

REA Proves To Be Sound Investment

EXTENSION OF REMARKS
OF
HON. OLIN D. JOHNSTON
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Tuesday, August 25, 1959

Mr. JOHNSTON of South Carolina. Mr. President, I call the attention of the Senate to a column from the Greenville News of Greenville, S.C., of August 23, 1959, by J. M. Eleazer, Clemson extension information specialist, entitled "REA Proves To Be Sound Investment."

Mr. Eleazer, well-known writer and friend of the farmer throughout South Carolina, has done a magnificent job of condensing the tremendous good that rural electric cooperatives have done for this Nation.

I ask unanimous consent that this article be printed in the Appendix of the RECORD, for it is one I believe every Member of Congress would enjoy reading.

There being no objection, the column was ordered to be printed in the RECORD, as follows:

REA PROVES TO BE SOUND INVESTMENT
(By J. M. Eleazer)

A little over a thousand to one.

That's unusual odds. Yet it applies to the 1,082 REA Cooperatives that are up with or ahead on their repayments to the Government.

Yes, when these great rural service organizations celebrated their 24th anniversary the past May, only one was in arrears on its scheduled repayments.

To help get electricity to the farms and far places in this country, the Government has loaned these farmers' cooperatives $3.8 billion. Repayments on principal amount to $599.7 million, interest payments $357.6 million, and advance payments ahead of due dates amount to $141.7 million.

This remarkable record prompted REA Administrator Hamil to say:

"In the late 1930's, a lot of people were wondering if those new rural electric systems were going to be able to meet the payments on their Government loans when due. Today they have their answer. The rural electrification program has proved one of the soundest investments ever made by the people of this country."

Back when REA came on the scene, few farms had electricity. Private companies have been active in this field, too. And now

few farms are out of reach of this great boon to rural life.

Even those most optimistic did not at first dream of the increasing use electricity would rapidly find in the rural areas. So the result has been that most rural lines had to be rebuilt or modified to carry the greater load, and it's still increasing. For electricity is more and more becoming the house servant and the handyman for every family.

At first electricity was mostly for lights and maybe the radio. Then came cooking, hot water, motors, refrigeration, air-conditioning, and maybe heating will be next. And the puny wires of the early days just couldn't carry the current that's needed now.

On a cold night the other winter our current went off. Lights went off. Supper stopped simmering on the stove, and company was coming. The furnace went off and the house started getting cold. The radio and television went dead. And we were just about on dead center there until it came back on. Yes, electricity has grown into one of the necessities of life in this day and time. The REA has sure played a big part in bringing it to the hard places.

Operation Bootstrap—Reservation Style

EXTENSION OF REMARKS

OF

HON. E. Y. BERRY

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 24, 1959

Mr. BERRY. Mr. Speaker, under leave to extend my remarks, I insert in the CONGRESSIONAL RECORD a portion of a letter Mr. George V. Labadie, Sr., of Pawhuska, Okla., has written and is circulating to both Indians and non-Indians regarding my Indian self-help bill which I have dubbed "Operation Bootstrap—Reservation Style."

The author, George Labadie, is one of the outstanding Indian leaders of the country. His untiring efforts in behalf of H.R. 7701 demonstrates his grand decision to be of service to the Indian people.

Part of his letter is as follows:

I am enclosing a bill introduced June 12, 1959, by Congressman E. Y. BERRY from South Dakota. Also attached to the bill is a full explanation concerning same.

READ CAREFULLY

I firmly believe the program under this bill is the solution to the most important phase of the Indian problem. Congressman BERRY, author of the bill, is from South Dakota, has been a Member of Congress for 9 years and comes from an Indian country. He is on the Committee on Indian Affairs in the House, known as the Committee on Interior and Insular Affairs, and as such member has rendered valuable services to the Indians.

The Osage Tribe of Indians in Oklahoma, of which I am a member of the Osage Tribal Council, has received splendid support and cooperation from Mr. BERRY in all our tribal business and legislation before the Congress of the United States. If the Indians in this country want progress and advancement from their present pitiful economical position, then let us all get behind H.R. 7701, which is the title of the proposed legislation introduced by Mr. BERRY.

I have been before the committees of Congress for 42 long years beginning in 1917 and during those years many plans have been initiated by the Indian Bureau and also the Congress of the United States concerning the welfare of the American Indians.

PRACTICALLY ALL OF THESE PLANS HAVE FAILED

Under this bill, H.R. 7701, generations of Indians can learn a trade, receive compensation for their services and become self-sustaining and independent from relief from their Government. But most important, this bill will restore their self respect and allow each Indian who participates in this program a decent standard of living for himself and his family.

Manners for the Visit

EXTENSION OF REMARKS

OF

HON. PHILIP A. HART

OF MICHIGAN

IN THE SENATE OF THE UNITED STATES

Tuesday, August 25, 1959

Mr. HART. Mr. President, all of us are troubled by the approaching visit of Mr. Khrushchev. I found the course of conduct recommended by an editorial in the Catholic Standard of August 21, 1959, a most responsible one. I believe the country would benefit from its counsel, and for this reason I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

MANNERS FOR THE VISIT

It is certainly understandable that the President should wish that Khrushchev be given a polite reception by the people of this country. It is understandable also, once the President had made his decision, that he should wish to contrive somehow a "friendly atmosphere" in which to conduct his conversations.

It is just as true that the President could not and would not expect Americans to be hypocritical or to deny their principles by hailing our self-appointed executioner who has bluntly boasted that he "will bury" us. We cannot conceivably be true to the Declaration of Independence and our Constitution which proclaims men to be free and equal by right of God's creation and cheer Khrushchev, covered with the blood of freemen, who only recently in Poland blasphemed God. It is very difficult to see how any loyal American can honestly cheer Khrushchev.

We feel also that the incisive speech by Senator DODD on this subject, to which so little press notice was given, contained a very apposite paragraph, "The American people, confronted now with exhortations to give Khrushchev a friendly reception, are being propagandized into a position of either applauding the Communist dictator or of appearing to hinder efforts to relax tensions." The Reds can use either or both of these effects to their own devastating advantage.

It is completely irrelevant to state that Americans should cheer Khrushchev because the Vice President was cheered by the Russians and the Poles. The Vice President is not Khrushchev. The Vice President was rightly hailed by the Russians and Poles because of the Nation he represents as well as his personal merits. Khrushchev represents the world's bloodiest tyranny and is himself a willing, guilty leader of that conspiracy. Long before he was the "Butcher of Budapest" he was the butcher of the Ukraine where he, in the land of his birth, supervised the ruthless suppression of his own section at the estimated cost of 4 million lives.

Regardless of the undeniably good intentions of the President and those who favor Khrushchev's visit, how can one compose the contradictions of free Americans cheering Khrushchev along Constitution Avenue? Is this a service to freedom and peace? Or is this a subversion of freedom and peace? Can cheers for the man who wears the red mantle of Stalin, appropriately killing and exiling his rivals, as he rides next to our President possibly advance the cause of justice, the basis of peace, as our President has acknowledged? Is there any conceivable legerdemain that could make the victims of Khrushchev believe that the cheers are not not for him and his villainy but for the Russian people and peace?

This is not to imply that a demonstration against Khrushchev would be advisable. The only deportment consonant with our principles, we feel, is a cool, formally correct reception that permits no denial of our heritage.

Interest on Government Savings Bonds

EXTENSION OF REMARKS

OF

HON. THOMAS M. PELLY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 25, 1959

Mr. PELLY. Mr. Speaker, this morning I received the following telegram from Reno Odlin, National Chairman of the Savings Bond Advisory Committee.

This points up the critical problem of the ceiling on savings bonds interest.

I urge my colleagues to give this telegram a thoughtful reading because I am convinced that before Congress adjourns consideration should be given to this most vital problem:

TACOMA, WASH.,
August 25, 1959.

The Honorable THOMAS M. PELLY,
House Office Building, Washington, D.C.:

I earnestly hope the House will act to remove the ceiling on savings bonds interest. You know my long association with this program. I can feel the demoralization and letdown that is going on all over the country on account of the utterly unrealistic rate which now prevails. In my work as national chairman I am getting reports of this nature from all over the country. This is a program that affects over 40 million people and comprises over $42 billion of the Treasury's debt management problem. Whatever you and your associates may think about other aspects of the fiscal and monetary situation, the savings bond program surely merits realistic treatment to keep the thing going. I hope this session will not conclude without giving us the tools to work with. Momentum in a program of this magnitude once lost is very hard to regain. Revision of these rates to a level that makes sense in the present market will revive the whole program and give us an opportunity to be extremely helpful in the overall problem of distribution of the national debt in a noninflationary manner. It will also play fair with those millions of people who have bought bonds and are holding them, and with the millions who continue to buy them

from month to month on the payroll savings plan. I ask your cooperation in urging this upon your colleagues.

RENO ODLIN.

Our Confused Civil Defense Program

EXTENSION OF REMARKS
OF
HON. STEPHEN M. YOUNG
OF OHIO
IN THE SENATE OF THE UNITED STATES
Tuesday, August 25, 1959

Mr. YOUNG of Ohio. Mr. President, a recent column by Sidney Andorn published in the Cleveland News of August 12, 1959, clearly indicates the confused and muddled status of our civil defense program.

Mr. Andorn correctly points out that subaverage planners are drawing big salaries to head up the very confused Office of Civil and Defense Mobilization. As a result of their activities and service, the Nation has spent nearly $1 billion of taxpayers' money and has less security than when the program began.

I ask unanimous consent that this column be printed in the Appendix of the RECORD. I commend it to my colleagues in the Senate.

There being no objection, the column was ordered to be printed in the RECORD, as follows:

NOW IT'S EVERY MAN FOR HIMSELF

(By Sidney Andorn)

It isn't indifference or apathy which has us so seemingly unconcerned about civil defense, Mr. President.

It's disgust.

Disgust with stupid leadership.

In a letter to New York's Governor Rockefeller you said the average American's indifference to civil defense must be overcome for the Nation's protection.

You should become better acquainted with the average American, Mr. President.

We don't want to be killed.

PLANNING BELOW AVERAGE

If you're really concerned about the Nation's protection you'd better look into the subaverage planners drawing big pay to head up civil defense.

Planning analyst for the evacuation of metropolitan centers in Ohio is working on expectation of 3 hours' attack warning.

Navy's new Project Tepee hopes to extend warning time from the present 15 minutes to 30 minutes.

Navy says Teepee won't be working for another couple of years.

WHAT ARE ACTUAL FACTS?

So what is it, Mr. President? Three hours' warning time in which to evacuate millions, or 15 minutes' warning time in which to say our prayers.

Or is it evacuate or go underground? New York has tossed out the evacuation program as useless.

New York's plan now, which your letter commends, calls for a voluntary program of providing shelters.

So after we've spent millions on civil defense it's every man for himself.

WAGER THEY'RE ALL SET

Now we're to get out our little shovels and our sacks of cement and dig ourselves shelters.

Nobody, however, tells us where to dig, how much cement, how deep to go, how big to build.

Nobody tells us where to get the dough for these diggings.

Don't you find it significant, Mr. President, that none of our visitors to Russia report on the Commies' civil defense?

You can bet it's not, as with us, that they're caught with their plans down.

View From the Farm

EXTENSION OF REMARKS
OF
HON. JACKSON E. BETTS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, August 24, 1959

Mr. BETTS. Mr. Speaker, as one who has respected and admired the American Farm Bureau for the position it has taken on agricultural programs, I submit the following editorial from the Wall Street Journal of August 17, 1959. The farm bureau is one of the great organizations of the country and its members come from small as well as large farms. I have personally witnessed local meetings of the organization where issues are debated and voted on. The results of the votes are forwarded to the State headquarters and ultimately to the national office.

When Mr. Shuman speaks it is fair to assume therefore that his views coincide with the thinking of the majority of farm bureau members. For that reason, they are entitled to every consideration.

[From the Wall Street Journal, Aug. 8, 1959]

VIEW FROM THE FARM

"Today's burdensome surpluses with their fantastic storage costs are symptoms of a sick farm program which has infected the business of agriculture with the disease of Federal aid and control."

Now, people reading those words might conclude they came from some city slicker so ignorant of the farm he thinks prize-winning calves always come in pairs a couple of inches above some shapely ankles.

Not so. Charles B. Shuman, president of the American Farm Bureau Federation, was the speaker. The Farm Bureau Federation represents 1.6 million farm families throughout the country, but does not, of course, claim to speak for all of them. It can speak for a considerable majority of its members, however, for frequent polls the federation holds invariably show opposition to the support programs.

The farmers would be vastly better off, Mr. Shuman told an audience recently in New York, if the Government would permit them to use the free marketplace to supply consumer needs. Government subsidy programs based on parity serve neither the interests of the consumer or the farmer, he added.

Nor of anybody else, for that matter. Consumers and farmers pay taxes (somebody once figured out that there are 51 taxes hidden in one loaf of bread) and the taxes they've paid for the monstrous farm program might be enlightening to some who don't realize the figures. Since 1954, and including 11 months of fiscal 1959, the farm program has realized losses of $5.8 billion.

In addition to paying farmers for things they grew and for things they didn't grow, the Government also spent some pretty impressive sums of money the farmers didn't get a dollar of.

For example, the Commodity Credit Corporation reports for the 11 months ending last May 31 that carrying charges alone on crops amounted to $495 million, interest amounted to $145 million, and general overhead—that euphemism for a bureaucracy that has moved in on the farmer faster than a corn borer through the lower forty—has cost the taxpayer $39.3 million in the same period.

Well, if a wasteful program such as this isn't even liked by farmers it's supposed to benefit, what in the world keeps it going?

Mr. Shuman had an answer for that one, too. "Though farmers often have asked that these programs be changed, the Congress has not yet taken effective action."

And that, so far as letting the public know who is really to blame for the follies of the farm program, ought to help separate the sheep from the goats.

The Steel Strike

EXTENSION OF REMARKS
OF
Hon. EVERETT McKINLEY DIRKSEN
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Tuesday, August 25, 1959

Mr. DIRKSEN. Mr. President, I ask unanimous consent that two editorials concerning the steel strike be printed in the Appendix of the RECORD.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Chicago Daily News, Aug. 21, 1959]

MITCHELL STATES THE FACTS—STEEL REPORT A WARNING TO INDUSTRY AND UNION

Taken together, Secretary of Labor Mitchell's factfinding report on the steel strike and his comments upon releasing it must be considered a solemn warning to both the industry and the union to come to terms soon or risk Government intervention.

Mr. Mitchell's report is restrained and objective—so much so, in fact, that each side interprets it as supporting its own position. It is also so comprehensive and balanced as to leave the general public, for whom it was ostensibly designed, lost in a sea of statistics and unable to make up its mind.

Some of the statistics appear to back management points in the 5-week-old controversy, while others support the union argument. In general, the report shows that steel wages and prices are ahead of those in industry generally.

The careful balancing and counterbalancing of fact in the 40-page document surely indicates a Government view that there is room for giving ground on each side.

While the Secretary carefully refrained from taking sides, it is significant that at his news conference he strongly underlined his belief that neither management nor union representatives have bargained as intensively as they should.

His idea of bargaining is that they should meet continuously and not on a 2- to 4-hour basis with a Friday to Tuesday weekend.

"Both sides," he warned, "should realize that they have a responsibility to the Ameri-

can public to settle this as expeditiously as possible."

How soon he thinks the strike problem will reach the critical stage may be inferred from his comment that very serious shortages of steel will begin to appear if a settlement is not reached by the latter part of September or early October.

As a one-man committee appointed by the President, Mitchell has made a soft beginning. But the tenor of his remarks indicate that as time goes on the Government will start exerting pressure for a settlement.

Mr. Eisenhower has repeatedly stressed his desire that the administration should not intervene in the dispute. Despite inferences to the contrary, it is reasonable to believe that he has been concerned not so much by political considerations as by a clear knowledge that he cannot properly invoke the Taft-Hartley law until the public interest is deeply involved.

Such an involvement would occur if a serious steel shortage should develop, as Mr. Mitchell suggests, a month or so from now.

One point in the report bears closely on one of the crucial issues in the strike, which is the question of output per man-hour. The steel companies have argued that steel prices have been forced up because increases in employment cost have exceeded increases in output per man-hour.

According to the Mitchell report, the industry's rate of annual increase in hourly output per worker since the war has been only 3 percent, compared with 3.7 percent for the economy as a whole and 3.1 for manufacturing plants.

This has occurred despite an increase in capital investment per production worker from $9,000 in 1947 to about $20,000 in 1957.

The administration has insisted all along that any steel settlement arrived at should not be inflationary. Mr. Eisenhower has held also that any wage boost granted should be tied to productivity.

While there is nothing that is new in any of the material assembled by Mr. Mitchell, the mere bringing it all together for reexamination and public appraisal may serve to throw new light on the complex issues involved.

[From the Chicago Daily Tribune, Aug. 21, 1959]

THE STEEL INDUSTRY AS EMPLOYER

Secretary of Labor Mitchell's compilation of the facts regarding the steel industry as an employer ought to prove helpful in ending the steel strike. He and his department deserve credit not only for assembling a mass of relevant material but also for presenting it in readable form.

Probably neither union nor management will be overjoyed. Mr. Mitchell's facts show that both sides have exaggerated their claims and their grievances. Steel labor is well paid by any standard of comparison that can be employed. Steel profits are high this year but they are not as outrageously high as the union has tried to make them appear and over recent years they were actually below the average for comparable industries.

On the other hand the union's featherbedding, however damaging it has been, has not blocked all efforts toward increasing the efficiency of the mills. The union can show from Mr. Mitchell's report that output per man-hour of the wage earners in the mills has increased by 3 percent a year, a higher rate of increase than is credited to the rest of the working force in the steel industry. Management can reply by quoting Mr. Mitchell's figure of an average gain of 3.7 percent in output per man-hour for all the Nation's economy.

Probably the most serviceable section of the report is that dealing with wage settlements in recent months in other industries. What this shows is that about half the wage earners concerned in the new contracts received increases of at least 7 or 8 cents an hour, with some additional fringe benefits, or, to put it the other way around, half received less than these amounts.

It does not follow necessarily that the steelworkers union will settle for the median amount but that would be a pretty good place to start the bargaining, especially in view of the fact that the employers have given numerous indications that they regard the figure as reasonable. The featherbedding problem will remain, but Mr. Mitchell's figures have placed it in perspective.

Some day this strike is going to end and, if negotiations follow the usual course, it will end with concessions on both sides. Meanwhile it is costing millions of dollars to wage earners and companies alike, giving both an incentive to reach a settlement. The possibility of Government intervention under the Taft-Hartley law will become a probability as the Nation's economy is squeezed for lack of steel. Mr. Mitchell's facts and figures should help speed the reopening of the mills.

Nice Words About Michigan

EXTENSION OF REMARKS
OF
HON. MARTHA W. GRIFFITHS
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 25, 1959

Mrs. GRIFFITHS. Mr. Speaker, recently I received the following letter regarding the National Music Camp located at Interlochen, Mich. While this is not in my district, I am proud of my whole State and her accomplishments:

AMERICAN SOCIETY OF COMPOSERS,
AUTHORS AND PUBLISHERS,
New York, N.Y., August 20, 1959.

The Honorable MARTHA W. GRIFFITHS,
House Office Building,
Washington, D.C.

DEAR CONGRESSWOMAN: On August 10, as the immediate past president of the American Society of Composers, Authors and Publishers (ASCAP), I was invited by Dr. Joseph Maddy to attend the dedication services of the scholarship lodge our society contributed to the National Music Camp at Interlochen, Mich.

As a professional songwriter for many years, I had heard much about Interlochen and what this camp has done over a period of 32 years for the youth of America. This was my first visit. There is an old saying "Seeing Is Believing" and what I saw is something I will long remember. I saw the Interlochen student of today becoming the teacher of tomorrow in schools and colleges throughout the Nation. I saw the epitome of discipline in this great operation and what's more important I saw approximately 1,200 youngsters being guided by able and conscientious counselors, whose sole aim is to make them—good citizens of the future. As a dyed-in-the-wool New Yorker, and a former showman who has traveled all over the country, believe me the State of Michigan can be justly proud of this camp's success.

No doubt the Members of Congress have given their support, directly or indirectly, to this wonderful achievement. For this you are to be commended. If more States throughout the Union could boast of a comparable activity, I am sure there would be less juvenile delinquency.

I am sure that I voice the sentiments of everyone connected with music when I say that although Michigan is the center of the automotive industry, it is also a great cultural center educating the youth of America in the arts and particularly in the universal language—music.

Hope I haven't taken up too much of your time, but I just couldn't resist telling a Michiganite how a New Yorker feels about your National Music Camp.

Respectfully yours,

PAUL CUNNINGHAM.

Visit of Premier Khrushchev in the United States

EXTENSION OF REMARKS
OF
HON. ROBERT C. BYRD
OF WEST VIRGINIA
IN THE SENATE OF THE UNITED STATES
Tuesday, August 25, 1959

Mr. BYRD of West Virginia. Mr. President, upon several occasions, I have made statements in criticism of the administration's invitation to Premier Khrushchev to visit this country.

As another supplement to my earlier remarks, I ask unanimous consent to have printed in the CONGRESSIONAL RECORD two letters from readers which appeared in yesterday's issue of the Washington Evening Star. These letters express some of the shock and disgust felt by American citizens. How much greater must be the disillusionment of the millions of enslaved persons behind the Iron Curtain, and the victims of communism throughout the world, when they find that America, the bulwark of freedom, is embracing with open arms, as it were, the tyrant chief of world communism.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

[From the Washington (D.C.) Evening Star, Aug. 24, 1959]

As a taxpaying citizen, I am curious to know whether President Eisenhower consulted with the immediate families and relatives of the pilots shot down over Turkey on September 2, 1958, as to the advisability of inviting Mr. Khrushchev to this country. As near as I can gather, the correct reason as to why this plane was shot down has not been forthcoming, nor has the State Department been able to secure an explanation although two very important Russian diplomats recently visited this country.

I would also like to know if the President has asked the families and relatives of some of the prisoners now held behind the Iron Curtain, whom the State Department has been unable to release, and likewise, the families and relatives of many of the men lost in Korea.

In the diligent quest for peace, it is hardly necessary to shake a murderer's hand.

J. KEITH CROMER, M.D.

Does Khrushchev's visit signal the final step in the master plan of the Communists to take over this country and to establish a world totalitarian dictatorship? A Russian Communist leader predicted that it would be so.

Dimetry Manuilsky, a prominent Red Party leader speaking before the Lenin School of Political Warfare in Moscow in 1930, declared: "War to the hilt between communism and capitalism is inevitable. Today, of course, we are not strong enough to attack. Our time will come in 20 to 30 years. To win we shall need the element of surprise.

The bourgeoisie will have to be put to sleep. So we shall begin by launching the most spectacular peace movement on record. There will be electrifying overtures and unheard-of concessions. The capitalistic countries, stupid and decadent, will rejoice to cooperate in their own destruction. They will leap at another chance to be friends. As soon as their guard is down, we shall smash them with our clenched fists."

A few years ago inviting a dictator to this country to be wined and dined would have been considered treason—or, at best, unpatriotic. Where are the voices of the "anti-Fascists" of the early forties who called out against appeasing Hitler? Would the Nazi Hitler have been invited to visit America? Are not both Khrushchev and Hitler dedicated to establishing a totalitarian world dictatorship?

Congress should force President Eisenhower to rescind the invitation to Khrushchev immediately.

KENT COURTNEY.

NEW ORLEANS, LA.

Mission With Nixon

EXTENSION OF REMARKS

OF

HON. HALE BOGGS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 25, 1959

Mr. BOGGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the 10th in the series of articles written by George W. Healy, editor of the New Orleans Times-Picayune, who accompanied Vice President NIXON on his recent trip to the Soviet Union.

The article follows:

[From the New Orleans Times-Picayune, Aug. 18, 1959]

MISSION WITH NIXON—RUSS SCRIBES PUT IN PLACE AT FINAL MOSCOW MEETING—HEALY TELLS OF RESTON QUERY THAT DID TRICK

(By George W. Healy, Jr.)

(Tenth of a series)

WARSAW, POLAND.—Sunday, August 2, was a great day in my life.

That's the day I saw a U.S. newspaperman put a crowd of Russian newspapermen in their places, and it's also the day I got out of Russia.

After going to two churches, I had the great privilege of watching James "Scotty" Reston of the New York Times handle the Russian press at Spaso House.

Spaso House is the U.S. Embassy, scene of Vice President RICHARD M. NIXON'S final public appearance in Russia.

When we were driven to this final conference we found all the front seats occupied by Russian reporters and photographers.

NIXON IMPARTIAL

Mr. NIXON, wisely, I think, recognized as questioners just as many Russians as Americans or British. The Russian questions were translated into English by an interpreter of the Russian Government, who in turn translated English questions into Russian for the Russian group. The answers also were given in two languages.

Most of the Russian questions weren't really inquiries—but speeches, pressing the Communist Party line.

As an example, here is a "question" by a representative of the Moscow radio named Zorin:

"Mr. Vice President, I have the impression that the conditions are such that representatives of the Soviet press have less opportunity of putting questions to you than foreign correspondents. The foreign correspondents you have with you on the trip have better opportunity of putting questions to you than the Russians. I want to insist that you give us Soviet correspondents the same opportunity to put questions to you. I am a representative of Moscow Radio, and my name is Zorin. I have a question. The Soviet Union has repeatedly suggested a ban on nuclear weapons to eliminate the arms race among nations and to put an end to war. The Soviet Union has made the same proposal after 1949 when it became known that the Soviet Union was the possessor of the nuclear weapon. The demand became stronger after 1953 when the Soviet Union became the possessor of thermo-nuclear weapons. Why, then, does the United States so persistently not want to put an end to all the atomic and nuclear weapons and eliminate all stocks of such weapons? My second suggestion is closely connected with the first one. In your television speech last night you touched on the open-sky plan. Why, since the Soviet Union accepted that suggestion in a form which excluded the using of that plan for intelligence purposes, the United States would not hear?"

WOULD STOP TESTS

Mr. NIXON'S reply, of course, was that the position of the United States was that it seeks not simply the writing of a paper but the stopping of the tests.

Then a representative of Pravda, official paper of the Soviet Union, a man named Litoshko, came in with a "question" similar to that of Mr. Zorin.

"Scotty" Reston got in his lick: "Mr. Vice President, in view of the questions put to you here by our Soviet colleagues, may I ask whether during your conversations you discussed with Mr. Kruschchev the aggressions in Korea or Indochina, or the Hungarian uprisings?"

The Vice President ruled out the Reston question as improper—in view of his policy of not disclosing the specific substance of discussions, on Russian soil, with top level Russian officials.

Although the question, technically, was improper, I suspect the Vice President was glad that it was asked.

I was.

PASSPORT HELD UP

It looked for awhile like I was not going to make the trip to Warsaw. As a matter of fact, it looked like I wasn't going anywhere.

Shortly before packup time on Saturday afternoon, August 1, I got the bad news from Tommy Tuck of the United States Embassy in Moscow that no visa had been issued for me to visit Poland and that my passport had not been returned. In other words, I had no permit to travel.

Others in the Nixon party were ready to go—visas and everything set.

When it was announced at a "briefing" that I had not been cleared to stay with the party everyone in the group was sympathetic. Some made suggestions as to how I should make my way back, alone, to the United States.

Naturally, I wanted to stay with the group. When you're in Russia or Siberia the phrase "collective security" comes to have real meaning. You're glad to be there with American friends, but you'd hate to be there all by yourself.

Representatives of the United States Embassy questioned me as to whether I had done anything which might be considered offensive to the Polish Government. I thought of a brush which I had with some Poles in Washington during World War II, but it didn't seem to me that this should have any bearing on my request for a visa.

Tommy Tuck and Richard Davies, State Department escort officer, went into action. At Tommy's request, the U.S. Embassy in Moscow telephoned the U.S. Embassy in Warsaw. Special action by the Polish foreign office was requested.

HALTED SECOND TIME

After several hours' suspense, I was told that my visa might still come through. I told our State Department representatives that I planned to go with the group to Warsaw—passport or no passport.

Late Saturday, my passport, with a Polish visa, was returned to me; but that was not the end.

At the Moscow airport Sunday I had to surrender this passport, with passports of other members of our party, for a final clearance before we could board the plane for Warsaw. When passports of the other members of the party came out with clearances, mine remained with the Russian officials.

Whatever the reason, clerical mistake or otherwise, I didn't get my passport and visa back for almost 2 hours. Our charter flight from Moscow to Warsaw was scheduled to depart at 3 p.m. We didn't get off the ground until 3:45 p.m.

I was the last man on the plane—holding up the bridge game for the championship of jet stream Russia, Siberia, and Poland.

West Virginia Legionnaires Active in National Convention; State Legion Memorial Address Cited

EXTENSION OF REMARKS

OF

HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Tuesday, August 25, 1959

Mr. RANDOLPH. Mr. President, the American Legion, now holding its annual convention in Minneapolis, Minn., doubtless is providing a forum for the advocacy of the best in Americanism by sincere men and patriots who have given much of themselves that it shall be perpetuated.

More than 100 West Virginia Legionnaires are in attendance, headed by Department Commander Bonn Brown of my home city of Elkins. I forwarded to Commander Brown today the following telegram, which is of vital interest to veterans:

Senate Resolution 19, to establish a standing Senate Committee on Veterans Affairs, of which I am a cosponsor, has been favorably reported by the special subcommittee of Senate Committee on Rules and Administration. I am on record with a forthright statement to the full committee supporting this resolution and I am attempting to have the measure reported for action by the Senate at the earliest date possible.

The Highlanders, a noted bagpipe band composed of 26 members, including the color guards, received merited recognition during the famed Legion parade yesterday. This musical organization from the H. W. Daniels Post in my home county is under the leadership of my fellow townsman, I. H. Gainer, with C. S. Kump in charge of the color guard.

In this connection, I am reminded of the memorial address by Department Chaplain George L. Cutlip before the recent State convention at Parkersburg, W. Va., in which he spoke of the Bill of Rights as our "crowned jewels," our "treasured freedom which we are privileged to display through the affairs of our country."

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the memorial address by Chaplain Cutlip.

There being no objection, the address was ordered printed in the RECORD, as follows:

OUR CROWN JEWEL—MEMORIAL ADDRESS AT THE AMERICAN LEGION CONVENTION, DEPARTMENT OF WEST VIRGINIA, JULY 26, 1959, PARKERSBURG, W. VA.

(By George L. Cutlip, department chaplain)

Being a minister, it is difficult to begin an address without a text. Therefore, I have selected two sentences. In Psalms 56: 3–4 are these words, "When I am afraid I put my trust in Thee. In God, whose word I praise, in God I trust without fear," and, also, in the Psalm 72: 11, "Ye, all kings shall fall down before Him; all nations shall serve Him."

We have observed a beautiful ceremony, "The Post Everlasting." This we do to honor those who have paid the price for freedom. But in keeping with the theme of Abraham Lincoln, in his Gettysburg address, "It is for us, the living, rather to be dedicated here to the unfinished work which they who fought here have thus far so nobly advanced. It is rather for us to be here dedicated to the great task remaining before us—that from these honored dead we take increased devotion to that cause for which they gave the last full measure of devotion—that we here highly resolve that these dead shall not have died in vain—that this Nation, under God, shall have a new birth of freedom—and that government of the people, by the people, for the people shall not perish from the earth."

Thomas Wolfe, in his book "You Can't Go Home Again" states: "I think the true discovery of America is before us. I think the true fulfillment of our spirit, of our people, of our mighty and immortal land, is yet to come. I think the true discovery of our own democracy is still before us."

David Douglas Duncan writes a story of a young soldier in the Korean war. The soldier was cold, beardy, clothes were showing signs of battle wear, and he had taken time out to eat his meal of a can of frozen beans, you know, those famous canned beans, and he was breaking each bean loose with his fork—and weighing the situation with all seriousness. He was asked by a passerby soldier what would be your request right now, if you had the privilege. His reply, "Give me tomorrow."

As the psalmist faced the many hardships of life, fears overshadowed him. He felt the tread of the enemy, the piercing of the arrow and the battleax, yet behind all these fears that crept into his life there was something that led to a trust in God. In our preamble, we say, for God and country, we associate ourselves together. We associate ourselves together for specific purposes. One is to overcome the fears that haunt our Nation, fear of world conflict, conflicts more destructive than those we have experienced. Here, we honor our comrades who have fallen in the many wars of the past, praying that no such an experience may befall our children. These are among the fears and unrest that haunt us each day as we read our papers and listen to the news on our audio-visual communication.

But again the psalmist said that all nations shall serve Him. This was the hope and dream of the psalmest as he wrote his beautiful songs. However, experience throughout the long period of human history teaches that liberty must be won in every generation and can be had only by "eternal vigilance." The Ten Commandments, the Magna Carta, and the Bill of Rights have each come into being at a time of great distress. They clearly represent the desire of a people who had paid a high price for their independence and were determined to keep it.

There is the story of a group of boys who built a shack in the woods. Each boy contributed his share of old lumber, nails, and covering. With a lot of pounding, sawing, and sweating a little shack was erected and the boys were very proud of the achievement. This was a magic example of cooperation. By pooling all their resources, a cozy retreat had been erected that protected them from the winds and rains.

But there were only a few days of the peaceful cooperation before one of the fellows became dissatisfied with the arrangement and began to tear off his boards and take them home. Each fellow joined in with his exasperations and likewise tore off his boards. Soon the cooperative enterprise was over, and only a trampled patch of weeds marked the place of the efforts of a neighborhood of boys.

Why have I told you this story? You say that happens with any gang of boys. Yes, it does, and it makes about as much sense as we do sometimes with our reasoning regarding our freedom and safeguarding against our fears. It is the united effort of every one of us that makes our Nation great and wards off our fears of destruction, fear of the might hand of tyranny, fear of the destruction of our American way of life.

Like old Caleb at the age of 85 years, when he was given the privilege to select the best of the land under the command of Joshua, he replied, "Give me the hill country." Thomas Wolf challenged his readers that much lies ahead for America—that the true democracy lies ahead. These are prophetic words, yet they bear much consideration.

We gathered here because we have had a common experience of at least two wars, and some three—World Wars I and II, and the Korean war. Our freedom has been challenged. We have come to realize that not all nations have learned to serve a God who is sovereign; nor to respect the rights of others, even though we may differ in certain idealism.

Our treasured freedom is the Bill of Rights—our "crowned jewels" which we are privileged to display through the affairs of our country.

They provide that "Congress shall make no law respecting an establishment of religion, or prohibiting the free exercise thereof; or abridging the freedom of speech, or of the press, or the right of the people to peaceably assemble, and to petition the government for redress of grievances."

Freedom is a man at a lathe, or at the desk, doing the job he likes to do, and speaking up for himself. It is a man in the pulpit, or on the street corner, speaking his convictions.

It is a man puttering in the garden in the evening, and swapping talk with his neighbor over the fence. It is the unafraid faces of men and women and children at the beach on Sunday, or looking out of the car windows speeding along a beautiful highway.

It is the man saying "Howdy," without looking cautiously over his shoulder.

Freedom is the air you breathe and the sweat of your toil. It is you, every American like you, with your chin up, daring anybody to take your Americanism away from you. It is you, unafraid—with an unfaltering trust in God. "For God and Country we associate ourselves together"—"In God we trust without a fear." This is the freedom—this is the America our comrades died for that we might live as free men. It is to us, the living, to be dedicated—unafraid—to the unfinished task remaining before us, and to discover the true democracy that lies ahead.

Poles Dressed Up—Smiling

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 25, 1959

Mr. BOGGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the 11th in a series of articles by George W. Healy, editor of the New Orleans Times-Picayune, who accompanied Vice President NIXON on his recent trip to the Soviet Union.

The article follows:

[From the New Orleans Times-Picayune, Aug. 19, 1959]

MISSION WITH NIXON—POLES DRESSED UP—SMILING—MASSES APPEAR MORE FREE THAN THEY ARE IN RUSSIA

(By George W. Healy, Jr.)

(Eleventh of a series)

WARSAW, POLAND.—Although some of us had come to regard the Ukraina Hotel in Moscow as akin to a second home, moving from Moscow to Warsaw was like crossing from a forbidding swamp to a promised land.

Switching from the Russian Aeroflot jets to the Trans World Airways 707–171 was comparable to leaving an old local accommodation mixed train to board the Panama Limited.

The flight from Moscow to Warsaw passed swiftly. Only an absence of trunk highways made the terrain below, seen occasionally through the overcast, appear any different from the rolling country of northwest Louisiana.

Our reception in Warsaw, to put it conservatively, was sensational—and unexpected. The Polish city did everything it could to make us feel welcome, from carpeting Vice President NIXON'S automobile with flowers to applauding all of us every foot of the way from the airport to the Grand Hotel.

Practically all the men and women and many children in the lines along the highway and streets through which we rode were well dressed—western style. Few men were without ties. All smiled or waved a cordial welcome as we passed.

When the NIXON automobile was alongside, the shout was "NIX-OON" or "Pat."

Through the 10-plus miles from the military airport to the hotel I heard not a single "Go home, Yankee," and saw not a single unfavorable gesture.

That more than 250,000 people turned out was remarkable, considering there had been little advance notice of our coming. The Warsaw newspaperman, a stanch Socialist, who estimated that the NIXON crowd exceeded 250,000 told me that Nikita S. Khrushchev attracted about 100,000 3 weeks earlier.

Our first night in Warsaw was memorable. The nation's association of newspapermen, comparable with the National Press Club in Washington, or with IBI in Rio de Janeiro, entertained at a cocktail party and buffet. On the program was presentation of a motion

picture showing steps in the restoration of Warsaw.

Although it was more than 14 years ago when the last bomb fell on the city, Warsaw still has heavy war scars. Just across the street from the Grand Hotel is a vacant lot, with scattered bricks reminding that a building once stood there. Coming from the airport we passed several bombed buildings whose ruins cry for demolition. The walls lean dangerously.

People of Warsaw with whom I talked expressed optimism as to the outcome of the Nixon visit. The president of the journalists' group (I can't spell his name), who was in New Orleans in 1957, suggested that the visit will bring much closer ties between the United States and the Polish People's Republic.

Thousands of Poles who went to the airport to inspect our TWA 707–171 jet were disappointed. They found the military airport closed to civilians. Before its ramp was removed at the Moscow Airport, more than 5,000 Russians had passed through this plane.

To the U.S. visitor, Warsaw definitely is a warmer city than Moscow, figuratively speaking. Its people extended the same kind of welcome to our party that was extended in Siberia—where visitors seldom are seen.

Poles definitely have more freedom than the masses in Russia. Their churches and church schools apparently are functioning normally.

European editions of U.S. newspapers, the New York Times and the Herald Tribune, are on sale here. In Russia they are not available, the official explanation being that demand for them is not great enough to justify their importation.

Poles, I found early, aren't enthusiastic about either Russian culture or the Russian language. When I said to a waiter, "spaseebo," the Russian word for "thank you," he frowned. Poles whom I met prefer to be spoken to in Polish, in French, or in English.

The Polish newspapermen were particularly helpful to our party. They provided each of us a list of editors and reporters of Warsaw newspapers and periodicals who can speak English. On the list were 61 names, with telephone numbers. As in Moscow, there apparently are no telephone directories in Warsaw. At least, we couldn't find one.

Trybuna Ludu, the organ of the Central Committee Party, expressed to us the feeling of the leaders of Poland regarding our visit.

This newspaper, which I was told is just as official for the party in power in Poland as is the official organ of the Communist Party in Russia, resurrected a phrase which long has been in mothballs—the phrase "coexist." We heard of coexistence once in Russia, when Mr. Khrushchev spoke at the U.S. exhibition.

"The Polish People's Republic and the United States are states with different social systems," said the Polish official organ. "Independent, however, of the social-political differences, both states and their nations can and should coexist between themselves in harmony and friendship, developing a mutual cooperation particularly in the economic and cultural fields, doing everything which is possible within their power to make peace permanent on earth and to prevent the most horrible of catastrophies which an atomic war could be for humanity."

This newspaper reminded us that while the United States with a capitalist system has developed the world's greatest productive capacity, the Polish nation "when it lived under a capitalist system in the period before September 1939, not only could not raise itself from economic backwardness and improve its welfare, rather, the system pushed it further into greater poverty and misery."

We were left no room to doubt that Poland prefers socialism to capitalism—this on the basis of what we read in the Polish papers and what we heard from Poles with whom we talked.

Although Poland is a Russian satellite, we hear in Warsaw no mention of communism.

My horseback opinion is that Poland differs from Russia in official attitude toward other nations. The Kremlin unquestionably would like to impose communism on the whole world. Polish leaders, barring stooges of Khrushchev in Warsaw, aren't interested in what kinds of government other nations have so long as those nations permit Poland to have its socialism.

Increase of Acreage Limitation of Oil and Gas Leases in Alaska

EXTENSION OF REMARKS
OF
HON. E. L. BARTLETT
OF ALASKA
IN THE SENATE OF THE UNITED STATES
Tuesday, August 25, 1959

Mr. BARTLETT. Mr. President, I have received a letter from a person eminently well qualified to discuss the merits of recently vetoed H.R. 6940, a bill providing for the increase of acreage limitation of oil and gas leases in Alaska. The author of this letter, Mrs. Irene E. Ryan, is a graduate mining engineer, the first woman graduated in that field from the New Mexico School of Mines, a senator in the Alaska State Legislature, and chairman of the Alaska State Committee on Natural Resources.

I ask unanimous consent that Mrs. Ryan's letter be printed in the Appendix of the RECORD:

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

STATE OF ALASKA, SENATE,
Juneau, Alaska, August 19, 1959.

Hon. E. L. BARTLETT,
U.S. Senate,
Washington, D.C.

DEAR SENATOR BARTLETT: The act of the President in vetoing legislation granting an acreage increase for oil leasing in Alaska did not come as a surprise to Alaskans. The testimony given in opposition in the CONGRESSIONAL RECORD and the adverse statements originating from the Secretary's office in the Department of the Interior led us to expect the President's action.

There is no question in my mind that the result will be detrimental insofar as oil and gas exploration programs in Alaska are concerned. It would be impossible to evaluate just how detrimental for the simple reason that we cannot know the cuts that will be made in the exploration programs the several hundred oil companies and independent producers had been considering for the State. It will have an immediate effect upon anticipated revenues from lease rentals that would accrue to the State for two reasons:

1. The amount of new acreage taken under lease will be materially restricted;

2. Leases now going into their fourth and fifth years of rental payments and held by individuals—most of them Alaskans—will expire and return to public domain.

The individuals simply do not have the money to pay continuing rentals; nor do they have the money to pay for the initial geological and geophysical exploration work which might show them if the leases are, in fact, worth keeping. They are now foreclosed from turning over the leases to companies able and willing to do such work because such companies and independents have already saturated their acreage allowable. Many people have asked me why the adverse report was given by the Department of Interior and why the President vetoed the bill. Obviously, the Peraident depended upon the advice of one of his Cabinet members, the Secretary of the Interior.

I cannot agree with the reasons given by that Department for their nonsupport of the bill. I have read their testimony before the committee with extreme care and find that it hinges entirely upon the statement that they do not believe the increase would be helpful or desirable or that it would promote the development of oil and gas in Alaska as contemplated by the Mineral Leasing Act.

In hearings held in Alaska and attended by the general public as well as the industry, it was made abundantly clear that the present acreage limitation was, in fact, hampering the exploration and development program in our State. The reasons were given with great detail by specialists in the industry and in such a manner that they were grasped by all attending. It was also evident at the hearings that the desire for an increased and realistic acreage limitation in this great State was not the desire of one or two major companies but was the solid and uniform thinking of the 21 major oil companies represented and approximately 30 independent operators. These are the people who are not only leasing lands in Alaska, but budget funds which run into the millions annually for geological and geophysical exploration in the State.

The State has two present and future sources of revenue from its petroleum resources. They are land lease rentals and royalties from oil or gas produced. In comparing the possible return to the State from these two sources, it is obvious to anyone who cares to play with the figures that royalties from two or three major fields would far surpass rental payments. It is also obvious that if discoveries are not made, revenues from lease rentals will decrease rather than increase. However, it is further evident that for the next several years the lease rentals will be an important factor in balancing the State budget. We must then, for the immediate revenue need, encourage continuing leasing and, for our long term hopes, keep the industry's interest in exploration in Alaska active. We know that the industry must balance the possible returns from money spent in Alaska with the same dollars spent anywhere else in the world, not only this year but in future years. We are most anxious that our laws and the Government administering them keep Alaska in a reasonably competitive position.

We find, then, that the Department of Interior does not believe the increase would be helpful or desirable, whereas the industry that will actually have to spend the money for exploration and development testifies that it is needed.

It may not have been so intended, but the expertly prepared and profuse testimony in opposition to this bill which appears in the CONGRESSIONAL RECORD on August 4 and August 6 leads to several wrong conclusions on the part of the average reader. They are points which I have been asked to explain and are as follows:

1. That, were the acreage increased, a major company could lease 600,000 acres at a very low cost, have the advantage of listing it as a reserve in their assets, and would therefore not spend any money in explora-

tion and development. This is not a true picture of the facts:

(a) Completely wildcat acreage cannot be listed as a reserve. Oil company reserves are known and quantitatively measured pools of oil and gas. It is quite possible that a 600,000 acre lease block in Alaska actually contains no oil or gas in commercial quantities.

(b) Furthermore, the 600,000 acres allowed would be leased under a Federal noncompetitive lease which is issued for a period of 5 years with a possible 5-year extension. An exploration program to properly evaluate the 600,000 acres would take a minimum of 5 years in Alaska. Any company holding such acreage knows that it will have to explain to its board and stockholders the ultimate value of the holding to the company. Since its value can actually be found only after extensive geological and geophysical exploration and since it would take in the neighborhood of 5 years to acquire this basic information, there would be no such thing as holding and freezing land under lease.

(c) Geological and geophysical exploration in Alaska is expensive. It also leaves dollars in Alaska and ultimately acquires for the benefit of the State the information obtained. This phase of an exploration program is divided into (1) rough geological reconnaissance, (2) rough geophysical surveys, and (3) detailed geophysical surveys and geological mapping.

I have before me the costs of one of the companies operating in Alaska. They have spent $340,000 in rough geological reconnaissance to look at 30 million acres, a cost of $0.0114 per acre. They have spent $177,000 for a rough geophysical survey to evaluate 1,152,000 acres, or a cost of $0.155 per acre. They have spent $850,000 in a detailed seismic survey to evaluate 300,000 acres, or a cost of $2.84 per acre. Even the detailed seismic survey is not the final step in this phase of the exploration program. Continuing seismic surveys, together with a well drilled for stratographic information as much as for finding of oil is necessary before the company can make a decision if the acreage is worth retaining for a further search for oil.

2. That, were the acreage limitation increased, a major company could then be in a position to control the oil industry in Alaska.

(a) There is no industry, in spite of the giants within its ranks, that is so competitive as the oil industry. The only way, even with the increased acreage allowable, that any one company could control the oil industry in Alaska would, in fact, be if the only field in the State existed under their acreage block. Considering the extensive probable petroleum provinces within the State, this possibility seems to me rather remote.

3. That there will be fewer wells drilled if this acreage limitation is increased rather than requiring the companies to apply for nonchargeability through development contracts.

(a) It is true that the final answer to the question of whether particular acreage does embrace commercial deposits of oil and gas can only be found by drilling. However, to require the drilling of a well as a primary and mandatory provision of obtaining a lease would result in such an expensively wasteful program that the cost of each barrel of oil found in Alaska would be priced right out of the market. Drilling is the final and the most expensive step in a long and expensive exploration program.

(b) Every dry hole drilled is a discouragement to the industry. Even after applying all the scientific techniques available in studying an acre of wildcat ground, the ratio of successful wells, industrywide, remains 1 in 10. It is important that the industry's experience in this regard in Alaska does not develop a lower ratio if we are to keep their interest here. Mandatory and indiscriminate drilling requirements could easily, at the present time, bring about this result and could, in fact, result in a completely wrong conclusion; i.e., that there is little commercial oil in the State.

4. That an oil company can increase its acreage holdings without any limitations under development contracts and unit agreements.

(a) The development contract is a useful means of securing nonchargeability of acreage, but it is not the sole answer to the present problem in Alaska. In the first place, although a development contract granted to a single company may embrace hundreds of thousands of acres, not all the acreage within its defined borders is necessarily owned by nor controlled by the company.

(b) To obtain a unit agreement, the company must have completed a sufficient geological and geophysical program to support an immediate and mandatory drilling program.

(c) This means that the company will have already spent from $2 to $5 an acre on lands, including those over which it has no ownership or control and which, by the time the program has reached the point that the company is willing to embark on a unit agreement, have been leased by other individuals and companies.

The testimony given to the Senate Interior Committee already points out that the size of Alaska and its potential oil provinces scattered in some seven geographic areas demands special consideration if equity with the other States is intended. Despite the President's veto and the action of the Department of Interior, I still believe this legislation is necessary and good for all the people. Senator ALLOTT's testimony indicated that his objections to the bill would be removed if other legislation pertaining to amending lease rentals, wiping out option provisions, and other amendments to the oil and gas laws, which are now in Senate Interior Committee, were considered at the same time. I would urge the early consideration of these measures with full hearings and recommend that one of them be amended to increase the acreage allowable to 600,000 acres without geographical division in the State of Alaska.

Very truly yours,

IRENE E. RYAN.

Address by Dr. T. Keith Glennan

EXTENSION OF REMARKS
OF

HON. OVERTON BROOKS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 28, 1959

Mr. BROOKS of Louisiana. Mr. Speaker, under leave to extend my remarks, I present a very able address of Dr. T. Keith Glennan, Administrator, National Aeronautics and Space Administration, delivered on August 24, 1959, to the fourth U.S. Air Force technical symposium on ballistic missiles and space technology held in Los Angeles, Calif.

The address follows:

ADDRESS BY DR. T. KEITH GLENNAN, ADMINISTRATOR, NATIONAL AERONAUTICS AND SPACE ADMINISTRATION, BEFORE THE 4TH USAF BMD SYMPOSIUM ON MISSILES AND SPACE TECHNOLOGY, LOS ANGELES, CALIF., AUGUST 24, 1959

It is my purpose this morning to discuss with you some of the conclusions that we of the National Aeronautics and Space Administration have reached after almost a year of operation. There could be no more appropriate forum for such a discussion than this fourth technical symposium on ballistic missiles and space technology. The members of this audience represent a solid core of the science-industry-Government team that is responsible for the acchievements of our national space effort to date. I hardly need add that you make up the team upon which the vital space work of the future must depend.

There is a tried and true formula for speech preparation that runs something like this—tell them what you are going to say—say it—and then tell them what you have said. I am going to attempt to follow that format this morning as I speak out on basic problems that confront us—problems that are common to all who labor in these missile and space technology fields.

Specifically, I want soberly to examine with you the present state of the art in these fields. While I yield to no one in the extent of my enthusiasm about the future in this business, I will not be painting a rosy, pie-in-the-sky picture of manned space transports, civilian colonies, and manned military bases on the moon or other planets, warehouses in space and the like. There seems to be a contest going on in this country in which substantial numbers of people are attempting to outdo each other in predicting exotic accomplishments in space in the next few years. In my opinion, there is need for more commonsense and good technical judgment to be injected into this picture. While there are others more able than I to handle such an assignment, my position as Administrator of NASA compels me to state my convictions in these matters as part of my responsibility of keeping the Congress and the public fully and currently informed.

As you know, it was just 1 year ago last month that the President signed the bill establishing the National Aeronautics and Space Administration. Building on the foundation of organization, personnel, plant assets, programs, and problems transferred from the NACA, ARPA, and the military services, NASA was a going concern from the day we announced that we were in business, the 1st of October 1958. We lacked, as did all of the others engaged in the space business, a full realization of the complexity of the technological problems facing us. And we were neophytes—probably still are—in our understanding of the costs to be incurred in a hard-hitting, broadly based national space program. But we had—and we still have—enthusiasm and real zeal for the great adventure that still lies before us: the discovery of new knowledge about our universe and the application of that new knowledge and supporting technology for the benefit of mankind everywhere.

Now, what have we learned from our successes and failures of the past year? And what are we planning for the future as a result of our experiences—both good and bad? Remember, please, that I am speaking about the civilian space program—not the military program. However, they are closely related—and are interdependent in many ways and it is probable, therefore, that some portion of my remarks may have applicability in the military area, as well.

In the first place, we have learned that we are not nearly as far advanced in space technology as we had thought or hoped. Our experiences in the space vehicle field have been less than completely satisfactory. The ratio of successful launches to what has been termed by some as "successful failures" has not improved very much in the past year. And as soon as we began to plan for second generation experiments we found that we were facing some hard facts of life in the propulsion and guidance fields. Even today, every shot we make—either by the military

or by ourselves in NASA—is a shot in which there is little or no margin for even a slight deviation from planned performance parameters. In thrust capability, in guidance-injection, midcourse and terminal, in thrust control—in all of these areas there is much that must be learned and applied before we undertake the difficult missions we all talk about so glibly.

Secondly, it is becoming clear that we cannot and should not attempt to undertake all of the hundreds of projects that are being recommended to advance our understanding of the space environment. We haven't the manpower, the facilities or the funds. More important than any of these, however, is the fact that it seems to me that we will make progress faster if we move at a rate that will enable us to understand a bit more about the things we have already done and the information we have already acquired from successful experiments that are behind us.

Probably more than any other single matter, the question that plagues all of us is one of reliability. When will we be able to count on being successful in launching and placing into orbit or on the desired trajectory in deep space as many as three out of four of our intended experiments? We should admit, quite frankly, that with distressingly few exceptions, we have not achieved complete success in any mission to date—success in the sense that the payload has been injected into orbit or into a deep space trajectory within reasonable limits of the planned flight objectives and in the sense that the payload has performed its mission satisfactorily.

Now lest you think I am being unduly harsh, let me hasten to say that our competitors in the U.S.S.R. have reported only their successful flights to date. We know they have had failures. We don't know, in any instance, whether even their announced successes have really come any closer to the intended objectives than have ours. And I am mindful of the truly great accomplishments that the United States has managed in the past 2 years in the space field. Indeed, I am proud to be one of those associated in a responsible way with this national effort where success or failure may well have implications far beyond the immediate civilian or military utility of the experiments we attempt.

We are the one nation in this world which has developed its position of leadership through the application of science and technology to the alleviation of man's back-breaking burdens while continuing to protect the rights of the individual citizen. For us to play second fiddle in this space business is to admit that we have lost a part of our genius for experiment—for taking a competitive risk—for searching out new facts about nature that ultimately will improve the well-being of mankind everywhere. No; we cannot and I am sure we will not fail to demonstrate once again that free men—when challenged—can rise to the heights and overcome the lead of those who build on the basis of the subjugation of the rights of the individual as they dictate to him the path he must take in response to the demands of the state.

Now that may seem to be a bit of histrionics to the sophisticates in this audience but it is the creed by which we must guide our actions in the days ahead. And we are not going to achieve our goals by wishful thinking about difficult technical problems.

But I'm afraid I'm being carried away by my own convictions about the basic capabilities that reside in our people while the realities of this business await attention. Having told you very, very briefly about the more important bits of realism that have been impressed upon us during the past year, let me now tell you something of our thinking about the future.

First, as to program—we have had to face up to the fact that we simply cannot do everything that is proposed either by members of the scientific community, other agencies or by our own people. Some of the firing schedules we developed 9 months ago lacked the realism that now characterizes our planning.

Within the next year, I think you will be able to note an orderliness about the attack our people will be making in the space sciences area. Thus far we have been engaged in completing experiments planned for the International Geophysical Year. In fields such as astronomy, meteorology, and the physical sciences, we are developing a determined and well-planned program. Lead times for most of these experiments will be long and will call for continuing high levels of effort and support. Unless we can achieve this goal, we will lack, ultimately, the underpinning for the entire space program and may miss the really important discoveries that now lie hidden from our view.

We plan to concentrate our initial efforts in deep space on lunar missions—rear miss, orbiting and hard and soft landings of payloads. In this program we will develop the techniques necessary to accomplish missions into deeper space and will use them for such missions as their reliability and the opportunity permits.

Second—as to basic research and advanced technology—we expect to support greater effort in the universities, other nonprofit institutions, and in industry in both basic research and in advanced development of systems components. In the development of better methods and devices in the fields of guidance, control, telemetry, auxiliary power units and sensors of all types—in all of these areas, we see the need for greater concentration of effort. Through such actions we hope to improve the reliability of the systems which will employ these components.

Third—as to booster systems—it is becoming increasingly apparent that greater efforts must be placed on simplification and reliability. As a corollary, it seems quite clear that continued attention must be given to reduction in the number and varieties of rockets and rocket booster systems for use in the space business. It is unlikely that these systems will become off-the-shelf production items in the foreseeable future. With limited numbers of firings in prospect, reliability can be expected only if the variety of systems is kept at a minimum. It will be cheaper to waste payload space in using an oversize booster that becomes reliable through continued use than to tailor boosters for each specific mission with the attendant lowered reliability that surely will result from infrequent use.

As we move ahead in our program, using newly developed vehicles of larger size and with more stages, the problems of achieving successful flights will increase. Recognizing the statistical success thus far achieved with the single- and two-stage missiles and the number of firings required in their development period, we must ask the question as to the probable success of a seven-stage vehicle required to land a man on the moon and return him to earth. Clearly, major advances in research and development techniques leading to greater vehicle reliability must be accomplished. Both the cost and development time will be prohibitive if vehicle development depends, as it does now, so heavily on "trial by fire." As a part of our program we are currently studying methods for development that might lead to earlier success of our flight vehicles, and the progress we make here may well determine how long it will take to do the advance missions that we are all so anxious to accomplish.

Finally—as in most other advanced technologies—a vast new area of materials research is being opened up by our space exploration requirements. As you well know, many materials exhibit different properties when used in radiation fields and in the vacuum of space. These materials must be improved or other materials found or developed to replace them. Magnesium, for example, sublimates in a vacuum—and effectively disappears. Another phenomenon—two moving metal surfaces in a vacuum tend to weld together by molecular adhesion. Our engineers and scientists are facing many such problems, but the list is far too long to catalog here.

My point is simply this: We have used up much of our missile technology. We have drawn heavily on our capital—the knowledge and experience accumulated by the military services, by industry and by NACA and others over the past 10 years or so. We must replenish that capital with new knowledge. From here on out, space research is going to be a matter of the same determined plugging away that has characterized aeronautics research—and, indeed all scientific endeavor.

As for Russian space achievements, we have learned that while they use their successes effectively for propaganda—and are able to hide their failures—their public claims have been, to the best of our knowledge, factual. Their scientists, however, are not the giants they would have us believe—they simply started working in this particular field 6 or 7 years before we did. It would be tragic if we had to admit they were working harder today than we. But they have set for us some targets by the success of their efforts thus far announced.

For instance, while we have no information which lead us to believe that the Russians have solved all of the guidance problems I mentioned earlier, obviously their guidance is good and obviously they are not standing still.

One of the most sensible men in our business today is my good friend, Dr. Lee DuBridge, president of the California Institute of Technology. I presume that most of you have read his article in the August issue of Harper's magazine. I think that he offers the most reasonable analysis of our present situation that I have seen lately.

Dr. DuBridge reminds us that conditions in space are completely outside all human experience up to now. He points out that the essential elements that sustain life—among them air, water, and food, as well as fuel for the craft—are missing. All these things, including instruments and other kinds of equipment, will have to be carried along with the astronaut, creating the biggest problem in logistics that has ever faced an expedition into the unknown.

Dr. DuBridge goes on to say that at the presently unattainable rate of 93,000 miles per hour—the speed required to overcome the gravitational attraction of the Sun—it would take 3 weeks to arrive at Mars, more than 3 years to visit Neptune, and 28,000 years to reach Alpha Centauri, the nearest star.

He emphasizes that maneuvering in space calls for totally new techniques of motion. No object in orbit can overtake another one, or lie in wait for it. Instead, it must be intercepted by a trajectory based on complex calculations, and on adjustments in course and speed of the utmost exactness.

The energy requirements for space vehicles are most formidable, and Dr. DuBridge cites the problem of sending a single man with a minimum amount of equipment (weighing in all about 1 ton) on a trip to the moon and back. A rocket with about 300,000 pounds of thrust—and we have such rockets—will carry him to the vicinity of the moon. But the weight of fuel needed to

land him on its surface will treble the necessary thrust raising it to 900,000 pounds. To bring him back and land him safely on the earth increases this to at least 5 million pounds of thrust—several times the amount provided by the biggest single rocket engine now under development by NASA.

In spite of these difficulties, and others equally challenging to engineers and physiologists, Dr. DuBridge is not discouraged; nor am I. We share the belief that space exploration by mankind within the solar system is both feasible and necessary—that it is indeed inevitable—and that it may offer rewards enough, in knowledge and in practical benefits yet unknown, to keep humanity occupied for the next hundred years. We recognize that the total cost will be colossal, but that the unforeseen—and unforeseeable—dividends, spread out over the years, will justify the cost.

Some Americans, as I and no doubt many of you have learned, have quite a different outlook. The other morning I had breakfast in the coffee shop of a Washington hotel. Two men were at an adjoining table. One was in a table-banging temper. When he mentioned what he called "this space folderol," I naturally pricked up my ears. I confess that I eavesdropped a little which wasn't hard since he had a powerful voice and made no attempt to lower it.

Among other things, he said—and I quote—"We had a 3-inch rain in Washington last Saturday. So what happened? The drains need working over so badly that a good deal of the city was flooded. People had to swim away from their cars.

"Now," he went on to say, "with a situation like that, right here in Washington, why in the name of commonsense are so many millions being spent on such nonsense as shooting a lot of hardware to the Moon? Who cares about the Moon? There's plenty to do down here without wasting money on things like that."

There is, of course, a fundamental difference between solving the problem of overloaded storm drains and sewers in Washington and conducting research and development in space. For the drainage problem there is a ready solution needing only money to complete the loop. Research in space and the development of useful applications of knowledge gained through that research requires imagination, courage, and lots of money. It may well prove to be one of the most exciting and profitable ventures of all time. But it is so easy to be carried away by our own enthusiasms to the point where we begin to ignore realities. It is obvious that the man I overheard is not convinced that research, and particularly research in space holds much promise for him.

Naturally, I do not agree with the gentleman's opinion about this matter. I do, however, concede that he had a right to his opinion and I am afraid that there are many others like him—persons who are less than excited over trips to the Moon and the building of way stations in space. Our problem—yours and mine—is to be as responsible as possible in our public utterances in this field. Overstatements of wonders that are to come may be exciting to some people—but I seriously doubt that those on whose understanding we must depend for continuing support will be thus convinced.

Speaking of support—you will note that I have said nothing directly about costs. That is a story in itself with which most of you have some familiarity. I would say only that space program costs will increase substantially in the years ahead if we are permitted to carry out the programs now believed to be desirable and necessary in both the civilian and military fields.

If you term this a sobering picture, I have made my point. But I do not intend it to be a pessimistic one. Our horizons will be bounded only by the limits of our imaginations, our ability to perform responsibly the tasks we undertake and by our ability thus to convince the Congress and the public of the worth and urgency of our programs. It is high adventure we are experiencing—let us be worthy of our trust.

Depressed Domestic Mining and Mineral Industries

SPEECH

OF

HON. E. Y. BERRY

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 24, 1959

The House in Committee of the Whole House on the State of the Union had under consideration the concurrent resolution (H. Con. Res. 177) declaring the sense of Congress on the depressed domestic mining and mineral industries affecting public and other lands.

Mr. BERRY. Mr. Chairman, I yield myself such time as I may use.

Mr. Chairman, first I would like to add my word of commendation to the chairman of the Interior and Insular Affairs Committee for bringing this resolution not only to the committee but to the House floor for action.

Certainly no harm can come from the passage of such a resolution, and possibly a great deal of good may result.

While this resolution is directed to the executive branch of Government, I am confident nothing will be accomplished until Congress itself decides to protect the American mining industry from complete destruction through the importation of foreign mineral products.

It is the importation of foreign minerals that has destroyed the American mining industry and will continue to destroy the American mining industry until tariffs and quotas are levied on such imports. Congress sits idly by and condemns the executive branch for not protecting the industry through the peril point and escape clause in the Reciprocal Trade Act.

With one hand the Congress directs the executive branch and the State Department of the executive branch to contract with these foreign countries for the imports of their mineral products, and then on the other hand when these imports do come in and do flood our market and put our mining industry out of business, they condemn the executive branch for not invoking the peril point and the escape clause provisions of the act.

The responsibility, Mr. Chairman, is that of Congress. It is Congress that represents the people of these United States and the industries of these United States. It is Congress and Congress alone that has the authority to levy import tariffs, quotas, and duties. That authority, that responsibility, and that duty is placed upon the shoulders of Congress, and we cannot shift it to some other branch of Government.

Those who espouse the one-world philosophy contend that we must keep our borders free to all foreign imports, and if we have an industry which cannot compete with foreign competition, the companies engaged in such industry should go out of business and the people employed in such industry should find work elsewhere because, they contend that Americans, with all their ingenuity and efficiency, must be able to compete with countries less fortunate than ours.

This argument, Mr. Chairman, does not take account of the fact that our industries and our mines are not given an opportunity to compete on the same basis with foreign industry and foreign mines. This argument does not take into account the fac. that the cost of operation of a mine or an industry in the United States cannot start on an equal footing with its foreign competitors.

That argument does not take into account the fact that the cost of operation of a domestic mine or a domestic industry, which must be added to the cost of the product before we can hope to begin to compete, are such items as salaries, taxes, and foreign aid.

Competitors of the American mining industry operating foreign mines are able to hire help working for one-half or one-third of the salary that must be paid to American workmen. Not only that, but they are working 12 hours a day 7 days of the week, where labor in the United States operates under wage-hour laws, minimum wage laws, a cost-of-living standard that is being forced higher and higher annually. The labor expense, which is a large part of the domestic mining cost cannot be offset by efficiency in operation.

The second thing the internationalists forget in their contention that domestic industry must be more efficient to compete with foreign industry and foreign minerals, is taxes. The internationalists would like to have us forget that our foreign competitors are not required to add onto the cost of their production, the defense of their country. The American taxpayer defends them. The American mine and the American mining industry carries a heavy burden of taxes to defend their competitors in these foreign countries. American labor carries a heavy burden of taxes to defend, if you please, the laborers in these foreign countries who are in competition with them. Yes, the American producer is required to add to his product the cost of the defense of not only the peoples of these foreign countries, but the very industries that are in competition with them. This cost must be added to the cost of the domestic product, all of which is free to the foreign competitor.

Not only is the domestic mining industry and domestic labor defending them, but they are at the same time required to finance these countries for the operation of their own government. Through foreign economic aid and public assistance, we are constructing public powerplants and reclamation projects for the nations within whose borders the competing mines are located. They are not required to pay taxes to finance these

programs in their country. The American taxpayer, the American miner, and the American laborer are carrying that burden for them—a burden which must be added to the product we are producing and must be added to the cost of our minerals before we are permitted to even begin to compete with foreign imports.

The third unfair competition the American mining industry is required to meet, and which is added to the cost of the product produced domestically, was brought out forcefully on the House floor last week when we were debating the extension of Public Law 480.

Not only are the American industrialist, the American laborer, and the American miner required to pay taxes to maintain the agricultural support program, but in addition to that, we turn around and give to the people of these competing countries the food and fiber necessary for them to be able to live on a starvation wage that is being paid by the mines in these foreign countries.

Not only is the domestic mining industry required to pay taxes to maintain and defend his foreign competitor, and at the same time compelled to compete with low salaries and low standards of living, but in addition to that, he is forced through Public Law 480, through our foreign aid program, and through these other assistance programs to provide the food, free of charge in many instances, that goes into the household of the laboring man employed by these competing industries.

No, Mr. Chairman, the internationalists argue that if the American industrialist and the American miner are not able to compete with foreign industry and foreign minerals through greater efficiency, greater per capita and greater per hour production, then they should go out of business.

Equalize these burdens, Mr. Chairman, and American industry and American mines will meet the competition of any country in the world. Equalize the variance in the standard of living, equalize the variance in the salary differential, require them to pay for the food that the American taxpayer has purchased from the American farmer, require them to levy their own taxes to finance their own public works programs, and, Mr. Chairman, require them to levy their own taxes to pay for their own defense and the defense of the rest of the free world, and our mines and our industries will compete with the mines and industries of any country in the entire free world.

Until that is done, it is the duty and the obligation of this Congress to levy upon the foreign importer the cost of this unequal burden that is levied upon the American producer, the American laborer, and American industry, through an import tariff or an import duty, or at least, Mr. Chairman, an import quota.

I sincerely hope this House will pass this resolution. I hope some good will come from it, but I know, as every Member on this House floor must know, that this Congress cannot shift its responsibility and that this problem cannot be solved until Congress is willing to fulfill the obligation and duty reposed in it by the Constitution and protect these industries as the Founding Fathers provided they should be protected and, as we have learned by experience, they must be protected if the economy of this Nation and the strength of this Nation is to be preserved.

East, West Comparisons

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 25, 1959

Mr. BOGGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the 13th in the series of articles written by George W. Healy, editor of the New Orleans Times-Picayune, who accompanied Vice President NIXON on his recent trip to the Soviet Union:

[From the New Orleans (La.) Times-Picayune, Aug. 21, 1959]

EAST, WEST COMPARISONS—FINDS FRIENDLY SPIRITS, MATERIAL WELL-BEING

(By George W. Healy, Jr.)

(Thirteenth of a series)

WASHINGTON.—It would have been very easy to have had breakfast in Warsaw, lunch in Keflavik, and dinner in New Orleans the day we returned to the free world.

Our TWA jet left Warsaw about 10 a.m., Polish time, was in Iceland about noon and in Washington about 4 p.m. An Eastern Air Lines turbojet was scheduled to take off from Washington at 6 p.m., Washington time, and to be in New Orleans before 8 p.m., New Orleans time.

Instead of making this connection, I stayed in Washington to get rest, to write a summation for the Associated Press and to reflect.

What had we found in Russia, Siberia, and Poland that we did not expect to find?

How were the lives of people in Moscow, Leningrad, Novosibirsk, Sverdlovsk, and Warsaw different from the lives of people in New Orleans?

All members of our party, I believe, feel that we found a much more friendly spirit—outside Moscow—than we expected to find.

On my own part, I found Russia's life much more capitalistic—outwardly—than I expected to find it. Although hotel employees and guides, all employees of Intourist, the official travel agency run by the Government, declined tips, I found none who refused the gift of an automatic pencil or of chewing gum. All seemed interested in earning rubles to buy things for their own use.

For years after the revolution of 1918, I was told, Gum's—Moscow's largest store—was closed. It had been operated as a capitalistic venture for the profit of its owners. As I understand the situation, the Communists closed this big store because it was a symbol of capitalism and because the people should be taught to obtain necessary goods by cooperative effort. The purchase of luxury goods was forbidden.

Gum's (it's pronounced Gooms) is open again and its shelves are loaded with luxury goods. I won't vouch for the quality of these goods, but Russians are buying them. Gum's is owned and operated by the state, but for all intents and purposes it seems to be run just like big department stores in the United States.

As to dress, nowhere save in Warsaw were men and women as well clothed as are the men and women in New Orleans. Even with Warsaw, I believe New Orleans has the edge.

Physical facilities in no city which we visited can compare with physical facilities in New Orleans. Take the airports, for instance. There, at Moisant International Airport, the passenger is told at what gate he should board his plane. At Moscow Airport and the others we visited, there was just one gate. When that gate is opened you walk out on the big ramp and try to find a plane with a large number on its fuselage matching the plane number on your ticket.

The large hotels which I saw have one entrance and exit. You can't walk in the Baronne Street entrance and go out at University Place or in the Gravier Street entrance and out the Common Street side. One member of our party expressed suspicion that this single entrance-exit makes it easier for somebody to keep tabs on somebody.

The Russian jets, as mentioned earlier, don't reverse their jetstream, as do modern American jets, to achieve braking. They release two parachutes from the tail section to serve as brakes. I believe the technical name is drobechutes.

If there is a variety of food in Russia, I looked in the wrong places. It definitely is possible to get tired of borsch, caviar and vodka. Restaurants where we ate in Poland offered a greater variety.

Aside from physical things, I found a pride on the part of Russian people in their workmanship and in their plants which I had been told I would not find.

No man could have escorted a group of visitors through an industrial pant more proudly than a superintendent escorted us through the stamping mill at Novosibirsk.

That was the day the party was split in several parts and several of our drivers got lost. The bus I was riding, fortunately, reached the main entrance to the plant. Standing on the steps there was what appeared to be an official reception committee. Vice-President NIXON, however, was not with our group.

Austin Kiplinger, the Washington magazine and newsletter man, nattily dressed and wearing a hat, walked up to the reception committee. He and the rest of us were greeted warmly. Our inspection of the big plant was started, with hundreds of off-duty workmen following us. Halfway through the inspection we met Mr. NIXON, surrounded by a handful of followers.

I suspect his driver took him to the wrong entrance. The plant superintendent who was showing us the works, I believe, thought Mr. Kiplinger was Mr. NIXON.

A Constituent Writes About the National Science Foundation Summer Institute Program

EXTENSION OF REMARKS
OF
HON. JEFFERY COHELAN
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 20, 1959

Mr. COHELAN. Mr. Speaker, I have received a thoughtful letter from Kingsley W. Wightman, of Oakland, Calif.,

who participated in a summer institute in Utah this year under the auspices of the National Science Foundation. This is a sincere and unsolicited endorsement of a Federal program. As such, I believe it will be of interest to all Members of Congress, and under permission to extend my remarks, I include it in the RECORD, as follows:

Congressman JEFFERY COHELAN,
House Office Building,
Washington, D.C.

DEAR SIR: As a participant in the summer institute program of the National Science Foundation, I wish to report to you my impressions of this program.

This summer I attended a science institute for secondary schoolteachers at Brigham Young University in Utah. I firmly believe that this institute provided one of the finest programs in secondary science education any teacher could possibly have. My background in chemistry, physics, and geology has been vastly broadened and deepened by what I learned this summer, and I feel much more qualified to instruct my students now than I did before I attended the institute.

I also feel that Brigham Young University is particularly suited for offering a program of this type because of its outstanding facilities, its excellent staff, and its comfortable living quarters.

I sincerely believe that the summer institute program of the National Science Foundation should be carried on indefinitely. In my opinion, it is one of the finest pieces of legislation for the improvement of education that has ever been enacted.

Cordially yours,

KINGSLEY W. WIGHTMAN.

Rockefeller and Stassenism

EXTENSION OF REMARKS
OF
HON. ROBERT H. MICHEL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 25, 1959

Mr. MICHEL. Mr. Speaker, in a previous insertion on page A6694 of the August 3 CONGRESSIONAL RECORD, I called attention to the fact that the type of thinking going on in the Rockefeller camp is not only contrary to the facts and the polls, but is countering the cohesive forces of the Republican Party which have been steamrolling into action, and, moreover, have been more recently, leveling some very difficult obstacles.

I also stated that the type of public relations being produced by the Rockefeller forces is a great disservice to the Governor. I do want to reiterate and reemphasize this fact by pointing out that the statements made by his aids, and subsequently by Rockefeller himself, smacked of Stassenism, or in other words, a pathetic attempt to initiate another "dump NIXON campaign."

I think Rockefeller should take a lesson from history and read the papers which have recorded the sad story of those who made previous, and similar blunders. One article in particular which I cite as a case in point was written by Ralph McGill and appeared in the August 24 issue of the Washington Evening Star.

Mr. Speaker, under leave to extend my remarks, I wish to include at this point, the article by Mr. McGill:

ROCKEFELLER'S DENIALS RAPPED—REPUDIATION OF STATEMENTS ABOUT POLLS IS LINKED TO CONFERENCE WITH DEWEY

(By Ralph McGill)

Fiddling Bob Taylor, who once was Governor of Tennessee and later a U.S. Senator, was good at a hoedown or a verbal knockdown.

He was a Democrat, and once, in campaigning in Republican east Tennessee where political factionalism was about to break the safety valve on the emotional boilers, he flung out, in his opponent's hometown, the damning verse:

"Oh, he wiggled in and he wiggled out
And left the people all in doubt
As to whether the varmint that made the track
Was going out or coming back."

The lines of this biting quatrain were hardly said before mountain pistols were out, but cooler heads prevailed and there was no bloodshed.

It grieves me to say that I thought of this little doggerel on reading the political dispatches from Albany, N.Y., in which Gov. Nelson Rockefeller issued categorical denial of statements attributed to him in one of those not-for-direct-quotation chats while he was in Puerto Rico at the national conference of Governors.

For a couple of weeks, without denial, statements had been attributed to the Governor as follows:

1. He had set a November deadline for making a decision as to what he would do about becoming a candidate for the GOP nomination.

2. He would make his decision on the basis of the public opinion polls at the time—the polls would be the controlling factor.

In a press conference in Albany, following a weekend meeting with former Gov. Thomas E. Dewey, who seems to be masterminding the unofficial Rockefeller campaign, Mr. Rockefeller repudiated the attributions. They were, he said, not true.

Now, I am one who worries and bites nails about what seems to me to be too frequent lack of responsibility by a free press. But if the Governor will pardon me, I do not believe that the able, experienced newspapermen who covered the Puerto Rican conference could have been so far off base as to be slapped down with a complete denial. Governor Rockefeller is, I am sure, a charming gentleman, but he looks even worse in denial than he did before.

It was no secret that the statements about polls being a controlling factor was an unwise one. It is not yet possible to take the pulse of the American people by polls and be confident of the right answer. The mood of the people changes with events. Polls are one reason why the campaign of Senator JOHN KENNEDY is not advancing, but standing where it was some months ago. He has relied too much on too many polls in too many categories of age, occupation, etc.

One readily can understand that Governor Dewey would be alarmed about any reference to polls as the determining factor. Polls selected him President of the United States in 1948. And a lot of newspapermen, in the cold gray dawn of the morning after, took an oath that as long as they thereafter lived they would go out and see for themselves rather than depend on the statisticians.

It was politically necessary for Governor Rockefeller somehow to manage to change the image of himself as having no capacity for decision until informed by the facilities of Madison Avenue poll takers. But the method of it and the outright denial means simply that he is saying veteran political reporters at Puerto Rico were utterly and completely in error. He didn't have the grace to say he may not have made himself clear.

This, if the Governor will pardon me, is difficult to accept. It is especially so since he did not make up his mind to deny the attributed statements until he had taken a poll of Governor Dewey, one of the most pragmatic of political advisers.

If the press at Puerto Rico was, indeed, entirely in error, there should have been an immediate correction on the day following their publication. The opinions attributed to the Governor assuredly should not have been allowed free circulation for 2 weeks to be, finally, denied after a conference with Governor Dewey.

"Nelse," as the public relations humanizers seem to be asking us to call Governor Rockefeller, doesn't look too good in this little controversy. The image of him is more fuzzy than before.

Good To "Be Back Home" in Moscow After Siberia

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 25, 1959

Mr. BOGGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the ninth in the series of articles written by George W. Healy, editor of the New Orleans Times-Picayune, who accompanied Vice President NIXON on his recent trip to the Soviet Union:

GOOD TO "BE BACK HOME" IN MOSCOW AFTER SIBERIA—ROUGH LANDING FAILS TO DAMPEN ENTHUSIASM

(By George W. Healy, Jr.)

Moscow.—If anyone had told me 2 weeks ago that I'd ever be talking about it being great to "be back home" in Moscow, I'd have told him he was off his rocker.

After 4 days in Siberia, that's the way most members of the party accompanying Vice President RICHARD M. NIXON were talking.

When we took off for Novosibirsk most of us kept our rooms in the Ukraina Hotel, Moscow. Aeroflot, the Russian airline, cut our baggage weight allowance, and we had to have some place to keep our gear.

Our rough landing returning to Moscow failed to dampen the enthusiasm of members of our party about getting back to the Ukraina. It doesn't compare with first-class hotels in New Orleans, but it's a happy home compared with Hotel No. 2 in Novosibirsk and the Bolshoi Urals in Sverdlovak.

At least you have your own shower, with hot water, at the Ukraina.

LONG WAY TO GO

The Russian people have no illusions about living standards in the United States being higher than those in the Soviet Union. Their master's voice, that of Nikita S. Khrushchev, repeatedly tells them that the United States is ahead but that the U.S.S.R. is catching up—fast. In 7 years, he has said, the U.S.S.R. will be ahead.

Just a few casual observations lead me to believe that Mr. K. is wrong—definitely. The U.S.S.R. has too far to go.

People in the United States have not just hundreds of things that people in the

U.S.S.R. don't have, but literally thousands of things.

A case in point is the telephone book. No Russian city I visited had a telephone directory. If you didn't know the number of the person or company you wanted to call, you just didn't call them.

It took most of our group a couple of days to learn how to work the eccentric dial telephones in the Hotel Ukraina. Then, when we moved to Siberia there were no telephones or telephones that didn't work.

ICEBREAKER "LENIN"

Cameras sold as luxury goods in Russian stores apparently are not up to date. Workmen at the hydroelectric station we visited near Novosibirsk obviously had never seen a Polaroid camera before Walter Ridder, of the Ridder newspapers, took their pictures with Vice President NIXON and immediately delivered prints to them. They were amazed.

Reports that Russian women carry big bags because the stores have no paper in which to wrap their purchases are false; but the paper used in the country is of inferior quality.

On the basis of a layman's observation, it appeared to me that the Mississippi Shipping Co.'s liner, *del Mar*, launched soon after the end of World War II, is a more modern vessel than the pride of the Russian maritime service, the icebreaker *Lenin*, which is about the *del Mar's* size. The *del Mar* certainly presents fewer fire hazards than the *Lenin*, with its heavy use of plywood.

This comparison, of course, doesn't apply to method of propulsion—inasmuch as the Russians say they are going to run the Lenin with atomic power.

OUT OF REACH

Thousands of things Americans accept as everyday necessities rather than luxuries apparently are out of the reach of most Russians. The United States of America has many wonderful things about which Russia apparently is yet to learn.

In all of Moscow, I saw not a single filling station. I did see a taxi driver take a can of fuel from the trunk of his taxi and pour its contents into his gasoline tank. I also saw another taxi driver pumping up a flat tire with an old-fashioned hand pump.

"Old hands" in Moscow told me that gasoline is obtainable at depots operated by the Government and that the price is astronomical. Russia unquestionably has made great progress in recent years and continues to make progress.

Still, on the basis of Mr. Khrushchev's public utterances, I believe that his country is a great deal farther behind America than he thinks.

If ever I go back to Russia, I'm going to write to Mr. Khrushchev, or his successor or assigns, before I go and say:

"Please, in your next 5-year plan or 7-year plan won't you include: A telephone book with every telephone; a stopper for every washbasin; restaurants where the patron doesn't have to wait interminably for service?"

RUSSIAN BUREAUCRACY

Westbrook Pegler, who remained in Moscow while we went to Siberia, told me that the longer he remained the more he was convinced that the Russian bureaucracy is the most inefficient in the world.

Bob Considine, another columnist, went stronger. "If these guys run their military establishment like they run the rest of their business," he said, "they couldn't lick Peru."

Remembering the terrific fight the Russians made in World War II, when men wise in Russian affairs were predicting that they could not stand up to the Nazis, I can't go along with opinions which hold that the Soviet Union is weak.

The Russians must be spending a large part of their budget for new weapons. Mr. NIXON mentioned 25 percent of national income. To the best of my knowledge his estimate was not challenged.

Despite heavy military spending, Russia is improving living standards. The tragedy is that most of the people seem to credit communism alone for their improvement and to give no credit to their own industry.

Russians are reminded constantly of the people's suffering in the reigns of the Czars—just as Poles are reminded of the evils of autocratic regimes in that nation.

What both Russians and Poles have today probably is better than the serfdom of earlier years; but what the people behind the Iron Curtain don't know is how well off they really would be if they enjoyed freedom.

They're moving; but I don't think they're moving fast enough to catch us.

HOUSING DESPERATE

The housing situation in Moscow seems more desperate than in other cities we visited. Scores of flats are under construction, but the work seems slow.

Esthetically, these buildings leave much to be desired. They have the disadvantage of looking like Harlem tenements, with the advantage of being placed with some open ground around them.

Russians living in other parts of the country can't move to Moscow, the Soviet showcase, unless the Government grants them a special permit.

BRIDGE OVER SIBERIA

Bridge players generally get together, no matter in what part of the world they may be.

It wasn't long on this trip before Frank Holman of the New York Daily News, produced two decks of cards and the game was on.

Jinx Falkenburg, of television and Newsday; Ruth Montgomery, of the Hearst headline service; Alfred F. "Mike" Flynn, of Pan American World Airways, and I were the most avid devotees of the game. Occasionally, Alan L. Otten, of the Wall Street Journal, "cut in."

Because she has long legs and is athletic, Jinx was designated to be first on the plane after every stop and to "grab" the four seats of the Aeroflot plane with a table.

The teams of Falkenburg-Flynn and Montgomery-Healy played for the bridge championship of Siberia at 40,000 feet over Europe and Asia.

We know it was for the championship, because a Russian kibitzer—who knew where every member of our party was every hour—seldom took his eyes off the game, but obviously didn't understand it. If he didn't know bridge, nobody in Siberia did.

Back in Moscow, as we planned to forsake the Aeroflot planes to travel to Poland in a Trans World Airlines 707–121 jet, an arrangement was made to save Jinx Falkenburg the run to the ramp every takeoff time. Ruth Montgomery saw her old friend, Charles Thomas, former Secretary of the Navy and now president of TWA, in a restaurant and made a deal with him. Either those seats with the table were going to be reserved for the bridge game or TWA was going to have some new hostesses.

The match was seesaw for days, with first one team and then the other in front. After more than a score of rubbers were played, over a distance exceeding 12,000 miles, the Falkenburg-Flynn team was the winner by a bare 200 points.

Public Law 480 Through the Looking Glass

EXTENSION OF REMARKS

OF

HON. HOWARD W. ROBISON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 28, 1959

Mr. ROBISON. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following editorial from the August 20, 1959, issue of the Journal of Commerce concerning the recent extension of Public Law 480:

OUR KIND OF PEOPLE

"It really looks as though the Americans are going to extend Public Law 480 once again." The Mad Hatter laid down his newspaper and stared fixedly over his bifocals at Alice.

"Is that good?" Alice asked.

"Yes and no. I daresay the Americans think it's good. It means they can trade more of something they don't want and can't use for more of something else they don't want and can't use. Sometimes I suppose it's better to have more of something else than more of just plain something."

"Stop. You're talking in circles again," Alice said sharply. "What has all this nonsense got to do with public law—what was it?"

"Four eighty. Let me explain this: The Americans grow a lot more wheat than they can eat or sell; other things, too, but let's take wheat. The Government buys what they can't use or get rid of. It's been doing that for years. Now it has so much wheat and other crops there's hardly any place left to store it. Soon there'll be no room for people."

"Dear me! Why don't they stop growing so much wheat, then? Or people?"

"I knew I should have never broached this subject to a woman," the Hatter said angrily. "That's very complicated. I'm talking about Public Law 480. Under Public Law 480 the Government can dispose of some of this by * * *"

"Dispose of it? Does that mean give it away?"

"Well, no. They give some away, but they can't give it all away. Like I said, it's very complicated. Some North American farmers still sell their wheat overseas. So do some other countries. But the American Government pays very high prices for the wheat it buys; it does that to keep prices up. So if it gave away all its wheat, prices would break because nobody is going to buy anything he can get for free. Then the farmers and other countries producing wheat would be very angry. They are angry anyway, of course."

"Then you mean they sell it?"

"Well, yes, by which, of course, I mean no. Let's say the Americans 'sell' $100,000 worth of wheat they don't want to Wamaria: you remember Wamaria? Splendid little country. Well, the Wamarians either pay for it in metals or in $100,000 worth of their own currency, the wampa."

"Oh, this is beginning to sound very tiresome," Alice said impatiently. "Then the Americans do sell it. What's so unusual about that? They can use the metals or go out and spend the wampa someplace else."

"Not so fast," the Hatter said, raising an admonishing finger. "Not everything is as simple as it looks. The Americans don't need or want Wamarian metals any more

than they want or need their own wheat. So far as the wampa is concerned, it isn't worth much anyplace outside of Wamaria; it isn't even worth much in Wamaria. Do you follow?"

Alice looked thoughtful. "It is beginning to sound interesting, now."

"Yes, and what happens is, instead of just being stuck with surplus wheat the Americans are now stuck with metals they don't want, with wampa or both. Sometimes, though, they'll use some of the wampa to build, say—a road in Wamaria. Then they'll loan or give the road to the Wamarian Government."

"That is very curious," Alice replied. "Now let me think. If they want to give Wamaria wheat, why not give them that and forget the road? Or if they want to give them a road, why not build the road and forget the wheat? Why make it so complicated?"

"You just don't know the North Americans, my dear. To know them is not only to sympathize with them but to like them. Whether they sell their wheat is of no importance to them. What is important is to get rid of it; and, in the process of getting rid of it to look like they're selling it. Remember, appearances are very important in North America."

"Still, it still make some sense," Alice said. "I suppose they put all those wampa aside for a rainy day; then when they need them they'll spend them."

The Mad Hatter laughed uproariously. "Indeed they won't. Yes, they accumulate them, just like they accumulate wheat. But the only way they got any wampas out of Wamaria was promising that they wouldn't spend them, except when and if the Wamarian Government said it was OK, and that will probably be never."

Alice sighed again, smoothed down her dress and looked dreamily up into the trees that arched above the garden. "You know what, Hatter," she said after a minute, "I think I'd like North Americans. They sound like our kind of people."

Home to Freedom: Some Conclusions

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 25, 1959

Mr. BOGGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the 14th in the series of articles written by George W. Healy, editor of the New Orleans Times-Picayune, who accompanied Vice President NIXON on his recent tour of the Soviet Union:

HOME TO FREEDOM: SOME CONCLUSIONS—MORE GOOD THAN BAD WILL COME FROM THE KHRUSHCHEV VISIT

(By George W. Healy Jr.)

Back home and, thank you, singing "God Bless America."

Looking back on 2 weeks behind the Iron Curtain—2 weeks that seemed a long, long time—calls for expression of some opinions and conclusions.

Among other things, it seems to me that most Americans—and I certainly was one of them—have underestimated the economic growth of the Soviet Union.

Prior to the revolution of 1917 the industrial output of Russia was one-eighth of the industrial output of the United States. Nikita S. Khrushchev told us that Russia's industrial output in 1958 had risen to one-half of the U.S. industrial output. Our personal observations indicate that he was not exaggerating—much. Observers better qualified than I to judge industrial capacity have estimated that Russia's production is about one-third of that of the United States.

"We are confident that the day is not far off when our country will overtake our American partner in the peaceful economic competition," said Mr. Khrushchev, "and then will at some point come alongside America, salute her with a signal and move on."

Russia may catch the United States in industrial production, but I don't believe that the day when she will do it is not far off.

Mr. Khrushchev, who impressed me as a cross between an old-line ward heeler and a Hoffa-type labor boss, unquestionably is cocky. As a consequence, I believe that he underestimates the U.S. capabilities.

This brings up the matter of the exchange of visits between President Eisenhower and Mr. Khrushchev.

We first heard of arrangements for this exchange while we were in Russia. Since the announcement came from the White House and from the Kremlin, some of our group expressed fear that Mr. Eisenhower had "pulled the rug out from under" Vice President RICHARD M. NIXON. This was not the case. Discussions looking toward the exchange had been in progress for some time, and I am sure the Vice President was informed of these discussion just as the President was kept informed of Mr. NIXON's activities on the trip.

The suggestion that the President had assigned his brother, Dr. Milton Eisenhower, to make the trip to "take the play away from" Mr. NIXON was published by some columnists before we left America. I believe there was no truth in this suggestion. Dr. Eisenhower made the trip for precisely the same reason several others of us made it. We were members of the President's Advisory Committee for the U.S. Exhibition in Moscow and, as such, were invited to become members of Mr. NIXON's official party.

I might add that if Dr. Eisenhower took any play away from Mr. NIXON, or attempted to take any play away from him, it happened while I was looking the other way. I'm sure it didn't happen.

Should Mr. Khrushchev have been invited to come to the United States?

Many Americans object to Mr. Krushchev's coming. A New Orleans pamphleteer, Kent Courtney, contends that the coming visit "is the second biggest step forward for world communism since the Russian Revolution of 1917—second only to the Soviet-United States alliance during World War II."

In this connection, I believe it apropos to quote the conclusion of an editorial from the St. Louis Review, a Catholic publication:

"Our perspective * * * is somewhat different. It is based on the fact that Saul would not have become Paul unless he had taken the trip to Damascus.

"Obtuse as Nikita may be to the American way of life, he knows a great deal about industry and science, mines and the military, competition and enterprise. All that we can show him will only enable him to make a comparison between communism and capitalism. Khrushchev does not need a comparison—he needs a conversion.

"In heaven's name let us hope that he sees our churches, our altars, our Christians, our spiritual and corporal works of mercy. Let us hope that he sees an entirely new concept of man on his visit to our country. If we let this opportunity pass we may never have another. Let's provide everything but the bolt of lightning that will knock him from his horse—and depend on God for that."

Personally, I think the prospect is that more good than bad will come from the Khrushchev visit. If, as Mr. NIXON believes, the Russian chief has concluded that America is weak he should have ample opoprtunity to see for himself that we are strong.

Mr. NIXON feels that it is better to talk with the Russians than to fight with them.

There can be no question that Mr. Krushchev preaches communism as superior to capitalism. He preached that sermon to us—at the opening of the U.S. exhibition. If he attempts to preach it again on his visit to the United States, I doubt that he will have any more conversions than he obtained in Sokolniki Park—where there were no defections from the West to the East.

As strong as is the desire of the Kremlin to spread communism throughout the world, I don't believe there is any danger of America going Communist through any action by Mr. Khrushchev, Mr. Kozlov, or any other Russian. If America goes Communist, it will be the fault or the doing of Americans.

Our greatest weakness lies in ourselves—in our failure to recognize that all the blessings which we have, which Russia does not have but which Russia seeks, stem from the freedom for which our forebears fought, freedom which we seldom appreciate enough.

I am in agreement with my friend Frank Holeman, of the New York Daily News, quoted earlier in this series, when he says:

"President Eisenhower was dead right when he said we can lose the struggle between free enterprise and a managed economy—and thus lose our freedom—unless all groups in the United States begin to exercise a lot of self-discipline.

"Worse than that, we can lose the economic and political hold if we keep raising prices. We can become a second-class power while we're gaily paying each other higher prices and wages unrelated to the real cost of production. In a few years, the Communists will be flooding world markets at rock-bottom prices, or below.

"As much as anything else, we need to reawaken our deep national pride, which seems to sleep between wars. Many Russians have enthusiasm for their way of life, believe it or not. All over the country are signs 'Work for the victory of communism.' We need the same kind of enthusiasm or more, for freedom."

I agree also that it would be better to die in an all-out atomic war than to live the way most Russians do, in a police state.

I've been there, and I'm glad I'm back.

Carey Letter and Lewis' Views

EXTENSION OF REMARKS
OF
HON. J. ARTHUR YOUNGER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 25, 1959

Mr. YOUNGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following very interesting and enlightening column by David Lawrence on the subject of campaign contributions in retrospect, which appeared in the August 24, 1959, edition of the Washington Evening Star:

CAREY LETTER AND LEWIS' VIEWS—FORMER CIO CHIEF QUOTED ON QUID PRO QUO FOR POLITICAL CONTRIBUTIONS

(By David Lawrence)

When the labor union bosses raise money to contribute to the campaigns of Members of Congress, must those who are elected disregard their personal convictions on the merits of proposed laws and do the bidding of the groups that furnished the funds? This issue seems to have been projected by James B. Carey, one of the top leaders of the AFL–CIO, whose recent letter to Members of Congress has caused a stir. He expresses gratitude to those who voted as labor wanted and wrote in bitter sarcasm to those who, having accepted campaign contributions from labor interests, voted against their wishes on the Landrum-Griffin bill.

Mr. Carey threatens reprisals at the ballot box, and apparently the labor unions will withhold contributions next time from those Members of Congress who refused to consider a campaign contribution as a bribe.

There is nothing unusual about Mr. Carey's letters to Members of Congress. He should not be criticized as being alone in his viewpoint. For what he has written is in line with CIO policy for years. Indeed, John L. Lewis, while active in the CIO, was characteristically frank about the meaning of a contribution from laboring men to the campaigns of candidates for office.

When the late President Franklin D. Roosevelt, having accepted big contributions from labor unions for his 1936 campaign, said in the midst of a strike in 1937, something that the labor union leaders didn't like, Mr. Lewis declared publicly:

"It ill behooves one who has supped at labor's table and who has been sheltered in labor's house to curse with equal fervor and fine impartiality both labor and its adversaries when they become locked in deadly embrace."

In a biography of Mr. Lewis written by Saul D. Alinsky and published in 1949 by G. P. Putnam & Sons, the author tells of an interview with the labor leader during the Roosevelt regime. Mr. Lewis is quoted as having said:

"Everybody says I want my pound of flesh, that I gave Mr. Roosevelt $500,000 for his 1936 campaign, and I want quid pro quo. The United Mine Workers and the CIO have paid cash on the barrel for every piece of legislation that we have gotten.

"We have the Wagner Act. The Wagner Act cost us many dollars in contributions which the United Mine Workers have made to the Roosevelt administration with the explicit understanding of a quid pro quo for labor. These contributions far exceed the notions held by the general public or the press. Is any one fool enough to believe for one instant that we gave this money to Roosevelt because we were spellbound by his voice? It is common knowledge that we spent approximately three quarters of a million dollars in the 1936 campaign. And you might be interested to know that the $500,000 direct contribution wasn't my price, but was the figure named by the White House, and I was given approximately 48 hours to get that money.

"Certainly there was a quid pro quo—the right for labor to organize. But there was more than that. The sums we spent in 1936 were not only cash contributions that were made to the Democratic Party, but also were money expended in terms of salaries for organizers and other personnel who worked full time organizing and electioneering for Roosevelt. Radio time purchased, billboards, handbills, literature, and all other paraphernalia that are part and parcel of the process of being elected President of the United States didn't come gratis."

The same interview reveals that in 1938 when the tensions between Mr. Lewis and Mr. Roosevelt had eased off somewhat and the Democratic President was trying in primary contests to "purge" certain southern Democratic Senators who happened also to be antilabor, the United Mine Workers' chief rendered a helping hand. Again Mr. Lewis is quoted in the Saul Alinsky book as follows:

"Where did the money come from that Franklin D. Roosevelt siphoned into those Southern States to try to bolster up the fight against the anti-New Deal Senators? Where did the money come from?

"I'll tell you where it came from. Right here, from the coffers of the United Mine Workers of America. It came by request of the President of the United States through one of his trusted aids. You tell this to the President, and if he questions it, and I'm certain that he will not, you may inform the President that I am perfectly willing to name names and sums, chapter, and verse, to satisfy any slight amnesia that there might be on this particular issue.

"You ask me for gratitude in terms of an administration that we have literally poured our life's blood into supporting. You wonder that I do not express the feeling that one should have for a great champion of labor. I say that labor's champion has to a large extent here been a bought and paid for proposition. There is nothing we should be grateful for when we paid cash on the barrelhead at the price demanded for it."

So the philosophy of the money raisers in labor's ranks hasn't changed much in the 20 years since John L. Lewis spoke. In the 1958 congressional campaign when the labor unions boasted that a majority of the House of Representatives was elected through their help, the Federal records show a relatively small sum was contributed. Big amounts were, however, donated largely to State organizations which do not come under the Federal laws requiring the reporting of contributions. It is estimated that labor raised approximately $10 million. Much of it was spent to uphold laws compelling workers to forgo their civil rights and join unions.

Sverdlovsk, Off Limits to Most, Is Industry Center

EXTENSION OF REMARKS

OF

HON. HALE BOGGS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 25, 1959

Mr. BOGGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the eighth in the series of articles written by George W. Healy, editor of the New Orleans Times-Picayune, who accompanied Vice President NIXON on his recent trip to the Soviet Union:

SVERDLOVSK, OFF LIMITS TO MOST, IS INDUSTRY CENTER—NIXON PARTY WARMLY RECEIVED BY PEOPLE

(By George W. Healey, Jr.)

SVERDLOVSK, SIBERIA.—This old city, where the last of the Romanoffs were killed, is off limits for tourists.

Unless you obtain high level official permission, Sverdlovsk is a closed city. The Intourist Agency has no office here.

Just east of the Uran Mountains, in a natural corridor which provides the easiest passage through those mountains, Sverdlovsk has grown rapidly in recent years—from 140,000 in 1926 to 775,000 in 1959.

The explanation? Simple. Many industrial plants were moved here from combat zones west of the mountains in World War II. More plants have been built in Sverdlovsk since the war—gaining the city the designation of "the Pittsburgh of Siberia."

Although Sverdlovsk is 880 miles west of Novosibirsk, the party of Vice President RICHARD M. NIXON, in three Russian jets, made the flight in no time at all. The planes covered the journey in 2 hours and there is a 2-hour time difference between the two cities. Thus we arrived in Sverdlovsk at the same hour that we left Novosibirsk.

Here we encountered a warm greeting—in cool weather, chilly enough at night for trench coats.

Unlike the low buildings of Novosibirsk, the buildings of Sverdlovsk—more Russian than Siberian—achieve heights of six or seven stories.

After Hotel No. 2 at Novosibirsk (and that's the only name we ever knew for that primitive establishment with eight in a room), the Bolshoi Urals Hotel in Sverdlovsk was a palace, even if your room was on the third floor and the shower—with the first hot water in several days—in the basement.

In front of the hotel is a beautiful plaza, complete with fountain.

The last day we were in Sverdlovsk a large crowd gathered in the plaza to see the Nixon party board buses and automobiles for transportation to the airport.

JUST POOR CAPITALIST

Several of us wandered into the plaza and were surrounded immediately by curious Russians. One, knowing a few words of English, principally "don't mention it," started a interrogation. A young woman, who explained that she was a teacher of Russian in a school in a nearby town, volunteered as interpreter.

She translated several respectful questions and my answers before the man who started the interrogation asked her to put a very long question to me. I asked her what he was saying and she told me she preferred not to translate. The man continued to talk and I recognized something that sounded like "capitalistic aristocrat."

I told the teacher that I thought the man was inferring that I was a capitalistic aristocrat and that I'd appreciate her telling him that I was no such thing but just a poor capitalist trying to learn something about Russia.

DRAWS LAUGH

She translated what I said, and most of the men and women laughed loudly.

Then the young woman explained to me that the man, who left when the laughing started, was attempting to start a political argument and that she did not desire to translate under the circumstances.

Jack Steele, Washington correspondent for the Scripps-Howard newspapers, told me he had a similar, more violent experience. A man attempted to start an argument with him aboard a public bus in Novosibirsk. A woman on the bus interceded, gave the man a verbal going over and stopped his talk by socking him on the jaw.

Jack said he learned firsthand why Russian women won their recent track meet with American women.

They might do very well in the ring, too.

STORE WELL STOCKED

A visitor to Russia, I believe, expecting a great shortage of consumer goods, might be surprised by offerings of the largest department store in Sverdlovsk. It's a four-story building, with wide stairways but no elevators; and every department seemed well stocked. There was an abundance of luxury

goods (it seemed to me of doubtful quality), and people were buying.

In the men's department were all kinds of ties. None that I examined had any kind of label. And, strangely, I didn't see a single male shopper in the store who wore a tie. That may be the reason the cravat stock was so large.

I asked a young Russian how its people seemed to have so much more money to spend than I expected. "Take my case," said he. "I have a salary of 2,000 rubles a month ($200). My mother, my father, and I live in one of the new apartments. We have two rooms, a bedroom and a parlor and a kitchen and bath. I sleep in the parlor. Our rent is 80 rubles a month ($8). Naturally, I have money to spend for souvenirs."

This in a country where small tomatoes sold for 6 rubles (60 cents) each in Moscow and for 4 rubles (40 cents) each in the remote city of Novosibirsk. Wool caps like the cossacks wore sold for 55 rubles ($5.50), but more modern attire was higher. Cheap-looking raincoats were priced at 500 rubles ($50).

Editors of the western Siberia newspapers called on us at the Bolshoi Urals Hotel and—of course—we treated them to vodka and caviar.

Reciprocating, they invited those of us who didn't care to visit a powerplant to be their guests the following afternoon at a lakeside picnic.

When they called for us in a bus they drove past dozens of well populated, sandy beaches to a desolate spot on the lake—where the shore was all rocks. Crosby Noyes of the Washington Star and I attempted to swim. The air was warm, but the water was like ice. We stayed in only a few minutes.

None of the hosts, including a photographer who doubled as a comedian, could speak any English. Our only Russian words, were dah (yes), nyet (no), zah meer (to peace), spaseeba (thank you) and perhaps one or two others.

The hosts had brought plenty of vodka, smoked salmon sandwiches and caviar; and the comedian-photographer put the emphasis on the vodka when he began serving.

CUPS LEAK VODKA

Either Russian paper cups are not up to the quality of American paper cups, or Russian vodka is more potent than you think. As the comedian-photographer would pour a few ounces of vodka into a cup it would all filter through the cup's bottom before he could hand it to the guest for whom it was intended.

After trying two cups, then three, then four—placed inside each other—our server finally found that seven cups, used as one, would hold a drink.

We never did learn why our hosts drove us past those fine sandy beaches to the forsaken spot where we tried to swim. Maybe they didn't want their friends to know they were running around with Americans.

Chet Holifield: A Man of Atomic Energy

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, August 24, 1959

Mr. PORTER. Mr. Speaker, big issues need big men. Control and development of atomic energy is a big issue. Our colleague, CHET HOLIFIELD, is a big man.

Conscientious, practical, hardworking, warmly friendly and a truly humble man, CHET HOLIFIELD is in many respects a Congressman's Congressman.

It is a pleasure to see the recognition given to our friend in the New York Times, August 24. Under a previous unanimous consent I include the text of the article entitled "A Man of Atomic Energy, CHESTER EARL HOLIFIELD":

WASHINGTON, August 23.—At the age of 15 CHESTER EARL HOLIFIELD traveled from Arkansas to California to seek his fortune. At the age of 19 he owned his own men's clothing business—so was never able to finish high school. Nor did he ever take a formal course in science. But today, at the age of 56, CHET HOLIFIELD, as he is now called, probably knows more about nuclear power, nuclear weapons and missiles than any other Member of the House of Representatives.

As chairman of subcommittees of the Joint Congressional Committee on Atomic Energy, he is the driving force behind reports now coming off Government printing presses on the hazards of fallout from atomic tests and warfare, on the methods of disposing of nuclear waste materials, and on the probable effects of nuclear war.

LITTLE TIME FOR PARTIES

CHET HOLIFIELD rarely goes to parties. He has given up golf and hunting and fishing.

"My wife and my doctor reproach me for it," he says, "but I have no time now."

By day he devotes himself to fighting in Congress for more information on nuclear weapons and warfare, for Government support of nuclear power, nuclear submarine and aircraft projects.

And at night, until 11 or 12 most evenings, he studies.

"It is a continuing challenge to keep on top of these subjects, not to mention other sidelines," he says.

Whether fighting for civilian control of nuclear energy, for public power, against the Atomic Energy Commission or for public shelters against atomic attack, Mr. HOLIFIELD is mild in manner but sharp of tongue.

He demanded the resignation of Lewis L. Strauss as Chairman of the AEC and criticized his successor, John A. McCone, for what he called planning on a pitifully small scale.

And a year ago he asserted that "there is at present no national plan for survival, and there is nothing I can see that will insure the survival of any major segment of our society in the event of an enemy attack."

STILL OWNS BUSINESS

Mr. HOLIFIELD'S forceful personality stood him well in the clothing business, which he still owns, at Norwalk, 12 miles from Los Angeles. The same year he went into business he married the former Vernice Caneer. They have four daughters, all married, and eight grandchildren.

Becoming interested in politics during the depression and the New Deal days, in 1936, Mr. HOLIFIELD managed the successful campaign of Jerry Voorhis, a Democrat, for the House of Representatives. And when the Voorhis district was split up to allow for increased population, Mr. HOLIFIELD was elected as a Democrat from the 19th District of California in 1942. He has represented it since.

Representative HOLIFIELD'S interest in atomic energy was confirmed in July 1946 by his appointment by President Truman to the Commission that went to Bikini in the South Pacific to see, as Mr. HOLIFIELD puts it, "atomic fusion at work."

Three years later he was chairman of a subcommittee that recommended, against powerful contrary advice, that the United States go ahead with production of a hydrogen bomb. In January 1950 President Truman agreed, and in the early fall of 1951 the United States exploded its first hydrogen bomb.

"We beat the Russians by 9 months," Mr. HOLIFIELD recalls proudly.

But along with this sense of achievement came knowledge of the awful power of the bomb, of all the dangers and potentialities of nuclear power.

"I felt I wanted the people to know," he says, "the truth about it, not just wild statements. I wanted the world to get behind the Iron Curtain, too. I have worked pretty hard at it. I guess it's a kind of conscience effort."

Judge Samuel A. Weiss Honored at Duquesne University Graduation Exercises

EXTENSION OF REMARKS
OF
HON. JOHN H. DENT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 19, 1959

Mr. DENT. Mr. Speaker, it is indeed a pleasure for me to call to the attention of Congress a singular incident involving a former Member of Congress, the Honorable Samuel A. Weiss, judge of the Common Pleas Court of Allegheny County, Pa.

Judge Weiss started his political career at the same time I did in 1934 as an elected member of the House of Representatives in Pennsylvania.

From there he was sent to the U.S. Congress where he served with honor and distinction until he was called back home by a grateful constituency to become a judge of the courts of our great State.

He has served long and well and the honor bestowed upon him by Duquesne University, his alma mater, attracts to the respect and affection in which he is held by all who have had the pleasure and privilege of knowing him over these many years.

I submit for the RECORD a reprint from the Pittsburgh Legal Journal, a report on this citation given August 7, 1959:

JUDGE SAMUEL A. WEISS RECEIVES DOCTOR OF LAWS DEGREE—LOCAL JURIST HONORED AT DUQUESNE UNIVERSITY GRADUATION EXERCISES

Duquesne University graduated 171 students, 62 with advanced degrees, at its summer commencement exercises held today (Friday, August 7) on the campus of the school.

The ceremonies marked the end of the 6- and 8-week summer sessions, and were held for the first time in the Mills Auditorium of Rockwell Hall.

Honorary degrees were awarded the Honorable Samuel A. Weiss, Duquesne alumnus and judge of the Court of Common Pleas of Allegheny County; Sidney V. Levine, president of Ad Press, Ltd., New York City; and Msgr. Robert B. Navin, S.T.D., president of St. John College of Cleveland.

Judge Weiss received the doctor of laws degree; Mr. Levine, doctor of commercial science; and Monsignor Navin, doctor of education. The Very Reverend Vernon F. Gallagher, C.S.Sp., chairman of the board, made the presentations.

Monsignor Navin delivered the commencement address, especially commending the

class "because of the very great sacrifices made to complete your educations—many working full time, and taking courses to fit yourselves better for positions in life and for the service of others."

He also gave the graduates his views on several controversial topics: "The world today is confused and mixed up because it does not recognize or will not accept the truth." This ignorance or rejection, he said, is a "faulty application of the most basic principles of the natural law."

He cited the much-discussed decision in the Chatterly case, referring to the recent lifting of the ban on the novel "Lady Chatterley's Lover," where, he said "one man's 'freedom to advocate an idea,' admittedly immoral, is upheld even though it is in direct opposition to the public good." He suggested that this was a situation where freedom had degenerated into license.

Monsignor Navin concluded by attacking the frequently advocated theory of custom-regulated morality as evidenced in general approval of divorce and birth control. "It is significant," he said, "that the very groups which originally brought about restrictive legislation on birth control information now favor banning all such legislation. If it was wrong then, could it be right now?

"You are saved this confusion and mental mixup because you have a definite philosophy which guarantees you consistency and stability in decision and action," he added. "You are in a position to do an immeasurable amount of good in bringing the truth to others—absolute, unchanging truth. This is the starting point."

Three students, two of whom are nuns, were graduated with honors. They are: Luetta Mae Camp, 903 Stuebenville Avenue, Cambridge, Ohio; and Sisters Mary Angelina Cavalle, S.S.J., and Grace Madeleine Lawley, S.S.J., both of Mount St. Joseph, Wheeling, W. Va.

More than one-third of the graduating class was nuns, the majority receiving bachelor of education degrees.

The exercises were preceded by mass, celebrated by the Reverend Edmund R. Supple, C.S.Sp., of Duquesne, and sung by the Sisters of St. Joseph Choir, from Wheeling.

The citation which was presented to Judge Weiss follows:

"CITATION: HON. SAMUEL ARTHUR WEISS

"Samuel Arthur Weiss, jurist, Congressman, philanthropist, sportsman, dedicated alumnus, friend to all:

"Yours has been a varied and rich career. Persevering industry in the face of many difficulties, carried you through college and law school with distinction. Meanwhile, your athletic ability kept pace with your scholarship when you excelled as captain of the varsity baseball and football teams.

"Your career in law and politics has been one of steady progress. The voters recognized in you a champion of their rights and a man of integrity when they elected you twice to the Pennsylvania Legislature, three times to the U.S. Congress, and twice as a judge of the Court of Common Pleas of Allegheny County.

"People of every race, creed, and nationality have felt the warmth radiating from a sincere and brotherly concern. It has embraced hospitals, lodges, boys' clubs, education, the military services, and religion.

"Because your alma mater is grateful to you and because she takes pride in you as a distinguished citizen, I ask our Very Rev. Chairman of the Board to confer upon you the degree of doctor of laws, honoris causa, with all the rights and privileges thereunto attached, and cause you to be invested with the hood appropriate to that degree.

"Very Rev. HENRY J. MCANULTY, C.S.Sp.,
"Acting President."

Legalizing the World

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 28, 1959

Mr. FULTON. Mr. Speaker, Mr. Charles S. Rhyne, a prominent attorney of Washington, D.C., and former president of the American Bar Association, has been instrumental in promoting world peace through world law. He is to be commended for his efforts in this important field.

Under leave to extend my remarks in the RECORD, I include the address that Mr. Rhyne delivered to the Junior Bar Conference on "Legalizing the World":

LEGALIZING THE WORLD

(Address by Charles S. Rhyne, Washington, D.C., former president of the American Bar Association, former chairman of the Junior Bar Conference, before Junior Bar Conference, Hotel Fontainebleau, Bal Harbour, Fla., Aug. 23, 1959)

Twenty-one years ago I attended my first Junior Bar Conference convention. The great men of the day were Arthur T. Vanderbilt and John J. Parker. What a thrill it was to see and hear them in action. The great idea they were urging was modernization of courts and legal procedures—judicial administration improvement. They called for traffic laws and courts adapted to automobiles, rather than the horse and buggy. They urged our dedication as lawyers to a program of service to the public as well as to our clients.

At their urging the Junior Bar Conference assumed major tasks in bringing this judicial administration improvement idea to reality. Junior Bar Conference members collected the facts State by State on courts and court procedures. And upon these facts Vanderbilt and Parker built their reform programs.

"Old men for wisdom, young men for action" were the Junior Bar Conference watchwords. Since that time the "wisdom" of Vanderbilt and Parker and the "action" of Junior Bar Conference have brought about tremendous advances in judicial reforms. In the traffic field alone most of the evils then rampant are either gone or going. A Junior Bar Conference national chairman—Jim Economos—has devoted his life to ramrodding this program. And while his hair is graying and his middle rotund, his zeal has never once slackened, nor has his identification with Junior Bar Conference—even today he is "credited" in the minds of most lawyers as a Junior Bar Conference representative.

At my first Junior Bar Conference meeting I never for one moment envisioned appearing before you someday as an old man to seek to harness your energies for yet another great public service crusade. Yet here I am—asking you to help legalize, and thus stabilize and bring order into, the relations between the peoples and nations of the world; to help achieve world peace through application of law, legal procedures and the courts to transnational relations of nations and individuals.

Under the ceaseless prodding and the inspired leadership of Vanderbilt and Parker these past years have witnessed great progress in modernizing judicial administration and legal procedures. Yet were they alive today they would be the first to say that this progress is small when compared to the job to be done. Until their untimely and unfortunate passing they never overlooked an opportunity to call for more and more effort to achieve the great goal of a more perfect justice for all men.

Due to Vanderbilt and Parker and their disciples in the Junior Bar Conference, and the bar generally, nearly all men today accept the need for modernization and reform of courts and legal procedures. Their idea has come of age. They have won the biggest part of their battle. For while their proposed reforms have been slow in coming and the setbacks many, the idea is implanted so firmly that it will never die out. Modern courts and modern legal procedures we have in some places. They will eventually be universal.

Vanderbilt and Parker planted their great idea deeply in the minds of the public as well as in the minds of lawyers. This public awareness and the resulting public opinion pressures are largely responsible for bringing about the improvements which have been achieved. The formula for success has been to spread the idea lawyer to lawyer to public and public to politician so as to bring about essential governmental action. That lesson I would now apply to a program to modernize international law and the international courts so that they can replace weapons as the decision mechanism in resolving international disputes.

World law is in its infancy. Men do not yet fully accept the idea that the rule of law can achieve and maintain order and stability internationally.

But the idea is better known and more widely accepted today by more people throughout the world than ever before. We are in some respects where Vanderbilt and Parker were 21 years ago. I earnestly hope it will not take 21 years to make this idea come of age. We probably do not have that much time before the arms race explodes into world holocaust. Events press hard for action in our quick-moving era. But in this pressurized context no idea holds greater potential for a peaceful world than that of creating legal rules based upon the immortal principles of the rule of law to govern transnational relations.

To make world law come of age we must convince men everywhere that law will do the job internationally that diplomacy, arms, agreements and treaties have been unable to do—at least they have not done it up to now. To convince men, we must prove to them by facts and sound logic that law can supply principles which will provide standards to guide the relationships of men and nations transnationally. We must persuade men and nations to choose to operate internationally under these standards rather than upon the present operational basis of capacity for mutual annihilation.

In the past we have made a mistake in our struggle for peace by going at the matter negatively. We have concentrated on getting rid of war, getting rid of tension and getting rid of armament.

But you cannot get rid of war, tension and armament and leave a vacuum. We will get rid of them only to the extent that we put something else in their places. What is that something? In the human story it has always been the rule of law in every civilized nation.

The concept of a rule of law as a step toward peace provides a positive idea around which we can rally the imaginations and hopes of people everywhere. Law is something everyone understands and practically everybody respects. Law is a concept that has not been spoiled by verbal distortion as have such words as "peace" and "democracy." Law is everywhere known to be the

familiar, the normal—indeed the only—alternative to force in organized society.

What can the Junior Bar Conference do? I propose that the Junior Bar Conference do two things: (1) set up task forces to contact young lawyers in every nation on earth to find out how these young lawyers of other lands think this job can be done and how we can work with them to legalize the world; (2) help collect the facts and experience upon which a world law system can be erected just as we collected the facts and experience for Vanderbilt and Parker on courts and legal procedures.

The job I ask you to do cannot be done in a year or a decade. It is one for continuous effort over the years just as in the case of court and legal reform. We strive for perfect justice always, yet we never quite achieve it. So on world law we must work and strive knowing full well that perfection is not achievable. But a world ruled by imperfect law is so much better than a world ruled by armed might that a choice is not hard to make. And the people will make that choice once the lawyers convince themselves, and then the people, that law is the answer.

The new uncharted, unexplored frontier of today is not in science despite the miraculous accomplishments and the potentials there. The real unexplored frontier of our day is the creation of the legal rules under which nations live together on this earth—each sharing its riches in peace in a world shrunken by fast transportation and communications; peace not on a community, State or national basis, but peace on a worldwide basis.

Little by little we are realizing that our own hopes and destinies are irrevocably linked to the hopes and destinies of our fellow men at home and abroad. To live in peace is beyond question the greatest current desire of all peoples. The cry of "Peace unto you" is and has been the most welcome cry to the ears of man from before the days of Christ until now—as witness Vice President NIXON's outstandingly successful trip to Russia.

The expanding horizons of the world promise fabulous rewards to those who are bold enough to brave the unknown. And make no mistake about it, our greatest unknown is still in the area of procedures, rules, and other machinery under which humans can get along together peacefully. Again, I recall to your minds that a study of civilization's development reveals beyond question that the rule of law is the best idea man has ever developed for this purpose. Our job is to give legal form and expression to this great idea as applied to the needs of the new world of today. The principles of the law can be used to map the way out on this new frontier so that man may harness modern technology for his benefit rather than have it used for his death. Under the rule of law we can live together rather than die together as we most certainly will if the rule of force continues to control the fate of humanity.

No one really knows as yet how to make law prevail throughout the world but we of our generation must be the first to attempt this task.

We can begin our exploration of the unknowns of this frontier with full awareness that the carnage and waste of war constitute the blackest pages in the history of man and that advances in law chronicle the brightest. What war or other killing or enslavement of man compares in the esteem of mankind with the Ten Commandments, the codes of Hammurabi, Solon, and Justinian, the Magna Carta and our own Constitution?

I a asking you to take part in a movement that is now already successfully underway. The march toward a world ruled by law is making electrifying progress on four fronts:

(1) Within the organized bar;

(2) Within the executive and legislative branches;

(3) Within university law schools and research centers;

(4) Within public opinion.

Through contacts with lawyers in 74 nations we have acquainted them with what the American Bar Association is doing and hopes to do in this field and have asked for their cooperation and assistance. Without exception the lawyers of the world have welcomed this movement and many of these lawyers of other lands are already working with us on plans to bring the movement to fruition. Tomorrow we will present a report for the committee on world peace through law to the house of delegates outlining the work and developments during the past year. We will outline the continental conferences, the world conference of lawyers, and a specified agenda for such conferences, which we recommend to capitalize upon lawyer interest and activity throughout the world. We also set forth the concrete steps we recommend to bring transnational relations under the rule of law.

On the executive front the President, the Vice President, the late Secretary of State, Mr. Dulles, and the Attorney General of the United States have all within the past year made strong statements supporting the rule of law internationally. Such concerted action by four such national leaders is in itself almost unique. In the Congress, by resolutions, speeches and other activity its Members have more and more demonstrated their interest and support for the rule of law in world affairs. And a mere glance at the CONGRESSIONAL RECORD indicates that this interest in accelerating on an ever-increasing scale. Governors, mayors, State attorneys general and other State and local officials have also expressed their interest and support.

On the research or university level the creation of the Duke World Rule of Law Center with Arthur Larson as its head, and work of great importance now being done at Harvard, Chicago, Northwestern, Cornell, Southern Methodist, Miami, and numerous other universities all over the world, are spotlighting this subject as never before.

Never before has so much effort and money been expended just to collect the materials in which international law may be found. And finding the law in this field—just as in other legal fields—is one of the big undone jobs we must accomplish. There is a lot of international law—there are many rules that apply internationally—but digging them out can never be done without the basic legal materials. You as young lawyers constantly find the law for your seniors in many fields of domestic law. You could not perform that task at all if the essential books, opinions, etc., were not available. Making international law available is a big task that universities and researchers can perform and are performing. And due in part to the rise in general university interest—and lawyer interest—one finds that law students are more interested in taking courses in international law. This too is a most essential development. In the past this subject has been looked upon as a mysterious field chiefly of interest to a few professors. Now the shrinking of the world in the jet age has thrown nations and people together and suddenly lawyers, law students and others realize that we must have rules to regulate these ever-closer and ever-accelerating contacts.

President Eisenhower's comment recently on the research scientists who produced satellites and split the atom and the researchers in medicine who produced the polio vaccine, that "the apparently visionary researcher is likely to produce unexpectedly practical results," applies equally to legal researchers and workers in the international law field. Their work is being put to more and more practical use daily. Here, as in the case of all great ideas, the idea of a world ruled by law is often labeled impractical and idealistic. In addition to the President's answer, I recall to your minds that our Government under our Constitution was so labeled 170 years ago both at home and abroad; yet it has worked practically and ideally to give man more effective protection of individual rights, more widespread justice, more equality under law, more evenly distributed economic opportunity, more security in person and property and greater personal freedom than any governmental system ever developed in all the history of mankind. The framers of our Constitution included lawyers of the kind that we sorely need now in the international field, lawyers who have, in the words of the late "Bull" Warren, of Harvard, "ideals and a realistic approach to the task of implementing the ideals as a practical matter."

In the area of public opinion, we find that governmental leaders of the world, when the potentials of world law are explained to them, are beginning more and more to express views in accord with those of President Eisenhower on this subject. Prime Minister Nehru, Chancellor Adenauer, Prime Minister Diefenbaker, and many others have spoken out in support of increased reliance upon the rule of law in world affairs. Great lay leaders of our country and the world like Henry Luce, Erwin Canham, religious leaders like Cardinal Cushing and Bishop Pike, to name only a few, have constantly and strongly urged that the rule of law is an answer to the problem of world peace. In the news media field several hundred editorials and news commentaries have expressed favorable views upon this subject. And "Law Day, U.S.A." has given great nationwide recognition and impetus to this development.

We of the legal profession are concentrating on building the necessary legal foundation and framework for the world. More and more people are realizing that if you are ever going to have a world ruled by law that foundation and framework must come first. Talk about disarmament and enforcement is really looking to the ultimate rather than to the first essentials. Disarmament and enforcement will follow if we get the necessary law and the needed judicial machinery. Summit discussions and meetings of leaders of nations may end tensions but they do not erect this legal framework which experience within nations proves we must have to achieve lasting order and stability.

So in asking you to join and aid this movement I am asking you to support an idea many are already pushing with all their capacity. The idea is on its way but it needs all the help it can get from all who sincerely desire a peaceful world. I am sure you have such a desire. I am sure also that no group can do more in translating that desire into reality once you focus upon the problem, acquire the knowhow and develop a program for action. You can perform no greater public service. No greater challenge exists for you as lawyers.

Let us march together again on this new crusade for the benefit of the public good as we have marched so successfully on court and legal reform. Let us see to it that ours is an age of unlimited progress rather than unlimited destruction. Only through making it the age of the law can this goal be achieved.

Sad Poles Wave Goodby

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 25, 1959

Mr. BOGGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the 12th in the series of articles written by George W. Healy, editor of the New Orleans Times-Picayune, who accompanied Vice President NIXON on his recent trip to the Soviet Union:

[From the Times-Picayune, Aug. 20, 1959]

SAD POLES WAVE GOODBY—KITCHEN CABINET BORN HIGH IN 500-M.P.H. JET

(By George W. Healy, Jr.)

KEFLAVIK, ICELAND.—Leaving Warsaw was not as pleasant as entering Warsaw.

Like the day we arrived, there were thousands of men and women and children on the streets the day we left. Many of them waved and shouted to us. Some of them, the older ones, wiped their eyes as they waved goodbye.

Although its people are reputed to have more freedom than is enjoyed by the people of any other satellite of the Soviet Union, the Poles in Warsaw—I believe—know that their hundreds of thousands of relatives in the United States enjoy greater freedom than do they.

Perhaps as they waved to us the day we left many of them would have like to some with us.

One of the most competent, and most understanding correspondents riding our press plane was Frank Holeman of the New York Daily News. It was Frank, a very tall young man, who back in 1950 took a tuxedo with him on a quick assignment—to Korea. Naturally, when the assignment turned out to be the coverage of a war, the tuxedo didn't see much service. However, when Frank returned to Washington—having worn thin all the clothes, save the tuxedo, which he had taken with him—the tuxedo served him in good stead. He found moths had feasted on clothes which he had left in Washington, so he wore the tuxedo until his tailor could fit him with new business suits.

Frank's description of the scene of our departure from Warsaw bears repeating.

"We waved goodby to a lot of friendly people in Warsaw this morning on the way to the airport with Vice President NIXON," he wrote. "They laughed and clapped, and some threw bunches of carnations and gladioli. Here and there along the way, though, you'd see a man or a woman wave, smile, then suddenly turn sad. * * * There was really something pathetic about the whole episode. In 12 hours with our big jet transport planes, we would be in a different world, the free world. The poor Poles would still be right there in the Communist world, which many obviously detest.

"We learned a lot of new things about that Communist world in our 2 weeks with NIXON. It may not sound like a long time to you, but 2 weeks behind the Iron Curtain can be a lifetime."

It seemed, indeed, a long time since we had breathed freely—conscious of the protection of the American flag on American soil.

Unlike other legs of our journey, Vice President NIXON rode the leg from Warsaw to Keflavik aboard the TWA 707–121 jet plane. Mrs. Nixon and other members of his official party continued to ride the Military Air Transport Service jet transport which followed us into every airport.

About the time we were over Denmark the Vice President held a conference and organized a new club. All the men and women who flew with him to Russia, to Siberia and to Poland were initiated as members of "The Vice President's Kitchen Cabinet," an organization reminiscent of Mr. NIXON's debate with Nikita S. Khrushchev in the kitchen of the model home at the U.S. exhibition in Moscow.

Although we were flying high above the clouds the news conference conducted by Mr. NIXON for almost 2 hours was as effective as any I ever attended. Certainly the British and Canadian and American correspondents who heard the late President Franklin D. Roosevelt and Prime Minister Winston Churchill at the Citadel in Quebec were no more attentive than the homing newsmen questioning and hearing the Vice President as they moved toward the new world at approximately 500 miles per hour.

The scene at the airport before we took off from Warsaw was impressive. There was a large band, and the Polish Army was represented by one of its crack drill teams.

John Charles Daly, the electronic newsman, gave his colleagues justification for loud laughter when, walking preoccupied across a ramp, he got in front of the drill team. When he realized that the drill team was about to run him down he had to break into a run.

Dr. Oskar Lange, vice president of the Polish council of state, was the last official of an Iron Curtain country who spoke to us.

To me, Dr. Lange's words had a ring of sincerity when he said, "In our opinion your visit has been a practical manifestation of that peaceful coexistence which we here in Poland so ardently desire and of the principles which we apply in our policy."

Observing how much the Poles love their families, their homes, their animals, and their flowers—it is difficult to consider them potential enemies of any peace-loving country. Whether the Kremlin has convinced many of them that the United States is not a peace-loving country, of course, is undetermined.

Their attitudes toward the Nixon party indicated to me that the Kremlin has not succeeded in this regard.

If I were called on to choose tomorrow between making a return visit to Moscow, to Leningrad or to Warsaw, I would choose Warsaw without hesitation.

The flowers in the boxes which decorate Warsaw's every light standard are as beautiful as any I have ever seen. Its men are as courteous as true southern gentlemen. Its women are charming and gracious.

It might have been good if some of those Poles who waved could have come along with us.

Red China Should Not Be Admitted to the United Nations

EXTENSION OF REMARKS
OF
HON. RUSSELL V. MACK
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 20, 1959

Mr. MACK of Washington. Mr. Speaker, I considered it a privilege to vote for the resolution that rejects any and all proposals that Red China be admitted to the United Nations.

Red China is an outlaw nation. She poured her Red troops into Korea and by this barbaric aggression plunged the free world into a bloody war that cost tens of thousands of young men their lives. Although that war long since ended, Red China still holds many American prisoners.

It is unthinkable that Red China now should be permitted to crash the gates and gain admission to the United Nations with whose efforts for world peace China repeatedly has manifest she has no sympathy.

Some argue that if Red China is admitted to the U.N. she might reform. To this, I reply let Red China reform first and prove by her actions that she is worthy of membership in the U.N.

It would be a display of weakness on America's part for the Congress of the United States to go on record as favoring admission of Red China, after all her outlawry, into the U.N. I was proud to vote for the resolution keeping the United Nation's membership doors closed to Red China. In that vote I am certain I expressed the almost unanimous sentiment of the constituents whom I have the honor to represent in Congress.

Tribute to Delegate Burns of Hawaii

SPEECH
OF
HON. GEORGE M. RHODES
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 20, 1959

Mr. RHODES of Pennsylvania. Mr. Speaker, I join my colleagues in paying this well-deserved tribute to a great American, John A. Burns of Hawaii, who leaves us shortly to return to the shores of his beloved homeland.

In the relatively short time that Mr. Burns served in this body, he carved for himself a prominent place in the history of our Nation. Two new stars have been added to our flag—two new States—and almost a million residents of Alaska and Hawaii have been granted first-class citizenship since John Burns arrived in Washington only a few years ago. Despite one-sided odds against him in the fight for Alaskan statehood and then for Hawaiian statehood, John Burns—more than any other single person—was the leading architect of the two statehood victories.

By his tireless efforts, persuasiveness, and sincerity of purpose, John Burns won the respect and support of his fellow Members of the House. Enactment of the statehood bills was a joint victory in which all Americans shared.

John Burns has served the people of Hawaii ably and conscientiously as their last Delegate. Those of us who value his friendship will truly miss him in the difficult times ahead. We greet the first Congressman from the State of Hawaii, DANIEL INOUYE, of whom John has spoken of so highly. I trust that in the not too distant future, John Burns will

return to Washington to continue his outstanding record of service to his State and Nation. Until then, John, we wish you good luck and Godspeed.

Poison in Your Water—No. 158

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 6, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the CONGRESSIONAL RECORD an article appearing in the Madisonville (Ky.) Messenger of October 13, 1958, entitled "Menace of Salt in the River Green":

MENACE OF SALT IN THE RIVER GREEN
(From the McLean County News)

There's another problem to be concerned about on our Green River.

That's the serious problem of contamination from oil wells in Green County.

This situation came to light this week in three different stories on the new oil pool near Greensburg. The pool there differs from most in Kentucky in that the oil lies under a big quantity of salt water. In producing the oil, this salt water is pumped to the top of the ground. It is estimated that 20 barrels of salt water is pumped out for every barrel of oil. This salt is finding its way into Green River and contaminating the river in that area. In some places the water is several times as salty as ocean water.

This new contamination can have several serious results. It can hamper operation of any industrial plants that use river water in processing. This has already happened to the Tennessee Gas Transmission Co.'s gas stripping plant at Gabe. Wednesday reports came that there was damage to the Kentucky Utilities plant at Green River.

The threat of such contamination will certainly be a drawback to obtaining any substantial new industry in this area that would depend on river water.

Another bad effect would be on wildlife, such as fish and ducks, which might be killed or driven away. Upriver farmers who use creeks for water supply have been forced to sell their livestock.

Perhaps the most direct threat is to our city water supplies. Livermore and Calhoun depend entirely on the river for their water supply and a considerable number of farmers in the county also depend upon water purchased from the city systems in dry periods.

Apparently, at this stage there is not much we here in McLean county can do about the problem. This is another occasion on which we must depend on our state agencies to protect our interests. We think they are alert to the situation and will find some remedy.

Meanwhile we should keep a close watch on the situation and support our city governments in any action necessary to safeguard our interests.

The Kentucky Water Pollution Control Commission has given the oil operators 30 days in which to halt the pollution of the streams. We hope the commission will be successful in its efforts.

However, at the rate the pollution is increasing, 30 days may be too late to avoid serious damage.

History of Benedictines in Cleveland

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, August 24, 1959

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an article entitled "Historical Review of the Benedictines in Cleveland," which appeared in the Slovak News of August 13, 1959:

HISTORICAL REVIEW OF THE BENEDICTINES IN CLEVELAND

Archbishop Joseph Schrembs, D.D., invited the Slovak Benedictines at St. Procopius Abbey in Lisle, Ill., to establish a foundation in Cleveland. Assigned to St. Andrew's parish at East 51st Street and Superior Avenue, the first Benedictine, Rev. Stanislaus Gmuca, O.S.B., arrived on February 2, 1922, while Rev. Gregory Vaniscak, O.S.B., the founder, remained at St. Michael's Church in Chicago until he was elected conventual prior of the independent priory that was established at 10510 Buckeye Road on September 1, 1929. Meanwhile, Rev. George Luba, O.S.B., had organized Benedictine High School, which first opened its doors at St. Andrew's parish on September 8, 1927. The high school, too, was transferred to the new site at East 105th and Buckeye Road for the fall term in 1929.

Abbot Stanislaus Gmuca, O.S.B., was elected as the first abbot of St. Andrew's Abbey on August 8, 1934, and remained in office until his resignation in 1946. Abbot Theodore Kojis, O.S.B., was elected to office on June 20, 1946. During Abbot Stanislaus' term of office the new Benedictine High School at 2900 East Boulevard was built in the spring and summer of 1940. The new abbey building was completed in 1952 when Abbot Theodore was host to Archbishop Edward F. Hoban, D.D., and Abbot Primate Bernard Kaelin, of Rome, who solemnly blessed the new abbey and an extension of the high school buildings.

Benedictine High School is staffed chiefly by members of the abbey, but approximately 14 lay teachers are employed in the teaching of a thousand boys each year. In addition to winning its share of scholastic, scientific, and journalistic honors, Benedictine High School has won renown in all major sports during the past dozen years. The Bengals won city championships in football, basketball, baseball, golf, and bowling in a decade of athletic glory seldom qualed in Cleveland interscholastic competition. In 1957 the Benedictine gridiron team won the State football championship, an achievement that was the crowning point of a long, uphill struggle to the Bengals' greatest triumph in 30 years of competition against the best high school teams in Ohio.

Behind the scenes of Benedictine's rise to fame and glory, the monks of St. Benedict live their daily lives according to the holy rule of the patriarch of western monasticism in which the motto "Pray and work" ("Ora et labora") is perhaps the predominating feature. Thus, the priests and Brothers work in the advancement of religion and education not only here in Cleveland but elsewhere. Besides administering Benedictine High School, St. Benedict's parish in Cleveland, priests of the abbey are engaged in parochial work in Chicago, East St. Louis, Ill., and Superior, Wis. Chaplains are assigned at the Benedictine Sisters' Convent in Tinley Park, Ill., and in the Jednota Home in Middletown, Pa.

For a quarter of a century several priests (notably the Very Reverend Gregory Vaniscak, Rev. Paschal Kavulic and Rev. George Luba) were editors of the Ave Maria, a religious monthly publication in the Slovak language, which has a nationwide circulation of 5,000 readers. Moreover, the official headquarters of the Slovak News, a semimonthly newspaper (a weekly until July 1, 1957), for the past 10 years has been in the old abbey building. The editors of both the Slovak and English sections of the paper have been members of the Benedictine High School faculty these years. Moreover, Rev. George Luba, O.S.B. (who succeeded Rev. Ivan Kramoris, O.S.B.) editor of the Zenska Jednota semimonthly magazine for 100,000 members of the First Catholic Slovak Ladies Union, has been in that office for the past 22 years.

Members of the Order of St. Benedict here are active in Catholic organizations, societies and clubs, namely, the First Catholic Slovak Union, the First Catholic Slovak Ladies Union, the Knights of Columbus, the Catholic War Veterans, the Catholic Order of Foresters, the Slovak Catholic Sokol, the Pennsylvania Slovak Catholic Union, the Ladies Pennsylvania Slovak Catholic Union, the Slovak League, the Slovak Catholic Federation, the Slovak Catholic Cadet Union, and the Catholic Slovak Benefit Organization. All of these at some time or other have made financial contributions to the building or maintenance of Benedictine High School. However, at the top of the list of organized benefactors of the school is the Benedictine Dad's Club, which in the past 12 years has contributed more than $300,000 to the school fund. Moreover, the Cleveland diocese through the efforts of Archbishop Edward F. Hoban, D.D., contributed a substantial sum to the extension of the high school in 1952.

Parochial work, especially on weekends, has always been an integral part of the work of the Benedictine priests who feel honored and privileged to serve in an auxiliary capacity in the work of God under the direction of the hard-working diocesan clergy throughout the diocese of Cleveland.

We Must Fight Filth in the Mails

EXTENSION OF REMARKS
OF
HON. PETER F. MACK, JR.
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 30, 1959

Mr. MACK of Illinois. Mr. Speaker, under leave to extend my remarks, I wish to include this excellent editorial from the Macoupin County Enquirer:

WE MUST FIGHT FILTH IN THE MAILS

The Post Office Department's drive to stamp out the mailing of obscene materials to children is receiving widespread support from the press, radio and TV commentators, public-spirited organizations and Members of Congress, officials report.

"We are most gratified by the wholehearted editorial support being accorded by the press," Postmaster General Arthur E. Summerfield said. Good progress toward solution of the problem is being made, he stated, but added that "persistent, intensive action on a nationwide scale will be necessary to cope with the determined plans of the filth racketeers to continue expanding their business."

These plans, he said, are aimed in large part at children. Recent reports, as well as testimony before Congress, have pointed out that the traffic in obscenity has doubled in just the last 5 years, and can double again by 1963 if the parents of America do not take a concerted stand within their own communities to wipe out evil.

There are steps the Postmaster General emphasizes, that every community can take. Alert parents are the most important source for direct action against the mail order "merchants of filth." The minor child need not have indicated interest in the material to receive solicitations through the mail to purchase obscene literature and photographs. It is the responsibility of the parents to take action when such material comes into the hands of their children through the mails.

Parents can work closely with teachers to detect obscene materials in the possession of children and to determine the origin of such material. Such efforts can be instrumental in the prosecution of traffickers in mail-order obscenity.

Perhaps most importantly, parents can cooperate with the schools in taking positive steps to help their children develop wholesome interests in good literature and art—making it readily available to them at home, in the classroom, through literary and library clubs, and through student groups.

The ultimate aim of all concerned, the Post Office Department believes, should be the forging of an active, continuing relationship among the local post office officials, civic organizations, representatives of the local government, the press, the radio and TV, and every parent, by which the community can present a united front in its determination to stamp out the purveying of mail-order obscenity to children.

Momentous Question of Labor Reform Laws

EXTENSION OF REMARKS
OF
HON. JOHN H. DENT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 19, 1959

Mr. DENT. Mr. Speaker, under leave to extend my remarks, I am inserting in the RECORD a copy of my lewsletter because of its relationship to the momentous question of labor reform laws:

HOMESTRETCH

As we enter the homestretch in this session of Congress, many thoughts cross the mind of a Member of Congress.

He wonders sometimes whether, with all of the conflicts, special interests, greed, envy, and sometimes even hate, that we are able to get anything done at all.

It's strange, but true, that the American public only gets the surface news and little of the real background and reasons for some of the actions of Congress and Government in general.

If I would attempt as a Congressman to give you only my views you would still be getting a single viewpoint.

However, during the session, I've tried to keep you informed on as many subjects as time and space would allow.

Behind the headlines and news, there are many angles that just can't be given the coverage they deserve. With your interest at heart, I want to cover our last remaining days and some of the highlights of the actions of Congress.

STRIKES

For many years, since man first discovered he could hire some other person to work and make a profit on his efforts, there has been a continuing economic fight.

One of the weapons used by the working masses in this warfare has been the use of the strike.

There's no question that strikes have at times created havoc with loss of life, injuries, destruction of property, want and hunger as part of the picture.

Strikes haven't always been called for the purpose of gaining wage increases. Sometimes men have had to strike to protect their jobs, especially the older workers who for years were discarded and tossed out to make room for younger and faster producers.

There have been times when strikes were called for overtime pay, vacations with pay, recognition of unions, insurance and welfare benefits, safety devices and almost anything you can think of.

It wasn't always a pretty picture and those of us who come from industrial and mining communities have very vivid memories of cold winter days and barren tables.

It was from this kind of a situation that the Wagner Act emerged and labor found itself blessed with new powers and privileges.

During the next generation, unions grew, wages and fringe benefits climbed and the American economy became the envy of the world.

Much water has gone over the dam since the passage of that act commonly called the Magna Carta for laboring men and women.

It was material for a growing antagonism to crop up on the part of employers and the first major attempt to curb labor ended up in the famous Taft-Hartley Act passed in 1947.

During the years that have intervened from that day to this, new and stronger demands have come forth for more stringent labor legislation, aided and abetted by the strange, illegal, and sometimes outright dishonest records of some of labor's officials.

A distortion of the facts seems to have resulted from the backdrop of Senate hearings by the McClellan committee and the personal political ambitions of Senator JACK KENNEDY, ballooned and favored by the antics of his younger brother on TV, etc.

All of these so-called labor-management control bills are purported to be in the interest of labor peace.

Recently, the Public Affairs Institute, conducted by Dewey Anderson and Associates sent out a timely observation entitled, "Labor Peace?"

I am passing it on to you with the hope that you too will stop and wonder about the facts behind today's events and issues.

"All the time that Congress is feverishly debating what kind of legislation we ought to have to bring an end to labor-management malpractices and to curb the power of alleged union bosses what may be an infiintely more important story is going unnoticed.

That is the story of the steady increase in labor-management practices before the National Labor Relations Board.

Month after month the Board's business mounts. Month after month the bitterness of strife between union workers and their employers mounts.

Instead of labor peace as the authors of our labor-management legislation tell us is their goal, we are getting industrial warfare.

With 500,000 Steelworkers out on strike and another 100,000 workers laid off in related industries in what is obviously one of the sharpest labor-management disputes we have had in many years, it might be a good time to look at the more general picture and see what is happening on the labor front.

Here are some of the recordbreaking highlights:

The General Counsel issued 297 unfair labor practices complaints—the greatest number ever issued in any one quarter.

Unfair labor practice cases filed by employers numbered 563; an increase of 126 percent over those filed during the same quarter a year ago.

Unions filed 1,021 unfair labor practice cases for an increase of 41 percent over those filed by unions during the corresponding period of 1958.

These increases are not something new. They are part of a pattern of increasing tensions and disputes that has shown itself clearly for at least the past year and a half. Why?

Any objective study of the attitude of many segments of industry during the past few years will show an obvious determination to crack down on organized labor.

Both the National Association of Manufacturers and the U.S. Chamber of Commerce have been conducting a never-ceasing campaign against labor, constantly using the timeworn cliches of "labor bossism," "labor monopoly," and "labor corruption."

In this the McClellan committee hearings have been a never-failing and convenient source of citable evidence to be used against all unions whether they are among those which have been investigated or not.

Right-to-work supporters, despite the setbacks suffered at the polls last November, have never ceased to press for harsher States' rights legislation to weaken and perhaps even destroy unionism in the name of protecting it.

In Congress itself there is a group of Senators and Representatives who spend much of their time in the fight to enact legislation that would further restrict union activities and discredit labor.

The drive of business to enter the political field more actively and more openly is a reflection of business hatred of labor strength.

It's all very well to keep pounding away on corruption within the labor movement. But how about a little investigation into the reasons for the recordbreaking charges and countercharges that are overburdening an already overburdened NLRB?

One of the amusing remarks that helped to break the tension when the labor bill was voted upon centered around the fact that the Speaker SAM RAYBURN lost all of the southern bloc except a scattered dozen or so and was supported almost to the man by the northern group of Congressmen.

One House Member was heard to remark "How do you expect to win the fight with a Yankee Army and a Confederate general?"

While mentioning the beloved Speaker, it might be well to note that Sam is no anti-union advocate by any stretch of the imagination.

The Speaker wanted and fought for labor reform and opposed labor annihilation.

Lost in the shuffle apparently are the real issues, minimum wage extension, social security improvements, reduction of income taxes in the lower income brackets, industrial and area redevelopment, decent housing legislation, reexamination of our trade and aid programs recognized now by many as inimical to our economic well-being, Federal standards for unemployment compensation, aid from the Federal Treasury for our hard pressed educational system, military influence peddling in war contracts and the other field of endeavor where the effect upon our daily lives touches all of us in and out of labor.

One wonders whether it wasn't planned that way. By hammering at Hoffa, Beck and unions, the people were made to forget the problems that loomed so high on the horizon in January.

Winter passed, spring has come and gone—summer is in its twilight, fall is waiting in the bullpen, and winter's icy fingers are reaching for our economic throats, yet all that's happened is that Congress has passed a bill curbing the economy of the country, moving completely into the orbit of the corporate semimilitary state and the President has caused Joe McCarthy to roll over in his grave by inviting Khrushchev to visit the White House.

It's been said often that consistency is the hobgoblin of small minds—there are few small minds in Washington.

Sincerely yours,

JOHN H. DENT,
Member of Congress.

Adlai's Back and Available

EXTENSION OF REMARKS
OF

HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, August 24, 1959

Mr. PORTER. Mr. Speaker, there are three things I wish the people of our great Nation would keep in mind as November 3, 1960, comes closer and we decide on our next President.

These three things also should be kept in mind by the Democrats next July in Los Angeles.

They are: First, Adlai is the best man; second, Adlai is available; third, Adlai will be elected.

There is much evidence for all these propositions but, under a previous consent, I will include only a small part of it to wit, an item from the New York Times of August 22 about his arrival back in the United States, Arthur Krock's column from the August 25 New York Times, and an article from the current Look magazine.

One admonitory word to Fletcher Knebel, the author of the Look article: It is not correct to refer to "Democratic fat cats," but maybe you did not write the headlines. In the text you refer to "well heeled" or "major" contributors. That is better. Republicans have fat cats and Democrats, proportionately speaking, have only slim kittens.

Whatever the breed or size of cat, they prefer Adlai.

The article follows:

[From the New York Times, Aug. 22, 1959]

STEVENSON SAYS EUROPE SEES GAIN FOR KHRUSHCHEV IN VISITS—REPORTS BEWILDERMENT AT REVERSAL OF U.S. POLICY ON HIGH-LEVEL TALKS

Adlai E. Stevenson reported yesterday on his return from Europe that the impending exchange of visits between President Eisenhower and Nikita S. Khrushchev was regarded abroad as a great achievement for the Soviet Premier.

The twice-defeated Democratic candidate for President interpreted the exchange himself as a reversal of the policy toward the Soviet Union advocated by John Foster Dulles, the late Secretary of State.

"I was surprised by President Eisenhower's sudden reversal of the Dulles policy," he commented, "and many European leaders, who had little advance notice, were bewildered by the news that instead of rigid resistance to any high-level meetings, the President was himself going to Moscow and Mr. Khrushchev was coming to Washington for intimate talks."

He voiced the opinion that President Eisenhower's visits with the political leaders of Western Europe prior to his meetings with Mr. Khrushchev would dispel any misgivings that the announcement had caused.

DISAVOWS PRESIDENTIAL HOPES

In an hour-long interview after his arrival at New York International Airport, Idlewild, Queens, Mr. Stevenson renewed his declaration that he would not seek the Democratic nomination for President next year.

As to a possible draft, Mr. Stevenson commented: "I have never thought for a moment it was possible for me to be drafted in 1960 and I have no reason to think it now."

Commenting on the announcement that New York Democrats would advance Mayor Wagner next year for the vice-presidential nomination, Mr. Stevenson said:

"I have a high regard for Bob Wagner. He is highly qualified for public office, including the vice presidency. But I don't know what his ambitions are."

In discussing the Eisenhower-Khrushchev visits, Mr. Stevenson remarked:

"It is a good thing for our leaders to meet informally without a gallery and get the issues and conflicts on the table. But it will take a long time really to change the false ideas and mistrusts. The tensions will continue to rise and fall, as Russian policy dictates. So let us not expect early results from these meetings."

As for Vice President RICHARD M. NIXON'S visit to Russia, Mr. Stevenson commented:

"I think Mr. NIXON'S visit to Russia was a good thing—especially for Mr. NIXON."

Several years ago, he went on, Mr. NIXON had called him un-American or disloyal for talking about the implications of Russian economic growth.

"Now," he said, "he is saying the same thing. But it is better late than never and I believe in adult education, especially for Mr. NIXON."

While Mr. Khrushchev is in the United States, he should be treated politely, Mr. Stevenson declared.

"I wish he would come to Chicago so that I could return some of the courtesies extended to me in Russia," he added. "I would like to show him around a typical small town, like Libertyville or around my hometown of Bloomington and my farm nearby."

Mr. Stevenson plans to spend the weekend in New York and return to Chicago next week.

[From the New York Times, Aug. 25, 1959]

AN ALMOST IDEAL POSITION TO BE IN

(By Arthur Krock)

The presidential nominee of the last two Democratic National Conventions has returned from his latest trip abroad to a party situation which he should find suitable to whatever ultimate political purpose he has in view.

If he wants the nomination again, Adlai E. Stevenson has the favoring fact that in the event of a deadlock at Los Angeles in July 1960, which is moving from the possible toward the probable, the convention is much more likely to turn to him than to anyone else. If he is adamant against making a third run and/or won't be given the opportunity, the prospect grows that he could exert a major influence on the convention's choice. And if the candidate wins, the way will be open for Stevenson to employ his great talents in high Government office—maybe that of Secretary of State, for which he is admirably fitted. Many who know him well suspect he would be happier in that post than in any other, and that it would fulfill an early ambition from which only a first presidential nomination by a draft unique in American politics could have diverted him.

Perhaps comfortable reflections of this nature were passing through Stevenson's mind as he faced the reporters and the questions as to 1960 he knew to be inevitable. At any rate, the news photographs were those of a man in genuine good spirits. What he said on public affairs had that sensibility and gentility the public has learned to expect from him. And the digs at Vice President NIXON, which are routine for the Democratic politicians whom the party "liberals" especially admire, Stevenson, as is his wont, administered with the gaiety of Cyrano running an opponent through.

It was this turn of his interview that suggested the leader who, though abjuring any activity toward a nomination, not only is available for the highest honor in the gift of his party but wants to be sure his party keeps that availability in mind. The tactic is classic and has been effective when a subsequent convention takes a number of ballots without making a nomination. And mandatory in this tactic is that the politician interviewed brackets himself in the public consciousness with the most probable nominee of the opposition. Stevenson's replies to the questions of the press conformed precisely to these specifications.

But that may have happened because the routine of taking a crack at NIXON has become fixed in the practice of Stevenson, former President Truman and certain other Democrats. Little the Vice President says or does escapes their derogatory, deprecatory or ironic comment.

All of them in the heat of campaigns have said very harsh things about the Republican Party and its standard bearers. For example, Truman charged Eisenhower with having become influenced by the Nazi concept of a master race. In the last days of the 1956 campaign Stevenson called Eisenhower's state of health and vigor into question as capable of meeting the exigencies of a second term; also the activities of those Republicans who had pressed renomination on the President in the circumstances of his medical record.

But NIXON'S specific charge that Communists had been negligently allowed to infiltrate and remain in Democratic administrations, and the graver implication of treason Democrats saw in this charge, have made him personally and permanently anathema to most of their national leaders. The constant professions of these leaders that NIXON would be the easiest Republican to beat might rob them of their fervent wish to prove it in 1960, particularly if this estimate is reflected in recurring sample public opinion polls. Nevertheless, the Vice President continues to be the target to which Democrats who presume to aspire to the Presidency seem to be drawn by some kind of unbreakable magnetic force.

Thus Stevenson in his interview coupled his estimate that NIXON'S visit inside the Iron Curtain was useful with the comment "especially to NIXON." And when he expressed gratification that the Vice President had come around to his view that the chief Soviet threat is economic, Stevenson added he was in favor of "adult education—especially for NIXON."

This may only be the effect of a settled Democratic routine. But routine also, for a politician who wants to preserve his availability, was Stevenson's conditionally negative attitude toward a party Presidential nomination which soon afterward was proved to be wide open by the check New York Democrats administered to the front runner, Senator KENNEDY.

DEMOCRATIC FAT CATS STILL PREFER ADLAI

(By Fletcher Knebel)

Adlai E. Stevenson is the leading choice for the 1960 Democratic presidential nomination among well-heeled contributors to the party. Despite his two defeats by President Eisenhower in 1952 and 1956, Stevenson led all Democratic presidential aspirants in a Look poll of the men and women who supplied most of the financing for the 1956 State and National campaigns.

JOHN F. KENNEDY, the 42-year-old Massachusetts Senator who has been winning most opinion polls of rank-and-file Democrats, rates second as the choice of the party's financial backers.

Senator STUART SYMINGTON, of Missouri, is in third place.

Look polled the men and women who contributed $500 and more to various Democratic organizations financing the 1956 campaigns. They gave a total of $2,820,000 to Democratic party groups, according to the Senate campaign spending committee headed by Senator ALBERT GORE, Democrat of Tennessee. A sizable proportion gave $2,000 or more, and some contributed more than once. Many family names are old standbys as donors to Democratic war chests over the years. Most can be expected to contribute to the 1960 campaign.

Poll cards were mailed to 1,610 people on the Gore committee's list of Democratic contributors. Returns were received from 728 of them.

The names of the top eight men in the running were arranged alphabetically on the cards. In the space left open for "other" choices, more than 20 Democrats received votes. Only two, however, received more than two votes. They were Senator ESTES KEFAUVER (Tennessee), with four, and Representative CHESTER BOWLES (Connecticut), with three.

In addition to conducting the anonymous card poll, Look also asked contributors for their comments. The remarks of some of those willing to be quoted, along with the amount the Gore committee says they contributed in 1956, follow:

Kenneth T. Anderson, Emporia, Kans., cattleman ($7,000): "I was for Adlai Stevenson twice, and I think the country is paying a high price for not having him in office now. My preferences in order are Stevenson first, Humphrey second, Symington third."

William Benton, New York publisher and former U.S. Senator ($23,657): "My views are flat and pronounced. I'm for Stevenson, and I hope we have the good sense to nominate him."

F. Joseph Donohue, Washington, D.C., lawyer and Senator KEFAUVER's 1956 campaign manager ($1,500): "I'm for SYMINGTON."

Robert W. Dowling, New York real estate executive ($12,500): "My preference is KENNEDY. And I hope he makes it clear that if elected, he would name Stevenson as Secretary of State."

Mrs. Marshall Field of New York, widow of Chicago department-store owner ($9,500): "I might change my mind, but I think I prefer HUMPHREY at this stage."

William J. Fitzgerald, Boston, Mass., executive ($500): "I prefer KENNEDY. I suppose I am slightly prejudiced in that he is approximately my age, a native of Massachusetts and a man with whom I politically agree. He is a man of fundamental integrity, whose intelligence and youth are sorely needed."

Miss Winifred Jones Gladwin, of Santa Barbara, Calif. ($10,000): "My preference is for Stevenson and nobody else."

Louis A. Kohn, Chicago, Ill., lawyer, who is given credit for "discovering" Stevenson 15 years ago ($10, 600): "I'm naturally for Stevenson, although whether he can get it again is a question in view of his two defeats. I just don't know who I'd favor after him."

Mrs. Albert D. Lasker, New York philanthropist ($64,400): "I don't have any preference—not yet."

Jubal R. Parten, Houston, Tex., oil executive ($11,700): "I'm for LYNDON JOHNSON. He's extremely well qualified."

Lou Poller, Miami, Fla., businessman and 1956 KEFAUVER backer ($14,500): "I'd be for KEFAUVER if he runs. If not, SYMINGTON and JOHNSON in that order."

John M. Redding, Washington, D.C., public-relations man ($4,000): "There's no question KENNEDY is in the lead now, but I think we'd have fewer problems with SYMINGTON, and he'd make a fine candidate."

Martin Segal, Jacksonville, Fla., investment broker ($5,000): "Several men would make excellent candidates. I think the best possibility is SYMINGTON. If he can't make it, Stevenson."

Dewey D. Stone, Brockton, Mass., business executive ($13,400): "I'm for my friend JACK KENNEDY."

The major contributors to the Democratic Party, it's worth noting, are concentrated in just a few sections of the country. More than a third of the 1956 money was given by New Yorkers. Outside New York, only the District of Columbia and three States, California, Illinois, and Pennsylvania, gave more than $100,000.

The significance of the poll seems to be that roughly one-third of the people who financed the last Democratic presidential campaign are ready to do so again with Stevenson at the head of the ticket. Two-thirds of them, however, would prefer another candidate. Stevenson does a bit better with the wealthy people than with Democrats generally, judged by the Gallup public-opinion polls. KENNEDY, on the other hand, does a bit worse with the contributors than with rank-and-file Democrats.

SYMINGTON is in much higher favor with contributors than with the rank and file. He gets 13 percent of the Look poll and only 6 percent of all Democrats in recent Gallup polls. HUMPHREY also does better with contributors than with the rank and file. Majority Leader LYNDON JOHNSON stands slightly better with all Democrats than with contributors.

Since few contributors to the party are convention delegates, their influence is debatable. Nevertheless, Democratic candidates and organizations come back to them year after year for money. On this score alone, the party's financial backers do get a hearing.

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD, with Mr. Raymond F. Noyes in charge, is located in Statuary Hall, House wing, where orders will be received for subscriptions to the RECORD at $1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Members of Congress to purchase reprints from the RECORD should be processed through this office.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer, plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

Appendix

Industrial Development Abroad: Threat or Opportunity?

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Wednesday, August 26, 1959

Mr. WILEY. Mr. President, unfortunately, the developing unfavorable trade trends—that is, a disproportionately large volume of imports as opposed to the decreasing volume of exports—is a matter of deep concern to industry, labor, and our whole economy.

Realizing the significance of this situation, a number of important questions have arisen in relation to a more effective trade policy:

First. Do our economic aid programs help to create industrial development abroad that will one day, if it has not already, compete with and take over markets of U.S. commodities?

Second. How can we best meet the incdeasing competition from the expanding industrial plants of our allies?

Third. What should be our economic policy in relation to efforts by the Soviet Union, Red China, and other Communist nations attempting to gobble up our markets and undersell us—or dump products, if necessary, to cripple our foreign markets?

Fourth. What should be our policy on imports, particularly as these adversely impact the economy causing slowdowns in industrial activity and loss of jobs?

To find answers to these, and other, complex questions, we need a careful reexamination of our domestic and foreign economic policy; trends in world production; relative competitive position of United States and foreign products on the world market now and in the future; a review of what possible action can, or should, be taken in terms of tariffs and quotas; and other problems.

Naturally, we must not create barriers that would choke off our own economy—and the economies of our allies. At the same time, adequate measures are necessary to protect domestic industries.

Although our economy is now healthy, we had better read the handwriting on the wall. The time to deal with the rising challenges is now—not after we get into a position in which the whole economy — not just single industries—find themselves hard hit by the developing competitive situation in the world market.

Recently, the Research and Education Committee for a Free World for a National Trade Policy, under the direction of Leon Edminister, prepared a special study entitled "The Industrial Development Abroad: Threat or Opportunity." Although the digest — prepared by the Committee for International and Economic Growth—presents no cure-all solution for the increasingly significant issue of competition in world trade, it does, I believe, shed light on factors that need to be considered in relation to our overall trade policy.

I ask unanimous consent to have the digest printed in the Appendix of the RECORD.

There being no objection, the digest was ordered to be printed in the RECORD, as follows:

INDUSTRIAL DEVELOPMENT ABROAD: THREAT OR OPPORTUNITY?

Two questions are posed for consideration:

"Does U.S. public or private investment in productive enterprise overseas build up injurious competition for U.S. exports in world markets and invite low-cost competition in our home market?

"Or may it be expected, by increasing purchasing power in other countries, to result in larger markets for U.S. exports and through competition to stimulate increased productivity at home?

"These questions have often been raised in the past. They are being raised again today as the United States and other industrial countries consider the problem of lending the underdeveloped countries the capital they need to build more modern economies with higher living standards."

MAJOR FACTORS

Major conclusions of the study are:

"1. More than half of the exports of manufactured goods from industrialized countries today go to other industrialized countries—this in spite of the fact that the population of the industrial group constituted only about one-fourth of the world population (1953 through the first half of 1956). Per capita exports of manufactured goods from industrialized countries to other industrialized countries are about five times those to nonindustrialized countries.

"As countries become industrially more mature they tend to specialize increasingly in the particular categories and subcategories of manufacturing in which they enjoy a comparative advantage. As their overall productivity increases, their standards of living—reflected in increasing and more selective per capita consumption—also rise. It is this circumstance that accounts for the growth, rather than shrinkage, of trade in manufactured goods among these countries as their industrial economies continue to expand.

"2. Increasing production of manufactured products has been historically accompanied by increased imports of manufactured products.

"It now remains to consider whether there is reason for supposing that there is any strong cause and effect relationship between the increases in production and in imports of manufactured goods.

"There is ample justification for this assumption. * * * Take the case of a country with an almost completely non-industrial economy. When manufacturing is introduced, more of the country's labor supply begins to work for wages. More people live in urban centers. Internal trade between town and country springs up and increases. As industry and commerce grow, the money incomes of population rise. With higher incomes the desires of the people for a greater variety of goods and services to meet their wants can be increasingly satisfied.

"Some of the increased output of manufacturers * * * may be of a kind that tends to displace in the home market or in export markets manufactures previously supplied by the industrialized countries. While particular industries in the older countries may feel the effect of such displacement, other industries will stand to gain from the newly-created and expanding market for a growing diversity of products.

"3. The statistical data appear to indicate that the increase in imports in industrializing countries are not in capital goods alone but also in consumer goods. For the older industrialized countries this is a likely inference from the fact that imports of manufactured goods trended upward along with increased domestic production, most of the time at about the same rate, for the long period of nearly 50 years prior to the 1930 depression. Recent data furnish more concrete evidence. Over-all postwar import figures for Latin America and individual data for Mexico and Canada, distinguishing between imports of capital goods and consumer goods, indicate very definitely that this point holds true for these countries * * * countries that are in the earlier or middle stages of industrialization.

"Future trends

"What are the potentialities for increased trade between developed and underdeveloped countries as the latter industrialize and under what conditions are these potentialities most likely to be realized?

"The potentialities for the growth of U.S. foreign trade are suggested by the following table, which shows the intensity of U.S. trade relations with the industrialized countries as compared with our trade with underdeveloped countries.

"U.S. exports per capita to specified countries in 1957

"Country:	*Dollars per capita*
Canada	235.00
Netherlands	50.00
United Kingdom	21.00
Germany	19.00
Japan	14.00
Iran	4.10
Egypt	1.67
Indonesia	1.28
Pakistan	1.32
India	1.10
Thailand	3.24
Burma	.37
Ceylon	1.45
Ghana	2.12
Ethiopia	.33

"From the data in these tables it is apparent that even modest increases in the incomes of consumers in the underdeveloped countries (say 2 or 3 percent a year) could lead to a great increase in their foreign trade, including imports from the United States.

"On the economic side there are at least three indispensable conditions to the po-

tentialities for increasing market outlets for the industrially advanced countries:

"Necessary conditions

"Continued economic growth in the industrialized countries. The first essential is that the economies of the industrialized countries shall be healthy and expanding. Under these conditions it will be much easier for the industrialized countries to profit from changing patterns of trade and competition. Economic contraction or stagnation in the industrial countries causes rigidity, fear of change, demands for import restrictions, and a reduction in imports which slows or obstructs economic development both in the industrialized countries and elsewhere.

"Maintenance of liberal commercial policies. It is of vital importance that the commercial polices of the free world be such as to encourage multilateral trading and the continuous expansion of international trade. Unless this condition is met it will clearly be difficult either for underdeveloped economies to grow or for the United States and other industrial economies to profit from their growth.

"The continuance and further strengthening of GATT (General Agreement on Tariffs and Trade) as the chief instrumentality for protecting and enlarging the volume of international trade is of the utmost importance to the United States and the entire free world. Its usefulness would be enhanced by the establishment of a permanent administrative organization to replace the makeshift arrangements under which it is now administered.

"Flexibility in adjusting to and taking full advantage of changing competitive conditions. This is the heart of the matter, upon which all else depends. Will industry in the developed countries make the necessary adjustments to assist and profit by the economic growth of the underdeveloped countries? Will industrial leadership be flexible and resourceful? Or will it be dominated by a purely defensive attitude, and seek to freeze existing patterns of trade in the face of inevitable economic change?

"Conclusion

"Growing industrialization in the less developed countries of the free world will over the years undoubtedly result in increased competitive pressure on some industries in the United States. At the same time, it will open vast opportunities for others. The pattern of trade will change continuously; but total trade and advantage will increase.

"Growing world industrialization is, therefore, a threat only if American industry, business, and Government react to it defensively and with hostility. If we regard it not as a threat but as a challenge and go forth confidently to meet it, it offers an opportunity beyond measure to safeguard freedom and build better lives for all free men."

Address of Gen. Lauris Norstad on Crucial Importance and Present Status of NATO Armed Forces Which He Commands

---

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 26, 1959

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address given by Gen. Lauris Norstad, Supreme Allied Commander, Europe, at the National Convention of the American Legion in Minneapolis, Minn., August 25, 1959. General Norstad, an officer and leader of whom all Americans are very proud, reports frankly on present differences within the NATO alliance and the common interests which unite:

SPEECH OF GEN. LAURIS NORSTAD, SUPREME ALLIED COMMANDER, EUROPE, AT THE NATIONAL COMMANDER'S DINNER, 41ST NATIONAL CONVENTION OF THE AMERICAN LEGION, HOTEL LEAMINGTON, MINNEAPOLIS, MINN., AUGUST 25, 1959

An anniversary occasion such as this 41st Convention of the American Legion is bound to be a time of memories. To have it take place in Minnesota, my native State, makes it particularly so for me. I am glad to be home and I am honored to be with you.

The Legion's part in American life is an important one. Your good works are many, your influence is broad. You are deeply concerned—as are so many of your old comrades in arms in NATO—with the peace and security of the free world. You of the Legion who have served in three wars and in many foreign lands have better reason than most to appreciate the respite of peace and the importance of looking after our defenses.

Therefore, in bringing you the greetings of the soldiers, sailors, and airmen of the Allied Command in Europe, I know I speak for them when I thank you for your understanding and for your help in keeping the free world strong.

The memories evoked by this occasion go back over 40 crowded years to the men of vigor and vision who founded the Legion and laid down the rules by which it has flourished. The names, many of them now inscribed on the long rollcall of history, themselves evoke memories—Theodore Roosevelt, Jr., Ogden Mills, William J. Donovan, Bennett Clark, Franklin D'Olier.

But you have not invited me here to speak of the past. Our greatest interest is in the present and the future.

THE MEETINGS IN PROSPECT

The chance of the calendar brings us together at an exciting hour. Events are now in train that are certain to bear heavily on our relations with Soviet Russia and with our allies in Europe, and on the position of the United States throughout the world.

In the curious political lingo of our day, there will soon occur what history may remember as a famous confrontation—President Eisenhower's meeting with Premier Khrushchev. That meeting will bring us, in the person of the President, face to face with the leader of a surging world power that is bent on overturning the world order. Much that is important to all of us here and to, I dare say, the Russians, as well as to the masses whose fate they control, may be influenced by this meeting. If, as Mr. NIXON has suggested, the experience of exchanging ideas with the President, and of looking at America, accomplishes nothing more than to rid the Soviet leader's mind of some of his appalling misconceptions about us, a useful purpose will be served.

Other matters, scarcely less important in themselves, are also in progress. Tomorrow morning the President flies to Europe for talks with a number of national leaders. He will again meet many of the statesmen with whom he has been transacting the business of the North Atlantic Alliance. He will also meet, but for the first time since the war, General de Gaulle, President of France, an ancient nation and our first ally.

In the background of these meetings—one of them with a self-avowed adversary who wants to measure our land and our people, the others with allies who stand with us in common defense of common principles—Americans can discern afresh one of the most urgent needs of our time. That is the need of nations to make themselves understood.

The process of broadening our knowledge of the Russians, and of persuading them that we are not the depression-haunted, power-grabbing monsters that their propaganda has invented, is only one aspect of that problem in national exposition which nowadays is called communication. It is equally important for us to continue trying to make ourselves understood to our allies, while at the same time we heed what they are saying to us in our mutual interest. To be sure, each may speak from his own special approach to changing circumstances, yet our relationship is on the solid ground of common purpose.

There never was a ship, however, stanchly built, that did not creak or groan as she rode the seas. So it is with an alliance. And an alliance that rests uniquely, as does NATO, on the principle that its members shall have equal representation—moral equality—in the common councils, is subject to more than the usual strains. NATO's effectiveness cannot be measured by simply counting up the number of troops and weapons which it is able to deploy. Its true strength depends rather upon steady surveillance of those issues which concern the member nations, great and small, in their pursuit of improvement. Without the sense of unity, of shared purpose, which can be achieved only by unwearied striving, the number of divisions in our order of battle loses all meaning.

There is a continuing charge upon the alliance to stake out the common ground. It is no secret that France, for example, has recently asserted certain new ideas concerning her place among her allies. It is certainly no secret that President de Gaulle seeks for France a larger role in the broad strategy of the West. Thorny though the issues are, they must be grasped. However, before I single out any of these for discussion, let me refresh your conception of the aims which NATO was founded to serve, and the concepts which have governed its evolution over a 10-year period.

THE BINDERS OF THE ALLIANCE

These aims and concepts were set forth in the North Atlantic Treaty, which was signed in Washington on April 4, 1949. That treaty has often been described as one of the shortest and clearest of international documents.

As proclaimed in its preamble, the central aim is "to safeguard the freedom, common heritage, and civilization of their people, founded on the principles of democracy, individual liberty, and the rule of law." Nothing could be more forthright, more admirable. We know what we stand for. And to show, further, that we mean what we say, we as allies have bound ourselves—and I quote again from the treaty—"separately and jointly, by means of continuous and effective self-help and mutual aid," to "maintain and develop [our] individual capacity to resist armed attack." Alongside this declaration is a clear pledge by all member nations that an attack on any one will be taken as an attack upon all. These are the binders and the stiffeners in the NATO concept of collective security.

It was, of course, the initial threat to Berlin, more than a decade ago, which inspired these aims and solidified these concepts. Before that, Czechoslovakia had been corrupted from within; and Greece had barely been snatched as a brand from the Communist burning. Even those of us who stood at the center of decision during those harrowing events find it had to recapture the sense of urgency that we then felt. The force and rush of aggressive events startled a world which had thought that the end of

the war marked the beginning of peace. The dramatic emergence of the Atlantic Alliance, combined with the brilliant technical success of the airlift, reduced the pressure on Berlin and on a Western Germany that still lay shattered. The respite was momentary. While the alliance was still debating, a year after its founding, how best to set up and operate its new apparatus of collective security, there fell the sudden blow on the Republic of Korea, and a fresh wave of apprehension swept the world.

The swift return of the threat raised NATO from a hopeful abstraction to the strong and active coalition that we now see. General Eisenhower left his desk at Columbia University to go to France and there set up the headquarters which I now command. It is at SHAPE—Supreme Headquarters Allied Powers Europe—that the military planning for the NATO Alliance is done; there are centered the control of the troops and military resources of 15 nations.

The ideas that have regulated the development of these forces have undergone radical changes since 1951. In this informed company, I need note only three. One was a concentration on the principle of integrated ready forces—formations, whether of land, sea, or air, brought under a central direction, shaped to serve a common strategic plan, and prepared to execute their tasks with that confidence which can come only from close association and long practice.

From the point of view of military planning, the time-space characteristics of modern military weapons have compressed Europe into one-tenth its World War II dimensions. Hence the need for a variety of forces, trained, fused, and ever on the alert. This is what is meant by integration.

Another idea of equal importance was to give NATO forces a nuclear capability. That idea was slow to mature. First there was the problem of supply, a question of quantity and quality. On the American side, there was also the problem of preserving the technical integrity of a weapon that was still novel. Lastly, there was an understandable hesitation about embarking on a defense based largely on such weapons. The Soviet Union, however, was already moving in that direction. The NATO heads of government, meeting in December 1957, took note of the Soviet course when they stated:

"The Soviet leaders, while preventing a general disarmament agreement, have made it clear that the most modern and destructive weapons, including missiles of all kinds, are being introduced in the Soviet armed forces. In the Soviet view, all European nations except the U.S.S.R. should, without waiting for general disarmament, renounce nuclear weapons and missiles and rely on arms of the preatomic age.

"As long as the Soviet Union persists in this attitude, we have no alternative but to remain vigilant and to look to our defenses. We are therefore resolved to achieve the most effective pattern of NATO military defensive strength, taking into account the most recent developments in weapons and techniques.

"To this end, NATO has decided to establish stocks of nuclear warheads, which will be readily available for the defense of the alliance in case of need."

The third idea was to make explicit the task of NATO's ready forces in Europe. Under the definition that evolved, these forces have to perform two functions. First, they must provide a shield for NATO's territory and people. Second, they must contribute to the deterrent and thereby assist in preventing war.

In Europe, the tactical situation is urgent, complex, and acute—more so than many Americans may appreciate, with their fenceless frontiers. There the adversary strains against NATO's fences, throughout the more than 4,000 miles from farthest Norway to eastern Turkey. Along the European fence, strategy must provide a reasonable margin for a response short of pressing the button of catastrophe. Such a margin answers the possibility of an action started perhaps by miscalculation or perhaps by a rashness that would be repented. If the shield forces, with their own striking elements—nuclear weapons included—are powerful enough to cope with the action in its critical developing phase, a pause can be imposed on the adversary. He will be forced into a fateful decision—whether to enlarge an incident into an action, or an action into war, knowing that his so doing would cast into the scales of battle the full weight of NATO's powers of retaliation.

This is the novel element contributed to the deterrent strategy by the forces based in Europe. In my judgment, it is an indispensable element, for it alone could return to statesmanship a final chance before force would take over from reason.

THE QUESTION OF QUESTIONS

Perfection can never be expected of a coalition strategy. Because nations differ in personality, an agreed strategy has to be the product of a painful search for safety through compromise. It has been so in NATO, just as within our own military establishment. Yet, while our differences of opinion have on occasion been sharp, we have always reconciled them. It is hard to quarrel with success. The plain fact is that NATO's strategy has worked. Behind the line that curves from Norway to Turkey, the Western nations have prospered. Nothing—I repeat, nothing—has been lost.

This is not to suggest that the pressure has relaxed. Again last fall Khrushchev tightened the screw on Berlin. For the moment, while the statesmen confer, the danger seems to have receded. When, or in what guise it may return, we cannot say. Khrushchev leaves us in no doubt that his business in Berlin is still unfinished. Only the other day, he said the position of Germany within the Western Alliance and the related situation of Berlin is the question of questions, the problem of problems.

Question and problem remain in suspense. That they do so is proof that a position of strength, resolutely maintained, is the surest guarantee of a continuing equilibrium. Plainly, our strength in place has enabled us to impose a second pause in the Soviet's maneuverings against Berlin and the German Republic beyond.

We can draw confidence from the course of events so far. At the same time, certain happenings remind us that our alliance must be patiently cultivated. For example, the French search for a stronger position has led to differences. Disquieting as these differences are, they are not nearly so important to France herself or to her allies as are the bonds that hold them to the alliance. In the Berlin crisis, France stood solidly with her allies. For me, an international commander, this was a heartening experience in the mutual support that can be achieved when matters of great moment are at stake.

CERTAIN FRENCH ISSUES

The new issues which France has raised are both political and military. Because of their dual character it would be unbecoming for me, the servant of 15 countries, to intrude my own opinion. It is enough for me to identify certain of these issues. The French desire for a stronger voice in the strategy of the West is a broad one and includes a particular interest in her exercising a major influence in any decision involving the use of atomic weapons. In the field of NATO interests, all members have subscribed to the principle that the voice of one nation would receive as much attention as that of its neighbor. Anything beyond this must necessarily be worked out by the allies having common interest.

France has stated her desire to become a nuclear power in her own right, and to have the United States share its nuclear secrets with her, thus saving her time, effort, and expense in developing her own weapons. Affecting the solution of this problem is, of course, the existing U.S. law, which is explicit about the conditions on which nuclear information and equipment can be given to other countries. Behind the law lies a concern as to the effect that wider dissemination of nuclear knowledge might have on the great issues of peace and war. The fact that under this law France is not receiving American technical assistance in the development of weapons has made for a sense of grievance.

The requirements of NATO in the nuclear field are responsive to the facts and circumstances of the hour. Knowledge refuses to be contained. Ideas are in flux. Military requirements necessarily reflect changes—technical, tactical and political. It may well be that policies will have to be adapted to new facts and circumstances; that the nuclear responsibilities of NATO authority will have to be broadened.

A symptom of existing differences, of developing French interests, was the inability to reach agreement on the matter of storing nuclear weapons in France for the general defensive needs of the alliance. From this failure stemmed my decision to move from France certain air squadrons which had been based there. These squadrons were and are essential to our NATO strategy. At a time of mounting tension—the Berlin crisis—we could not accept a situation that left a considerable part of our defense force indefinitely separated from its weapons. A shield strategy is an effective instrument of deterrence only in the degree that its capability to strike back is ever in place, ever ready. The transfer of the squadrons was therefore essential, but it was greatly regretted by the two nations most directly concerned: the United States and France. It was certainly regretted by me.

Another aspect of the French situation deserves our study. This is the harsh and bitter war in Algeria, which is drawing a great part of France's Army, her efforts and her wealth. To achieve a peace, to find a solution, is scarcely less important to the stability of the alliance than it is to France herself. For the Algerian war colors and conditions the French outlook not alone on domestic questions but also toward the great Atlantic security system whose center is the geography and spirit of France.

THE NATO BUCKLER

Happily, the issues that now concern us will soon be discussed by men who are no strangers. Eisenhower and de Gaulle, who dealt with each other 15 years ago as generals in the heroic enterprise of liberating France, now meet as Heads of State. Their mutual esteem, and the traditional friendship of their two great countries, give promise that matters will be approached in a breadth of spirit that will enrich the ancient association of France and America, and enhance the parts they play in the great alliance.

In conclusion, I quote a distinguished French statesman-scholar, André Francois-Poncet, who wrote only the other day, "The buckler of peace, the rampart of liberty in the world, is the Atlantic alliance."

So long as men think that way, so long as they have the insight to pierce through the momentary surface distractions, the great end which all of us seek through collective security—a life without war, without fear and without slavery—will still give noble purpose and direction to our generation.

Our Medical Research Investment—Is the Salk Vaccine Worth $1.26?

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Wednesday, August 26, 1959

Mr. NEUBERGER. Mr. President, the National Health Education Committee, with headquarters in New York, is doing an excellent job in providing the American public with much-needed information on the vital subject of medical research.

One of the committee's recent high-quality publications points out, in dollars-and-cents terms anyone can understand, just how much we are spending on lifesaving medical research, in contrast to the amounts we spend on amusements to help us enjoy life. The study notes that the Government medical research expenditure of $215 million a year amounts to $1.26 a person, less than the per capita spending of Americans for cosmetics, liquor, tobacco, greeting cards, and numerous other items.

The dramatic story of the statistics contained in the National Health Education Committee pamphlet is well summarized in an excellent and challenging editorial published in the Eugene Register-Guard, of Eugene, Oreg., for August 13, 1959. I ask unanimous consent that the editorial entitled, "Is the Salk Vaccine Worth $1.26," be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

IS THE SALK VACCINE WORTH $1.26?

It is a proper function of Government to assist the citizen in protecting himself against a foreign invader. That our Government does, to the tune of some $39 billion every year. Is it not an equally proper function of Government to help the citizen protect himself against other enemies—the germs or deteriorations that cause tuberculosis, cancer, heart disease, mental illness, and cerebral palsy? This is the question that comes up when one leafs through a beautifully put-together brochure issued by the National Health Education Committee. The argument of the committee is not that the Government should provide medical treatment, but that it should play a greater part in making possible the research that will lead to cures.

The 39 billion we spend to ward off possible enemy attack is money well spent. But it is spent to save lives that might not be endangered. Yet we knew that 1,636,000 Americans will die this year—1,147,270 of them from heart disease and cancer. To meet this threat of certain death the Government spends only $215,800,000. That is for all medical research. The same Government which spends only $26 million a year for research into arthritis and metabolic diseases spends $157.8 million a year for research into the diseases of plants and animals. Mental illness, the leading cause of disability (as contrasted with death), afflicts 16 million Americans and puts a patient in every second hospital bed in the country. For research in this field we spend $27 million a year. For the geological survey we spend $38 million. Somewhere we have lost our sense of values.

Nor is it only in the public area that our values seem to have been twisted out of shape. Look at what we do privately:

That $215 million the taxpayers spend for medical research amounts to $1.26 a person. For face cream, lipstick, face powder, and make-up bases, we spend $1.39. Tobacco costs us $34.30, liquor twice that much. Foreign travel costs us $14.10 a year, greeting cards $2. And the figure again for medical research—$1.26.

The small amounts we have spent for research have paid off. Since 1944 deaths from pneumonia have decreased 24 percent. Maternal deaths have decreased 83 percent. Percentage declines since 1944 in other death rates include nephritis, 65 percent; syphillis, 74 percent; influenza, 74 percent; appendicitis, 78 percent; tuberculosis, 81 percent; and acute rheumatic fever, 83 percent.

These battles are not won, but they are being won. Now, thanks to research, we have 18 compounds that cause temporary regressions in patients with various types of cancer. Another 10 cure (that's right, cure) in varying rates transplantable animal cancers. As these battles go on, as cures and near-cures are discovered, Americans live longer, work longer, earn more money, pay more taxes.

Since 1944 research has been such that 1,823,175 lives have been saved. Thus is the country that much more populous than it otherwise would be. These people work. In 1957 they paid $623 million in Federal taxes.

Figures can be tricky, but the figures from this vantage point make it appear that medical research, far from being subsidized by the Government, is helping to support other programs. These people who, by 1944 standards, would now be dead, paid $623 million in taxes. The medical research program that kept them alive cost us only $215 million. That is as good a return on an investment as the American people will ever make.

The Salk vaccine alone, even without the money return, would have been worth more than $1.26.

Democrat Lists Nixon Virtues

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 26, 1959

Mr. HOSMER. Mr. Speaker, the Long Beach Press Telegram of August 16 carried the following letter to the editor which seems pretty well to sum up what a lot of Americans—both Republicans and Democrats—think of our fine Vice President:

DEMOCRAT LISTS NIXON'S VIRTUES

EDITOR: The writer has long been intensely interested in helping get the right men at the helm in high offices of our country. It is so important. It does seem that Theodore Roosevelt was practically flawless for his high office and now RICHARD NIXON looms up the same way, but what his chances are remains to be seen.

Please allow me, a Democrat, to list his qualifications:

1. Brought up right in a Christian home; had to work hard.

2. Finished college; lawyer, popular debater.

3. Has ideal wife and family, with harmony.

4. Was a good U.S. Senator and battled some Reds at core of our Government into prison. Splendid southwest Pacific war record. Lieutenant Commander, U.S. Navy.

5. Had 6 years close up under Ike, where he has learned much, and has been most productive vice president we ever had.

6. A proven fighter, yet shows perfect self control and tact; when Ike was ill he conducted himself most admirably.

7. He has proved that he knows more about dealing with Russians than any one, unless it is Ike himself. We need him there and they know and like him.

8. He looks like somebody; not old, not too young.

9. He can dish it out, sharp, cutting and clear, justly, and he can take it with a smile.

10. He doesn't pollute his system with cigarettes.

The man is head and shoulders above anyone in either party for the all-important job when Ike leaves.

JEFFERSON JONES.

House Victory for Food Stamp Plan

EXTENSION OF REMARKS
OF
HON. THOMAS C. HENNINGS, JR.
OF MISSOURI
IN THE SENATE OF THE UNITED STATES
Wednesday, August 26, 1959

Mr. HENNINGS. Mr. President, Missouri is extremely proud of Representative LEONOR SULLIVAN, of St. Louis, and the State is highly gratified that Mrs. SULLIVAN's fight for a food stamp bill has met with success in the House. The entire Nation owes Mrs. SULLIVAN a debt of gratitude for her 5-year struggle in this field of legislation and I ask unanimous consent that two newspaper editorials dealing with food stamp legislation be printed in the Appendix of the RECORD.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the St. Louis Post-Dispatch, Aug. 24, 1959]

MRS. SULLIVAN'S BIRTHDAY GIFT

The House of Representatives gave Mrs. LEONOR SULLIVAN, of St. Louis, a welcome birthday gift when by a vote of 232 to 127 it adopted the food stamp plan for which she has been battling the last 5 years. If approved by the Senate and not vetoed by the President, it will be even more welcome to the country's needy families.

Under the Sullivan plan, the Secretary of Agriculture in his own discretion could issue stamps good for up to $1 billion a year in designated surplus foodstuffs. The Republican objection has been that it would put the Department of Agriculture into the welfare business. Why should it not—especially since the Department already makes some commodities available for distribution?

To avert a veto, Mrs. SULLIVAN this year presented her plan as an amendment to a bill which authorizes the distribution of an even greater quantity of surplus foods overseas. The Senate and the President will find it difficult to advance a valid reason for not giving food—food which otherwise might rot—to the Nation's hungry.

[From the St. Louis Globe Democrat, Aug. 23, 1959]

HOUSE VICTORY FOR FOOD STAMP PLAN

Congresswoman LEONOR K. SULLIVAN, like most members of her sex, has a sturdy determination, which after 5 years has put through the House of Congress her plan to

distribute surplus food through grocery stores by means of stamps. The plan is intended to provide food items for needy families.

Her proposal was tacked on to an oversea food dispersal program, which the House voted 323 to 127, and which now goes to the Senate.

We have supported Mrs. SULLIVAN in this proposal because of the basic excellency of the idea. It may not be adopted at this session of Congress, and many problems will be encountered in developing such a plan—among them, persuading the Secretary of Agriculture to put it to work under the discretionary power the proposal gives him.

It has been opposed by the administration, which brands it costly and unwieldy and contends it would make the Department of Agriculture a "welfare" unit.

But we think Congress is beginning to see the merit in Mrs. SULLIVAN'S idea, which is to provide for our own ill-fed citizens with portions of the vast stores of surplus edibles in the Nation's bins and warehouses. The country has long deemed it humanitarian to feed the needy in foreign lands.

Mrs. SULLIVAN may be overly optimistic when she says the Senate is more favorably inclined to passage of a stamp plan. However, she has exhbited some smart political manuevering in geting her 5-year-old proposal this far.

No one has produced a better plan or fought any harder for its recognition.

Congress should support Mrs. SULLIVAN in her persistent efforts toward outlawing hunger.

Taxation of Certain Retirement Benefits of Nonresident Aliens

SPEECH

OF

HON. ALVIN M. BENTLEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 25, 1959

Mr. BENTLEY. Mr. Speaker, I would like to speak in support of H.R. 135 which would amend the Internal Revenue Code of 1954 to exclude from gross income amounts paid by the United States to certain nonresident alien employees or their beneficiaries.

Earlier this year Mr. KEOGH, the author of the above bill, introduced H.R. 135, and I later introduced H.R. 6847 which was identical. These bills had the same objective but the State and Treasury Departments both opposed their enactment. In opposing the bill the State Department suggested similar legislation which had been previously recommended by the Treasury Department after consultation with the Department of State and the Civil Service Commission. Upon receipt of a copy of this report from the committee chairman, I immediately introduced the suggested legislation which became H.R. 7673.

After receiving favorable reports from both State and Treasury Departments on my bill H.R. 7673, the Ways and Means Committee decided to amend H.R. 135 in such a manner as to made it identical to H.R. 7673 and report it favorably.

By way of clarifying the objectives of this bill, Mr. Speaker, the purpose is to provide tax relief for nonresident alien individuals receiving civil service annuities after retiring from U.S. Government employment abroad. Since such persons are classified as nonresident aliens not engaged in trade or business in the United States, their earnings from such employment are exempt from income tax. Upon retirement, however, that portion of the civil service annuities in excess of the allowance for investment in the retirement fund is subject to the flat rate of 30-percent withholding tax imposed on income derived by a nonresident alien from sources within the United States.

Speaking as one who spent several years in the Foreign Service, I can assure you that the imposition of this tax upon the annuities of nonresident aliens has caused great hardship and in some instances has engendered resentment against the United States because of its failure to comply with what is assumed to be its contractual obligation to pay retired alien employees a pension not subject to withholding tax. Actually, nonresident alien employees consider their pension as deferred compensation, and since their earned income is not taxable, they expect their pensions also to be tax free. When one realizes that in many cases these pensions amount to $600 or less per year, it is indeed unfortunate that it is subject to a 30-percent tax and I certainly feel that it makes our Government look somewhat ridiculous in the eyes of foreign governments.

I would like to quote from a letter I received under date of June 29, 1959, from Mr. Marciso San Agustin, president, National Association of Retired Civil Employees, Chapter 9, Cavite City, Philippines:

> Your great and magnificent Government had done much in our country. The independence that we now enjoy was due to your magnanimous generosity. We, your former employees, are highly grateful for our retired status, and only claim and beg for a little more compassion to our distressed situation in our retired status, now that we are old, mostly infirm, almost crippled, unable to devote ourselves to any useful or gainful occupation with which to increase our small income, now being slashed by the inexorable 30-percent levy from our annuities. We only ask to be allowed to enjoy a little sunshine in our miserable homes during the remaining years of our lives.

In closing, Mr. Speaker, I would like to urge my colleagues to take favorable action on H.R. 135 and remove this 30-percent tax from the annuities of our retired nonresident alien employees abroad.

Early Drillers Wanted Water When They Brought in Oil in Texas

EXTENSION OF REMARKS

OF

HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Wednesday, August 26, 1959

Mr. YARBOROUGH. Mr. President, Texans of an earlier day were plagued by a black liquid which kept bubbling up when they drilled water wells.

Today that black liquid, oil, is eagerly sought after. And it has helped build the growing economy of the State of Texas. Oil wells have given rise to dozens of related industries and have generally helped increase Texas' economy. Tomorrow is the 100th anniversary of the discovery of oil in the United States which has meant so much not only to Texas but to the Nation and the world.

Mr. President, as part of a salute to the oil industry and related businesses in Texas and the Nation, I ask unanimous consent to have printed in the Appendix of the RECORD an article by John Lakeman, printed in Texas, the rotogravure magazine of the Houston Chronicle for Sunday, August 23, 1959, and entitled "Texas' First Oil—They Wanted Water."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TEXAS' FIRST OIL—THEY WANTED WATER

The driller threw his hat to the ground, stomped it hard, and muttered angrily. A dirty black liquid bubbled up through the pipe he was poking into the ground to get water for thirsty Corsicana.

He had finally struck artesian water, but oil gurgled up with it. To the driller and his crew, that meant extra hours of hard work. They had to shut out the contaminant so the water would be fit for Corsicanans to drink.

Before the job of casing off the oil was finished, the news had spread over the countryside. Oil.

The original purpose of the well was forgotten by the excited crowd that gathered to see the greasy fluid that soaked through the soil around the well pipe. But the driller was still more concerned with water than with oil.

He did not realize, on that hot summer day in 1894, that he was witnessing the birth of a new Texas industry—one that, in a few decades, would become the greatest single source of wealth in his State.

That industry 65 years later would provide jobs directly for one out of every eight persons in the State, and indirectly for additional thousands who would supply the services and equipment it would need. It would also provide millions of dollars in tax money and royalty payments to build Texas schools and roads.

But the future was not so bright for the water well drilling rig that gave birth to the State's petroleum industry. A careless smoker in the knot of spectators contributed his bit to history by touching off the State's first recorded oil blaze, a fire which destroyed the derrick. Despite precautions, the same fate befell the second and third wells drilled in that area, and the driller who unwittingly served as midwife at the birth of Texas oil almost went bankrupt.

In spite of those early setbacks, more wells were drilled, yielding just enough crude to fan the sparks of excitement. The quiet farming center became the State's first boom town. Speculators thronged in to lease farm land and city lots for drilling. Every bed and cot in town was rented.

By 1897, Texas production of crude oil reached 65,975 barrels, with Corsicana accounting for almost all of it.

Corsicana was indeed the birthplace of Texas oil—the scene of the first discovery and exploitation of the resources in commercial quantities. The first refinery in the State was built there. However, this was not the first time oil had been found in the State.

In 1543, Spanish explorers in DeSoto's expedition found petroleum asphalt float-

ing on the waters of a bay near Sabine Pass. They used that tar to paint the bottoms of their storm-battered ships so they could sail safely on to Mexico.

Even before the Spaniards came, Texas Indians knew of magic springs where greasy bubbles popped to the surface and a dark film spread across the waters. Indian legends say those springs had strange medicinal powers and were capable of healing all manner of ills, both internal and external.

The fact is, the Corsicana well was not even the first successful oil well drilled in Texas. In 1866, just 7 years after Col. Edwin Drake drilled the famous first well in Pennsylvania, a Texan named Lynis T. Barrett sank a shallow oiler near Nacogdoches. And Barrett's discovery was no accident like the one at Corsicana. He was actually looking for oil.

His well doesn't count as a commercial producer, however, although Barrett made a pretty good living peddling the 10 barrels a day he bailed out of the hole. His neighbors bought it to cure their ills and quiet their squeaking wagon wheels.

Compared to what was to come in the early 1900's, Barrett's oil was only a drop; Corsicana's, only a trickle.

The 20th century was a few days old when, on a small hill near Beaumont, a green stream shot 200 feet into the air. The gusher at Spindletop spouted 100,000 barrels of crude oil a day—many times more than any previous well, and Beaumont exploded into another boom town.

Spindletop was the result of the faith of one man and the resourcefulness of two brothers. The man whose faith led to the discovery was Pattillo Higgins, a one-armed Sunday school teacher. On outings with his class of youngsters, Higgins would poke his cane into the soil on the hill and set fire to the escaping gas. Higgins knew there must be oil beneath the knoll. He worked for years to get a test made, and lived to see so many drilling rigs in operation.

The resourceful brothers who drilled the difficult hole were Al and Curt Hamill, veterans of the Corsicana boom and pioneers in rotary drilling. They were the first oilmen to use drilling mud in their operations, mixing the soupy fluid by driving cattle through their slush pit.

After Spindletop opened Gulf Coast production, the story of Texas oil shifted to the north and west. At Electra, in north Texas, cattleman W. T. Waggoner drilled for water for his herd. It was 1904, and the range was dry. When his fourth consecutive water well filled with oil, Waggoner lost his temper. "Damn the oil," he shouted. "I want water."

At Thrall, in 1915, another "water well" spouted oil. At Burkburnett, farmer S. L. Fowler decided to make one try for oil before selling his land. He hit the big Burkburnett townsite pool in 1919.

Oil came to west Texas in 1923, when the Santa Rita wildcat, named by Catholic backers for the Saint of the Impossible, accomplished the impossible. The drillers brought in a gushing well in Reagan County—in a region geologists had marked off as completely unsuited for oil production. Much of the West Texas crude came from lands owned by the State university system and brought millions in royalties to Texas colleges and universities.

Boomtowns sprouted all over the Texas oil patch. Some still live as thriving cities. Others died when the oil that nurtured them trickled out.

Many men willing to take chances tried their hand at the oil game. Some won and became rich and famous. A larger number lost everything they owned, or could borrow. A few early winners later lost their fortunes, but by persisting in their efforts, became winners again.

One of these men was Columbus Marion (Dad) Joiner. Seventy-year-old Dad Joiner had made and lost two fortunes in the Oklahoma booms before he moved to Texas. His first two attempts to find oil on his 1000-acre lease in Rusk County failed.

The third well, stopped once when he ran out of money and restarted with funds scraped from every available source, blew in October 3, 1930, during the dark days of the great depression.

That well opened the prolific east Texas field—the greatest oilfield ever discovered in the United States—and swung the petroleum pendulum back to the east.

A boom to end all booms hit east Texas. Longview almost split at the seams. In less than 15 months after Dad Joiner's discovery, more than 3,600 wells dotted the field, and production reached 110 million barrels. The producing area proved to be 43 miles long and 5 miles wide, and eventually contained nearly 30,000 wells.

East Texas oil flooded the market plummeting prices so low that producers had a hard time selling their oil for 10 cents a barrel. From that period of economic chaos and waste sprang the necessity for State control of oil production to conserve the valuable natural resource that was spilling upon the market—and upon the ground.

Because it had controlled the flow of oil and developed a tremendous reserve producing capacity, Texas was able to open the spigot during World War II and supply 80 percent of the Nation's increased wartime oil needs. If another war breaks out, the State may be called on to repeat that feat.

In recent years, the waters off the Texas coast have been probed for oil. As yet no large deposits have been found. In fact, not enough oil has been tapped to pay for the costly exploration and drilling operations carried on at sea.

But east Texas oilmen are still looking, on land and at sea—and with a sharper, better-trained eye than their forebears possessed. Science has reduced the odds they face to some extent, but the oil business is still a big gamble. One well out of 9 may hit oil or gas; about 1 in 44 a field of commercial size.

However, there is always the possibility that another Spindletop or east Texas lies waiting to be tapped. That's what keeps exploration crews hunting and drill bits boring throughout the State.

Sioux City: Largest Stocker-Feeder Market

EXTENSION OF REMARKS
OF
HON. CHARLES B. HOEVEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 26, 1959

Mr. HOEVEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared in the Sioux City (Iowa) Journal of August 24, 1959:

SIOUX CITY: LARGEST STOCKER-FEEDER MARKET

Arrival the other day of one of the first fall shipments of fine feeder cattle from the western ranges reminded us that Sioux City is the largest stocker-feeder market in the world. In 1958, for example, 679,636 head of stocker and feeder livestock originating mainly on the ranges of Montana, Wyoming, North Dakota, South Dakota, and Nebraska were sold on the Sioux City market. They went to thousands of feeder buyers in 20 States in the Corn Belt and elsewhere throughout the United States.

At Omaha, the large central public market to the south of us, only 512,462 head of stocker and feeder cattle were handled last year. That poses a logical question: Why is Sioux City the leading market for this type of livestock, instead of Omaha or Kansas City?

We put the question to Ray Rodeen, president and general manager of the Sioux City Stock Yards Co., and here's his answer:

"We believe that there are many reasons for Sioux City excelling as a stocker and feeder market, among them being more aggressive commission firms and programs for soliciting business by the market as a whole; our proximity to the heart of the Corn Belt, where the largest share of the cattle in the United States are on feed; the ability of livestock feeders to purchase livestock out of first hands direct from the commission firm, who is the agent for the rancher at Sioux City.

"Approximately three-fourths of the feeder livestock are purchased by farmers in the commission firm alleys rather than through a group of dealers, as is the case in some markets.

"At Sioux City we truly have an open competitive market on which all buyers and all sellers have an equal opportunity to operate."

Those are some of the reasons Sioux City tops the Nation's markets on this type of livestock—a natural geographical advantage plus a go-getting attitude on the part of commission firms and a free competitive system of buying and selling.

The importance of the stockyards to our area is readily apparent. And to those Siouxlanders who never have visited the yards, we suggest they take an early look. It's an impressive sight to see thousands of cattle, sheep, and hogs gathered together in the sale pens. It proves that we live in the center of the finest agricultural area in the world.

The Fight Against Mastitis

EXTENSION OF REMARKS
OF
HON. THOMAS C. HENNINGS, JR.
OF MISSOURI
IN THE SENATE OF THE UNITED STATES
Wednesday, August 26, 1959

Mr. HENNINGS. Mr. President, an article on a disease affecting the dairy herds of this country has been brought to my attention. The disease is mastitis. Believing the article dealing with the disease and its control will be of interest to my colleagues, I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE FIGHT AGAINST MASTITIS

Every citizen who drinks milk or consumes milk products has a stake in the battle now taking place on the Nation's farms. The battle is against mastitis, a bacterial disease that attacks the udders of cows. Currently, it is the No. 1 farm disease, and costs the dairy industry $252 million every year in lost milk, diseased animals and medication. This cost, naturally, is reflected in the price we pay for milk.

Ten years ago mastitis was most commonly caused by streptococcus germs which

could be controlled by medication. But the common cause of mastitis has changed.

Today, the most common cause of mastitis is staphylococcus bacteria, which resist even the most powerful antibiotics. This is the same resistant staphylococcus germ which is causing infectious outbreaks in hospitals, sometimes resulting in human deaths.

But mastitis isn't just a farm problem. There are signs it may become a human menace as well. Scientists do not regard pasteurized milk as a source of staphylococcus infection in man, but they say that 'staph' germs can develop in the cow's udder and infect persons who contact the animal.

In the udder, these germs may develop increasing resistance to drugs because of improper medication. A new breed of infectious germ, as yet unknown to science, might develop if this trend continues.

The implication of this danger is clear. Mastitis must be stopped. The history of dairying shows that if a concerted effort is made, the disease can be licked. Not too long ago, tuberculosis and brucellosis were more dreaded than mastitis. Dairy farmers, veterinarians, county agents, and processors got together and whipped these diseases. They can do the same with mastitis.

Definite steps have been taken in this direction. Early in 1958, experts in dairy science and veterinary medicine met at a 2-day mastitis symposium in Chicago at the invitation of the Jensen-Salsbery Laboratories, Inc.

These authorities agreed that good herd management, routine veterinary inspection, proper diagnosis, and specific treatment were essential for mastitis control. They pointed out most emphatically that do-it-yourself treatment by the dairy farmer is not the answer, and may even contribute to the spread of the disease.

In the first place, these experts said, the farmer cannot diagnose all cases of mastitis, and, consequently, can treat only the obvious cases. Many hidden cases go undiscovered, and remain to spread infection.

In the second place, the farmer cannot select the proper medication or administer the proper amount. What worked for him 10 years ago may not work today. By giving the wrong medication, he can make the disease worse.

The problem of incorrect medication has been recognized by the Food and Drug Administration. It has limited the dosage of penicillin, the drug often used to treat mastitis, to 100,000 units, and has forbidden farmers to use milk from cows until 72 hours have passed after the last treatment.

Unless these precautions are followed, there is danger of penicillin being included in market milk and endangering the health of nearly 17 million people in this country who are sensitive to penicillin.

Recognition of sound mastitis control programs has now been followed by two important developments. The first is the availability of new mastitis compounds which contain no penicillin.

The second development is the organized enlistment of county agents to help the fight against mastitis. There are 3,500 county agents in this country whose work is both Federal and State supported. Their job is to acquaint farmers with the latest agricultural methods, and help them solve their farming problems. To the farmer, the county agent is a most important person.

The county agent's role in the mastitis battle is vital. He must convince the farmer to adopt scientific mastitis control procedures. The county agent is the person who must instruct the dairy farmer in the changing character of mastitis causes, and urge him to consult the veterinarian.

At the same time, the county agent is the only person who can work with the farmer in achieving good herd management that is essential for mastitis control. Clean barns, proper milking techniques, and clean milking equipment are commonsense precautions that some dairy farmers have overlooked, preferring instead to rely on "miracle drugs" to cure mastitis after it breaks out. The county agent is the person who can remind the farmer that an ounce of prevention is worth a pound of cure.

The outlook is encouraging. Backyard meetings of county agents, veterinarians, and farmers are being held. In several States, 4–H clubs and the Future Farmers of America are sponsoring mastitis control programs to teach farm youngsters how to deal with the disease. Universities and colleges are using their extension services to teach farmers about current mastitis-fighting methods.

As these developments progress, they will mean increased prosperity for dairy farmers. But most important, they will mean a safer, more abundant milk supply for all of us and further conservation of our most precious asset—the Nation's health.

Vice President Nixon's Address on Khrushchev Visit, Given at American Legion National Convention in Minneapolis

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 26, 1959

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following excerpts from the address given by Vice President RICHARD M. NIXON on August 25, 1959, before the 41st National Convention of the American Legion in Minneapolis, Minn. Mr. NIXON dealt forthrightly with the Khrushchev visits—and how we should conduct ourselves, correctly civil and without demonstrations, in order, if possible, to convince the Communist dictator that the American people and their Government are strong, resolute, and united in opposition to his plans for achieving world domination by force or otherwise:

EXCERPTS OF REMARKS OF THE VICE PRESIDENT OF THE UNITED STATES AT THE 41ST NATIONAL CONVENTION OF THE AMERICAN LEGION, MINNEAPOLIS, MINN., AUGUST 25, 1959

I recognize that there are a substantial number of Americans in this audience and throughout the Nation who are deeply concerned about the visit of Mr. Khrushchev to the United States. There are many who believe that no good and much harm can come from such a visit.

There is no question but that there are minus as well as plus factors in appraising the possible results of the Eisenhower-Khrushchev exchange of visits. On balance, I believe the decision to invite Mr. Khrushchev to come to the United States was correct.

In indicating my reasons for reaching this conclusion, may I first remind you of the background from which I speak. I have made a comprehensive study of the philosophy, tactics, and strategy of communism as set forth by Marx, Lenin, Stalin, and other Communist leaders. On the basis of those studies, I know that Communists throughout the world are united in working for one objective, Communist rule over all the people of the world.

I know from experience that the Communist Party in the United States, like all Communist Parties throughout the world, is directed and controlled from Moscow and has in the past and will in the future engage in espionage and subversion in order to serve the interests of Communist governments wherever they are opposed to those of the United States or other free nations. And I can vividly recall that it was just a little over a year ago Communist-led mobs made an unsuccessful attempt on my life in Venezuela.

I have just returned from the Soviet Union where I have had the opportunity to speak at length with Mr. Khrushchev and to appraise the present tactics and strategy of the world Communist movement. On the basis of that visit, I can say unequivocally that the only significant change in Communist tactics since the death of Stalin is that Mr. Khrushchev and other Communist leaders now say they will accomplish their objective of world domination without resort to war.

Subversion and espionage in the United States and other non-Communist countries continue to be directed and supported by the Communist Party of the U.S.S.R. The rigid positions of the Soviet Government on such issues as Berlin, disarmament, setting up an inspection system for prevention of surprise attack, and ending atomic tests, are the same now as they were before these visits were announced.

It would be naive and wishful thinking to assume that the visit of Mr. Khrushchev to the United States will result in any basic change in the Communist objective of world domination or their adherence to policies designed to achieve that goal.

We should be under no illusions that Mr. Khrushchev's belief in the superiority of the Communist system will be changed in any significant respect by his seeing the great productivity of the American economy. Everything he sees in the United States will be seen through Communist eyes and the picture will be distorted or magnified so that it fits into the rigid description of free societies which the Communist doctrine has painted for over 100 years.

Nor should we be under any illusions that better understanding between the Soviet leaders and ourselves is all that is needed to resolve our differences and to assure peace. There are some deep and basic conflicts of interest and ideology which all the good will and mutual understanding in the world will not settle. Charm, words of friendship, gracious toasts, are not going to have the slightest effect in deterring Mr. Khrushchev from his basic objectives.

What useful purpose then will this visit serve? Putting it in its simplest terms, while understanding alone will not bring peace, misunderstanding could provoke war. And it is because his visit can serve to reduce the possibilities of such misunderstanding that it could contribute to the chance that we can settle our differences without war and, therefore, deserves the approval of the American people.

What does Mr. Khrushchev really believe about the United States and the free world?

Based on my conversations with him and my analysis of the statements he has made, publicly and privately, through the years, here is a thumbnail sketch of a man who holds in his hands the greatest power any one man has ever held in the history of civilization—who by his decision alone could press the button which could start a chain reaction which would destroy civilization as we know it.

First, here are some things he believes which are true. He is aware of the fact that the United States has great military strength. While he constantly boasts of his superiority

in the missile field, he has publicly stated in his speech at Dnepropetrovsk on July 28 that no nation today can initiate a war without suffering terrible destruction in return.

He knows the United States is a rich country economically with a high standard of living. He has paid us the compliment of setting as the Soviet goal catching up with and passing the United States in the production of consumer goods.

I believe he is convinced that President Eisenhower is a man who wants peace and who insists that the United States remain strong only because he believes this is the way to keep peace.

But he also has some dangerous misconceptions about the United States and the free world which, in the mind of a man with such awesome power in his hands, constitute a terrible risk to the peace of the world.

Here are some of the things he presently believes about us and our policies:

"Freedom in the United States exists only for those who have money and power and not for the working people."

"Capitalists in the United States have turned the society in which they rule into a paradise for the rich and a hell for the poor—a kingdom of the dollar, of harst exploitation of millions of people to enrich a handful of monopolists."

"In the United States and other free countries the working people are given the right to vote for various representatives of the ruling class but have no right to participate in the work of the legislative bodies."

"However beautifully the ideologists of imperialism may dress up the capitalist system, it still remains a system by which millions of people are enslaved by a comparatively small handful of exploiters, a system in which poverty and mass unemployment reign."

The words I have just quoted are not mine but his—taken directly from his public statements. And these ideas he reiterated to me in my conversations with him. Because he believes these things he has reached other conclusions which he has stated to me and to others who have talked with him: that millions of people in the United States do not support the President in his firm stand against Communist aggression; that both of our major political parties are controlled by a few rich monopolists and are not responsive to the will of the people; that our economy has reached its peak and is on the way down; that the nations of the free world alliance are divided and when the chips are down will not unite in resisting aggression.

Put yourself in his place. If you possessed great military strength with uncontrolled and absolute power to use that strength to accomplish your purposes; if also you were fanatically dedicated to the philosophy that your economic and political system should and would rule the world; and if in addition you believed you were confronted by opponents who were divided an who lacked the will to resist aggression, would you not be tempted to be far more aggressive in your policies than if you had other ideas as to the strength and will to resist of those who might oppose your aims?

Mr. Khrushchev will be here for only a relatively brief time, but, in his conversations with President Eisenhower and in his trip across the country, there is no doubt in my mind but that he will see and hear some things which will change his preconceived notions about the United States and which in turn will give him pause before he embarks on a course of action in the future which might be contrary to our vital interests.

He will find that not only are we strong militarily and economically, but that the American people have the will to use their strength to defend our freedom or the freedom of others any place in the world. He will find that the overwhelming majority of the American people are as dedicated to our system as he is to his. He will find that we will no more tolerate being pushed around than will he.

In a nutshell, if we are to have a Soviet leader with such power in his hands, it is better to have one who knows the world than one who is isolated in the Kremlin.

But what about the dangers of such a visit? There are some who fear that the American people will be lulled into a false sense of security and trust by this exchange. I think that those who believe this to be the case underestimate the intelligence of both our people and our leaders.

It is true that throughout American history we have a record of being a trusting and forgiving people in our relations with other people, but it is also true that we are a people who do not like our trust betrayed and when it is we react accordingly.

When President Eisenhower meets Mr. Khrushchev, you can be sure he will have in mind: The record of major treaties and agreements broken by the Soviet Government—50 out of 52 since 1933; the fact that subversive activities against the United States and the governments of other free nations continue despite Soviet protestations to the contrary. There will be fresh in his memory the fact that Mr. Khrushchev failed to carry out the commitments made at the last Geneva Conference and instead encouraged and stimulated Communist probing actions against the free world in the Middle East and the Far East. And if there was any doubt that we would go into this conference with our eyes open, the Soviet Government's support of the Communist forces in Laos provides a grim and timely warning of what we should expect.

I have had the rare opportunity of seeing both Mr. Khrushchev and President Eisenhower in action both publicly and privately, and I can assure you that the fears of those who believe that President Eisenhower may be taken in or bluffed by Mr. Khrushchev are completely without foundation. There is no doubt whatever but that the interests of the United States and the free world will be vigorously, firmly and aggressively represented by the President in this meeting.

Another objection to the visit is the possible effect on our allies. The President's trip to Bonn, Paris, and London provides a complete answer to this objection. As the President has made abundantly clear, it is not the American way to negotiate, in the absence of our allies, problems that vitally concern their future. We reject the concept that two great powers—the United States and the U.S.S.R.—should decide the fate of other peoples without consultation with them.

A major objection to the visit is the effect it may have on the captive peoples of Eastern Europe. You can be sure, however, that under no circumstances will this exchange of visits result in statements or actions on the part of the United States indicating our approval or acquiescence in the status of the peoples of Eastern Europe.

We do not question the right of the people of these countries, or any other for that matter, to have a Socialist or Communist government if they so desire. But we believe that all people should have a right to choose the kind of government they want. The people of the satellite nations of Eastern Europe have never had an opportunity to exercise that right since World War II. We recognize that their right of choice cannot be obtained by armed intervention on our part. A so-called war of liberation would liberate only dead bodies and ruined cities. But we will continue to support through peaceful means realization of the objectives that the peoples of these satellite countries be given the opportunity to choose the kind of government they want.

I believe that the American people should give Mr. Khrushchev a courteous reception when he visits the United States. I do not suggest this because I believe a courteous reception is going to affect one way or the other his ideas about our system, but because this is the American way of doing things. Visitors in our country, regardless of how much we disagree with them, should not be subjected to the rowdyism and riots for which the Communists were responsible when I was in South America.

The discussions President Eisenhower will have with Mr. Khrushchev, involving as they do such basic differences and conflict of interest, will be difficult at best. In the cause of the peace with justice that we all want, let us by our conduct see that those discussions are conducted in the best possible climate.

Resolutions of Oregon AFL–CIO

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Wednesday, August 26, 1959

Mr. NEUBERGER. Mr. President, the Oregon AFL–CIO, meeting in its fourth annual convention at Seaside, Oreg., August 3–7, 1959, adopted a number of resolutions pertinent to legislation before the Congress this year. I was particularly pleased to note the unanimous adoption, by the group, of Resolution 73, which endorses my bill, S. 1162, to provide an appropriation of $500 million for cancer research through the National Cancer Institute, of the National Institutes of Health.

I ask unanimous consent, Mr. President, that this resolution—together with Resolutions 31, concerning expansion of social security assistance; 34, concerning use of surplus foods; 51, concerning employment practices; and 81, concerning scrapping of obsolete ships—be printed in the Appendix of the RECORD.

There being no objection, the resolutions were ordered to be printed in the RECORD, as follows:

RESOLUTION 31

Whereas the Forand bill, entitled H.R. 4700, which would liberalize cash monthly payments and provide hospital, surgical, and nursing home care for persons on social security; and

Whereas the maximum possible allowance provided under social security is inadequate to pay extensive bills arising from illness; and

Whereas such suffering would be avoided and hospitals and public and private assistance would be relieved of a substantial burden; and

Whereas the future well-being and happiness of all of us depends upon the social security provision we establish for widows and elder citizens: Therefore be it

Resolved, That this fourth annual convention of Oregon AFL–CIO call upon Congress and the President of the United States to make the Forand bill into law. We also advise the Oregon congressional delegation to support the passage of this law.

Adopted August 7, 1959.

OREGON AFL–CIO.

RESOLUTION 84

Whereas the Department of Agriculture has been stockpiling various commodities for years in its farm surplus program; and

Whereas these stockpiles of food commodities have created an ever-increasing cost to the Federal Government, and we, as taxpayers, share this cost: Therefore be it

Resolved, That the Oregon AFL–CIO meeting in annual convention support Senate bill 1884, which would provide the availability of surplus foods for individuals who are in need of more nourishing food, and also to provide a better balanced diet, and that the Oregon congressional delegates be advised to support the passage of such legislation.

Adopted unanimously August 7, 1959.

RESOLUTION 51

Whereas one of the greatest menaces to the economic stability of our country and certainly one of the greatest menaces to the security and well-being of many American families is a continuing lack of job opportunities for many heads of those families; and

Whereas the people who are working have to support those who are not, either through taxes or direct charitable contributions, which impose an additional financial strain on all classes of citizens; and

Whereas organized labor has emphasized its concern over the plight of the 3 million still unemployed during this time of prosperity and has called for immediate, positive action to remedy this situation; and

Whereas we feel that this distress among American families would be most effectively relieved by giving priority in new hiring to the unemployed heads of families; and

Whereas the agencies of government should take the lead in alleviating this dire situation, by setting up a system of priority which wold favor the hiring of family breadwinners, regardless of sex; and

Whereas Postmaster General Summerfield has issued a directive ordering a larger percentage of women to be hired in the postal service, without regard for veterans preference or whether they are the heads of families; and

Whereas we feel this directive is harmful for the following reasons:

1. It disregards veterans preference—both male and female—since the ratio of hiring is to be determined on the basis of sex, which circumvents by Executive decree the law giving veterans preference, which law was enacted to compensate servicemen for being uprooted from their communities and denied, during the period of military service, the ordinary opportunities for advancement which they would have had in continuous civilian employment; and which was further enacted to provide a place for those maimed in the military service.

2. It shows no consideration for the pressing needs of many breadwinners of either sex who are desperately seeking a chance to work so that he or she may support his or her family according to a decent, American standard of living.

3. It will promote dual employment in the postal service since the spouse can coach the applicant in what to expect in a civil service examination. And this when most communities in the United States have many families in which there is a desperate need for work on the part of the family breadwinner.

Resolved, That the Oregon AFL–CIO in convention assembled at Seaside, Oreg., August 3 to 7, 1959, go on record as opposing the preferential hiring of women in the Post Office; and be it further

Resolved, That the Postmaster General be requested to rescind the directive for the preferential hiring of women in the Post Office, and that preference be given to veterans and heads of families, regardless of sex, and be it further

Resolved, That copies of this resolution be sent to the Oregon delegates in Congress, asking them to use any influence or legislative action necessary to insure preference for veterans and heads of families.

Adopted August 7, 1959.

OREGON AFL–CIO.

RESOLUTION 73

Whereas the Constitution of the United States directs that the Government shall provide for the general welfare; and

Whereas cancer is a cold and calculating disease inflicting immeasurable mental and physical anguish on its victims; and

Whereas two out of every three families in the United States shall be stricken by this disease; and

Whereas almost 2½ times as many Americans died of cancer during World War II as were killed in action on all our worldwide battlefronts, and in 1 year claimed more than 10 times the number of Americans who perished in the 3 years of fighting in Korea; and

Whereas Senator NEUBERGER has introduced a bill—S. 1162—in the U.S. Senate to provide an appropriation of $500 million to be continuing until it is used to fight this killer: Therefore be it

Resolved, That the Oregon AFL–CIO, 1959 convention endorse S. 1162, a bill offered by Senator NEUBERGER to provide an appropriation of $500 million for cancer research to be used by the National Cancer Institute until the fund is exhausted, and be it further

Resolved, That copies of this resolution be sent to the Oregon delegation in Congress.

Adopted unanimously August 7, 1959.

RESOLUTION 81

Whereas the dismantling and scrapping of excess and obsolete ships from the reserve fleets provided employment for our workers in the Pacific Coast States; and

Whereas many of these ships are being purchased by so-called dummy corporations and then towed to Japan for dismantling and scrapping by cheap labor; and

Whereas this practice deprives our workers of employment they should be entitled to; and

Whereas the situation creates unfair competition for local companies employing American workers: Now, therefore, be it

Resolved, That the Oregon AFL–CIO vigorously oppose the scrapping of obsolete ships in foreign countries; and be it further

Resolved, That copies of this resolution be forwarded to our congressional delegation in Washington.

Adopted unanimously August 7, 1959.

Maj. Gen. William P. Fisher

EXTENSION OF REMARKS

OF

HON. WILLIAM E. HESS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 26, 1959

Mr. HESS. Mr. Speaker, under leave to extend my remarks, I wish to call attention to one of the distinguished military officers on the Washington scene who is soon to leave. Maj. Gen. William P. Fisher, the Air Force Director of Legislative Liaison, is to become in a few weeks the Commander, Eastern Transport Air Force, Military Air Transport Service at McGuire Air Force Base, N.J.

Bill Fisher is an airman for whom I have great respect and admiration. He was born the son of a Congregational minister in Atlanta, Ga. He grew up in Southern Pines, N.C. He graduated as an engineer from North Carolina State College in 1934 after a 2-year interruption of his education to work. He then became a flying cadet in the Army Air Corps. After completion of his flying training he competed for a Regular Army commission which he won in October 1936.

On December 7, 1941, Bill Fisher, then a major of 2 days' standing, was wounded in the Japanese attack on Clark Field in the Philippines. His airplane out of action, he led his squadron, the 28th Bombardment Squadron of the famous 19th Bombardment Group, as it fought on the ground as an infantry unit. But he was soon back in the air fighting the Japanese from Java. After a short interval in the States, he returned to the war as a colonel in command of the 308th Bombardment Group under Maj. Gen. Claire Chennault in China.

During the Korean conflict Bill Fisher commanded the Far East Air Forces Bomber Command until assigned as Inspector General of the Strategic Air Command. He came to his Washington assignment in Air Force Legislative Liaison from the post of Deputy Commander, 8th Air Force.

That firm determination and immense ability which made him a great combat air commander has made him unusually effective as the Director of the Air Force's legislative liaison activities. He has represented the Air Force most ably in its relations with the Congress during the past session. I am convinced he will continue to do big things for the Air Force and the Nation in his new post. I am sure that I speak for the Congress when I wish Bill Fisher every good wish for continued success.

Cities for Men and Motorcars

EXTENSION OF REMARKS

OF

HON. J. W. FULBRIGHT

OF ARKANSAS

IN THE SENATE OF THE UNITED STATES

Wednesday, August 26, 1959

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article concerning city planning for Washington, which I think makes a great deal of sense.

This article was taken from the Athens College Newsletter and, I believe, contains a practical, and yet imaginative, suggestion for this city.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CITIES FOR MEN AND MOTORCARS

WASHINGTON.—The cities of North America, choking on their growing car populations, are turning to Asia for ways to escape strangulation; or rather, they are turning to a compact, tense Greek who is applying in Asian countries his concepts on how to help man avoid domination by the machines he has created.

This Greek, architect and engineer, Constantine Doxiadis, now 40, is perhaps the foremost world authority on a science, he has named ekistics—the science of human settlement.

He was already chief of town planning for Athens at 23, and Greece's head regional planner at 25. During the Axis occupation he ran a Scarlet Pimpernel band of fellow technicians and achieved the improbable by kidnaping the Italian counterespionage service complete with archives and commanding general.

At the end of the war, Doxiadis became his country's Minister of Reconstruction, survived 21 changes of government in 5 years, and rebuilt much of Greece for far less money than anyone thought was possible. Now he heads Doxiadis Associates, his own firm, which acts as engineering and planning consultants to the Governments of Persia, Iraq, Pakistan, Lebanon, Syria, Ethiopia, India, and Greece for projects which total $500,000,000.

He has been visiting the United States, brought over to advise on planning for the future of Norfolk, Detroit, Philadelphia and Washington, D.C. (through lack of time, he had to turn down an invitation from Cincinnati). The plan which he proposes for Washington gives a sample of the imaginative Doxiadis approach.

Washington lies in the shape of a wineglass formed by the Potomac and Anacostia Rivers. The stem of the wineglass flows south to the sea. At the bottom of the glass, like an undrunk sediment, lies Washington's forgotten area, its biggest slum. This is known as the southwest, bounded to the north by what is now the heart of the city, a broad strip of Government buildings running 4½ miles east and west between the two sides of the wineglass.

Doxiadis proposes that this vast slum should be cleared as the new capital area of Washington. Large buildings, hotels and apartment houses should be erected there, so designed that as the Government grows they can be easily converted to offices. Further growth should be along the stem of the wineglass, downstream along the river to the sea.

The new triangular capital area would be one of large waterfront piazzas like Venice's Saint Mark's Square, and would be approached by water. Giant hydrofoil water buses doing 60 miles an hour would bring the people upstream and to their work. Tourists would board similar buses from the jetties of waterfront motels downstream on the Potomac.

The Potomac River, a giant freeway already built, should be used as the axis of growth for Washington.

Cities are no longer the static organisms they were in the Middle Ages, when they remained unchanged in size for centuries within their walls. And they cannot be built in ever-growing circles, because in a circular pattern, as the city grows and its center grows within it, traffic to and from the center becomes progressively heavier and chokes movement.

The center of a Doxiadis city is like a narrow cone, flaring out in the direction in which the city is moving. The increased traffic does not all try to converge from every direction toward an evermore congested central point, but moves in parallel streams toward a central backbone which grows longer as necessary.

The streets are in a grid that divides the city not in small blocks, as now, but in large rectangles called sectors, which could be 1 mile long by half a mile wide. Streets outside the sectors are superhighways in which the motorists can travel at high speed.

From this grid of superhighways, small access roads stick into the sectors, rather like the black keys on a piano. The houses in each sectorline, the access roads and the perimeter form the frame for a park area where only pedestrian traffic is allowed, and where shops, cinemas, and schools are located in a setting of trees and fountains.

Each houseowner can choose his own style of house, and individual dwellings may resemble one another only in having two doors—one leading to the garage and the superhighways (the door to the machine world) and a second door to the human world, opening onto the interior of the sector.

A Doxiadis city provides for several thousand families in each sector, where privacy is secured by high garden walls and trees, where children are no longer in danger of being run over, where the strain of a mechanized civilization is left in the garage and the colossal waste of man-hours on commuting is ended.

In this design for living, man and his motorcar exist in contiguous but separate worlds. The city does not lose its citizens and revenue to the suburbs, whence people now fleet noise and traffic only to find themselves captives of the car, without which they and their families are immobilized, and in what is not a quiet community, but a mere characterless dormitory.

The Doxiadis cities are already more than dreams. He is building them in Asia. One is the new Bagdad, a city of 100,000 people rising on the west side of Iraq's old capital.

When the People Speak

EXTENSION OF REMARKS

OF

HON. MILTON W. GLENN

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 26, 1959

Mr. GLENN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial from the Bridgeton Evening News, a newspaper published in an industrial area of my district, which very lucidly and concisely summarizes the general reaction on the passage in the House of the Landrum-Griffin labor bill. The editorial follows:

WHEN THE PEOPLE SPEAK

The people have spoken through their leader, President Eisenhower, on the labor reform bill. And Congress has listened.

This is what happened in the House of Representatives last week when the strongest of three labor bills went through on a roll-call vote by a margin of 28 votes.

The astounding victory, which came despite fierce pressure from the Hoffa forces and other union leaders, proved that the President had the people back of him when he castigated bad labor practices in a public address just recently.

Those Democrats from the Northeastern States who went along with labor's cracking whip can only stand up to be counted. They should be listed, but for their own constituents to see.

Unfortunately, the vote wouldn't have been that close if national representatives had been less obligated to the unions—and their political funds at election time. This is also a blight on the free system of America and one that cannot be solved as easily as others.

But at least the House has acquitted itself with credit and honor, thanks to the coalition of Republicans and enough good-thinking Democrats who came through.

The controversial labor bill now goes back to the Senate where it is hoped the great tumult from the people will be heard and recognized by our senior lawmakers, who previously passed a measure that was lacking in punch and purpose. Let Senator KENNEDY, who has been active in exposing the vicissitude of labor evils and racketeering, be man enough to go along with the strong bill that the President endorses, and show the Nation that he has the courage of his convictions, despite the danger of offending the labor vote.

Actually, those who voted for the Landrum-Griffin bill will get support from the rank and file of labor which has been "taken in" by the money grabbers within its movement. The working man has no time for violence in his union, nor the practice of taking his dues for the support of hoodlums to carry out strong-arm methods.

It was the Hoffa influence and his defiance that helped to bring about passage of this strong labor control measure. The people are fed up with this kind of power which defies the Government and everything decent and good within it.

Senate passage of this new labor bill will serve notice on Mr. Hoffa and his 100 lawyers that the people rule this Nation—through those they elect—and that his will cannot prevail in a system dedicated to free enterprise and love of liberty.

What You Can Do About Khrushchev's Visit

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Wednesday, August 26, 1959

Mr. WILEY. Mr. President, the upcoming visit of Mr. Khrushchev—representing a new tactic in East-West negotiations—presents a new challenge to us.

There are, of course, differing ideas as to whether or not the invitation to Khrushchev should have been extended at all. However, President Eisenhower, the standard-bearer of our foreign policy, has made the decision that, in his judgment, will serve the interests of our security and world peace. The American people—in a unified, bipartisan manner—I believe, should give full support to that decision.

This does not, of course, presume an "open arms" welcome to the Soviet Premier.

We realize, of course, that there are a great many people, particularly from the captive nations, who resent, and understandably so, the Premier's being invited to this country.

It should, of course, be made abundantly clear for the public and our allies, that the invitation does not represent approval of communism or of Communist tactics that have resulted in international tensions and threats to world peace.

Nevertheless, I feel that the American people can, should, and will act in a dignified and reasonable manner in attempting to provide the climate in which the Eisenhower-Khrushchev talks and

exchange visits may have the best opportunity for positive accomplishment.

Yesterday's New York Times published an article suggesting "do's and don'ts" entitled "What You Can Do About Khrushchev's Visit." As illustrative of provoking ideas on the visit I ask unanimous consent to have the text of the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WHAT YOU CAN DO ABOUT KHRUSHCHEV'S VISIT

The decision to have Premier Khrushchev visit this country has been made. Now it is up to the American people to meet the challenge of that decision.

This event may mark a turning point in history. The question is—in what direction? The world is watching and wondering how we will receive this man who has threatened to bury us—the man who did just that to the Hungarian Freedom Fighters.

If he finds us naive, uninformed, and easy to deceive, he might be encouraged to risk adventures leading toward war. But if he finds us realistic, tough-minded, well-informed and united, he may well adopt a more cautious course.

Mr. Khrushchev is not coming to the United States to offer significant concessions or recant his life-long enmity toward us and our values. He is coming prepared to score a propaganda victory, with confidence in his ability to arouse false hopes, weaken our resolves and cause us to make substantial concessions. He must not succeed in such a mission.

You, as an individual American, can do specific things to help make this historic event a turning point toward a better world.

President Eisenhower can tell Mr. Khrushchev that we know the score, that we are not fooled by words without deeds, that we stand fearlessly for real peace with freedom and justice. But only you can make him believe this.

SEVEN THINGS YOU CAN DO

Think of yourself as a participant in this historic event and not a mere spectator. You will then find ways to act effectively. Here are seven suggestions:

1. Keep the reception truthful: Communists, fellow travelers and other extremists must not be allowed to take over and create a false impression. By calmly voicing your views you can encourage responsible, loyal Americans to reflect the true public temper with dignity and self-discipline. Khrushchev should be met with civil silence.

In addition to giving the visitor a polite hearing, you can convey a realistic reaction to his visit. For example, well reasoned, fact-filled Letters to the Editor in thousands of local papers and publications will go a long way toward giving Mr. Khrushchev our views straight from the shoulder. Dignified meetings under responsible auspices at times and places removed from contact with his visit can serve to make clear the voice of countless refugees from captive nations.

You can help make sure that people understand how important it is that Khrushchev's reception be orderly and correct. Street demonstrations by insulting crowds is a familiar tactic he has used many times. Soviet rowdies at the Vienna Youth Festival discredited themselves with such demonstrations a few weeks ago. Non-Communist young people who went to Vienna with plans of their own showed how intelligence and courage can win even against trained street fighters.

2. Know what Khrushchev wants: His major propaganda objectives are revealed in volumes of Communist theory and by years of acting it out. There has been no repudiation by him and he has often repeated the hard core ideas.

Soviet aims are thoroughly documented in the current bestseller, "What We Must Know About Communism" by Harry and Bonaro Overstreet. Here are a few points to keep in mind:

(a) The Soviet Premier wants to lull us into a false sense of security—to make us believe that the kind of peace we want can be had at the next summit conference for the asking. But the last time President Eisenhower met him at the summit—1955 in Geneva—his smiles and joviality were a cover for Soviet penetration of the Middle East, and encouragement of his Chinese allies to start shooting their way to Formosa.

(b) He wants to force us out of West Berlin and clamp down on that island of freedom. He wants to make it appear safe for the Western allies to withdraw, and at the same time dangerous to stay.

(c) He wants to create dissension among free world allies, to isolate us from our friends, so the Soviets can pick them off one by one.

(d) He seeks always to wheedle us into accepting past Soviet conquests and forgetting the plight of the captive peoples. This he considers a basic price for peaceful coexistence.

(e) He continues to demand acceptance of paper agreements banning atomic weapons without any workable inspection or effective control.

(f) He wants us to fear nuclear war so desperately that we will back away whenever the Soviets warn us that standing firm would risk such war. He wants us to believe that the Soviet Empire is now so powerful that we have no choice but to make the bite-by-bite concessions he demands.

3. Know what we want: It is not enough to realize what he wants; we must know what we want and why.

Basically, we want governments to respect and protect God-given rights of the human person, as affirmed in our Declaration of Independence:

"We hold these truths to be self-evident, that all men are created equal, that they are endowed by their Creator with certain unalienable rights, that among these are life, liberty, and the pursuit of happiness."

(a) We relentlessly seek a real peace, one that will assure all peoples freedom from fear of direct or indirect aggression.

(b) We want to strengthen and keep the free world united to prevent any further Soviet takeovers.

(c) We believe in self-determination, and we say that the way to unify divided nations like Germany, Korea, and Indochina is by free elections. The way to find out whether nations we call capitve really want their Communist rulers is to let them choose freely between Communist and non-Communist candidates.

(d) We want to help nations stand on their own feet and achieve their own goals so they can become good neighbors and traders. And we try to strengthen their capacity to resist constant Communist pressures—economic, political, and military.

(e) We want to reduce the burden of armaments by reaching agreements that are enforcible through adequate international controls.

(f) We favor the free exchange of information and ideas between East and West. Soviet acceptance of this idea requires that they stop jamming foreign broadcasts.

4. Know what Khrushchev represents: As Al Smith used to say, "Let's look at the record." You can help spread the facts about the Soviet record from Lenin's seizure of power in 1917, through Stalin's takeover in Latvia, Lithuania, Estonia, Poland, Czechoslovakia, Hungary, Albania, Rumania, and Bulgaria, to the current Communist aggressions in Tibet and Laos.

If Khrushchev's visit serves to draw attention to the Soviet record and sharpens world understanding of what he stands for, it will really mark a significant turning point. It is not enough to be against communism; we have to know precisely what it is and why we resist it. People who know can not be misled or confused.

For example, if each one who knows the facts encourages someone who doesn't to find out, there will soon be no danger of Communists winning propaganda campaigns.

5. Know Khrushchev's personal record: How many people know the bloody story of his rule over the Ukraine in the 1930's? It was so vicious that the people of the Ukraine welcomed the German army as liberators. And in 1944 Khruschev was sent back to punish them.

His speech to a closed meeting of the Supreme Soviets in 1956 exposing some of Stalin's crimes ignored the fact that he was actually a leader in the blood purges and a denfer of Stalin's worst excesses.

Anyone familiar with Khrushchev's biography will never make the mistake of taking him seriously as an apostle of peace and friendship. Knowing the facts is the best insurance against being deceived or used.

6. Know how he distorts, confuses and misleads: Lenin taught: "We must be able to resort to all sorts of stratagems, maneuvers, illegal methods, evasions, and subterfuges * * * to make practical compromises, to make agreements, zig-zags, retreats. * * * " The present line of peaceful coexistence may be just another "zig" that will be followed up by a "zag" to new aggressions. Soviet leaders have shifted back and forth between relaxations of tensions and threats, between peace offensives and ultimatums. Khrushchev sometimes "zigs" and "zags" on the same day, using a mixture of peace and war talk.

Be familiar with the way Communists use the free world vocabulary to mislead. When Khrushchev says "Fascist" or "capitalist" he means everybody who isn't a loyal Communist. When he says "noninterference in internal affairs of other countries" he means "everybody else stand aside and let us 'liberate' our neighbors from their 'Fascist' governments." Take note of Communist phrases like "peace and friendship" (the current slogan) and "people's democracy." Be aware of the Communist way of dodging embarrassing questions: "I've never heard of that * * *," "You are misinformed * * *," "A malicious fabrication by our opponents," "You bring that up to aggravate tensions when I am trying to reduce tensions. * * *"

7. Take personal responsibility for promoting public discussion: Get people in your community to talk over how they can best participate in this event as citizens.

(a) Arrange discussions in homes, churches, clubs, Grange Halls, veterans' organizations—wherever people meet.

(b) Ask your local editors, radio and TV station managers to help provide the essential background information.

(c) Encourage librarians to feature displays of books and pamphlets that will help readers understand the truth about communism.

(d) Urge groups to adopt resolutions expressing their views and to send supporting statements to President Eisenhower.

Is the World To Sit Silently by While the Whole Tibetan Race and Culture Are Being Systematically Destroyed—Genocide—By the Communist Tyranny in China?

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 26, 1959

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Saturday Evening Post:

THE REDS ARE GUILTY OF GENOCIDE IN TIBET

People in the comfortable countries, including the United States, have grown so used to reading about mass murders in faraway places that it is hard for them nowadays to feel these things as real. Atrocities have become commonplace. Have Red China's army and secret police been killing Tibetans in large numbers? Of course. But murder by Communists is such an old story that most of us merely turn the page to murders by juvenile delinquents.

The Chinese Reds are not simply suppressing a rebellion by taking the lives of the rebels. More than that, they seem to be killing Tibetans because they are Tibetans; thus they commit the crime of genocide, which means the slaughter of a people.

That matter has been investigated by the International Commission of Jurists, an alliance of lawyers with headquarters in Geneva, Switzerland. Its record is one of sharp struggle against tyranny. After the Tibetan uprising in early spring this legal group called on its branch in India to search out the facts.

Experts were appointed by the Indian Commission of Jurists to interview witnesses and collect and study documents. After 2 months of investigation, a report has been rendered by the general secretary, Purshottam Trikamdas, who was once secretary to Mohandas K. Gandhi.

The Indian commission has found "a prima facie case that * * * there has been an attempt to destroy the national, ethnic, racial, and religious group of Tibetans by killing members of the group and by causing serious bodily and mental harm. These acts constitute the crime of genocide under the Genocide Convention of the United Nations of 1948." Prime Minister Nehru, however, has said that, because of the absence of Red China from the United Nations, he doubted that the U.N. could take up the Tibetan case.

However, the charge of genocide was soon made officially by the legal head of the Tibetan Government, the Dalai Lama, speaking from his place of refuge in India. "Complete absorption and extinction of the Tibetan race is being undertaken," he declared. There is "terrible deportation and execution of innocent men."

A former delegate from India to the United Nations, B. S. Gilani, says that Red China has an "ultimate aim. It wants to colonize Tibet."

Hitler similarly wanted to colonize Poland and other countries of eastern Europe. To that end he murdered vast numbers of their inhabitants. Stalin committed genocide repeatedly, long before that term was coined to give the crime a particular name. In two continents, from the Baltic to central Asia and farther north in Siberia, he exterminated, he deported, he colonized. Men and women and children who escaped immediate death were shipped around like low-grade cattle. There are places like Kazakhstan, in Asia, where colonists from other parts of the Kremlin's empire have become the majority; those natives who remain are outnumbered in their own country.

Now Mao Tse-tung and his fellow slavemasters in Peking are apparently committing the same wholesale crime in Tibet. In view of the charges by the Dalai Lama and the Indian Commission of Jurists, the United Nations should make a thorough investigation, even if the guilty nation is not a U.N. member. Otherwise, what good is the U.N.'s Genocide Convention of 1948?

A Texan Serves the Nation—Lt. Gen. Bernard A. Schriever Is Missile Chief

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Wednesday, August 26, 1959

Mr. YARBOROUGH. Mr. President, Lt. Gen. Bernard A. Schriever, Chief of the Air Force Air Research and Development Command, was a pioneer in the field of missiles.

The record of this man, who was born in Germany, grew up in San Antonio, Tex., and graduated from Texas A. & M. College, shows he is well qualified for his post.

Recently Ralph Dighton of the Associated Press, wrote an article telling of General Schriever's colorful career.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD Mr. Dighton's article as printed in the Dallas (Tex.) Times Herald for Sunday, August 23, 1959, under the title "Schriever Stands Up and Is Counted—From Texas Caddy to Missile Chief."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SCHRIEVER STANDS UP AND IS COUNTED—FROM TEXAS CADDY TO MISSILE CHIEF

(By Ralph Dighton)

Early next month the Air Force hopes to stamp "operational" on the Atlas intercontinental ballistic missile.

The expected announcement will mark a significant stride toward eliminating the critical gap—once estimated as 3 years—between the American and Soviet long-range missile programs.

Among the men largely responsible for whipping U.S. missile technology back into the race with Russia is Lt. Gen. Bernard A. Schriever, Chief of the Air Force Air Research and Development Command.

Russia first claimed possession of an ICBM on August 26, 1957. The United States had to wait 15 months before the Air Force blasted its first experimental Atlas from Cape Canaveral over the full 5,000-mile-plus South Atlantic range.

Now, less than a year since that test, the Atlas is about to join the Air Force arsenal of weapons. None could feel greater satisfaction over this development than Schriever—who won his present post and his general's stars fighting for missiles.

It was not an easy fight. There were times when he laid his career on the block, an obscure Pentagon colonel and former German emigrant bucking generals who would not believe the space age was about to dawn.

But in little more than 5 years Schriever has rocketed to three-star general and built missile technology into a $2-billion-a-year industry.

HONORED BY TEXAS

Schriever's success was recognized last May by the State of Texas, where he grew up. A joint session of the Texas Legislature honored Schriever's mother for her own and her son's achievements. The legislators gave Mrs. Schriever, now crippled from effects of a stroke, a bouquet of roses and a standing ovation.

Schriever was visibly shaken by the tribute.

"What a wonderful day this is for her," he said to a friend, his eyes dimming with memories. "What a wonderful day."

Handsome and broad shouldered, this man with the sky-blue eyes sometimes is mobbed for autographs by women in the factories he visits on production-spurring tours. Men, too, like him instinctively. His subordinates frequently find their regard bordering on awe.

One of his favorite phrases is, "Stand up and be counted."

"If you believe in something," he says, "fight for it—at least until a decision is reached on a higher level. Then, whether you're right or wrong, stand up and be counted."

MODEST ABOUT ROLE

Schriever is inclined to be modest about his pioneering role in missile development. "It was my job to look ahead, he says.

He has been credited with fighting for missiles since 1950, when they were more closely related to science fiction than military science.

"It just isn't true," he says, with characteristic frankness. "I did not become sold on missiles as weapons until late in 1952, when technological advances showed that nuclear warheads could be made small enough to fit missile nose cones.

"Up to that time I had been more interested in big bombers as a deterrent force. Then the picture changed. With smaller payloads, missiles became practical."

By 1954, when the Air Force decided to set up a missile research and development center on the west coast, it was obvious that the man for the job was the man who had fought for their existence.

First, as a crackerjack engineer, Schriever knew missiles and how they should be made.

Second, he was a topflight administrator, a paperwork genius in development and planning.

MISSILE GROUNDWORK

Schriever, then a brigadier general, was sent to Inglewood, Calif., to lay the groundwork for what was to become the Air Force Ballistic Missile Division.

In the years since 1954 Schriever has flown hundreds of thousands of miles in this country and abroad in the cause of missilery. He spent much of this time in Washington, selling his program to Congress.

Scriever was among those who pushed the idea for setting up production facilities while development of the Thor intermediate range missile was still underway. He argued that this compression of lead time would mean that the missiles would be ready for deployment much sooner. Thors are now operational in bases in England.

His aide, Capt. Robert Crabbs, says Schriever rarely gets more than 3 or 4 hours' sleep a night when traveling. On a typical cross-

country trip he will take a group of subordinates with him as far as Omaha or Chicago, send them back on another plane, and during the rest of the flight work with another group that has flown out to meet him.

CHECK PRODUCTION SNAGS

Many of the general's trips are to check on snags in production.

Dan Kimball, former Secretary of the Navy, who now heads the missile-building Aerojet-General Corp., says:

"He beats contractors over the head to keep them on schedule. He has even worked some of my executives over with a wire brush—and we keep on schedule."

What drives Schriever so hard?

A clue comes from retired Lt. Gen. Lawrence Craigie, now vice president of American Machine & Foundry, a supplier of missile launching equipment.

"You have to know about his childhood," says Craigie. "Ben seldom speaks of it, but I feel sure one reason he loves this country so much is his early experience, his own personal knowledge that this is a place where a kid who can't even speak English can rise to a position of great trust and responsibility."

BORN IN GERMANY

When Bernard Schriever, born September 14, 1910, in Bremen, Germany, arrived in America in 1917, effigies of Kaiser Wilhelm swung from lampposts across the land.

Through a rising tide of anti-German hysteria, his mother hurried with him and his young brother Gerhard to a haven with friends at the German-American community of New Braunfels, Tex. There they awaited the release of her husband, a German seaman who had been interned at the outbreak of hostilities.

His father died in a factory accident at San Antonio shortly after his release. Schriever's mother went to work as housekeeper for a wealthy family in San Antonio.

Mrs. Schriever's employers gave her a small house on a golf course. The boys operated it part time as a refreshment stand until their benefactors died and Mrs. Schriever took over the stand full time.

Ben began caddying and took up golf with characteristic determination. By the time he reached high school he was a golf prodigy. He still shoots sub par golf.

Harvey Penick, now a professional at Austin, says: "What a waste of talent. Here he is fooling around with missiles when he could have been greater than Hogan."

A. & M. GRADUATE

Ben received a B.S. in engineering from Texas A. & M. in 1931 and joined the Air Force. He has been in the service ever since, except for a brief period as a commercial pilot in 1938. He married a general's daughter (they have three children), became a Wright Field test pilot, took a master's degree in aeronautical engineering at Stanford University in 1942, then flew 63 bomber missions in the Pacific.

After the war Schriever was sent to Washington as Chief of the Scientific Liaison Section. In 1949 he entered the National War College and upon graduation went into the Pentagon. There he demonstrated his ability to handle tremendous detail and inspire those around him.

At 48, as the Air Force's research and development chief, Schriever today is making decisions which could affect this Nation's survival.

If he does his new job well, there may be even higher rewards. Some observers believe he may be marked for the top Air Force job—Chief of Staff.

But it would be difficult for any reward to surpass one he already has—the accolade from the Texas Legislature.

Home Rule for the District of Columbia

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 26, 1959

Mr. MULTER. Mr. Speaker, on July 28, 1959, I testified before the House District Committee in support of my bill, H.R. 4630. My testimony was as follows:

STATEMENT OF HON. ABRAHAM J. MULTER, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF NEW YORK, JULY 28, 1959

Mr. MULTER. For the record, I am Abraham J. Multer, Representative from the 13th District of New York.

Mr. Chairman and distinguished members of the committee, I appreciate the opportunity to appear here this morning in support of home rule for the District of Columbia.

At the outset may I say that I understand and respect the views of other Members of Congress who oppose home rule for the District. At the same time I very vigorously and sincerely disagree with them.

It is my opinion that not only should the hearings go forward expeditiously, but that a bill should then be reported to the House so that the House may work its will as to whether or not the District should have home rule and if so the form that that home rule should take.

Mr. MCMILLAN. Will the gentleman yield for a question at that point?

Mr. MULTER. Surely.

Mr. MCMILLAN. I take it you do not favor the discharge rule before the Rules Committee that would not permit the House to work its will?

Mr. MULTER. I do not know as of this moment of a discharge petition, if that is what you are referring to.

Mr. MCMILLAN. I am referring to the discharge rule that provides for a 1-hour debate on the home rule bills.

Mr. MULTER. I do not think a discharge petition has been filed yet but, most respectfully, I hope it will be filed and I hope to be one of the first to sign the petition, and I hope in short order the petition will be signed and the legislation will be brought before the House.

Mr. MCMILLAN. Perhaps I misunderstood you. I understood you to say you wanted the House to work its will, and the House cannot work its will on this legislation in the period of 1 hour.

Mr. MULTER. I understand your statement, but I do not agree with it and cannot subscribe to it.

[Applause.]

Mr. DAVIS. Mr. Officer, if anyone attempts any applause or any other demonstration in the room, I want you to see who it is and promptly remove him.

The OFFICER. Yes, sir.

Mr. DAVIS. Proceed, please, Mr. Multer.

Mr. MULTER. Addressing myself further for the moment to Chairman McMillan's remarks, it is my firm opinion that the House can work its will on any bill that is brought before it, whether it comes before it through the committee procedure of being reported by a committee and then by a rule, or without either report from the committee or a rule. And when a discharge petition is filed and it is signed by the necessary number constituting a majority of the House, that is the will of the House that the House shall determine whether they shall pass on the legislation. That is the first question the discharge petition puts before the House. The House can then decide it will not consider the matter, or, on the other hand, if the majority says it will consider the matter, the House proceeds to determine what it will do with the bill and perfect the bill if that is the will of the majority. It is my considered opinion that it is and that the majority will so express itself in favor of home rule for the District and will bring forth a bill that will give to the District a modicum of home rule, probably not as much as I would like to see, and probably not as much as other Members would like to see, but, at the expense of referring to the cliche that maybe this is just a foot in the door, I for one am willing that we get that foot in the door or that toe in the door and move forward from that. If we get some kind of home rule for the District this year, after we have had some experience under it I hope we can perfect it and give to the District more and more home rule.

I have before me the letter from our distinguished chairman, the gentleman from South Carolina, Mr. MCMILLAN, dated July 27, which was addressed to me and I believe to all the authors of other home rule bills, in which he states that among other things he will request the chairman of the subcommittee to insist on all authors of bills making an oral statement so that we will be able to get all the information possible on this subject.

Mr. MCMILLAN. That is correct. That letter was sent to the author of every bill because this is an important question and I think every member who thinks enough of this question to introduce a bill should come in and explain how he can get by the Constitution. You are a good lawyer, and we want you to tell us how you can get by article I, section 8, of the Constitution.

Mr. MULTER. I will get to that in a moment, sir.

I would first like to say that this is rather an unusual request. The chairman himself, Mr. MCMILLAN, has been the first to violate it by having the chairman of the subcommittee read his own statement, and I respectfully suggest that other members who desire to file a written statement be permitted to do so and to file it just as though he had made it orally.

Mr. MCMILLAN. Of course, everybody may submit a statement, we will be glad to have it, but we feel any man who introduces a bill should be willing to come in and explain it. I did not introduce a bill.

Mr. MULTER. I understand. I do trust the committee will take the view that when 26 Members of the House introduce an identical bill, if one or more come in here and explain the bill and they explain in writing or otherwise that they support that bill, that would be a sufficient record.

I do not pretend to know all about home rule or all about all the bills that have been submitted, but I think it is high time, after the other body has five times in the last 10 years passed a bill for home rule for the District, it is high time this committee report a bill to the House so that the House can decide by vote if it wants home rule for the District and to what extent.

Mr. MCMILLAN. Will the gentleman yield?

Mr. DAVIS. Mr. McMillan.

Mr. MCMILAN. I do not know whether you were here when we had the bill before the House and the House spent 2 whole days on home rule?

Mr. MULTER. I recall it, sir.

Mr. MCMILLAN. And the bill was not passed.

Mr. MULTER. I recall it, sir.

Mr. MCMILLAN. According to the radio and television and the newspapers it would appear we have never had one before the House.

Mr. MULTER. It has been 10 years since we had one, and I think it is time the House decide whether the people of the District are entitled to the right of representation as well as the burden of taxation. One goes with the other, and without both we do not have the democratic form of government—with a small "d"—that we brag about to the free world and that we like to talk about during campaign time, and that goes whether we believe in States' rights or a central government. That is unimportant. Certainly all should agree that everybody has a right to vote and elect their representatives and their representatives should have a right to participate by voting on every piece of legislation passed or considered which affects their lives and their property and their rights.

I have introduced two bills. One bill, H.R. 4630, is the bill which is preferred by the administration. While I have disagreed vigorously from time to time with the administration on many problems—and probably will again many times before this administration leaves office—this is one time I am willing to go along with them again with the idea in mind that this is half a loaf and this half loaf is better than no loaf.

I will not take the time to discuss each of the sections in that bill. I did place a detailed analysis of the bill in the CONGRESSIONAL RECORD during the course of a special order I had on February 17. It appears at page 2312 of the RECORD and subsequent pages up to and including page 2317.

The other bill which I introduced, H.R. 8081, is the so-called Morse bill, and it is quite like the one which the Senate has now passed and sent to this body. I will not take the time to analyze that bill either.

The first bill calls for elected local legislators and an appointed Governor.

The second bill calls for an elected mayor and city council and so forth.

Both bills present the primary issue—

Mr. DAVIS. Will you designate them by number?

Mr. MULTER. Yes, sir. The first bill is H.R. 4630 and the second bill is H.R. 8081.

Both bills present the first and primary issue the Congress must determine, and that is, Shall there be home rule?

Mr. DAVIS. I shall have to ask you to suspend until we can have the noise stopped outside.

(Brief suspension of the hearing.)

Mr. DAVIS. Some of the people who attended the hearing this morning seem to be determined to make this the same kind of situation which prevailed in Havana last week. If we just had the beards and machetes we would have a pretty good duplication of it out in the hall this morning and we apparently would be ready to begin the distribution of land and other property.

We will proceed in an orderly way, and I think you can proceed now, Mr. MULTER.

Mr. MULTER. Mr. Chairman, I think before we go much further I ought to direct the attention of the committee to one of the primary rights of citizens of our country. It starts with the Declaration of Independence and it is written into our Constitution with such bold letters and big type that none can misunderstand it, and none should ever forget it, and that is the inherent right of citizens of our country to assemble publicly and to peaceably petition their legislators and their Congress, and that is what these people are trying to do who are in this room and out in the hall, and if there is any disorder the committee must bear the responsibility for it by not providing adequate room for these people to come in and quietly attend the hearing and hear what is being said.

Mr. DAVIS. Will you yield at that point?

Mr. MULTER. As soon as I finish this point.

I submit this hearing should be adjourned to a larger room, if one is available, which I am sure it is, so that we can all, citizens outside, and citizens inside, listen quietly and orderly and give them the orderly hearing I am sure they all want.

I yield, sir.

Mr. DAVIS. Mr. Multer, as I stated in answer to a question by our colleague, Mr. Wier, a moment ago, we have been able to hear all the legislation that we have had hearings on in this room. We are able to hold these hearings here now and will hold them here in an orderly fashion and will hear everyone who desires to be heard on this legislation.

This is a staged demonstration, as you well know and as all of us well know, and its purpose is not to present any facts to the committee but to bring pressure on it. I do not think it will succeed.

We will be glad to hear you and we will be glad to hear every other interested person.

You may proceed.

Mr. MULTER. Mr. Chairman and my distinguished colleagues on the committee, although I did not participate in the preparation for this demonstration or in the march on the Hill, I approve of it and I remind you gentlemen that the Boston Tea Party also was a staged demonstration, a demonstration against the King and his tyrannical use of his powers. It did not have its effect. It resulted in a war, a revolution, and the birth of this country.

I am sure that no such demonstration will ever again result in war in this country to attain for the people the privileges and rights that are guaranteed to them by the Constitution, and I am sure the Congress will eventually give them all the rights they are guaranteed by our Constitution, including the right to elect a voting Representative to the House of Representatives and to elect their own local officials.

With respect to the specific question that was tendered by Mr. MCMILLAN of whether or not home rule legislation would be constitutional, may I suggest that in the same article I, section 8, the Congress is given the power to coin money and regulate the value thereof, yet no one denies that the National Bank Act and the Federal Reserve Act are constitutional. They have been tested and found constitutional and I have not heard anybody in recent days argue against the constitutionality of the National Bank Act and the Federal Reserve Act. Both acts take from the Congress, by the Congress's own legislation, and give to the Comptroller of the Currency and to national banks and to Federal Reserve banks the right to do that which is reserved to the Congress in this same article, this same section, with reference to money.

How much more important is it that we give personal rights—the right to vote, the right of representation—to these people by legislative enactment. We do it every time we create a State. I know the answer will be, "But look at the particular language of section 8, clause 17." I do look at it, but I do not overlook when I get to the same article, same section, clause 18, the same Constitution says, "The Congress shall have power to make all laws which shall be necessary and proper for carrying into execution the foregoing powers, and all other powers vested by this Constitution in the Government of the United States, or in any department or officer thereof."

I think that is the complete answer to any argument that may be urged that home rule legislation would be unconstitutional.

Mr. MCMILLAN. While you are on that subject, were you in Congress when we had the last hearings on this subject?

Mr. MULTER. I came here in 1947, Mr. Chairman.

Mr. MCMILAN. You were not a member of this committee at that time?

Mr. MULTER. No, sir; I was not.

Mr. MCMILLAN. We had a statement from the late John W. Davis, who I am sure you will agree was one of the greatest constitutional lawyers in the United States.

Mr. MULTER. One of the greatest.

Mr. MCMILLAN. He sent down a statement to the committee stating we did not have the right as Members of Congress to delegate our authority in this respect.

Mr. MULTER. I respect the opinion of the late John W. Davis as a great constitutional lawyer. I disagreed with him in this instance, as I have in other instances. Without going into the details, I recall distinctly one case that went to the Supreme Court in which we were on opposite sides. The Supreme Court unanimously agreed with me. And I hope if the home rule bill goes before the Supreme Court it will again agree with me. I think the arguments for constitutionality of the home rule bill are of much greater weight and have more validity than the respected and respectable opinion of the late John W. Davis.

Mr. BROYHILL. Will the gentleman yield?

Mr. MULTER. Yes.

Mr. BROYHILL. We appreciate your stating your views. However, it seems our Founding Fathers went to great lengths to make sure Congress would exercise authority over the District of Columbia, because they added some words to emphasize that language that would otherwise be superfluous. They said Congress shall have power to exercise exclusive legislation in all cases whatsoever. The language without the words "exclusive" and "whatsoever" would still make sense, but they added the words "exclusive" legislation in all cases "whatsoever." It seems to me their intent was to exercise the authority of Congress over the city.

There is and has been for several years a resolution pending before the House Committee on the Judiciary to grant to the citizens of the District of Columbia who are American citizens the right to vote for President and Vice President.

To my knowledge no consideration has been given by the Judiciary Committee to that legislation. I have not heard of any Member of Congress who objected to that proposal to give the citizens of the District of Columbia the right to vote for President and Vice President, but there does not seem to be the same desire to give them that right—which seems to me to be more important than to give them the limited authority involved here. And it will be limited because whatever bill is passed there will be the question of how much voice the local people would have, but in voting for President and Vice President there would be no question about it, and I am certain the House would pass an amendment to give these citizens of the District of Columbia the right to vote for President and Vice President, and it would go through.

I am wondering why the people interested in this legislation do not start a discharge petition to discharge the Judiciary Committee and bring that bill before the House?

What do you say about that?

Mr. MULTER. I say let us not pass the buck.

Mr. BROYHILL. I am not passing the buck.

Mr. MULTER. I am willing to join with you tomorrow in filing a petition to discharge the Judiciary Committee from further consideration of the bill to pass a constitutional amendment to give the citizens of the District of Columbia a right to vote for President and Vice President.

Mr. BROYHILL. Do you not think that is a more important bill?

Mr. MULTER. I think it is a very important bill and I am willing to join in filing a petition to discharge the Judiciary Committee, but I think we should leave no stone unturned to give them both bills.

Mr. BROYHILL. You would eliminate the constitutional question by a constitutional amendment to give them that right.

Mr. MULTER. I do not think you need a constitutional amendment. I agree the weight of authority is with you in saying there is need for a constitutional amendment, but I would risk passing a law and giving the right to them and I would risk what would happen in the U.S. Supreme Court as to whether that bill is constitutional or not.

Mr. BROYHILL. I will not argue with you on that.

Mr. MULTER. I say let us do the two things. Let us do the three things. Let us pass the constitutional amendment, too. By the time the constitutional amendment is adopted I think the Supreme Court would have passed on the constitutionality of the legislation. I am willing to vote for the constitutional amendment because it is one sure method to give them the right to vote, but I would not forgo the right of Congress to give it to them without a constitutional amendment.

Mr. BROYHILL. I am merely suggesting that we eliminate the ambiguity. I do not think that would be difficult if the Judiciary Committee would hold hearings on the legislation before it.

Mr. MULTER. But this is before us now.

Mr. DAVIS. Mr. MULTER, would you prefer to finish your statement and then answer questions?

Mr. MULTER. No; I think it is much better that the questions be asked and the answers given as the questions arise.

Mr. MATTHEWS. Mr. MULTER, will you yield?

Mr. MULTER. Surely.

Mr. MATTHEWS. I want to express my sincere regard for our colleague, who is a very distinguished member of our committee and who is always loyal to his interests.

I think I heard you say you would be in favor of giving the District a voting representative in Congress, and if I heard you correctly, is it your idea that the next step probably that would be undertaken would be to make the District a State with two or more U.S. Congressmen and two or more U.S. Senators, and if that is granted I wonder what you think about giving them voting representatives in the Senate, too?

This is a great concern that I have. We hear so much about taxation without representation. If we grant some kind of home rule would the next step be, "We are still being taxed without representation," and what would be the position of the great city of New York and the State of New York and down the line? That is the question that puzzles me.

Mr. MULTER. It gives me no trouble, Billy, and may I take a moment to say I appreciate the compliment you pay me. It gives me no trouble because I so frequently refer to the history of the city of New York and State of New York and what happened to my town or city of New York. We did not always have home rule there. We do not have complete home rule yet but we have more than many cities. We had to fight for it all the way and today we have more than many other cities.

It does not bother me that you have a bill—I do not think it is on the list but I think our distinguished colleague from Texas, Mr. TEAGUE, has introduced a bill that is known as a nonsovereign State bill.

Mr. DAVIS. Do you have the number of that bill?

Mr. MULTER. No, I do not, but the newspapers referred to it. I do not know the number of it but that bill, I think, calls for a voting Member of the House of Representatives and two voting Members of the U.S. Senate.

I do not go for half representation. I say if a citizen is entitled to be represented he is entitled to full representation. If he is entitled to vote he is entitled to vote on everything that concerns him. But I am willing to take this step by step, and I think the first step is to give him some home rule. I do not know of any prohibition against home rule up to 75 years ago. No one tested its constitutionality. It was good at that time. Why could not home rule be good today?

I think the constitutional question is one that should be resolved by the Supreme Court if and when it is tested, but in the meantime I think we should move forward and give the taxpaying citizens of the District of Columbia of the United States of America the right to vote for their local officials and to govern themselves.

And that reminds me of this situation:

If what is said about home rule being unconstitutional is true, and if this language means precisely what it says, that the Congress reserves to itself all the legislative power concerning this District of Columbia, then indeed our Founding Fathers were very foolish and impractical, and I disbelieve that because if that is so everything that is done today by the Commissioners is illegal and unconstitutional. I have not heard anyone say that. Every time you give the Commissioners or the Public Utilities Commission the right to issue a rule or regulation, whether it involves health or sanitation or transportation, that is legislation and a legislative power, and if the Congress did not have the right to give that authority to the Commissioners or to the Public Utilities Commission or any other District Commission, then everything they have done is unconstitutional and everyone who violated an ordinance and paid a fine was fined illegally, and I do not think that is so.

This is my position on these bills and I hope very shortly you will go into executive session and bring forth a bill that can be acted on promptly.

Mr. DAVIS. We appreciate your statement.

I want to ask you some questions about some of the points you touched on.

Mr. MULTER. Surely.

Mr. DAVIS. I notice in House Resolution 320 that you are listed as one of the four Representatives which that resolution provides for recognition by the Speaker to move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of H.R. 4630, which is one of the bills you referred to in your statement.

Mr. MULTER. Yes, sir.

Mr. DAVIS. You are familiar with House Resolution 320?

Mr. MULTER. Yes, I am.

Mr. DAVIS. That resolution provides that all points of order against the bill are waived and it provides that general debate shall be confined to the bill and continue not to exceed 1 hour to be equally divided and controlled by you or whoever requested the rule for consideration of H.R. 4630, and a Member who is opposed to said bill to be designated by the Speaker.

The resolution further provides that no amendment shall be in order to the bill except those offered by direction of the Member requesting the rule, which could be you or one of the three other Members named in the resolution, and that amendments so offered may be offered to any part of the bill but shall not be subject to amendment.

That strikes me as being a very harsh and stringent gag rule.

This bill, H.R. 4630, is a bill which has 83 pages in it. This resolution also provides that it shall be considered as read when the debate has been ended.

What is the reason for all these various provisions?

Mr. MULTER. All the reasons I have ever heard urged since I have been a Member of the House in support of closed rules can and should be urged in support of that closed rule. It is no different from any other closed rule that has been reported by the Rules Committee and adopted by the House, and you know, I am sure, the House does not have to adopt this closed rule.

Mr. DAVIS. It expresses your attitude?

Mr. MULTER. That is right, because I think a bill of this kind ought to be considered just as we can consider bills out of the Ways and Means Committee dealing with billions of dollars under a closed rule without amendment when there is much disagreement. Surely we can consider a bill of this kind under the same rule and determine once and for all the issues it raises in this session of Congress and that is, whether or not home rule shall be given to the District and whether or not they shall at least have the right to experiment under home rule for a while.

Mr. DAVIS. How does the gentleman feel that restricting these debates to 1 hour will further the purpose of having home rule this session? Does not the gentleman know that 1 day's debate or 2 days' debate or any reasonable time would not jeopardize the passage of the bill if the House wants to pass it? I would like to know why you want to restrict it to 30 minutes to those in favor and 30 minutes to those opposed when you cannot begin to touch the various provisions in this 83-page bill in that length of time?

Mr. MULTER. May I be presumptuous enough to suggest that the reason for the limitation to 1 hour is that I do not think if you talked about this bill for 10 days a single vote would be changed.

Mr. DAVIS. Is that the gentleman's attitude about legislation generally?

Mr. MULTER. No; it is not.

Mr. DAVIS. Why does the gentleman say it about this bill?

Mr. MULTER. Because on this particular bill I think every Member of the House has made up his mind whether he is for or against home rule and will vote accordingly regardless of how much debate there is.

Mr. DAVIS. Would you say every Member of the House is familiar with the provisions of H.R. 4630?

Mr. MULTER. Just as he is not now, I would say after 20 days' debate every Member would not be familiar with every provision of the bill.

Mr. DAVIS. You do not think debate would inform him as to the provisions?

Mr. MULTER. Debate would inform those willing to stay on the floor during general debate.

Mr. DAVIS. The gentleman knows you have a right to get them on the floor and keep them there.

Mr. MULTER. You cannot if there are 100 on the floor, and that is less than one-fourth of the Members of the House.

Mr. DAVIS. I differ with the gentleman as to the necessity to explain the provisions of a bill.

Mr. MULTER. Before we leave the matter of limitation of debate, I have learned the hard way that all good legislation is the result of compromise, and I am willing to compromise if you and others who feel about it the way you do say 1 hour is not enough. I am willing to agree with you on how much time for debate there should be.

Mr. DAVIS. Let me get the gentleman's idea on how much time he thinks would be reasonable?

Mr. MULTER. I have said I do not think any amount of debating——

Mr. DAVIS. You are a member of the Banking and Currency Committee, are you not?

Mr. MULTER. Yes, sir; I am.

Mr. DAVIS. That committee reports out many bills and the Rules Committee has always allowed reasonable time for debate on bills out of that committee.

Mr. MULTER. That is right.

Mr. DAVIS. You have referred to tax bills. We all know the reason tax bills come before the House on a closed rule is that experience has demonstrated that is is almost impossible to pass a tax bill unless it comes up under a closed rule.

The gentleman referred to tax bills involving billions of dollars. Appropriation bills also involve billions of dollars and they come up under a closed rule.

Mr. MULTER. Sometimes they do.

Mr. DAVIS. Almost always, but you can offer an amendment any time you want to and get a hearing before the House, and House Members are not prevented from offering amendments and expressing themselves about such amendments as they may offer, and certainly the appropriation bills I do not think can be considered as of lesser importance than the subject matter of this legislation.

What do you say about that?

Mr. MULTER. I say this committee is in charge of that situation. Most of these bills have been before this committee since January. Most of them have been before Congress every session for the last 10 years. I am not accusing anyone of being dilatory, but I am suggesting the answer to any discharge petition is that the committee has had ample time to report out a bill and that the committee can be in control of the kind of rule you wanted brought forth. It is still within the power of this committee to control that.

Mr. DAVIS. Is it your attitude, then, that because the committee has not held hearings on these bills up to this time, to eliminate all the legislative processes and go ahead and adopt these stringent provisions provided for in this resolution which have already been outlined here and assume that this bill, H.R. 4630, is so perfect that no Member of the House other than the four named in House Resolution 320 would be capable of offering an amendment to it that would improve it?

Mr. MULTER. I am sure I can talk for the other three colleagues mentioned in that resolution. None of us claim to know it all, none of us is perfect, and none of us claim we can bring out a perfect bill.

Mr. DAVIS. Why have you restricted it so that the other 433 Members of the House would have no opportunity to offer an amendment or debate it?

Mr. MULTER. Because the discharge petition and the closed rule is as much a part of the legislative processes as the committee system.

Mr. DAVIS. Why have you restricted it further so that if one of these four Members does offer an amendment that no Member of the House will be permitted to amend that amendment?

Mr. MULTER. The same principle applies here regarding the offering of amendments to amendments as to other bills.

Frankly, none of us at this time foresee the necessity for amendments. However, during the course of the debate things may be suggested to improve the bill, and I am sure my colleagues sponsoring this bill will agree to any amendment that will improve the bill.

Mr. DAVIS. But you would not agree that any other Member who disagrees with the propriety of any provision in this bill could offer an amendment?

Mr. MULTER. Most respectively I say to you we had a choice, a hard choice. We could have an open rule and permit amendments until the end of the session of Congress—whether dilatory or otherwise is unimportant—but under an open rule it could go on until adjournment. Or if it is a closed rule it must be a closed rule not in part but completely, otherwise those who want this legislation will see it talked to death.

I say that to you most respectfully.

Mr. DAVIS. Again I disagree with the gentleman most respectfully because I am convinced under the rules of the House there cannot be carried on any such dilatory tactics as the gentleman has referred to. I thoroughly disagree with the gentleman regarding the reason he gives for completely eliminating the voice of the House in passing on the provisions of the bill, which is what this gag rule would do.

Mr. MULTER. If the majority of the House disagrees with us the rule will never be adopted. If it agrees with us it will be adopted. That is the democratic way, again with a small "d".

Mr. DAVIS. I think the gentleman obviously wants to be democratic, but if there has ever been an autocratic gag rule presented to the House in the history of this country, this is it.

Mr. MULTER. I urged the same arguments when I was opposed to the gag rule on bills I did not like.

Mr. DAVIS. Did the gentleman change his opinion?

Mr. WILLIAMS. Mr. Chairman, I think it should be pointed out that there is a difference in the procedure followed by the Ways and Means Committee in seeking these closed rules and the very stringent procedure that is being followed here; that is, that this bill has never reached the stage of committee consideration.

The bills which come out of the Ways and Means Committee have received careful studious consideration by that committee and must be recommended by that committee before the Rules Committee will even give consideration to granting a rule. I think there is quite a difference in the procedure. This is a bill that has been arbitrarily selected and as a bill which the proponents seek to push through the House without giving the House an opportunity to work its will on the legislation.

There is quite a bit of difference in the procedure.

Mr. KEARNS. Mr. Chairman.

Mr. DAVIS. Mr. Kearns.

Mr. KEARNS. Mr. Chairman, I would like to compliment my colleague. I think he is very honest and sincere in his conviction. There is also one thing very interesting about him. He always has a very great sense of humor.

Mr. MULTER. Thank you, sir.

Mr. KEARNS. Especially when he said he thought every Member of the House had their minds made up whether or not they would uphold home rule.

I would like the record to show at least some conscientious person living here in Washington did not think so because my telephone rang at 3:30 this morning and at 4:30 this morning asking me to vote for home rule.

I had illness in the family back home so I thought nothing of it and I answered the phone.

There is one conviction I have and I am very sure about it, that when George Washington stepped off this 10-mile square and said, "This shall be the seat of the Federal Government," he never anticipated, neither did we, that the bureaucracies of Government would get to the numbers they are and people would come here as they have, in droves. I share the thinking of my colleague from Virginia about their right to vote for President and Vice President, but in the years that I have had the privilege of serving here on the District Committee, I do not see possibly how the Federal Government can act, be effective in their designated duties being subjected to a municipally controlled government.

I mean it sincerely. Then, too, where are you going to get the money to pay for this? The first year you are going to be in the red. The second year more in the red, the third year more in the red, and coming to Congress every year for money. You do not have the taxable potential here to run as other municipalities do.

There are many things considered. My goodness. You talk about the resolution here. We should have as much debate and read the bill on a subject like this as we would on passing a labor bill here in the Congress. To ever think of getting this through, on that type of thing, my dear friend, I don't think it is fair to the people. I don't think it is fair to the Congress, and above all I don't think it is fair to our concept of our form of Government.

Thank you, Mr. Chairman.

Mr. MULTER. Mr. Chairman, may I thank Mr. Kearns for the remarks he made about me and indicate to him that I feel as strongly as he does at the anoyance that was tendered to him. I think it was deliberate annoyance and if they did that to me as strongly as I feel about this bill, I might change my vote. That might change my vote faster than anything else. I think that kind of annoyance and nuisance just cannot be condoned. It is wrong.

With reference to the financial situation the gentleman referred to, may I there again call upon my personal knowledge of operations in the city of New York. We have the second biggest budget in the country. There is no budget bigger than that of the city of New York except that of the U.S. Government.

But we do not hesitate to come to the Congress, and our mayor comes down here regularly asking the Congress to help us out financially. And every other city does. Every State does, too. The District of Columbia will be no different then than it is now.

Mr. MCMILLAN. Has the city of New York had any assistance to help operate the city government from the Congress of the United States?

Mr. MULTER. If we take "government" in its all-inclusive term, which I am sure we must, and that is the entire operation of the city of New York, we get money for the city of New York for housing, without which we would have no public housing. That comes from the Congress.

Mr. MCMILLAN. I am talking about operating the city government. I want to get some, too, if you can get some in New York.

Mr. MULTER. Our mayor and our city council, elected by the people of the city of New York, our board of estimate, elected by the people of the city of New York, have their salaries and expenses paid out of the budget which is raised by taxation upon the citizens of the city of New York, those residing and working there.

That does not give us all the money we need with which to operate.

Mr. MCMILLAN. Since the gentleman is one of the leaders in this proposed legislation, I wonder if he could tell the committee who he would provide or give permission to vote here in the District of Columbia.

It seems that we have so many categories of people here as brought out in the last hearings who would not be permitted to vote in the District, I wondered who you would permit to vote.

Mr. MULTER. I would permit to vote in the District any person who has a bona fide legal residence in the District and has had it and maintained it at least 1 year prior to the election in which he participates.

Mr. MCMILLAN. That would exclude Government employees?

Mr. MULTER. Those Government employees are voting back home now. A Government employee comes down here from back home and lives in a house and he registers from the last place he voted. He takes a Government job and he can vote forever and a day from that residence even though the house is torn down.

It is still his bona fide residence according to the law.

Mr. McMILLAN. There are 2,500 people working here on Capitol Hill. Would they be permitted to vote?

Mr. MULTER. If they give up their legal residence back in their home State and establish a bona fide residence here and maintain it at least 1 year prior to election, they should have a right to vote.

Every citizen of the United States should have the right to vote once in a general election but not in two different places, in one place only.

Mr. McMILLAN. How about Navy personnel? Would they be permitted to vote here?

Mr. MULTER. They vote from their bona fide legal residence at home.

Mr. McMILLAN. Who would vote in the District?

Mr. MULTER. They would not vote in the District unless they changed their legal residence.

Every man has that right. If I did it and moved out of the State I would lose my seat in Congress. That is not a right, but a privilege. If I want to give up that privilege by moving out of my home State, that is my business.

I can move anywhere within the State and stil retain my right to vote within that State.

Mr. McMILLAN. We all know that. The record should show who shall be eligible to vote in the District of Columbia should this bill become a law.

Mr. DAVIS. Can the gentleman tell us what percentage of the residents of the District of Columbia would be excluded from voting under his bill by reason of the fact that they maintain a legal voting residence in some other State?

Mr. MULTER. I have no such statistic, sir. I am sorry I cannot give it to you. I don't know if anbody has that statistic.

Mr. DAVIS. That would be quite a substantial number, would it not?

Mr. MULTER. I would not even try to guess, sir. I don't know. I have never seen any figure that attempted to give it to us. I do know that most Government employees have been moving out of the District and living in Maryland, nearby Maryland, nearby Virginia. But how many still live in the District, I have no idea.

Mr. DAVIS. The gentleman, I believe, stated in his initial statement that every person was entitled to have the right to vote for representatives.

Did I understand you correctly?

Mr. MULTER. I did say that although that is not in any of the bills that are before you.

Mr. DAVIS. Why, then, especially in view of your feeling, is that not included in H.R. 4630 and these other bills?

Mr. MULTER. We are trying to get as much support for a bill as possible. We tried to bring forth the least controversial bill and that is why the resolution, H. J. Res. 320, refers to H.R. 4630, which is the so-called administration bill. Frankly, I think if we took the other bill which was passed by the Senate the Republicans in the House would probably not support us. They will support the President's bill, the administration's recommendation and that is the bill which I put in under H.R. 4630. This is one instance where I think we need all the bipartisan support we can get. I am willing to compromise and give up the Morse bill for the administration bill for the Republican support.

Mr. DAVIS. I have read some of the provisions of H.R. 4630, not all of them as yet, although I intend to, but I notice that this bill provides for a Governor and a Secretary. I notice also that although the gentleman has expressed himself very sincerely and earnestly as being in favor of giving the people of the District the right to vote and self government that this bill does not give them the right to vote for the Governor and the Secretary the highest two offices in the bill.

It provides that those officers shall be appointed by the President and also provides that they can be removed by the President at his pleasure.

Mr. MULTER. That is right.

Mr. DAVIS. Why does the gentleman wish to prevent the people of the District from voting for those two high officers and yet have the right to vote for certain others?

Mr. MULTER. I think you put it unintentionally in reverse, Mr. Chairman. I do not want to prevent them from doing that.

Mr. DAVIS. Your bill does that.

Mr. MULTER. The bill does not give them that privilege. I hope some day we will get a law that will give it to them but this is, I think, as far as we can go at this time.

Mr. DAVIS. Isn't that one of the most important things you could give them?

Mr. MULTER. It is a very important thing, but it is not the most important thing. In order to get a bill past a Presidential veto I am willing to go along with the President in this instance and let him have the appointive power and hope in 1961 we can change it and have a President who will go along with elective power and give up his own appointive power.

As of today I do not think we can get the President to go along with a bill that will permit us to elect the Governor or the mayor, as the case may be. He will go along with a bill which will call for an appointment by himself or by his successor.

Mr. DAVIS. I have noticed that many people threatened the Congress in recent days and weeks with a possible veto by the President.

I am glad to have your voice added to the list.

Mr. MULTER. Many a time, and the housing bill is one time, when I said, "Let's override the President's veto and let's send him a bill whether he likes it or not, which we think is a good bill," but there there is a difference of opinion as to the contents of the bill, as to whether it is inflationary or less inflationary than that which he wants.

Mr. DAVIS. Are there any further questions?

Mr. BROYHILL. One more question, Mr. Chairman.

Mr. DAVIS. Mr. Broyhill. I would like to compliment the gentleman for a very fine statement, particularly for his excellent sense of humor.

Mr. MULTER. Thank you, sir.

Mr. BROYHILL. As the gentleman knows, when the Federal city was laid out, 100 square miles, a 10-mile square, in 1847 the portion west of the Potomac was ceded back to the State of Virginia, 66 square miles. Has the gentleman ever given consideration to the desirability of ceding a large portion of that part that was contributed by Maryland back to the State of Maryland and let the residential areas and a large portion of the business areas be part of the State of Maryland and then reduce the size of this Federal City?

It was done once before. I wondered if we might cut down some more of it.

Mr. MULTER. Under our system of government you cannot force a gift upon people, and I do not think Maryland would accept the gift. I do not think Maryland would accept the cession.

Mr. MATTHEWS. If you will yield.

Mr. BROYHILL. Yes.

Mr. MATTHEWS. I believe all of our colleagues from Maryland have introduced home rule legislation. I believe I am correct.

I know they are sincerely anxious to give our people voting rights such as people in the State have. I am not so sure of that. I wonder, with their enthusiasm and their active cooperation, if maybe the State of Maryland would not be glad to have the opportunity of gaining so many fine citizens from here in the District of Columbia. I am really serious about that. We were talking a while ago about everybody having different ideas about home rule. I want to say to my colleague I have talked to many Members of the House who say they are in favor of some home rule and actually at least four or five Congressmen have suggested that that fundamental idea is right. I know it is difficult. I know it can't be worked out easily, but they said, "It would get rid of all my objections if we could tie in the District with Maryland." I do not think that is a facetious suggestion. I want to emphasize it. Many a Congressman has spoken to me about it.

Mr. BROYHILL. I want the record to show that over a hunderd years ago Virginia did its share and its part.

Mr. DAVIS. I would like to ask the gentleman, what is the reasoning behind the provisions in this bill, H.R. 4630, which do not or would not give any representation whatever in the Senate to residents of the District?

Mr. MULTER. Again, we have tried to follow tradition and what we think will gather the greatest number of votes, the most support.

Mr. DAVIS. What objection do you see in the residents of the District having representation in the Senate?

Mr. MULTER. I see none, but I do not think we can get that kind of a bill through today. I think what we have to do is first give them territorial status, representation as Alaska and Hawaii had before they had statehood, a nonvoting delegate, the same as Puerto Rico has, a nonvoting commissioner, giving them a nonvoting representative in the House first and eventually give that representative the right to vote.

Mr. DAVIS. Eventually give them statehood.

Mr. MULTER. Whether statehood or not, or simply a right to participate in the right of the Government of the Nation I think is unimportant. I respect all of those who so sincerely urge the States rights theories. I am not a States righter. I think this Government and this Nation of ours can grow and prosper and continue to be the greatest country on God's earth without individual States reserving to themselves all the powers they demand. I think today, with communications what they are, with transportation as fast as it is, when you can get in a matter of hours from one part of the world to the other—not the country, the world—that you do not need this decentralization of Government to the States that we did need many years ago so that whether the District of Columbia has a representative form of self-government is not the test. Every citizen has a right to vote for President and to vote for a Representative in the House of Representatives, and two Senators in the U.S. Senate. I think those are things that they are entitled to. I do not think the Congress is ready to give them to them at this time. Eventually I hope Congress will see fit to do that. I think this bill is as far as we can get a majority of the House to go at this time. The Senate has already indicated they will do this. This is as far, I think, as we can go today, to get a bill to the President which he will sign.

Mr. MATTHEWS. I do not want to belabor that point, Mr. Chairman, but the gentlemen in the other body are so anxious to have us adopt it I wonder why they are opposed to a delegate.

Mr. MULTER. I have said to those who discussed it with me over there, "We will get

two Representatives in your body there some day from the District of Columbia."

Mr. DAVIS. Of course, all this legislation ought to be aimed toward fairness and justice and toward securing the appropriate voice in the Government. I presume that is what is behind it.

The gentleman has just stated he does not see too much need for continuance of States rights. I believe that was the substance of what was just said. If I have misquoted you, I wish you would correct me, but if State lines and State functions are to be eliminated, it would seem to me that that is all the more reason why the citizen should have a stronger voice in the Federal Government, in the concentrated Government here in Washington.

If they are not to have States rights, not to have the rights of a citizen of a State, then if their status is to be changed, they ought to be given as strong a voice as possible in the operation of the Federal Government and if you deny them representation in the Senate, you are just giving them what might be called second-class citizenship. Is that not right?

Mr. MULTER. There is substance of what the gentleman says but I say if we cannot give them all the gentleman suggests we have, let's give them part of it now. I will join the gentleman in giving them the rest of it. I will join the gentleman and anybody else in this House or in the Senate to give them all the complete representation and rights that they should have, including the right to elect a voting Representative to the House, and two voting Senators in the U.S. Senate and to vote for the President and the Vice President. I will go along with anybody who will go all the way and I will also go part of the way part of the time until we can get part of it and gradually move along.

Mr. DAVIS. Inasmuch as the gentleman is the present witness before the Subcommittee I just want to get all these matters stated as clearly as possible.

Are there further questions?

Mr. WILLIAMS. Mr. Chairman, I think it might be well for Mr. MULTER to describe to the committee the means by which the Federal contribution to the District Government will be determined, if any, and why there should be a Federal contribution if we are to grant autonomy to the city itself, any contribution other than a payment in lieu of taxes on the same formula as payments are made in the States.

Mr. MULTER. I think a complete answer would be that if you can set up a local home rule government here and you enact legislation which will require the Federal Government to pay to the local government a sum each year in lieu of taxes upon the full appraised or assessed value of all of the operations of the U.S. Government in the District, they will have more money than they will need and they will be able to make a contribution back to the U.S. Government. That, of course, is a fair way of handling the situation.

Mr. WILLIAMS. You are referring to a payment on property owned by the Federal Government?

Mr. MULTER. Yes, sir.

Mr. WILLIAMS. What are you going to do about parks and playgrounds owned by the Federal Government, deed them to the city?

Mr. MULTER. Do you think we in the Congress ought to exercise jurisdiction over them, operate and maintain them?

Mr. WILLIAMS. Quite obviously I do not, but we are doing it at the present time. Do you feel those should be deeded to the city so that they would relieve the Federal Government from paying in lieu of taxes?

Mr. MULTER. Yes, but relieve the Federal Government of its obligation to support them, no, because most of the people who use those recreational facilities in and around the District of Columbia are the tourists, American citizens who come to their capital from all over the country.

Mr. WILLIAMS. Those tourists bring money into the capital, don't they?

Mr. MULTER. That is right.

Mr. WILLIAMS. There is not a city in the United States who would not be tickled pink to have these facilities provided for their city by the Federal Government and let them enjoy the benefits of it, is there?

Mr. MULTER. I am not so sure about that. It is an economic situation you cannot argue intelligently about unless you have the exact figures and know precisely what we are talking about. I think we can generalize about it, but it will get us nowhere. The fact is even if we give home rule to the District, the U.S. Government must, in my opinion, continue to make a fair contribution to the maintenance of those facilities in and around the District of Columbia that are used by all of the American citizens.

Mr. WILLIAMS. Isn't that going quite a bit further than the Federal Government does with respect to other cities?

Mr. MULTER. What do we do with our national parks outside the District.

Mr. WILLIAMS. I am not referring to national parks.

Mr. MULTER. Don't you think the recreational facilities of parks in the District of Columbia are national parks?

Mr. WILLIAMS. Let's stick to this situation for a minute. You mentioned facilities. Isn't it your purpose to put the city of Washington on exactly the same footing insofar as possible as Kansas City, New York City, Chicago, or other cities and municipalities?

Mr. MULTER. I cannot say that I can't say that any bill goes that far. I do not think you can ever go all the way in the District of Columbia as long as this is the capital of the country.

Mr. WILLIAMS. That is the very point. That is the very reason.

Mr. MULTER. I do not think we ought to confuse the issue.

Mr. WILLIAMS. It is the reason the fathers gave for setting this aside as a separate district.

It gave Congress exclusive control over it.

Mr. WILLIAMS. They didn't see at that time a country stretching from the Atlantic to the Pacific and from the Rio Grande to Canada and they did not foresee all of the difficulties and problems we have today. I am sure one thing they did foresee is that no American citizen should ever be deprived of his right to participate in his own government. I think that is what we should concentrate on here in this bill. We will worry about the financial situations and the financial problems a little later.

Let's give these people their basic, fundamental right to govern themselves.

Mr. WILLIAMS. You think this bill does it even though it does not give them a voice in the Senate nor does it give them a vote in the House?

Mr. MULTER. It gives them only a part of what they are entitled to.

Mr. DAVIS. Are there further questions?

Mr. Multer, you still insist that all of the provisions of House Resolution 320 remain in that resolution?

Mr. MULTER. I am willing to discuss with those who are of a mind to compromise, a compromise resolution in exchange for support for the bill or the resolution.

Mr. DAVIS. What is your position on those things that I asked you about?

Mr. MULTER. As of now, sir, I favor that resolution but my mind is never closed to improvements or amendments that may get additional support for it.

Mr. DAVIS. What would be the method of changing the provisions of this resolution? Has the gentleman studied that any?

Mr. MULTER. First, I think we would have to determine what support we can gain for what amendment. I mean this would have to be a matter of sitting down around the conference table and a matter of give and take.

I think it can be worked out. If there is a will to bring a bill to the House and get it enacted, I think we can work out a method of doing that.

Mr. DAVIS. You won't know whether there is a will to do that or not, will you, until the House votes on this resolution?

Mr. MULTER. We can try to improve it in advance. I think we have a pretty good idea of who is opposed to the resolution, who is opposed to the bill, and if any of those Members are willing to give up some of their opposition in exchange for an amendment, either to the rule or to the bill, I think all of the sponsors of this legislation, including those representing the people in the District of Columbia, I am sure, will be happy to appoint a committee and sit down and discuss with the opponents of the measure how it can be improved so as to eliminate their opposition.

Mr. DAVIS. Does the gentleman have any move in mind of bringing about such a conference?

Mr. MULTER. Frankly, I did not.

Mr. DAVIS. Or such a discussion?

Mr. MULTER. No. I have nothing in mind, because until this morning I had no idea there was any will to compromise or any desire to compromise on the part of the opponents of the measure. If there is such a desire and such a will, we would be very happy to sit down and discuss it.

Mr. DAVIS. But as of now the gentleman does not have any such move in mind?

Mr. MULTER. No.

May I make one more very frank statement about this entire matter, and please believe that I do not intend to offend anybody.

Starting again in my home district, where many people say I come from a one-party district, where in the last election I got some 78 percent of the vote, I might just as well resign or never run again if I voted against a home-rule measure such as these that are before this committee.

I appreciate that many Members in this House and on this committee are in the opposite position, where, if they voted for a home-rule measure, they might just as well resign or not run again. Those are the political facts of life. There isn't much we can do about it, except I think we all, as good American citizens, ought to combine and concentrate our efforts toward bringing something before the House and let the House work its will; and when the majority has spoken, we bow in humility and say, "This is it; maybe we will be the majority next time."

Mr. DAVIS. Well, thank you very much, Mr. Multer.

Mr. MULTER. Thank you, gentlemen, for listening to me.

Oregon's Representative Porter Visits Cape Hatteras, Sees Benefits of Similar Oregon Project

---

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Wednesday, August 26, 1959

Mr. NEUBERGER. Mr. President, the able Representative from Oregon's

Fourth District, CHARLES O. PORTER, has returned from a personal inspection of the Cape Hatteras National Seashore Area, and has expressed enthusiasm for the development there under National Park Service auspices. Mr. PORTER is sponsoring in the House proposed legislation similar to my own bill (S. 1526) which authorizes establishment of the Oregon Dunes-Sea Lion Caves National Seashore Recreation Area. So the favorable impression he received of the Cape Hatteras Recreation Area was of special interest to me. Mr. PORTER's comments on Cape Hatteras were reported in an article written by A. Robert Smith, and published in the Oregonian of July 20, 1959. I ask consent to include it in the Appendix of the RECORD with my remarks.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Oregonian, July 20, 1959]

TOUR OF NORTH CAROLINA DUNES BUOYS PORTER'S STAND

(By A. Robert Smith)

WASHINGTON.—Representative CHARLES O. PORTER, Democrat, of Oregon, has made a personal inspection of Cape Hatteras National Seashore Recreation Area and returned more enthused than before about the merits of the same type development at the Oregon Dunes.

Cape Hatteras, on the Outer Banks off the North Carolina coast, is the only National Seashore Recreation Area in the country. The National Park Service hopes to create similar seashore parks at a number of other suitable, scenic coastal sites.

"I was very much encouraged by the operations of the Park Service," PORTER said. "They certainly know how to handle such an area."

PORTER drove the entire 80-mile length of the Cape Hatteras area, saw slides at a park service museum, had a jeep ride over the sands, was escorted about by the park superintendent, and talked with natives of the area.

"Nobody was complaining about it," PORTER said of local residents.

He noted that the State of North Carolina is planning to invest $3 million in a bridge across Oregon Inlet, a body of water which separates two of the islands which make up the Outer Banks.

"That shows how much the State thinks of it," he said.

Viewing Cape Hatteras, he said, gave him a better vision of what could be done at Oregon Dunes. He said he pictured museums of natural history, nature talks and beach walks conducted by park rangers, long beaches untouched by commercialization, swimming in the fresh water inland lakes as well as in the ocean.

"I can see a museum of the sea at Florence," said PORTER.

He obtained a set of slides showing Cape Hatteras which he said he plans to send to Oregon to be shown in the communities in the area of the Oregon Dunes. PORTER hopes to arrange House hearings in Oregon after Senate hearings in October.

PORTER still thinks, however, that the precise boundaries of the Oregon Dunes National Seashore should be described in legislation authorizing it. No boundaries are described in the legislation as introduced by him in the House and by Senators RICHARD L. NEUBERGER and WAYNE MORSE in the Senate.

MORSE has been especially critical of the idea of letting the Secretary of the Interior determine where the exact boundaries should be without Congress having any check over that authority. NEUBERGER has defended the idea of allowing the Interior Department to use its own discretion.

DUNES HEARINGS AWAITED

Joe W. Penfold, conservation director, Izaak Walton League of America, takes NEUBERGER's side. His conservation organization is promoting the seashore bills. He said: "We are pleased that the legislation sets fairly broad acreage limitations on the areas to be considered for authorization within which, if authorized, the Secretary of Interior may acquire lands. This is a sound method, as has been demonstrated at Big Bend, Cape Hatteras, Everglades, Virgin Islands, Fort Clatsop, Shenandoah, and other national parks and monuments established under similar or identical procedures.

"During the course of hearings, of course, the committee will be able to study specific boundaries in more detail, and may, if it appears desirable, describe them with more preciseness. We note also that the Secretary, before designating any authorized area, would be required to consult with the Governor of the State concerned and to hold hearings.

"Beyond this, and before the Secretary could spend any Federal funds for land acquisition, he would be required to come before Congress, in the usual appropriation process, for funds. This provides Congress with still another opportunity to assure itself that the program is being carried out soundly and within the congressional intent.

"These appear to be adequate safeguards against any possibility of abuse of administrative authority. At the same time, it provides means at the administrative level whereby the most sensible areas can be worked out in terms of National, State, and local interests."

Tobacco Exports

EXTENSION OF REMARKS
OF
HON. W. J. BRYAN DORN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 26, 1959

Mr. DORN of South Carolina. Mr. Speaker, I warned the House last year time and time again about unfair trade policies. I particularly emphasized the adverse affect of so-called reciprocal trade upon agriculture—especially tobacco. Some of the newspapers in the tobacco area really whooped up support for a 5-year extension of this phony reciprocal trade bill. I predict under this trade law all of our tobacco experts will dwindle away. Not only that but foreign nations will blackmail our State Department into permitting more and more imports of tobacco. All of this being done, Mr. Speaker, to a country that at one time was the only nation in the world growing and exporting tobacco. The following letter indicates what is going on:

LIGGETT & MYERS TOBACCO CO.,
Durham, N. C., August 24, 1959.

Hon. WILLIAM JENNINGS BRYAN DORN,
House Office Building,
Washington, D. C.

MY DEAR REPRESENTATIVE: The Committee for Reciprocity Information has scheduled hearings beginning September 15 to gather information preparatory to forthcoming tariff negotiations with Cuba. Cigarettes and smoking tobacco are on the list of items which Cuba has proposed to renegotiate.

We have not the slightest doubt that renegotiation in this instance will mean a proposal to raise the Cuban tariff still further against American cigarettes. This gives us great concern because of the adverse effect on all those engaged in growing tobacco and manufacturing cigarettes, and we seek your help in pointing out to our officials the hurtful nature of the suggestion.

It would come with ill grace from Cuba to take this kind of step against American cigarettes because the U.S. imports from Cuba nearly 20 times as much tobacco as Cuba imports from the United States. In 1958 Cuba imported $1,900,000 worth of cigarettes, but Cuba sent to the United States cigars and tobacco worth $34 million. Furthermore, the present Cuban duty on cigarettes (well over 150 percent of factory price) requires that they be sold in Cuba at three times the price of the locally manufactured brands. Only 4 percent of the total consumption of cigarettes in Cuba are imported American cigarettes.

In view of the foregoing, we propose to protest most vigorously to the Committee for Reciprocity Information and we hope that you will express to the State Department your interest in this situation.

Yours sincerely,

———— ————,
Branch Manager.

Wilson County, Tex., Farmers Help Christian Rural Oversea Program Build Friends for America

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Wednesday, August 26, 1959

Mr. YARBOROUGH. Mr. President, any country is made up of the people who inhabit it. And the more the people of one country know about the residents of another, the more the ideals of understanding and cooperation are furthered.

The Christian Rural Oversea Program, known as CROP, is doing a magnificent job of people-to-people diplomacy. By working with farmers and ranchers in this country, this program sends help and animals and seeds to farmers in other countries. These people are helped to help themselves.

A meeting was held last Friday in Floresville, Tex., to plan the participation of Wilson County in this program. Wilson County has been generous in its support of this program in the past. Last year I attended the Peanut Festival in Wilson County. The peanut growers of Wilson County have an outstanding record of support for our oversea goodwill efforts. Similar meetings are being held in other parts of Texas and the Nation, with gratifying response.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter to Mr. Sam Fore, Jr., of the Floresville Chronicle from G. James Huston, Texas CROP executive director, telling of some of the activities of the program. The letter was printed

in the Chronicle-Journal for Friday, August 21, 1959, under the heading "Important CROP Meeting To Be Held at Floresville Courthouse August 21—Appeal to All Wilson County."

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

IMPORTANT CROP MEETING TO BE HELD FLORESVILLE COURTHOUSE AUGUST 21—APPEAL TO ALL WILSON COUNTY

Mr. SAM FORE, Jr.,
Floresville Chronicle,
Floresville, Tex.

DEAR MR. FORE: We are again setting up plans for a CROP campaign in Wilson County. I am sure you are interested in this project for helping to relieve the suffering of destitute people overseas. We need your help in making plans and carrying out this campaign.

Last year's collection of $508.50 from Wilson County was used to help send peanut butter to refugee camps in Belgium and France. The people in these camps, because of disease, disability, and age, are not acceptable for repatriation in any country. Many of them have been in the camps since World War II and will remain there until they die. Another part of the shipment was sent to orphanages in Italy.

Our organizational meeting is set for Friday, August 21, at 8 p.m., in the district courtroom in the courthouse at Floresville. I hope that you will be able to attend and that you will help us by giving this meeting all the publicity possible. You may be able to bring others with you who are interested in agriculture and relief. It is important that we have a good attendance at the meeting.

Everyone urged to attend from all parts of the county.

Yours truly,

G. JAMES HUSTON,
Texas CROP Executive Director.

How Big Budgets Get That Way

EXTENSION OF REMARKS
OF
HON. MILTON W. GLENN
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 26, 1959

Mr. GLENN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a splendid editorial from the Atlantic City Press, pointing out how the Members of Congress are subject to pitfalls during the session in our efforts to keep the Government budget at a level with spending. The editorial follows:

HOW BIG BUDGETS GET THAT WAY

Earlier in this session, Congressmen's pen pals, the voters, jammed the mails with pleas for the Government to live within a balanced budget. Some sobered solons switched to the side of the savers, and many a big-spending proposal bit the dust.

Now it appears that while the battle is won, the war is far from over.

Senator JOHN J. WILLIAMS, Republican, of Delaware, has unlimbered his adding machine to discover that bills still pending before Congress could increase the Federal budget by $187 billion over the next 5 years—an increase of about $40 billion a year, or 50 percent over the present staggering budget.

Few of these bills are likely to pass this year. It's too late in the session, and the piles of mail are too fresh in the Congressmen's minds. But each of these bills is alive because some powerful group wants the money spent. That the people want the money saved may be beside the point in the long run.

What often happens is that those who are for Federal aid to abattoirs team up with those who want subsidies for xylophone schools and a lot of other organizations with itchy palms. They all agree to support each other's bills, and a giant and powerful spending bloc is formed in the Congress. That's how the civilian budget has gotten so big as it is.

Those who want something will fight long and hard for it. Those who are just generally opposed to senseless taxing and spending usually limit their efforts to pained outcries at infrequent intervals. During the lulls between outcries, the spending gets done.

The only long-term answer, from the taxpayer's point of view, is to elect stingier men to Washington. Oh, it's all right to elect men who are generous with their own money—philanthropists and the like. But the voters had better choose men with the intelligence and courage to say firm "No's" to the countless groups and special interests who covet the taxpayer's money.

If Congressmen would say "we can't afford it" more often, husbands wouldn't have to say "we can't afford it" so often to their own families.

Oregon Citizens Hail Captive Nations Week

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Wednesday, August 26, 1959

Mr. NEUBERGER. Mr. President, recently I received a copy of a resolution adopted in Portland, Oreg., by representatives of certain Communist-dominated countries expressing their appreciation of congressional passage of Senate Joint Resolution 111, which designated the week following the Fourth of July as Captive Nations Week. I ask unanimous consent that the resolution sent to me by this group be printed in the Appendix of the RECORD.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

We Americans of European descent, representing the captive nations of Armenia, Estonia, Hungary, Latvia, Lithuania, Poland, and the Ukraine, assembled in a general meeting on August 2, 1959, in the hall of St. John's Ukrainian Orthodox Church, 6401 Northeast 10th Avenue, Portland, Oreg., have adopted the following resolution:

"We are deeply moved by the proclamation of the Captive Nations Week and express our heartfelt appreciation to the Government of the United States. This proclamation is of great significance because it gives a ray of hope of liberation for the millions of peoples enslaved by the Soviet communism.

"The United States, as a stronghold of liberty and the leader of the free world, has embarked upon the only right road in her struggle against communism in order to establish a lasting peace with freedom and justice for all. We pledge our unreserved support to these policies of the Government of the United States of America."

JAMES S. HONCHARIW,
Chairman of the Meeting.
KONRAD DE HACKBEIL,
Secretary.

PORTLAND, OREG., *August 2, 1959.*

The Carey Letter

EXTENSION OF REMARKS
OF
HON. GEORGE MEADER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 26, 1959

Mr. MEADER. Mr. Speaker, as did many of my colleagues last week, I received an intemperate, threatening letter from a prominent labor official criticizing my vote on the Landrum-Griffin substitute labor reform bill. I refer to James B. Carey, president of the powerful International Union of Electrical, Radio, and Machine Workers, AFL–CIO. I incorporate his letter in my remarks at this point:

INTERNATIONAL UNION OF ELECTRICAL,
RADIO, AND MACHINE WORKERS,
August 18, 1959.

DEAR CONGRESSMEN: Only you know, in the privacy of your own conscience, whether you carefully considered the possible consequences of the Landrum-Griffin bill when you voted for it on August 13, 1959. If you did, and realized that it is a punitive, repressive measure intended to weaken all labor unions and thereby all working men and women, you have much to answer for. If you did not, and merely yielded to the pressures of the chamber of commerce and the National Association of Manufacturers, your guilt is perhaps even greater.

You should realize now, if you did not during the heat of battle, that this vindictive assault on the labor movement will, in the long run, prove to your constituents that you are less interested in individual rights and democracy than in property rights and the concentration of power in the hands of big business.

You may believe that you are safe in such action because organized labor is relatively weak in your district, and cannot call you to account for the damage you have sought to do to it. You may be right—at the moment.

We wish to assure you, however, that we shall do all in our power to prove to the working men and women in your district that you have cast your lot against them and they should therefore take appropriate action at the ballot box.

Very truly yours,

JAMES B. CAREY,
President.

Now, generally, I find it hard to stimulate much enthusiasm for a mimeographed or multigraphed form letter, but I read Mr. Carey's missive with considerable care and replied to him as follows:

AUGUST 26, 1959.

Mr. JAMES B. CAREY,
President, International Union of Electrical, Radio and Machine Workers, Washington, D. C.

DEAR MR. CAREY: I have your form letter of August 18, 1959, a copy of which I understand was sent to all my colleagues who voted for the Landrum-Griffin version of the labor-management reform bill.

Neither your intemperate characterizations, your threat to get me nor your erroneous assumptions concerning my study of the measure impress me as worthy of a high official of a powerful labor organization.

No representative of the National Association of Manufacturers or the chamber of commerce "pressured" me or even contacted me. I believe, however, in the right of petition and would have welcomed their views as I did those of six officials of the Teamsters Union and three officials of building trades unions with whom I discussed at some length the differing provisions of the various proposals.

I heard nothing from you or your union—but would have welcomed any proof you could submit—as I requested of the other union officials—that specific language in any of the various bills would hamper legitimate organizational and collective bargaining activities of unions. My conception of the duty of a legislator requires more than simply voting by labels or adjectives unsupported by fact and logic.

Requiring democratic procedures and honesty in handling funds in labor organizations cannot possibly harm the rank and file union member, though it may well curb dictatorial officials insensitive to their position of trust with respect to the rights and the funds of those they represent. Shielding innocent third parties, managers, employees and consumers, from being drawn into someone else's labor dispute and preventing "sweetheart" contracts and representation not actually desired by the free choice of employees are reforms demonstrated by the McClellan Committee investigations to be necessary and should not impair legitimate union activities.

Consequently, it is a misrepresentation to describe legislation designed to achieve these goals and no other as "punitive," "repressive" or "killer" legislation.

I believe my colleagues, like myself, are far more likely to be impressed by logic than by threats.

To assist in advising the working men and women of my district on this very important issue, I will be happy to send a copy of your letter and of this reply to anyone living in the Second Congressional District of Michigan whose name and address you furnish me.

Sincerely,

GEORGE MEADER.

Mr. Speaker, as one might expect, Mr. Carey's threats did not go unnoticed by the public. As an example I include at this point an interesting commentary from the August 23, 1959, edition of the Jackson (Mich.) Citizen Patriot:

JAMES CAREY'S MISTAKE

Leaders of organized labor in America apparently have become panicky since their defeat on the Landrum-Griffin bill in the House. And men in that state of mind are likely to make mistakes.

That is probably what James B. Carey, AFL–CIO vice president, did with his "we'll-get-you" letters to Members of the House who voted for the labor bill.

The action is all the more strange because there are precedents which prove that the tactics are wrong.

Labor was unable to defeat the Taft-Hartley bill, even with all the pressure that was applied and with a veto by former President Harry S. Truman.

After the debacle, labor took after the late Senator Robert A. Taft, throwing all of its power into an effort to "get" him.

The result was the greatest political victory in the Ohio Senator's career. The opposition of labor almost made him President.

More recently, the passage of the Landrum-Griffin bill in the House showed the ineffectiveness of the Carey type of politics.

Labor lobbyists swarmed over the Capital, applying all the pressure they could. They lost because the people rallied behind the controversial measure.

It is likely that many of the Congressmen followed the wishes of their constituents with some misgivings. They know that the voice of the people is loud, when it is heard, but that the public generally will not remain "steamed up" over a given issue for any great length of time; that the men who work at politics every day in the year can be very effective.

That is why traditional politicians fade out of sight when hit by a successful reform movement. They carefully avoid stirring up any controversy until the reformers lose interest.

Thus Carey's letters handed the Congressmen exactly the ammunition they need to rally support when they come up for reelection. The letters will be carefully preserved to be brought out at campaign time to remind the people that their will prevailed.

And if Carey goes through with his threat to punish "labor's enemies" he will reelect a lot of men who voted for the Landrum-Griffin bill.

Mr. Speaker, Mr. Carey threatens to "do all in our power to prove to the working men and women" in my congressional district, the second of Michigan, that I have cast my "lot against them" and that "they should therefore take appropriate action at the ballot box." That, of course, means he must conduct an educational campaign.

In my letter, I offered to assist him, by sending a copy of his letter and a copy of my reply to any resident of my district for which he would furnish names and addresses.

Timely Health Topics

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 26, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following three articles of importance to the Nation's general health submitted by Dr. Emmett J. Murphy, director of industrial relations of the National Chiropractic Association, with offices in Washington, D.C.:

[From the Chicago Daily Tribune, Tuesday, July 7, 1959]

DOCTOR WARNS LIVING IN PAST FOSTERS AGING

(By Roy Gibbons)

If you aspire to grow old gracefully, don't yearn for a return of the good old days, the director of industrial relations for the National Chiropractic Association suggested Monday.

"People who live in the past grow old accordingly," said Dr. Emmett J. Murphy, of Washington, D.C., in an interview at the association's 64th annual meeting in the Sherman Hotel.

HOW TO AGE GRACEFULLY

Proper nutrition, correct posture, and self-control head the list of factors that are most important in helping achieve a graceful old age, he said.

Murphy then recommended these additional rules for persons over 40:

1. Slow down. You may be able to go as fast as before, but if you do you are inviting old age to come prematurely.

2. Avoid fatigue. It is a killer. Fatigue produces poisons that injure the nervous system and hasten the onset of old age.

LEARN TO RELAX

3. Learn to relax even while you work. You will be able to do your job more easily and save wear and tear on your nervous system.

4. Don't whip your nerves with your emotions. The habit of making emotional scenes will play havoc sooner or later with your digestion, lead to constipation, high blood pressure, or heart disease.

5. Cultivate patience. You can control yourself. Cultivate an unruffled attitude toward other people, circumstances, and your work.

6. Watch your waistline. Excessive fat after 40 is detrimental.

[From Healthways magazine, August 1959]

POLLUTION: A GROWING HEALTH MENACE

(Edited by A. L. Gregory)

Pollution of air and water was named as a great health menace by Dr. Emmett J. Murphy recently. Dr. Murphy is director of industrial relations of the National Chiropractic Association.

"For years we have been pouring raw sewage and industrial wastes into the rivers and streams of our nation," Dr. Murphy said. "We have spoiled much of our recreational areas, and we have contaminated the source of water for home and personal use. Millions of acres of river banks are not fit for American children to play on, and the stream itself will not support fish or wildlife," he continued.

Pointing to the dangers to public health from polluted air, Dr. Murphy warned that the lungs of the people in the United States are being filled with poisonous gases from exhausts of motors and from the industrial smog created in certain highly populous areas.

The problem of pollution is one which should be attacked at every level of government. In our homes and around our homes, each of us should see that he does not contaminate, clutter, or befoul either land, water, or atmosphere in such a way as to render it less beneficial to ourselves, to our neighbors, or to our children.

Towns and cities should review their practices of sewage disposal, industrial waste carry-off, and any other problems contributing to water pollution. Soil erosion needs to be controlled in agricultural areas.

Ordinances need to be enforced to keep car exhaust and heavy smokes and odors from industries from befouling the air which we breathe.

Urging complete community awareness of the problem and action to control it, Dr. Murphy predicted that the United States could return to being a playground for the coming generation, rather than a land of wasted resources, if contamination of air and water were controlled.

[From the Washington Sunday Star, Aug. 9, 1959]

POISON ON WHEELS

It is good to note that General Motors, in cooperation with the Sloan-Kettering Institute for Cancer Research, is planning to finance a thoroughgoing study of the actual and potential evils inherent in exhaust fumes from trucks, buses, and private automobiles. The project is altogether timely and very much to the point, and it is to be welcomed and commended as something that ought to stimulate the entire automotive industry into doing far more than

it has done so far in this challenging and worrisome field.

There can be no doubt, in any case, that the contaminating materials released by vehicular exhausts markedly exceed industrial smoke as the principal cause of poisonous smog and other noxious atmospheric conditions in all our great urban centers. Experts like Surgeon General Leroy E. Burney of the U.S. Public Health Service make no bones about the situation. They feel sure that our municipal traffic, because it is the chief contributor to these conditions, must be dealt with as a factor definitely associated with malignant tumors and such afflictions as asthma. In Dr. Burney's opinion, as expressed some months ago to the first National Conference on Air Pollution, "We know that cancer-producing agents are in the air we breathe. * * * We know that lung-cancer rates in the largest cities are twice as high as those in nonurban areas. The case has not yet been proved, but the weight of circumstantial evidence grows heavier as research progresses."

These are words that speak pretty much for themselves. With our population increasing at an explosive rate, we face the prospect of massively expanding motor traffic throughout our country. As far as metropolitan public health is concerned, this makes it all the more important, if not urgent, to carry out just such studies as the one being contemplated by General Motors. Everybody, of course, and not just GM, has reason to take a lively interest in the problem.

The President Must Submit Better, Sounder, and More Specific Proposals to the Congress Than Heretofore if Federal Debt Is To Be Reduced and Stability Restored to the Dollar

---

EXTENSION OF REMARKS

OF

HON. HARRIS B. McDOWELL, JR.

OF DELAWARE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 26, 1959

Mr. McDOWELL. Mr. Speaker, the President must submit better, sounder, and more specific proposals to the Congress than heretofore if the Federal debt is to be reduced and stability restored to the dollar.

In a single day, recently, the President told a political rally in Washington, D.C., that—

> It is the Republican Party that fights for responsible, sensible fiscal policy.

And sent Congress a message asking:

First. A sky-is-the-limit policy on Federal interest rates. This was turned down by the Congress.

Second. Another increase in the limit on the public debt. This was granted by the Congress.

The President has been talking economy, without calling attention to the performance record of his administration. Actually, the Federal debt has increased by $19 billion in the past 6 years, and the cost of interest on this debt has risen from $5.8 billion to $8 billion during the same period.

Obviously, the President must provide better, sounder, and more specific recommendations to the Congress than heretofore, or the Federal debt will continue to rise, and inflation will destroy the earning power of our people.

I have, therefore, prepared a resolution which I am offering today calling upon the President to provide the Congress advice, suggestions, plans, and proposals, including legislative recommendations by January 1960, which are better, sounder, and more specific than heretofore to provide for the reduction of all business and agricultural subsidies and a corresponding reduction of all Federal income taxes.

I include here the text of my resolution, as well as an article from the Democratic Digest, of September 1959, which discusses some aspects of the current economy drive which have been generally overlooked by that part of the press which is oriented toward the Eisenhower administration:

HOUSE RESOLUTION 361

Resolution expressing the sense of the House of Representatives with respect to the reduction of Federal expenditures and requesting the President to provide the Congress advice, suggestions, plans, and proposals, including legislative recommendations, by January 1960, which are better, sounder, and more specific than heretofore to provide for the reduction of all business and agricultural subsidies and a corresponding reduction of all Federal income taxes

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That it is the sense of the House that in view of the increase in the Federal debt by nineteen billion dollars in the past six years, and the increase in the cost of interest on the Federal debt from five billion eight hundred million dollars to eight billion dollars during the same period there is a pressing need for substantial reductions in Federal expenditures in order to reduce the staggering burden of our ever-increasing Federal debt with its constantly rising interest and refinancing charges and resulting dangerous inflation. The House finds that business and agricultural subsidies to big businessmen and to big farmers, including but not limited to direct grants, disguised grants in the form of nonrepayable loans, postal subsidies, shipping and airline subsidies of various kinds, accelerated tax amortization programs, and indirect grants through long-term, low-interest-rate loans, and other methods and programs, although desirable as a means of assisting these special groups to retain their relative positions in the economy, should be reexamined in the light of the overall need for rigid control and a sizeable reduction of Federal expenditures.

SEC. 2. In view of the foregoing, the President is requested to prepare and transmit to the Congress by January 1960 advice, suggestions, plans, and proposals, including legislative recommendations which are better, sounder, and more specific than heretofore, to provide (1) for the reduction by not less than twenty-five per centum of all business and agricultural subsidies, together with such other specific proposals, including specific legisaltive recommendations, as he may deem advisable in order not only to prevent further increases in Federal expenditures but to actually reduce them, and (2) for the reduction of Federal income taxes in aggregate amounts equal to the total of the reductions in subsidies effected for the taxable years involved pursuant to such legislative recommendations.

[From the Democratic Digest, September 1959]

THE STATUS QUO SEEKERS: THEIR SCAREWORDS, "INFLATION"; THEIR TARGET, "PROGRESS"

Ever since the great crusade (the great crusade, that is, for the bankers and the big industrialists) came sweeping into Washington under the banner emblazoned with that magic word—Eisenhower—the crusaders have been desperately searching for a way to obstruct the program which the Democrats had designed to improve the welfare and security of the people.

Early in the crusade, of course, the crusaders found that they could not fight the program head on; any direct efforts to deny people the much-needed schools, housing, highways, medical programs, etc., were answered by the people at the polls. Any lingering doubts which the Republicans might have had about this were dispelled by the elections of 1958.

However, never ones to be daunted by the expressed wishes of the people, Republican hucksters continued their search for a way to merchandise an obviously unattractive program. And early this year they finally hit on what is certainly the most effective packaging yet for their negative ideas. They decided that one way to fight the people's welfare programs would be to come up with something positive which the people could be for (a balanced budget). But it might be even better, they decided, to come up with something scary which all the people could be against (inflation).

So they did both.

The first faint stirrings of a skillfully promoted and now mushrooming scare over inflation were heard last January and February when the President began holding press conferences at an unprecedented pace. (After his seventh consecutive conference, the Wall Street Journal, trying to contain its enthusiasm, remarked: "Not in nearly 5 years has Mr. Eisenhower held so many successive meetings with reporters.") The reason for Ike's sudden romance with the press soon became clear: He let it be known that despite the missile gap and the Berlin crisis, the one thing he wanted to talk about at his press conferences was inflation. Sooner or later would come one of his little sermons about the dangers of spending.

The next day, most of the Nation's editorial pages (and the following week such publications as Time and U.S. News) would translate his ambiguous sermons into a grammatically (if not economically) sound, continuing campaign against the Nation's newest scareword. As Don Campbell, business columnist for the Indianapolis Star, wrote: "Add to the Red peril and the yellow menace the name of inflation as one of the key bogeymen of the 1950's."

However, the Republican merchandisers were aware that press conference sermons were not enough. The Wall Street Journal and other papers reported that the President had also launched an all-out letterwriting campaign designed to drum up support for the fight-inflation drive. Secretary Seaton joined in (he was reported to have written about 100 letters) as well as Secretary Ezra Benson and Secretary Arthur Flemming.

The general theme of the letters was that everything must be done to support the President's budget because not to support it would lead to inflation. Most of the letters went to publishers asking for editorial support. As Ike put it: "Help in any way you think proper."

NEEDED NO URGING

Not that the publishers of most newspapers needed any urging. They had been printing editorials about economizing for years. But they were, no doubt, gratified at this new idea of fighting the welfare programs with the bogeyman inflation. And, no

doubt, they were equally gratified that Eisenhower himself was finally going all out in an effort to block the Democratic programs—what the Republican press had helped put him in the White House to do anyway.

At the same time, the Republican national committee joined in the fight—although, considering the administration's failure to balance the budget or curb inflation, it is not clear just who or what the GOP was fighting. Nevertheless, the national committee, certain it had found an effective way to block Democratic programs, picked up the cry of "inflation" and begin coming out with a few gimmicks of its own. An example: The committee made available to GOP Congressmen tapes for a canned radio interview with Budget Director Maurice Stans. The Congressman contributes his voice to the tape by asking Mr. Stans questions. For instance, the Congressman asks: "One final question, Mr. Stans. What can the average citizen do to help maintain a sound dollar and to fight inflation?"

Mr. Stans, in a reply already taped, says there are many things, such as recognizing "the fact that the more the programs that are urged upon the Congress, the more difficult it is to hold the line, and it is important that people not on the one hand ask for or insist on a balanced budget and on the other hand petition their Congressman for new programs of spending of one kind and another."

In other words, the Republican Congressman, with Mr. Stans' help, is saying in effect: "Now folks, no matter how much you think we may need those new schools, or new highways, or to keep up with the Russians in guided missiles, remember if we have those things it will cause inflation and we all know how bad that would be—otherwise, why would Mr. Stans, speaking for the President, be so worried?"

When efforts to promote something reach the point where Congressmen are coming out urging the people not to write in requesting much-needed schools, low-cost housing, improved highways, and a crash missile program, it is high time to ask: Who is really behind this campaign? And the answer is not hard to find, as every day a new barrage of full-page, anti-inflation newspaper ads is fired at the American public.

The real hidden persuaders hiding behind Ike and his constant cry of inflation are the big corporations, the big bankers, and the big insurance companies. They have been spending thousands of dollars (which could well be going into taxes to help offset the Eisenhower budget deficit) on an all-out advertising campaign to establish a fear-of-inflation climate. For instance, Republic Steel, the Young & Rubicam Advertising Agency, the Institute of Life Insurance, and the American Iron and Steel Institute have all joined in the effort to wreck the public welfare programs by trying to frighten people to death with the threat of inflation. (For examples of what the status quo seekers have been saying in their ads see above.)

Other groups joined in: A Sound Dollar Committee was formed with headquarters in New York; the Chicago Tribune launched an all-out drive against inflation and asked the 21-State National Industrial Council to urge newspapers in other States to join the drive. (The Tribune also reported that from the golf course in Augusta, the President said he was following the drive with keen interest and congratulated the Tribune on its efforts.) The Advertising Council, public service unit of the advertising industry, was also approached for help. But the council is still undecided about what to do—partly because of the obviously political nature of the anti-inflation drive.

As Congressman CHESTER BOWLES, Democrat, of Connecticut, told a college news conference audience: "This has been an extraordinary skillful publicity campaign. I have never seen anything to equal it." Although conceding that there are a lot of honest people genuinely concerned about inflation (including the President), BOWLES said: "There are a lot of other people who have been trying to stop public housing, depressed area bills, social security programs, and all the rest." Both these groups, BOWLES explained, "have joined arms in a great alliance and they have learned they can't lick housing and depressed area bills and social security by a frontal attack so they have tried a flanking attack, so they have equated public housing, urban development, social security, with inflation. It has been extremely skillful."

Meanwhile the hidden persuaders, who have been stirring up so much excitement about inflation, have been reaping the gains of higher interest rates and showing no inclination to lower prices, despite the record profits recorded in many industries. Just recently, for instance, United States Steel announced all-time high net profits for the first 6 months of the year: $255 million. The same pattern held true for the other steel companies: Inland Steel reported a net income of $42.1 million for the first 6 months of 1959—more than double the net income for the same period last year. (For record-setting prices see table below.)

But the steel companies continue to cry that they cannot meet labor's demands without further price increases—which would be inflationary. (The steel companies have in the past always raised prices after a wage settlement, usually two or three times more than would be necessary to offset the increased wage costs. For instance, according to a study made by Senator ESTES KEFAUVER'S subcommittee, although the steel companies raised their prices $6 a ton in 1957, "a reasonable guess as to the magnitude of increased labor costs which have arisen from the July 1957 adjustments in wages and other benefits falls somewhere between $2.50 and $3 per ton.")

Behind the inflation hysteria, of course, is hidden one of the most cynical political maneuvers in history; the attempt to discredit all Democratic efforts to initiate the much-needed domestic and military programs by reiterating the emotional, fear-ridden word "inflation." If the President were really scared of inflation he would be willing to listen occasionally to students of our economy other than the representatives of big banking and big business who make up his numerous bridge and golf foursomes. If he did, he might learn a few things about prices which his big banking and big business friends have failed to tell him—such as the fact that one of the greatest causes of inflation today is the increased interest rates which have helped drive prices up on every item which the consumer must purchase on credit; or the fact that many costs have been held up artificially by "administered prices"—a fact given impressive substantiation by industry's unusually high profits.

However, the President continues to listen only to representatives of big business. Consequently his idea of the way to fight inflation is to come out—as he did recently—against raising the minimum wage to $1.25. But Ike never seems to show the same concern about raising the wages earned by bankers—which is what raising the interest rate amounts to. As Senator PAT MCNAMARA, Democrat, of Michigan, said: When Ike took office he must have taken two pledges of allegiance, one of which goes like this:

"I pledge allegiance to the banks,
And to the benefits for which they stand,
High interest, compounded
With tremendous profits for all."

While many are beginning to recognize the great inflation conspiracy as a concerted effort by big business to block the people's welfare programs, Ike persists in seeing a conspiracy working against the people. "I believe the public will soon realize * * *" the President said last February, defending his inadequate budget, "that we are engaged in a contest between the public interest and a wide array of special interests."

IKE'S SPECIAL INTERESTS

Senator JOHN J. SPARKMAN, Democrat, of Alabama, replied: "If President Eisenhower's definition of 'special interest' is old folks who have to live in firetraps instead of safe nursing homes; colleges which have no place to house their students; people of low and middle incomes who need a decent place to live; cities full of slums breeding poverty and crime which want to clean out those slums, and veterans who are in need of homes, * * * then I want to urge the Democrats to continue to help those kinds of special interests."

Despite his campaign promises and despite 6 years in office in which he has done nothing to get at the real causes of inflation, the President continues to say: "By golly, we ought to do something about this inflation." Meanwhile, prices continue their upward creep. Recently the Bureau of Labor Statistics announced that at the end of June the consumer price index had reached an alltime high, 124.5. Everywhere, low- and middle-income families were feeling the pinch. "It is just like being pecked to death by gnats," a Los Angeles homeowner lamented to a Time correspondent.

Ironically, the people are beginning to see the swarm of gnats for what they really are, despite the gigantic campaign to make inflation a scareword to be used every time someone mentions a public need. Recently the Gallup Poll announced that in answer to the question: "Which political party * * * do you think is most interested in keeping prices down?" the majority answered, "the Democratic Party."

It is more than possible that of all the phony slogans which the great crusaders have run up the flagpole, the great "fight inflation" campaign will make the loudest backfire yet.

PROFITS OF 428 COMPANIES GAINED 75.6 PERCENT OVER A YEAR EARLIER IN SECOND QUARTER

The columns below show corporate profits reported for the second quarter of 1959, and those for the like quarter of 1958, with percentage changes, by groups. Where individual company reports cover 3-month periods other than calendar quarters, the nearest comparable periods have been used:

	2d quarter, 1959	2d quarter, 1958	Change from year ago
			Percent
10 Aircraft makers	$7,208,000	$18,862,000	−61.8
4 Airlines	13,786,000	13,156,000	+4.8
19 Autos and equipment	543,706,000	135,828,000	+300.1
21 Building materials	122,196,000	70,450,000	+73.4
14 Chainstores	33,707,000	31,023,000	+8.6
19 Chemicals	152,062,000	87,020,000	+74.7
12 Department stores	44,164,000	32,881,000	+34.3
5 Distillers	19,757,000	13,383,000	+47.6
9 Drug makers	26,891,000	23,649,000	+13.7
14 Electrical equipment	87,191,000	66,393,000	+31.3
7 Farm equipment	85,472,000	47,342,000	+80.5
16 Food products	51,200,000	51,067,000	+.3

	2d quarter, 1959	2d quarter, 1958	Change from year ago
			Percent
9 Mining and metals	$52,909,000	$23,717,000	+123.2
5 Office equipment	43,463,000	33,416,000	+30.1
15 Petroleum and products	386,482,000	303,823,000	+27.2
15 Pulp and paper	41,547,000	33,088,000	+25.6
9 Railway equipment	23,063,000	11,385,000	+102.6
8 Rubber companies	41,266,000	25,083,000	+64.5
21 Steel manufacturers	321,077,000	121,894,000	+163.4
12 Textiles	12,638,000	2,028,000	+523.2
6 Tobacco companies	57,293,000	50,162,000	+14.2
17 Tools and machinery	30,156,000	15,564,000	+93.7
97 Other companies	189,462,000	130,041,000	+45.7
Total, 366 industrials	2,386,726,000	1,341,285,000	+77.9
35 Railroads	147,583,000	59,286,000	+148.9
27 Utilities	119,554,000	110,622,000	+8.1
Grand total, 428 companies	2,653,863,000	1,511,193,000	+75.6

Time and Tide Wait

EXTENSION OF REMARKS
OF
HON. MILTON W. GLENN
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 26, 1959

Mr. GLENN. Mr. Speaker, now that we are approaching the end of the session, and with the rush that will probably occur in the enactment of several remaining pieces of legislation, with the resultant raising of blood pressure and heart action, I deem it timely and fitting to insert in the RECORD, an editorial appearing in the New Jersey County Government by the editor in chief and also freeholder of Ocean County, Mr. A. Paul King.

I hope that all Members will give thought to the contents of this editorial during the long awaited recess, and remember it in the 2nd session of the 86th Congress. I am sure if we do this, there will be less reason for Dr. Calver to watch over us, as I have noted recently he is making it a point to be in attendance in the Chamber during the debate of any highly controversial measures.

I might also point out that there is no better time of the year, weatherwise and for complete rest, relaxation and health, than a sojourn on the New Jersey shore during the months of September and October.

The editorial follows:

TIME AND TIDE WAIT

A midsummer day's dream seems to reverse the adage that time and tide wait for no man on the Jersey Shore. But while the clock stops at the zenith of the summer sun on the coast of Monmouth, Ocean, Atlantic, and Cape May Counties, the cash registers keep ringing a tune of prosperity. Another month will tell the tale in the State's biggest industry—a recordbreaking income of a billion and a half dollars.

Such a relaxed calm before returning to the busy, everyday grind is a good time to consider 12 ways of how to join the coronary club. They apply to elected officials as well as to harassed businessmen. Check them off. See if you are ready for your membership card:

(1) Your job comes first, everything else is secondary;

(2) Go back to the office evenings, Saturdays, Sundays, and holidays;

(3) Take the old briefcase home on nights you don't go to the office (this gives you an opportunity to review all the troubles and worries of the day);

(4) Never say "No" to any request, always say "Yes";

(5) Accept all invitations from everybody to anything;

(6) Don't just eat a relaxed meal, plan a conference at mealtime;

(7) Fishing or hunting are a waste of good time and money (besides you never bring back enough fish or game to justify the time or expense);

(8) It is a poor policy to take all the vacation time allowed you;

(9) Golf, gardening, bowling, cards, and most conversation are also a waste of time;

(10) Never delegate responsibility to others, carry the entire load yourself at all times;

(11) If you job calls for traveling—work all day and drive all night to make that appointment next morning;

(12) Promises to your family and friends come last; head down, now—keep charging ahead. Think how efficient you are and how much time you are saving.

Depressed Domestic Mining and Mineral Industries

SPEECH
OF
HON. DENVER D. HARGIS
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, August 24, 1959

The House in Committee of the Whole House on the State of the Union had under consideration concurrent resolution (H. Con. Res. 177) declaring the sense of Congress on the depressed domestic mining and mineral industries affecting public and other lands.

Mr. HARGIS. Mr. Chairman, the present sad plight of the hard-pressed miners and mine operators in the lead-zinc areas of my home district make the passage of House Concurrent Resolution 177 a matter of great concern to me. The aims and purposes outlined in this resolution are truly commendable, and are worthy of unqualified support.

We need to make every possible effort to restore domestic mine and mineral production to a high level. We must do something to curb unemployment in mining areas. And above all, we must take steps toward ending the ruinous policy of impoverishing this Nation's mining areas through continued and excessive purchases of foreign imports. Immediate action is imperative.

In April this year, I went along with four of my House colleagues—ED EDMONDSON, of Oklahoma; CHARLIE BROWN and WILLIAM J. RANDALL, of Missouri; and J. EDGAR CHENOWETH, of Colorado—for a firsthand look at the lead-zinc situation in the tristate area of Kansas, Oklahoma, and Missouri. The tour included sections of my own congressional district in southeast Kansas.

The conditions we found were appalling, and they are no better now. Decreased prices because of foreign imports have caused a virtually complete shutdown of the mines for 2 full years. Unemployment in this area is as bad as it was during the worst years of the depression in the 1930's. Two-thirds of the miners and their families have left this once-prosperous region. Many of those remaining are enduring privation and hardship.

In Picher, Okla., alone, we found that more than 700 families were on relief. Many were dependent on Government distribution of surplus foods.

This was once the leading lead and zinc production area in the United States. Now, employment has shrunk from thousands of men to fewer than 100 men. The few that are left are fighting a constant battle, through pumping and maintenance, to prevent mining properties that are still valuable from deteriorating.

We need a full-fledged plan for reorganization of the entire Government-related program. And this should be followed promptly by remedial legislation. Action must be taken to assist this essential industry—reduce economic losses in the mining areas—and put an end to the personal tragedies resulting from unemployment and dire need. This program is an urgent necessity.

It is up to Congress to begin corrective measures at once. The resolution now being considered is a meritorious effort. Its passage would be a long and decisive step in the right direction.

Amendments to War Claims Act Urged by Polish National Alliance

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 26, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter which I received from Mr. Louis L. Slivinski, president, Council No. 86, Polish National Alliance of the West Side, Edwardsville, Pa., urging that amendments be made to the War Claims Act to include claims of victims of Nazi war crimes:

Hon. DANIEL J. FLOOD,
House of Representatives,
Washington, D.C.

DEAR SIR: There are now living in the United States thousands of victims of Nazi persecutions during World War II. Among them are former prisoners of war, prisoners of concentration camps, forced laborers and internees. Some of them were citizens of the United States at the time of war, many others became citizens later and others are here as permanent residents.

The Nuremberg trial and other war crime trials have proved to the civilized world the guilt of the Nazis of the mental and physical torture and inhuman treatment of these unfortunate human beings. Their claims for compensation were never paid.

There are bills pending in the House of Representatives of the United States to compensate in part the above-mentioned victims of Nazi persecutions; H.R. 2913 introduced by MACHROWICZ, H.R. 6513 by DINGELL, and H.R. 6519 by BLATNIK. Under the War Claims Act of 1948 as amended certain German assets were seized in the United States to be used as compensation for losses suffered by U.S. citizens as a result of World War II.

The above bills are amendments to the War Claims Act as amended to extend its provisions to include the claims of the victims of Nazi war crimes. Under these bills the compensation of these persons would come from Nazi assets seized in the United States and would not burden the U.S. taxpayer.

We respectfully ask you to examine, consider and support these bills and thus help these unfortunate victims of Nazi oppression.

Yours very truly,

COUNCIL NO. 86, POLISH NATIONAL ALLIANCE OF THE WEST SIDE,
LOUIS L. SLIVINSKI, *President.*

Armed Services Retirement

EXTENSION OF REMARKS
OF
HON. JOEL T. BROYHILL
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 17, 1959

Mr. BROYHILL. Mr. Speaker, an editorial in the August 7 edition of the Northern Virginia Sun is of such vital concern to all military personnel, both active and retired, that I submit it here for inclusion in this RECORD.

I know my colleagues will join me and the Sun in extending a sincere commendation to Mr. John J. Ford, of Vienna, Va., and the Navy Times, for his part in making this development in the military retirement situation known to members of our armed services and the American public.

[From the Northern Virginia Sun, Aug. 7, 1959]

HIGH COST OF RETIRED PAY

A neat piece of reporting by John J. Ford, a Vienna resident who covers Capitol Hill for the service weekly Navy Times, has turned up a still secret Defense Department study which says military retired pay is going to cost the United States $3.4 billion annually by 1983. Ford pried the story out while investigating the chances of increased retirement pay for military personnel who left active duty before June 1958, when the new pay scales went into effect.

There has been evidence for some time that Congress and the Defense Department were a bit worried about the rising cost of retired pay. The $3.4 billion bill for 1983 is based on present pay scales, too. The figures were compiled by an outside actuarial firm working for the Defense Department.

The completed report may well ruin any chances of the extension of new pay scales to pre-1958 retirees, Ford's article says. He adds that it may lead to a wholesale overhaul in the armed services promotion and retention systems.

There is no question that it will be ammunition for the proponents of longer service careers before retirement eligibility is established. As things now stand, 20 years is the minimum time in uniform required in order to leave via the retired list. Many people believe that an individual should stay in service for 30 years in order to qualify for retired pay. Ford's story certainly will help their case.

Eisenhower Leadership Has Led to Inflation

EXTENSION OF REMARKS
OF
HON. HARRIS B. McDOWELL, JR.
OF DELAWARE
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 26, 1959

Mr. McDOWELL. Mr. Speaker, in his 1952 campaign President Eisenhower promised to tidy up the national debt. Now we know what he had in mind. On June 30, the fiscal year ended with the largest Federal budget deficit in our history, $12 billion. During the time the President has been in office the public debt has increased from $267 billion to $284 billion.

The cost of interest on the public debt has risen from $5.8 billion to $8 billion, and the President has requested $8.6 billion for debt services in fiscal 1960.

The national debt has indeed been tidied up.

Let us all take note of the fact that the total Federal budget in 1939 for all purposes was only $7.9 billion during the height of the New Deal era under President Franklin D. Roosevelt.

Obviously, things have been going from bad to worse during the past 6 years.

In order to help bring some soundness and stability to the dollar, and to save the taxpayers money I am introducing today a resolution expresing the sense of the House of Representatives with respect to the reduction of Federal expenditures and requesting the President to provide the Congress advice, suggestions, plans, and proposals, including legislative recommendations by January 1960, which are better, sounder, and more specific than heretofore to provide for the reduction of all business and agricultural subsidies by 25 percent and for a corresponding reduction of Federal income taxes.

I include here for the information of my colleagues an article entitled "The Fabulous Fiscal Fiasco" which appeared in the Democratic Digest of August 1959:

THE FABULOUS FISCAL FIASCO

The Republican Party, loudly trumpeting farewell to the second Eisenhower recession, is trying to brush under the rug the consequences, past, present and threatened, of its own fiscal irresponsibility. The Democratic Party, thunders the GOP, is the party of budget-busters, of inflationists, of financial hooligans. The din created by the elephant has reached such a pitch and volume as to persuade the unwary that the fellow might have something there. The Digest, therefore, desires to submit some sobering truths about the Eisenhower administration and its banker-minded fiscal policies.

(The statistics at the end of the article lists certain indisputable facts which the elephant is having great difficulty hiding under that rug.)

President Eisenhower, a fiscal innocent who was putty in the hands of his first Secretary of the Treasury, industrial titan George M. Humphrey, and who is equally malleable for the greatest Secretary of the Treasury since Humphrey, namely, Robert A. Anderson, appears to be as trustful today as ever.

If he found it galling that the results of the Humphrey-Anderson advice forced him to ask Congress in June to raise the ceiling on the public debt, and ask it also to abolish the historic 4¼ percent limit on Government bond interest, he took solace in the cry of "inflation, inflation"—a magic word used by all Republican fiscal wizards to explain why they have gotten the Government's financial affairs into such a stew.

The Cabinet of millionaries, inheriting from the Democrats a high prosperity without inflation, had scarcely taken the oath before Secretary Humphrey, with a let-George-do-it nod from Ike, started raising interest rates. The Treasury upped the rate on Government bonds far above the requirements of the market—from the previous Democratic rate of 2½ percent to a charitable 3¼. (Charitable to the banks and corporations, that is.) The effect on interest rates in general was electric—and a vicious circle began to rotate, generating inflation as it turned. "Why, I can remember," Humphrey mused fondly, "when 7 percent interest was normal. We thought nothing of it." (Today the banks' prime rate, the interest charged gilt-edge commercial borrowers, has climbed to 4½ percent—and the price of money is scaled up rapidly for the less favored.)

Humphrey also sponsored a $7 billion tax cut, of which three-quarters was given unfairly and foolishly to corporations and higher income individuals. Foolishly, because this policy caused investment in productive capacity to outrun consumption, with unhappy results. Columnist Joseph Alsop wrote last month: "There would be no budget-balancing problem today, as there would be much less inflationary pressure, too," if Humphrey had not put over this "profligate" tax cut.

Humphrey presided over the first Eisenhower recession (1953–54), and converted the recover of 1955 into the stagnation of 1956–57. The second recession was leering around the corner as he bowed out and returned to his counting houses in the summer of 1957.

The Republicans choose to blot the recessions from memory, and to assure us that all is now rosy. They blithely advise Congress that the fiscal policies under which the recessions occurred should be not only ratified but intensified. To be sure, the vast Eisenhower deficits have cooled off the GOP's infatuation with tax cutting, but the ardor for tight money is unabated. The balanced budget is given precedence by a veto-brandishing President over (1) adequate defenses against an opponent of unexampled might; over (2) the encouragement of a swifter growth by the economy, and over (3) the urgent needs of a multiplying population in such fields as education, housing, urban blight, and conservation of natural resources. (Creeping socialism.) Fiscal management under Eisenhower continues to follow classic Republican theory—as imagi-

native as Calvin Coolidge, as dynamic as Herbert Hoover, as progressive as the trickle-down philosophy of McKinley's day.

The Democratic Party is just as devoted to a balanced budget as the Republicans profess to be—despite their mammoth deficit of fiscal 1959. Speaker SAM RAYBURN pointed out July 2, in a sharp rebuke to GOP propagandists, that the Democratic Congress had already cut $353 million off the Eisenhower budget requests, and he predicted the cuts would reach $500 million to $1 billion. But those savings, basically, are no more than a prudent overseeing of the routine housekeeping of the Government. Let us look beyond such details to the big picture.

In the House of Representatives a few weeks ago Representative CHESTER BOWLES, Democrat, of Connecticut, noted that our animal output of goods and services, remains more than twice that of the Soviet Union. But he quoted Allen W. Dulles, head of the Central Intelligence Agency, as a warning that a much greater rate of growth is enabling the U.S.S.R. to close the gap rapidly. He cited this somber statement by Dulles:

"If it is true that our industrial growth (between now and the end of the new Soviet 7-year plan) will be only 2 percent a year, the United States will be virtually committing economic suicide."

The truth is, the average growth rate of our economy in the first 6 Eisenhower years was only 1.3 percent annually.

TIGHT MONEY STOPS GROWTH

Growth is faster this year, but already the administration (abetted by the Federal Reserve Board) is applying the brakes of tight money. Economists of the top rank[1] reported in July that the "repressive policies now in effect might well lead to an average annual growth rate" for 1958–64—the approximate term of the Soviet 7-year plan—of less than half of the 5 percent annual rate which "we need and can readily achieve."

In 1953–58, these economists said, "we fell more than $150 billion short of full production, and suffered about 10 million man-years of unnecessary unemployment. In addition, Federal, State, and local governments collected about $30 to $35 billion less in revenues than a full rate of economic growth would have generated at existing tax rates."

The economists commented: "The erroneous methods used to fight inflation have contributed greatly to this poor economic performance. Especially, the tight money policy and successive retrenchments in the Federal Budget have been powerful factors in the deficient rate of economic growth."

They continued: "Now in 1959, we are moving upward again as we did in 1955. And once again, we are misreading the signs and applying the wrong policies. The Federal Reserve Board is now reactivating with a vengeance the tight money policy, which has proved to be economically repressive and socially regressive, and a very frail weapon against inflation. In accord with the misguided FRB policies, the Administration is asking for the removal of ceilings on interest rates. Budgetary retrenchment is again being given precedence over the neglected priorities of our national and international needs.

"Few, if any, of the fundamental maladjustments which contributed to the erratic and low growth rates of recent years have been corrected. Some of them are now being further aggravated—for example, the further forced decline of farm income, and the immense drive against wage adjustments."

But the President seems content. The oracles of the White House stoop, Messrs. HALLECK and DIRKSEN, are radiant. The Republican National Committee's mimeographs brim with happy tributes to prosperity. The moneylenders are happy, too—

The Federal Reserve Board reports that profits (after taxes) of its member banks rose 25 percent in 1958. Since the last Truman year, bank profits (again after taxes) have increased by 75 percent.

George Champion, president of New York's biggest bank, the Chase Manhattan, says a "prime rate" of interest even higher than the 4½ percent, established last May is possible. (He awaits it with open arms.) Henry Clay Alexander, chairman of the Morgan Guaranty Trust, "looks for a continuing rise in the cost of money." (His welcome mat is out.)

Government programs to help home building have felt the hot breath of tight money. Congress a few weeks ago had to raise from 4¾ percent to 5¼ percent the interest allowable on housing loans guaranteed by the Veterans' Administration. Similarly, the Federal Housing Administration is said to be pondering a raise to 5½ percent in the interest permitted on FHA-guaranteed loans. (Even at the existing rate, a typical FHA mortgage negotiated today would cost $5,700 in interest, against $4,500 in 1952.)

But the GOP, although it has given us more inflation than we ever had before except as a result of war, still insists that high-priced money is the best weapon against inflation. Is it working that way? Perhaps it has deterred some people from buying homes. But look at this—

In May alone, consumers increased their outstanding installment debt by $443 million (seasonally adjusted), the Federal Reserve Board reported in July. That was the biggest jump since September 1955. We may be sure that there was a hidden tax on much of that buying—for higher interest is in effect a tax, imposed by the Government's tight money policies, and payable to lenders rather than to the Government. But the point is, tight money did not dampen the buying urge—hence did not work against inflation.

Actually, higher interest rates are of themselves inflationary, since they increase costs without increasing production. "Few things have contributed as much to inflation as rising interest rates," Senator LYNDON B. JOHNSON, Democrat, of Texas, said recently.

A budget deficit is supposed to be inflationary. Yet Mr. Eisenhower, who loves to denounce inflation, told Congress in June, as casually as if he were asking it to pass the butter, that higher rates necessitated his requesting $500 million more to pay the interest on the public debt than he had asked in his budget message only 5 months earlier.

One penny and part of a second penny out of every tax dime now go to the unproductive cost of carrying the Federal debt. The effect of tight money and inflation are reflected also in the debt burdens of the States and cities, of school districts and of public utilities, of home and automobile buyers—indeed, in one way or another, of every American.

And the Republican Party, failure going to its head, is proud of it.

On June 30 last, the fiscal year ended with the biggest peacetime Federal deficit in history—around $12.5 billion.

Total 6-year Eisenhower deficit—$19.4 billion versus record of first 6 Truman years; $3.7 billion surplus.

Public debt: When Truman departed, $267 billion. On June 30 last, $284 billion.

Cost of interest on public debt: In Truman's last full fiscal year, $5.8 billion. Requested by Eisenhower for fiscal 1960, $8.6 billion (up half a billion from his January estimate). The total Federal budget in 1939 for all purposes was $7.9 billion.

[1] "Inflation, Cause, and Cure," a study directed by Leon H. Keyserling for the Conference on Economic Progress, Washington, D.C.

Progress Toward Weather Modification

EXTENSION OF REMARKS
OF

HON. B. F. SISK

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 26, 1959

Mr. SISK. Mr. Speaker, I recently had the honor of acting as moderator of a panel of outstanding scientists and experts who discussed "Weather Modification and Space Exploration" at the 46th Annual Convention of the National Rivers and Harbors Congress, meeting here in Washington.

I consider the information provided by the three speakers so important and timely that I would like to make summaries of their remarks more generally available.

One of these papers is presented herewith. It summarizes the address of Dr. Earl G. Droessler, director of Atmospheric sciences program of the National Science Foundation.

Dr. Droessler's summary follows:

Mr. Moderator, ladies and gentlemen, it is a pleasure to bring you the greetings of the National Science Foundation and our best wishes for the success of the 46th National Convention of the National Rivers and Harbors Congress. I should like this morning to present to you information on the space exploration and weather modification programs of the Foundation.

First, may I take a moment to introduce the National Science Foundation for we are relatively a new organization, having been established by the Congress in 1950. The Foundation is an independent Federal Government agency dedicated to the promotion of scientific progress through support of basic research and of education in the sciences. Many of your boys and girls attending high schools, colleges, and universities are assisted in their science courses by programs of the National Science Foundation. Their science teachers are encouraged to broaden their knowledge of science and to develop their teaching skills through attendance at a variety of summer institutes which are held at many colleges and universities throughout the country under the auspices of the National Science Foundation. The college students themselves compete for over 1,000 National Science Foundation fellowships each year, and professors at our colleges and universities are provided with grant money to undertake basic research in such fields as mathematics, biology, chemistry, physics, oceanography, and atmospheric sciences.

Each year the Foundation uses the budget moneys received from the Congress to increase the national scientific wealth in terms of improved research environment, research skills, and research facilities. This activity represents a major annual investment in our national prosperity and welfare.

Now, I shall briefly discuss the Foundation's interest in space exploration—I say briefly because this is a new field of scientific experimentation and technology, and the Congress has wisely decided to establish a new Government agency to direct the na-

tional program. The new agency is called the National Aeronautics and Space Agency, and I am sure that Dr. Porter, who follows me, will have more to say about the NASA programs and about future prospects in this area.

However, I believe we must understand that with the coming of the space age we did not create new sciences; actually, we still depend upon our trained physicists, astronomers, and upper atmosphere scientists to carry forward our understanding and exploitation of outer space. Inasmuch as many of these scientists are now supported by Foundation grants, we fully expect that we will continue to support their scientific work which, in many instances, will lead into space experiments. Through close cooperation between the Foundation and the new Space Agency, arrangements will be made to schedule such experiments on the high flying rockets and satellites.

On weather modification, I can speak more fully because here the National Science Foundation has received special responsibilities from the Congress. Just about a year ago, July 11, 1958, Public Law 85-510 was signed by the President. The law directs the Foundation "to initiate and support a program to study research and evaluation in the field of weather modification." Public Law 510 was a direct outgrowth of the work of the Advisory Committee on Weather Control which was so ably chaired by our next speaker, Captain Orville. For 4 years the Advisory Committee studied and evaluated public and private cloud seeding experiments and encouraged programs aimed at developing both physical and statistical evaluation methods. The final report of the Advisory Committee was issued in December 1957 and it stressed particularly the importance of basic research and recommended that the Government give full encouragement and support to the widest possible research as the fullest and most direct way to success in any attempt of modifying the weather.

The National Science Foundation moved promptly and vigorously into this new area of responsibility. A program of atmospheric sciences was established and weather modification research and evaluation was placed therein. I should like now to list some of the things we have been able to accomplish over the past 10 months:

First. The Foundation sought the advice and assistance of outstanding scientists and engineers in framing its program; for weather modification is an area of research involving many talents and disciplines. It embodies knowledge of meteorology, statistics, mathematics, physics, chemistry and engineering. Therefore, in October 1958 an Advisory Group on Weather Modification, composed of distinguished civilian experts, was appointed by the Director of the Foundation. The Advisory Group has fashioned general and specific guide lines within which the program has been carried out.

Second. The program has established direct contact with all known private weather engineers and consulting groups in the country. We have informed them of the new weather modification program and have asked for and received full cooperation.

Third. A series of workshop conferences were set up to stimulate and initiate research and evaluation and to bring together interdisciplinary scientific and engineering groups that must be involved in a program expansion. The first of these workshops studied the problem of improved measurements and instrumentation for cloud physics and weather modification. The second brought together mathematicians, statisticians, and cloud physicists to develop new approaches on the design and evaluation of field test programs. The third meeting will call together meteorologists, physicists, and chemists to discuss theoretical and experimental research regarding the scientific basis of weather modification.

Fourth. The Director of the Foundation invited the several interested Government agencies to appoint representatives to the Interdepartmental Committee on Weather Modification. This Committee was formed to keep the governmental activities fully advised of the national efforts in this expanding area of meteorology, and to encourage coordination among them. The Committee will insure a cohersive and effective U.S. program in which other Federal agencies are expected to participate by taking charge of projects suitable to their interests.

Fifth. Last, but certainly not the least, we have done something in a very positive way by launching a full-scaled $1,130,000 research program on weather modification. This was announced by the Director of the Foundation in March of this year. The program consists of 13 grants and contracts for laboratory research, field experiments, evaluation of present theory and practices, and study of modern meteorological methods directed toward weather modification. In announcing this program Dr. Waterman said: "We believe that these investigations are most necessary at the present stage of development of weather modification theory and practice. Until now, weather modification studies have been complicated by a large proportion of trial-and-error experiments of uncertain results, many without the controls necessary to assess their meaning and significance. The work under the NSF program will increasingly move from scattered and unrelated investigations to efforts soundly based on scientific knowledge.

"The National Science Foundation program has the objective of studying more intensively than has been attempted before the scientific basis of weather modification, through support of competent scientists working in cloud physics and allied fields. Under this program a full range of laboratory and field experimental work will be carried out using techniques of physics, chemistry, and mathematics, all of which play important roles in meteorological research."

The 13 research grants and contracts have been made with universities and research organizations and also include one grant to the U.S. Weather Bureau. If you wish to examine the details of this program, I would be pleased to leave a copy of the NSF announcement with the chairman for inclusion in the proceedings of the convention.

What lies ahead in weather modification: First and foremost, we are hoping that the Foundation can keep its program going for a long enough time to be really meaningful, considering the complexity of the problem. This means that we should provide steady support for at least 10 to 15 years. Nothing is more critical and essential to lead man to his ultimate control of weather—whatever that may be—than long term, stable support for the best scientific minds we can bring to bear on the problem.

I know that this convention has a particular interest in water resources, and you want to know how weather modification may fit into your future plans. We should keep in mind that the Advisory Committee on Weather Control found that the seeding of winter-type storms in mountainous areas in the western United States produced an average increase in precipitation of 10 to 15 percent from the seeded storms with heavy odds that this increase was not the result of natural variations in the amount of rainfall. Therefore, I believe that in the planning of water development for these mountainous regions in the years ahead, consideration of the potentials of artificial cloud seeding and weather modification will have to be made.

In addition to precipitation increases, the prospects of weather modification are attractive because of other possible benefits. These include the suppression of hail storms, decrease in lightning storms, a reduction in the frequency and severity of floods, and even a possible diminution of hurricane intensity and damage. The fact that the present scientific basis for expecting such results is meager does not necessarily mean that the longer range prospects are negative, for the scientific examination of the problem has just begun on a systematic basis.

Landrum-Griffin and Farmers

EXTENSION OF REMARKS
OF
HON. QUENTIN BURDICK
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 26, 1959

Mr. BURDICK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio broadcast of the Farmers Union Grain Terminal Association, St. Paul, Minn., of August 24, 1959:

GTA DAILY RADIO ROUNDUP, MONDAY, AUGUST 24, 1959

Who would have thought that a labor bill, that contains no mention whatsoever of agriculture, would end up by putting farmers behind the legislative eight-ball? But that's just what is happening.

It's no fault of the laboring man, who's working for better take-home pay, just as is the farmer. But, as you know, there's been a big scare over a few bad actors in the leadership of a couple of big unions. That's been the signal for a general attack on labor by nonunion groups. Farmers have seen that same pattern repeated against farmers—under the leadership of the Secretary of Agriculture. By playing off commodity group against commodity group, and city people against farm people, the farm Secretary has raised hob with the farm program and farm prices.

That's the price farmers are paying, and it it not over yet. Now labor is up against the Landrum-Griffin bill, which has passed the House. It wouldn't have passed except that the Southern Dixiecrats joined the Republicans (at least most of them) in voting for the bill, which sincere labor people say will hamstring the unions if it ever becomes law.

The northern city Democrats are plenty sore about that. They want no part of the Landrum-Griffin labor bill, because most of their constituents in the cities work for wages and this tough bill would strip unions of their most effective weapons in the battle for better wages. So the city Democrats are boiling mad at farm district Southeners who voted for the bill, almost as a bloc, as well as at Republicans. In the past, northern city Democrats have been mighty cooperative in voting for farm measures, but now they are inclined to strike out at any farm legislation.

The northern Democrats, and the group of levelheaded Republicans who analyzed the situation and voted accordingly, are trying to patch up these wounds. Maybe they'll be able to, but the city Democrats seized their first chance to hit back at the Dixiecrats by voting solidly against CCC barter provisions in the Public Law 480 bill, sponsored by COOLEY of North Carolina.

So the Dixiecrat vote on the Landrum-Griffin labor bill, which doesn't even mention farmers, has chilled the working relationship in Congress between city Democrats and the

farm-State Members. The situation is serious. Washington farm observers are saying that chances for good farm legislation in 1960 and 1961 are endangered. Maybe it can be patched up before then. We certainly hope so. The farmers have some very capable friends in Congress who are working on it, men like McGOVERN of South Dakota, ANDERSON of Montana, BURDICK of North Dakota, and others.

But farmers need to understand that their margin of victory on the farm bills they've been able to get through Congress has been thin as a thread. That means that farmers, fewer in number each year, need to double and triple their organizing activities. Not one single farmer who wants to be farming 10 years from now can "leave it up to George" to carry on the fight for better legislation and stronger co-ops.

The Late Eugene Meyer

EXTENSION OF REMARKS
OF
HON. EDWIN B. DOOLEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 26, 1959

Mr. DOOLEY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD I include a tribute paid to the late Eugene Meyer, publisher of the newspaper the Washington Post and Times Herald, by the Cuban delegation to the extraordinary session of the Council of the Organization of American States, on July 24, 1959:

HOMAGE BY THE COUNCIL OF THE ORGANIZATION OF AMERICAN STATES, WASHINGTON, D.C., JULY 24, 1959, ON THE OCCASION OF THE DEATH OF MR. EUGENE MEYER, CHAIRMAN OF THE BOARD OF THE WASHINGTON POST AND TIMES HERALD

The interim representative of Cuba, Dr. LEVI MARRERO ARTILES. "Mr. Chairman, the Cuban delegation has the honor to propose to this distinguished Council that we observe a minute of silence, on our feet, as a homage to the distinguished journalist, Mr. Eugene Meyer, publisher of the newspaper the Washington Post and Times Herald, who died recently. The cause of democracy in all our countries had ever in Mr. Meyer a large-hearted and firm defender. The people of Cuba found in the Washington Post, under Mr. Meyer's guidance, a broad understanding of its ideals and sacrifices. It is for this reason—and I believe I express the feelings of the Cuban people and their revolutionary government—that I have spoken these brief words of homage to an exemplary journalist and a representative of the highest moral and intellectual values of American democracy. Thank you."

The chairman, Dr. GONZALO ESCUDERO, Ambassador of Equador, "The Chair, agreeing entirely with the remarks of the Ambassador of Cuba, and interpreting the unanimous sentiments of the Council, allies itself to this motion; therefore, let us proceed to observe a minute of silence, standing, in homage of this eminent journalist who has died."

The representative of the United States, Mr. JOHN C. DREIER. "I wish to express the gratitude of my delegation for this homage to a distinguished American, Mr. Eugene Meyer, which the Council has just rendered at the suggestion of the delegation of Cuba."

Woolworth To Mark Kirby Anniversary

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 26, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Wilkes-Barre Times-Leader, of August 19, 1959, which reports that the 75th anniversary of the founding of F. M. Kirby's first store in Wilkes-Barre and the 80th anniversary of the F. W. Woolworth Co. will be marked in Wilkes-Barre by a Kirby-Woolworth Founders' Days celebration in the near future:

WOOLWORTH TO MARK KIRBY ANIVERSARY—EARLY DAYS RECALLED

The 75th anniversary of the founding of F. M. Kirby's first store in Wilkes-Barre and the 80th year of the F. W. Woolworth Co. will be marked in Wilkes-Barre by a Kirby-Woolworth Founders' Days celebration in the near future, according to Everett W. Chance, local Woolworth manager.

Similar events have been held in Lancaster, where F. W. Woolworth's first store was established and in Erie, where Seymour H. Knox, first located his 5-and-10-business.

Simultaneous with the Wilkes-Barre Founders' Days event, honoring the late Fred Morgan Kirby, the Scranton Woolworth store will stage its affair honoring the late C. S. (Sumner) Woolworth, its founder.

DINNER PLANNED HERE

Prior to the start of the local sales event, a dinner will be held on September 18, at the Westmoreland Club.

With over 3,250 stores in operation today in 11 countries of the world, the firm has 1,600 stores advertising in daily newspapers, a trend of recent years in the 5-and-10 chain.

Kirby's original store, located on East Market Street, was put in operation in 1884 with $500 representing his entire savings, plus $100 borrowed from his father, and $600 which Charles Sumner Woolworth, of Scranton, invested with him in the new venture, to be known as Woolworth and Kirby's

To satisfy his desire to have his own store, he bought out Mr. Woolworth's half interest in the next year. But the association between the two continued and they with Frank Woolworth sought each others advice and studied each other's merchandising methods and at times pooled their purchasing power to acquire better values for their customers at 5 and 10 cents.

SECOND STORE OPENED

In 1889 Fred Kirby opened his second store at Williamsport and in 1891 he moved his store in Wilkes-Barre (which he was beginning to consider his adopted home) to the corner of East Market and Washington Streets.

Nine years later, in 1899, while he was opening stores in the Eastern and Middle Western States, the Kirby Building on Wilkes-Barre's public square was built. At its completion, F. M. Kirby & Co. moved into its new, larger accommodations with suitable ceremonies.

In 1908 the Wilkes-Barre store moved to South Main Street. At the opening, the street was jammed for hours. Special police tried in vain to keep the crowds in order, windows and tempers were smashed. The beautiful F. M. Kirby & Co. store, its bigger-than-ever values, the great crowd itself were the talk of the town for weeks.

FIVE AND DIMES

By 1911, five-and-dime stores were familiar sights on the main streets of many American cities. Sumner Woolworth had 18; his brother, Frank Woolworth, had 318; Mr. Charton had 53; Mr. Knox, 112; Mr. Moore, 2; Fred Kirby, 96.

In 1912 they took the next logical step. They combined under the name F. W. Woolworth Co., each partner continuing active in the company management. F. J. Weckesser of Wilkes-Barre, who had begun with F. M. Kirby & Co. in 1895 as manager of the company's Baltimore store, continued as district manager under the merger. He later became a director of the company and continued until his death. Today, Mr. Kirby's son, Allan P. Kirby, railroad magnate and financier, serves as a director of the Woolworth Co.

None of the five founders of the original modern Woolworth Co. is living. The last survivors were Fred M. Kirby and C. S. Woolworth, the boyhood chums of the old corner store.

Mr. Kirby became one of America's leading philanthropists—his contributions to educational, religious, scientific, and recreational groups and institutions has by 1940 reached the vast total of $68 million.

Some of the organizations which have benefited in whole or part from his contributions are Wyoming Seminary Endownment and Sprague Memorial Hall, Guthrie Clinic and Robert Packer Hospital at Sayre; Wilkes-Barre General Hospital, Angeline Elizabeth Kirby Memorial Health Center and Maintenance Endowment, F. M. Kirby Park and Maintenance Endowment; Irem Temple, Wilkes-Barre Institute for Girls (now Wyoming Seminary Day School), Kirby Hall and Endowment of the Chair of Civil Rights, Jewish Welfare Association, American Red Cross, and Leonard Hall of Lehigh University.

Labor Legislation

EXTENSION OF REMARKS
OF
HON. TOM STEED
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 26, 1959

Mr. STEED. Mr. Speaker, among the most thoughtful and respected newspapermen in the State of Oklahoma is Mr. Milt Phillips, publisher of the Seminole Producer.

In an editorial, August 13, Mr. Phillips urged the public not to be misled by demands for a specific label or a package deal in labor legislation but to concentrate on results—sound legislation to curb the abuses brought out by the McClellan committee:

THE NAMES OF AUTHORS NOT IMPORTANT THING

(By Milt Phillips)

By the time this appears in print the House of Representatives may have concluded consideration of labor reform legislation. As this is written it appears a majority of the House Members in Congress are convinced that legislation curbing abuses of labor union powers must be enacted at this session. It also appears a majority of House Members do not want to enact legislation that will seriously injure legitimate union functions. We have said in this column, and we again reiterate, a vast majority of the people of the Nation do not want to impair

or injure legitimate union activities. It is the abuses of union powers which has brought resentment to a high pitch among the people all over the Nation. It is not an easy job to provide legislation which will effectively curb racketeering and abuse of union powers and at the same time preserve to honest, sincere union members the rights to which they are entitled under this democratic form of government. Of course there are some union leaders and members that want unlimited powers regardless of the effect such powers have upon the Nation and all the people. Likewise there are those who so bitterly oppose any kind of union labor function that they would destroy the unions by legal means or any other means. The vast majority of people in the Nation do not agree with either of these extreme viewpoints.

A problem sincere lawmakers face is the lack of understanding by the average citizen on how legislation is enacted.

For example, this present labor reform legislation was first passed by the U.S. Senate. The bill passed by the Senate was a weak bill with little enforcement powers. Senator MCCLELLAN, of Arkansas, tried to strengthen it during Senate debate on the bill.

Senator MCCLELLAN attempted to put into the legislation a "bill of rights" for union members and the public. He was unable to get very much of his proposal into the Senate bill as it was finally enacted.

Senator JOHN KENNEDY, an aspirant for the Presidential nomination, has helped dig up much of the dishonesty, corruption, and malpractices of mobsters operating under union labels. But the Presidential aspirant is trying to ride the fence on the labor reform legislation.

Unlike MCCLELLAN, KENNEDY is trying to appease the union extremists while playing to the demand of the people for adequate laws to control the abuses uncovered by the McClellan and Kennedy committees.

The Senate-passed labor reform, weakened far below the necessary safeguards recommended by MCCLELLAN, was sent to the House of Representatives.

There it was referred to the House Labor Committee for study and hearings.

Under pressure of Hoffa and other leaders of organized labor, the House committee changed some of the weak Senate provisions, and in some ways even softened the already soft Senate bill by lessening penalties for violations of the proposed law.

However, the House committee bill, as finally sent to the floor of the House Tuesday, contained some sound provisions, and if penalties had been imposed sufficiently rigid to provide enforcement, might have helped to clean up some of the abuses brought out in the congressional investigations.

Then President Eisenhower endorsed legislation proposed by two Representatives, one a Republican and the other a Democrat. The Eisenhower endorsement brought some possibility of making the labor reform legislation a partisan issue.

However, Senator MCCLELLAN, an Arkansas Democrat, joined Eisenhower in endorsing the bill proposed by the Representatives, LANDRUM and GRIFFIN.

In the meantime, a California Congressman named SHELLY, a former union organizer, introduced another proposal which was endorsed by many of the labor officials. It gave the unions even more power to abuse.

Thus the House of Representatives faced the problem this week of trying to develop sound legislation which would curb abuse of union power by dishonest and corrupt union officials, and yet would not penalize honest and properly operated labor unions.

The Members of the House of Representatives faced a tough job.

Whatever legislation the House passes this week must be returned to the Senate for concurrence or rejection.

Since the Senate passed a very weak piece of legislation, it is naturally expected that body will refuse to concur in House changes from the Senate bill.

So the Senate will refuse to concur and ask for a conference. A small number of House and Senate Members will be named to a joint conference committee and this committee will attempt to work out a bill satisfactory to both branches of Congress.

Therefore the House Members this week, especially those like TOM STEED and CARL ALBERT, who want sound legislation protecting the public, the union members and the national security, are having a tough time trying to get House colleagues to write a good, sound bill from all of the proposals, and in addition, pass a bill which has some chance of getting Senate approval.

As individual citizens, we folks back at home in the congressional districts, have the problem of trying to show our Representatives how we feel about this labor reform legislation.

Inasmuch as the Landrum-Griffin bill had more real controls and provided more rigid penalties for violation of such things as "hot cargo" clauses in union contracts, "blackmail" picketing, refusal to permit union members to vote secret ballots and other needed legal controls, the public used this specific bill in urging their Congressmen to support labor union reform legislation.

However, what the average citizen—a vast majority or all the people of the Nation—really want is legislation that will curb mobsters and racketeers and assure that members of labor unions will have the right to express their views without coercion and threats from entrenched officials.

The average citizen cares little what name is attached to the legislation.

They want adequate labor reform legislation enacted.

If the House will enact legislation outlawing "hot cargo," prohibit with rigid penalties "blackmail" picketing and boycotts, and give unions back to the membership where democratic processes will prevail, the public is sufficiently aroused that Senate approval will follow.

Citizens must remain alert—not get themselves all tied up with some "package deal" under any name, whether it be Landrum-Griffin or some other name—but insist that the major reforms so urgently needed are included in the final legislation. That will assure progress in cleaning up corruption and dictatorships in the labor unions where these conditions now exist.

Sincere Congressmen in both the House and Senate should be encouraged to do this. Let's not get ourselves all worked up over some specific name or title of legislation.

But let's not relax one iota in insisting that reforms, with enforcement teeth, must be enacted by this present Congress before the Members return home.

Hawaii Teaches a Lesson

EXTENSION OF REMARKS
OF
HON. SILVIO O. CONTE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 26, 1959

Mr. CONTE. Mr. Speaker, under leave to extend my remarks I include an editorial from the North Adams (Mass.) Transcript which expresses most eloquently the great lesson of toleration and understanding which the State of Hawaii is teaching all America:

HAWAII TEACHES A LESSON

The appearance of the newly elected Hawaiian congressional delegation in Washington will be an auspicious occasion for most Americans. The exceptions will be those persons, mostly in the South, who have been fighting a losing battle for white supremacy.

One of the State's two Senators is the son of an indentured Chinese immigrant. The State's lone Representative, a hero of the famous Nisei fighting unit in World War II, is the son of a naturalized Japanese clerk. They will be the first Members of Congress of Chinese and Japanese ancestry.

We hope Senator HIRAM L. FONG and Representative DANIEL K. INOUYE will be productive Members of the congressional body. Time alone will tell about that. What is most important for the moment is that America has now taken into its national leadership people of Asian ancestry. The impact of that will certainly not be lost in the Far East, where this country's standing has long been harmed by its anti-Asian prejudice.

In the new State of Hawaii more than half of the 80 offices at stake in this week's election were won by Americans of Asian descent. That is as significant as the makeup of the congressional delegation.

Racial snobbery undoubtedly exists in Hawaii, but it is no different than the social and religious snobbery that exists almost everywhere in this country. The Hawaiians, however, have managed to eliminate racial discrimination. If all people are afforded equal rights, the silly pretensions of superiority by one group or another are harmless.

In some ways many of this country's older States have a lesson to learn from its newest member.

Free Elections in East-Central Europe Should Be Made a Condition for Any Future Summit Conference

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 26, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from Mr. Stefan Korbonski, chairman, Assembly of Captive European Nations, New York City, concerning free elections for east-central Eurpean countries:

ASSEMBLY OF
CAPTIVE EUROPEAN NATIONS,
New York, N.Y., August 12, 1959.

The Honorable DANIEL J. FLOOD,
U.S. Congress,
Washington, D.C.

DEAR REPRESENTATIVE FLOOD: I am glad to convey to you the assembly's appreciation of your excellent address, delivered on July 23, in the House of Representatives, requesting that free elections in East-Central Europe be made a condition for a summit conference.

The subsequent invitation to Mr. Khrushchev to visit the United States has lent even more weight to your address. The unwelcome and harmful effects of this visit can be, at least partially, offset by confront-

ing the Soviet dictator with a determined attitude of the United States to discuss the case of the subjugated East-Central European countries. Prolonged silence and inaction by the West on these countries, coupled with the increased prestige that Premier Khrushchev will derive from his U.S. tour, would only strengthen the suspicion of the captive peoples that they have been "written off." As for the tragic consequences of final hopelessness and disillusionment in the captive European countries, you have clearly and graphically described them in your address.

We at the assembly have also been very impressed by the resolution on the fulfillment of the wartime pledges requiring free elections in Eastern Europe, introduced by you on the same day in the House of Representatives. When it will be passed—and we are confident that it will—it will mark a new milestone in the long list of your distinguished contributions to our countries' freedom cause.

Sincerely yours,

STEFAN KORBONSKI,
Chairman.

Distinguished Service to Agriculture Award to Senator Frank Carlson

EXTENSION OF REMARKS
OF

HON. THOMAS B. CURTIS

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 26, 1959

Mr. CURTIS of Missouri. Mr. Speaker, at the 45th annual meeting of the Missouri Farmers Association at Columbia, Mo., on August 24, the Honorable FRANK CARLSON, Senator from Kansas, received the award for distinguished service to agriculture. Following is the citation used by the president, Fred V. Heinkel, in presenting the award:

Because of your genuine interest and leadership in the encouragement of farmer owned aud controlled cooperative associations and your sincere and demonstrated friendship for farmers; and because of your particular and thorough understanding of the difficult problems involved in the production and marketing of our great wheat crop, and your dedication to finding a solution to these problems, a solution which is of vital importance to the farmers of Missouri, Kansas, and the rest of the Midwest's great Wheat Belt, we feel that you have fully earned and deserve the highest honor and award the Missouri Farmers Association has to offer.

Therefore, the board of directors of the Missouri Farmers Association has voted unanimously to bestow upon you the MFA's award for distinguished service to agriculture.

FRED V. HEINKEL,
President.

Mr. Speaker, I am happy that the Missouri Farmers Association honored our distinguished colleague from our adjoining sister State. Hereafter follows the speech of the Honorable FRANK CARLSON delivered on this auspicious occasion:

SPEECH BY SENATOR FRANK CARLSON, ANNUAL MEETING, MISSOURI FARMERS ASSOCIATION, INC., COLUMBIA, MO., AUGUST 24, 1959

It is an honor and a privilege for me to appear on your program today. We folks in Kansas have always had a great respect for the farmer in Missouri and especially for your active, hard hitting Missouri Farmers Association.

After accepting your kind invitation to speak here today, I spent some time thinking about a wide range of topics which I would have liked to discuss with you. As you probably know, a Senator becomes involved in so many activities today that he has difficulty in keeping up to date in any one field. After considering several alternatives, I decided to try to organize my thoughts and observations regarding the current impasse which has developed in the farm policy field.

I ask, What, if any, progress has been made in national farm policy in the past 30 years?

I ask, Why do we find it so difficult to reach a common agreement on desirable revisions in farm price support legislation?

And finally, I ask, How and in what manner can we expect to make progress in improving farmers' bargaining power in months and years immediately ahead?

These are the questions that interest me, and I believe they are questions in which you are interested.

When I consider the first question, "What, if any, progress has been made in national farm policy?" it occurred to me that it was just 30 years ago that we first made the stabilization of farm prices a national policy objective. The Agricultural Marketing Act, the first national legislation having as its objective the stabilization of farm prices, was passed in 1929 with the active support of President Hoover.

Those of you who have as many gray hairs as I do will remember that the Agricultural Marketing Act created a Federal Farm Board with a price stabilization fund of $500 million and a charter to assist in the development of regional and national marketing cooperatives. The Board hoped that, with the help of credit from the $500 million stabilization fund, these cooperatives would be able to stabilize market supplies and prices.

President Hoover, especially anxious that this new Board should succeed, prevailed upon Alexander Legge, the former president of the International Harvester Co., to become its first Chairman. Soon after taking office Mr. Legge explained the purpose of the Board in a U.S. Chamber of Commerce meeting in these words:

"Nearly 10 years of discussion, controversy, and compromise led Congress, in its wisdom, to declare that permanent solution of the agricultural problem lies in collective action on the part of the farmers. It created the Farm Board to help producers organize for such action, both as to production and marketing of their crops, the purpose being to enable them to put their industry on economic parity with other industries."

Apparently the chamber of commerce opposed farm price stabilization 30 years ago, just as it does today, for later in the same speech Mr. Legge said:

"Is there any reason why those who have prospered and grown apace through governmental aid and assistance to various industries should object to the farmer getting his?

"You fellows, better organized, got yours while the farmer, unorganized, failed to get anything.

"The farmers have little or nothing to say about what their product brings. Costs of production can be passed along to the buyer by nearly everyone but the farmer. Unorganized, he has to take for his product what the other fellow is willing to give him."

No one knows how successful these first efforts at farm price stabilization would have been under normal peacetime conditions. We know, of course, that they were unable to stem the tide of economic recession which set in in the fall of 1929.

We usually think of the Federal Farm Board as having failed in its price stabilization efforts. But it was this first Farm Board experience which convinced Mr. Legge and other farm leaders that production and marketing controls were essential for the success of farm price stabilization policies.

Mr. Legge, with his background of manufacturing experience, was a vigorous advocate of balancing supplies with available markets. After several years of service, in his letter of resignation to President Hoover, he included this significant sentence:

"While there are still a few of the agricultural leaders who lower their voices when they speak of production control, yet practically all of them have accepted the principle as essential."

The production control programs of the Agricultural Adjustment Administration in the 1930's were a direct outgrowth of the Farm Board's experience. The Secretary of Agriculture in 1933 also inaugurated price-support loans direct to producers. In the fall of 1933 producers of cotton and corn who had kept production in line with their allotments were offered loans on their crops at above-market values. This was the beginning of direct price-support programs as we know them today.

The price support features of the farm program increased in popularity throughout the 1930's. It became increasingly difficult, however, to hold production in line with the volume that could be marketed at the support price levels with continued large unemployment rolls. Just as a matter of interest I looked up the records and found that the loans and inventories of the Commodity Credit Corporation increased from $279 million in 1938 to $1.7 billion at the end of 1942.

I often wonder how our farm price policy would have met this problem of growing stocks in the prewar years if high levels of employment could have been achieved and World War II could have been avoided.

World War II generated economic forces, just the opposite of those prevailing in the 1930's, and gave us an opportunity to try out Government price supports as economic incentives for increased production. The experience of the war period was not particularly revealing, however, for market prices remained well above support price levels most of the time.

Production goals replaced quotas and, to increase production, farmers were given all possible incentives feasible in view of wartime conditions. They responded with such vigor that per capita food consumption (in part associated with fuller employment) increased 6 percent. In addition, large quantities of food were supplied to the Armed Forces and to our allies.

Senator AIKEN, of Vermont, recently said: "In fact, the increase in agricultural production in America was largely responsible for winning the war, and was a feat which was exceeded only by the men in the fighting forces themselves.

"After the war the productive power of American farms was instrumental in putting countries of Western Europe and other parts of the world back on their feet.

"This had hardly been accomplished when the Korean war broke out; and there was increased demand for certain commodities, particularly wheat.

"Again the American farmer responded."

The 6 years following the Korean war have given us a different kind of experience. It has been a frustrating experience for farm leaders, farm program administrators, and farm-minded legislators.

During the last 6 years net farm income has been almost $20 billion less than in the previous 6 years.

Farm prices are now 17 percent lower than 6 years ago and the trend is still downward in spite of the general business boom in progress.

Farm production in 1958 was 15 percent higher than the new record levels achieved in 1952–53, and total producton in 1959 may equal or exceed 1958.

We have bartered, sold for local currencies, and given away at home and abroad $8 billion of farm products.

Government loans and inventories of farm products have increased to almost $9 billion and further increases are expected under present legislation as currently administered.

Net budget expenditures of the Department of Agriculture in the past 6 years have reached $28 billion.

Prof. Dale Hathaway of Michigan State University, who spent 1956 on the staff of the Council of Economic Advisers, made a widely accepted appraisal of recent U.S. farm policy in the May issue of the Journal of Farm Economics. The key points in this appraisal are as follows:

1. The program probably has maintained farm income (both in the aggregate and per capita) at levels higher than would have existed in the absence of a program. (Other reputable economists estimate that net farm income would have been one-fourth or more lower without supports in recent years.)

2. The program that has operated has not seriously impeded agricultural adjustment, especially the adjustment of the agricultural labor force.

3. Aggregate agricultural efficiency probably has not been impaired by the program.

* * * * *

5. Despite the conclusion that our recent program has not been a major contribution to the present difficulties in agriculture, neither has it contributed positively to a solution of the problem.

It (the program) has failed, despite massive expenditures, to bring a solution to the U.S. farm problem.

To Professor Hathaway's appraisal I should like to add the following too often overlooked facts:

Over the past 30 years, with farm price supports in operation most of the time, the cost of food in terms of workers' earnings has dropped sharply. A weekly market basket of food for a family of three which cost 25 percent of the worker's average weekly earnings in 1958 would have cost 48 percent of a worker's weekly earnings 30 years earlier.

Food costs less in the United States in terms of workers' wages than anywhere else in the world. Although Government costs of farm price support programs are higher than they should be, they equal only 5 percent of the money spent for food at retail. If the pro rata share of farm program costs had been added to the cost of food, workers in 1958 would have spent only 26 percent of their weekly earnings for a market basket of food as compared with 35 percent for the same food 10 years earlier, and 41 percent 20 years earlier.

Throughout the last two decades, output per hour of farm labor has increased at a rate equal to two to three times that of the nonfarm worker. Largely because of this rapid increase in efficiency, people have left the farms in record numbers in the past 20 years. Yet workers in agriculture, mostly independent farm operators, receive less than half as much for their labor as nonfarm workers. The economic benefits of this increase in efficiency have largely been passed on to the processors and consumers.

When I reflected on the second question, "Why do we find it so difficult to reach a common agreement on desirable revisions in farm price support legislation?" I found it especially challenging. Actually, in the past 6 years I have given a good deal of thought to this question. And I have changed my views somewhat over the period.

In the past several months it has seemed to me that the single most important factor has been the wide difference in views as to the economic facts relating to agriculture. I am told that for the country as a whole, perhaps a third of the farmers believe farm income will drop sharply if effective supply management programs are not adopted soon; an equal number of farmers just as sincerely believe that farm income will be maintained at present levels or will be increased by lower price supports and the removal of production restrictions; and the other third of the farmers are undecided as between these two points of view.

The proportion of farmers holding each of these views differs in the different farming areas. A large majority of the tobacco, cotton, and wheat producers apparently believe in the need for production controls while only a minority of the corn and livestock producers appear ready to accept production controls or believe them to be feasible for their products. There also is a wide diversity of views with respect to the effectiveness of acreage controls and of market prices as incentives in adjusting supplies to available markets.

In my opinion if we could more nearly agree on the relevant economic facts we could rather quickly agree on desirable changes in farm price support legislation. All of us would prefer more, rather than less, individual freedom in our farming operations. All of us would prefer to do away with price support programs and production controls if farm prices and farm income would not fall to disastrously low levels.

I am not an economist and it is not my purpose to attempt a review of all the important facts relating to farm price support programs. There are, however, three misconceptions which I would like to clear up. First, the evidence does not support the often made assertions that control programs have been ineffective and that farm price support programs have stimulated greater production.

Official statistics compiled by the Department of Agriculture show that in the last 5 years production of the basic crops has been held 21 percent lower than the nonbasics, using 1952–53 (the last 2 years before acreage controls and marketing quotas were invoked) as the base period. The production of the basic crops, feed grains other than corn and soybeans (crops increased most by diversions from the allotment crops) in the last 5 years has averaged 2 percent lower in relation to the 1952–53 base than all other (non-price-supported) crops. Obviously production controls have not been as effective as they should have been but they have held production in check, as compared with that of the non-price-supported crops.

Second, the economic facts do not support the propaganda to the effect that the producers of the non-price-supported products, especially livestock, have demonstrated the superiority of free market policies in recent years. In the 6 years 1953–58, on a net basis 94.5 million tons of feed grains and wheat were removed from commercial market channels by surplus disposal and Government storage programs.

Had these additional feed grains and wheat remained in commercial market channels, their outlet would have been livestock feeding. Livestock feed grains supplies would have been 14 percent larger for the entire 6-year period. In the absence of price-support programs on feed grains and wheat, total livestock feeding would have been about 14 percent larger, thus increasing supplies and lowering prices of livestock products generally.

Hogs which would have utilized about half of the increased feed supplies would have been sent to market in about 16 percent larger numbers. An increase in marketings of this magnitude, on the basis of recent Department of Agriculture analyses, would have lowered hog prices one-third or more below what they actually were.

While we are discussing farm surpluses and the effect they have had on farm prices generally, I want to discuss briefly our crop surplus problem in Kansas. Wheat is the basic crop and the farmers are very much concerned and embittered about the continuous reminder to the public about the cost to the taxpayers for the storage of wheat and cost of the program. Wheat is the political football—the whipping boy for those who do not know the farm problem.

Admittedly, we have a surplus of some 120,917,000 bushels of wheat stocks in all storage positions as of August 7. On August 7 corn stocks in the United States were 1,033,431,000 bushels and this figure will go up about 340 million bushels in the next 2 or 3 weeks, or to a total of 1,373 million bushels.

With the present anticipated corn yield this year, corn could also be a great burden in our farm surplus problem.

Stocks of oats on August 7 were 36,495,000 bushels—grain sorghums 269,912,000 bushels.

I mention these figures because the wheat farmers of this Nation have been receiving the brunt of criticism for surplus crops that are not limited just to wheat.

The third misconception relates to the potentialities of market expansion as a solution for the current imbalance between supplies and market outlets.

The evidence does not support the optimism often expressed regarding the widening of markets which will occur with lower prices. Although I have always supported programs for market expansion I believe we should be realistic in our expectations.

In spite of the greatly increased promotional efforts in recent years, 9 percent more American consumers, with 10 percent higher real incomes in 1957, bought 11 percent more food, including more higher cost meats and fewer cereals and potatoes than in 1952. Yet farmers received $600 million less for this food in 1957 than for the smaller quantity taken 5 years earlier.

Prof. Murray Benedict of the University of California, a long-time student of national farm policies, says: "* * * so far as food is concerned, once a nation is as well fed as ours now is, demand can grow only about as fast as population grows."

Official reports show that in the 4½ years of surplus disposal operations ending December 31, 1958, we removed a total of $10.7 billion of farm products from commercial markets by disposal and net storage programs. These disposal and storage programs provided an outlet for $2.4 billion of farm products a year. Had these extra products moved through commercial markets, they would have caused a sharp decline in prices. The most recent studies available indicate annual farm income would have dropped by at least twice this amount.

In my opinion far too small a part of our expanded research programs in recent years has been devoted to an objective study of farm price-support program results.

There has been far too much propaganda based on misconceptions of agriculture's basic economic problems. There has been far too little comprehension of the economic significance of the output—increasing effects of rapid technological change in food production at a time when the peoples of the industrialized Western World already are well fed. There has been far too little understanding of the economic effects on farmers of the market pricing policies of big business and big labor.

I believe that if we could get widespread common understanding of the economic facts and relationships in these fields it would not be difficult to reach agreement on desirable revisions in price support legislation.

This brings us to a consideration of the third question, "How and in what manner can we expect to make progress in the near future in improving farmers' bargaining power?" I hope you won't be disappointed if I fumble this one a little.

Although I am vitally interested in farm problems I am not a member of the Senate Committee on Agriculture and Forestry. Consequently, I have not become involved in the cross currents of conflicting recommendations which almost overwhelm the members of the Committee on Agriculture.

As I see it, however, producers of the basic crops—with the exception of corn—have a tolerable satisfactory history of price stabilization and supply management through marketing quotas. Producers of the more important perishable crops appear to have learned how to use marketing agreements and marketing orders effectively in stabilizing their market supplies and prices.

Dairymen have been able to stabilize their prices with the help of Federal milk-marketing orders, where the milk goes into fluid use and price-supporting Government purchases as necessary for manufactured dairy products.

While it is difficult to discover any clear trends in recent farm-policy developments, it appears to me that these groups are likely to maintain and improve on such price-stabilization measures as they now have. As technological progress continues to expand the productive capacity of the agricultural plant faster than markets expand, the producers of these other products may be more or less successful in balancing their supplies with market outlets available at stable prices and in diverting their unused resources into feed grain and livestock production.

For the farm economy as a whole we are now producing 6 to 9 percent more products than can be sold in commercial markets at stable prices. Most of this excess capacity is likely to be diverted into feed and livestock production. Since feed grains and livestock products now make up two-thirds of total farm marketings, an expansion of some 8 to 12 percent in feed grains and livestock would be necessary to absorb current excess productive capacity in agriculture.

In addition, stocks of both feed grains and wheat are excessive. Even though exports are expanded as much as possible through continued Public Law 480 programs, it is probable that a part of these excess stocks can only be liquidated by feeding them domestically to livestock.

Every effort must be made to expand our export of farm commodities. The export of these farm commodities means not only dollars for farmers, but it has been, and will continue to be, an important part of a program of bringing closer relationships with countries that do not have an abundant food supply. Food for peace must be more than just a slogan; it can and must be a reality.

Recently the Senate Foreign Relations Committee, of which I am a member, reported to the Senate a bill, S. 1771, which is known as the International Food for Peace Act of 1959. I am a cosponsor of that bill.

From a humanitarian standpoint, I know of nothing we can do as a nation that will win friends faster and more permanently than getting food and fiber into the hands of the needy.

The distribution of this food to underdeveloped countries where there are millions of needy and undernourished people is more than a commodity-disposal operation; it has important psychological value. In my opinion, it is one of the most effective forms of foreign aid.

Although attention was centered on wheat in this session of Congress, CCC loans and inventories of feed grains already are 10 percent larger than the loans and inventories of wheat. It seems almost certain that by this time next year CCC investments in feed grains relative to wheat will be even larger than at present. Hog prices will be distressingly low, poultry and egg prices will be less than fully satisfactory, and cattle prices will be starting their cyclical decline as marketings increase.

If there is anything to the old saying that necessity is the mother of invention, I am inclined to believe that in the next year or two increasing Government stocks of feed grains and declining livestock prices will force Midwest farmers to agree upon some program for improving their bargaining power.

Undoubtedly, it will have to include placing a part of our cropland in a conservation reserve. The central issue that should receive a great deal more study and discussion is whether or not more direct market supply management programs will be needed to make a conservation reserve program reasonably effective for feed grains and livestock products.

This has been a rather long statement, but the agricultural problem today is a complex and badly misunderstood problem. We and the public have been confused by the substitution of cheerful and hopeful statements for vital economic facts.

It is my hope that the leaders of our farm organizations, the farmers themselves, and our citizens generally will take a realistic view, with the hope that we may work out a solution which will maintain price stabilization and give the American farmer his fair share of our national income.

Businessmen Receive Government Aid, Too

EXTENSION OF REMARKS
OF
HON. JOSEPH E. KARTH
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 26, 1959

Mr. KARTH. Mr. Speaker, long before I arrived in Congress, I had heard a great deal about farm subsidies. Knowing full well that our Government was the most subsidizing Government in the world, I was amazed to find that people generally were only concerned with and aware of—farm subsidy. Coming from a city district, it was unpopular for me to support high farm price levels. However, in so doing, I pointed out that business generally prospered from subsidies by vastly greater amounts than did the farmer. In fact, the farmer looks like a "piker" in comparison.

Although 90 to 100 percent of parity may not be the answer to the farmers' dilemma, it is the best program at the moment. I do, however, sincerely hope that this Congress will come up with a better answer so the farmer can prosper along with the rest of society. I am mindful of the fact that the farmer is a great consumer of factory-made goods, hence provides substantial employment in cities like the one I represent.

In making my position clear, I have stated publicly I would support the elimination of all farm-price subsidies if all other subsidies, both direct and indirect were likewise eliminated. I still maintain that position, and do not while so doing, consider vital defense work a subsidy.

In reflecting on this subject, I read a most interesting article in the Catholic Bulletin by Father James Vissard, S.J. The article follows:

[Catholic Bulletin, Aug. 21, 1959]

BUSINESSMEN RECEIVE GOVERNMENT AID, TOO

(By Father James Vizzard, S.J.)

"It's no fun to be sober when everyone else is drunk" is the somewhat flippant reply recently given to a business executive who criticized subsidies to farmers. "We're pouring billions of tax money down a rathole," he insisted, "and what have we got to show for it? I'll tell you, mountains of surpluses that nobody wants and on which we're paying more than a million a day for storage."

This business expert had his easy answer to the farm problem: "Get Government out of agriculture. Let the supply and demand of the market determine what farmers will grow and what price they'll get.

"The efficient operators will make money, the others will get out. Food will be cheaper, inflation will be checked, taxes can be cut." To him it's that simple.

What do you say to a man like that? Don't you feel that while he may know a lot about business he understands very little about agriculture and its problems? Aren't you also tempted to give him a flippant or even an angry answer and let it go at that?

Yet we can't afford to ignore him or treat him lightly. He represents the viewpoint of too many millions of voters and too many influential people both in business and in government.

The prevalence of such views proves how bad have been agriculture's public relations. Of course, public misunderstanding and resentment are particularly difficult to overcome when the Secretary of Agriculture is himself one of the farmer's, and the farm program's, chief critics.

So, what answer do you give to the businessman and the millions like him?

Perhaps you don't have time to give him a patient and detailed explanation of why the welfare of over 4 million farm families is important to the Nation, of what problems they alone face of all our economy's primary producers, of how much of the Agriculture Department's budget actually goes to farmers and what portion directly benefits nonagricultural businesses and other parts of our population or of how lower food prices have kept the cost of living down while everything else has been rising.

You might want to tell him that you're not happy either with the present farm program and that you have your own ideas of how it can be improved.

But instead of being too apologetic, why not put the businessman on the defensive? Tell him that farmers pay taxes, too, and that they're tired of subsidizing him. He may say, in surprised protest, that he isn't getting a dime from the Government. If that's true, he's one of a mighty small minority in big business.

Ask him, for instance, if his company has ever taken advantage of the fast tax write-off available to industries related to defense. That subsidy has already amounted to billions. So has the depletion allowance granted to oil and mining companies.

Find out if some of his products are among those purchased by the Government for stockpiling often only a polite name for buying to keep prices up.

No public outcry has been made about that though the government-held hoard of strategic materials cost more than the at least equally valuable, and strategic, stockpile of food he complains about.

Perhaps he benefits from the $500 million yearly post office subsidy given to magazine

publishers—Time, Life, Look, Saturday Evening Post, etc.—and direct mail advertisers.

Or does this free enterprising businessman get his Government help through the grants and other aids to the merchant marine and airline industries?

And then, of course, there are the tariffs and import quotas. These carefully lobbied protections against overseas competition take money out of the pocket of every consumer, particularly the farmer who has to buy price protected goods while he sells in the open market.

If the businessman virtuously protests that none of these Government supports reach him, don't let him off the hook. Find out how much of the $40 billion yearly defense budget is spent in his industry.

If he's in electronics, chemicals, airplanes, missiles, heavy construction, steel, roadbuilding or any of a dozen other major lines the chances are that a large part of his business, and profit, comes from Government contracts, paid for out of farmers' taxes too.

Perhaps the subsidy is a little less direct than some the farmer receives, but ask him what shape his business would be in without it.

In other words, I think it's time for farmers to howl too. They ought to raise the roof. They've been made the whipping boy for all kinds of critics who never turn the mirror to themselves.

If those critics consider subsidies to be dirty they ought, in all logic and decency, to fight to end all Government programs of aid including those which help them. Otherwise they ought to lapse into embarrassed silence and leave farmers alone.

Ceremony Honoring Speaker Thomas B. Reed

EXTENSION OF REMARKS
OF
HON. FRANK M. COFFIN
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 26, 1959

Mr. COFFIN. Mr. Speaker, this morning you very kindly participated with the Maine delegation in the House in a ceremony in the rotunda of the Old House Office Building, in which we presented a new stone pedestal to support the Gutzon Borglum bust of Thomas B. Reed, late Speaker of this body. This presentation fulfills a keen desire on the part of some of us who have long been irked by the hollow plywood base, simulated to look like marble, which has hitherto served as the pedestal for a bust of a noted son of Maine, carved by a noted sculptor. What irked us was not any real or fancied slight, but the un-Maine-like idea of apply cosmetic skill to make wood look like something else. We could tolerate solid wood that looked like wood, or solid stone that looked like stone, but not hollow wood with face of stone.

Speaker Reed himself looked like what he was—a large, hearty, vigorous, and courageous man. With the thought that the membership might be interested in some of the contributions of Speaker Reed, I am inserting the remarks I made at our little ceremony this morning:

Mr. Speaker and honored guests, on this occasion it may be appropriate to note that at one time Maine occupied a position in national politics comparable to that occupied by the State of Texas, today. We are here, today, to dedicate a new pedestal for the bust of Thomas Brackett Reed, Speaker of the House of Representatives in the 51st, 54th, and 55th Congresses. In his last two terms the President pro tempore of the Senate was Senator William P. Frye, of Maine, and Asher Hinds, of Maine, author of "Hinds' Precedents," was Parliamentarian in the House. A little earlier, the powerful combine of James G. Blaine, Nelson Dingley, Reed and Frye controlled the political fortunes in Maine and occupied central positions in the Republican Party on the national level. Then, Maine possessed five seats in the House of Representatives.

Today's dedication is a statewide affair. Speaker Reed represented the first district, Congressman OLIVER'S constituency. The granite for the pedestal was quarried in Stonington, in Congressman MCINTIRE'S district. The cutting and finishing of the pedestal was done in my own district. We are paying tribute to a leader from our State and to the State itself.

Thomas Brackett Reed was born in Portland in 1839. A graduate of Bowdoin, he set out for the West to teach school and practice law in California. Apparently having seen all he wanted of that far land, he returned to his home State to make his career as representative and senator in the Maine State Legislature, attorney general, and finally Congressman from Maine's First District. He was first elected in 1876 and served continuously until 1899, when he resigned.

First nominated for the post of Speaker in 1885, Reed was elected to that post in 1889, when the Republicans controlled the 51st Congress. He was reelected in the 54th and 55th Congresses, resigning in September 1899, in disgust over the Spanish war and the annexation of Hawaii.

Speaker Reed is most noted for his contributions to majority rule in the House. As a member of the Rules Committee he had succeeded in ending filibustering on election cases, and on the tariff bill of 1883. His rules were adopted in the 51st Congress, dropped by the 52d, revived by the 53d, and restored by the 54th. They marked the first in the major steps toward modernization of House procedures and coincided with the compilation of the impressive "Hinds' Precedents."

In dedicating this monument to Thomas Brackett Reed, we are honoring a great line of Speakers who have brought the House to its present stature. Not the least of these greats is our present Speaker, the embodiment of tradition and respect for the need for democratic processes in our deliberations and actions. This pedestal is the product of the Maine coast, a symbol of integrity and an example of the craftsmanship which also marked the career of Thomas Brackett Reed.

I should mention, here, that we are indebted to the Deer Island Granite Co., of Stonington, Maine, and the James P. Murphy Co., of Lewiston, Maine, for the pedestal. They have donated this to the House of Representatives without any cost to the Federal Government.

Mr. Speaker, I wish to present to you, for your library in Bonham, Tex., a simple and homely memento of Thomas Brackett Reed. This is a bootjack, designed for colder climes than yours, but suitable, I am sure, for removing the boots for which your State is famous. This was given by Mrs. Frances W. Spencer, owner of the Thomas B. Reed house in Portland, Maine. The jack belonged to Mr. Reed, and may serve as a reminder to all of us that even the mighty must stoop to jack a boot.

In closing, Mr. Speaker, may I thank you for your cooperation in this, as in so many other matters, and offer to you my own admiration and good wishes for your continued leadership in the House.

Air Landing Rights

EXTENSION OF REMARKS
OF
HON. SAMUEL N. FRIEDEL
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 26, 1959

Mr. FRIEDEL. Mr. Speaker, I am deeply concerned that during the past several years, the representatives of our State Department engaged in bilateral air agreements with other nations that might have an adverse effect upon U.S. airlines. There is no desire on our part to see this country unfairly or artificially restrict the growth of our foreign-flag competitors, large, or small, provided they are engaged in traffic recognized as primary under the worldwide system of agreements into which the United States has freely and so generously entered.

However, no foreign-flag airline competitor to the U.S.-flag carriers should be allowed to prosper at the expense of the United States by engaging in traffic to which it does not have a primary entitlement. We must look to the future that our survival in the field of international commercial air transport should not be imperiled by the operations of the heavily subsidized airlines of foreign countries.

It is difficult enough for American free enterprise to compete in a field where subsidized foreign aviation has a free reign. The inexcusable thing is to see U.S. free enterprise being stifled by its own Government. It is the clearly announced policy of the Congress, as set forth in the Civil Aeronautics Act, to further the promotion and development of American air transportation systems both at home and abroad.

A very enlightening article appeared in the August 17, 1959, issue of Time entitled "Air Landing Rights," which sheds additional light and presents new facts of international competition. I wish to call the attention of my colleagues to this splendid article, which is as follows:

AIR LANDING RIGHTS—NEW FACTS OF INTERNATIONAL COMPETITION

As U.S. international airlines enter the jet age, the United States is junking a belief as outdated as its piston planes. The belief was that U.S.-flag carriers could hold their lead over a growing flock of aggressive foreign competitors without a drastic change in U.S. air policy. Last week the U.S. airlines got a new warning of the onward march of foreign competition. From the State Department came an announcement that Air France will get an additional U.S. gateway at Baltimore and a polar route to the U.S. west coast. BOAC will get the right to land at Tokyo on its San Francisco-Hong Kong run, which is expected to take $7,800,-

000 yearly away from U.S. lines. A CAB examiner recommended that Air India be authorized to fly into the United States.

But the biggest threat is Russia's Aeroflot, the world's largest commercial airline. Its 1,600 planes fly 350,000 route miles, serve 500 airports from Kamchatka to London. Airmen expect that one of the points of discussion between President Eisenhower and Premier Khrushchev will be yet another jump for Aeroflot—the right to carry passengers to and from the United States.

If Aeroflot gets rights into New York, Pan American World Airways will fly into Moscow. But the exchange does not tell the whole story. Aeroflot, which now matches International Air Transport Association rates (though it does not belong to IATA), is expected to behave for a while. But airlines fear that, as a totally subsidized state airline, it will eventually cut fares to aid Russia's economic offensive.

Despite last week's OK on new competition, U.S. lines found some cheer in the decisions. They showed a real change in U.S. policy to conform to the new competitive facts. What made the decisions different was not so much what the United States granted—BOAC, Air France, and Air India were entitled to the routes under reciprocal exchanges—as the manner of giving. France had formally denounced its bilateral air route agreement with the United States 13 months ago, insisted on getting "double trackage" rights; i.e., the right to serve any U.S. city where a U.S. carrier originates a flight for France. The State Department flately refused.

CAB and the State Department have not always been so alert to protect the interests of U.S.-flag lines. When Great Britain and the United States laid down the basic postwar air route pattern in Bermuda in 1946, the United States was the only Nation equipped with planes to operate long-distance service. It campaigned for a free competition agreement, but the plane-short British forced a compromise that provided for an equitable exchange of traffic between nations signing a bilateral pact. Since then the United States has often ignored breaches by foreign airlines, drawn criticism from U.S. carriers for giving out fat new routes without getting much in return.

Now the State Department and the President, who has the final say about what international routes the United States gives out, are ending the giveaway period in favor of more horse trading and stricter rule watching. The new trend was forced by the awareness that U.S.-flag lines could follow the downward path of the U.S. maritime industry. Though 70 percent of all air passengers between the United States and foreign countries are U.S. citizens, the share of traffic carried by U.S. carriers has fallen from 75 percent in 1949 to 60 percent today. In the first quarter this year, BOAC nudged out Trans World Airlines as the second biggest transatlantic carrier (No. 1: Pan American), the first time a foreign-flag line has flown ahead of a U.S. line.

Foreign carriers have rushed into the United States in such numbers that 40 now draw from the U.S. market versus 22 in 1949. Most of them get far more than U.S. carriers out of the bargain, often add extra flights to siphon off as many passengers as possible in violation of the spirit of the Bermuda agreement. In return for permitting Pan American to serve Amsterdam, KLM flies into New York and Houston. Result: last year KLM collected $29.4 million on 86,225 U.S. passengers, while Pan Am got only $1,700,000 from 2,842 Dutch passengers. While cutting into U.S. markets, foreign carriers are strengthening themselves against inroads into their home territory; e.g., European carriers got IATA to place a special tariff on transatlantic jet flights because they do not have jets to compete with the Boeing 707.

As the only private, nonsubsidized air fleet in the world, U.S. carriers must find a better way to face competition if the United States is to keep its place as a powerful air nation. The most obvious solution would be Government subsidy, but most airlines themselves admit that this is a last resort. What they want is for the United States to show a tougher stand in route bargaining and in enforcing current agreements. In the next 5 years the jets will force a revamping of virtually all of the 54 bilateral agreements between the United States and other nations. Unless the United States trades much more shrewdly with foreign airlines, U.S.-flag carriers may not be able to compete in the jet age.

Newsletter of the Honorable James Roosevelt

EXTENSION OF REMARKS
OF
HON. JOSEPH E. KARTH
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 26, 1959

Mr. KARTH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from my distinguished colleague and friend, Representative JAMES ROOSEVELT, to his constituents. What Representative ROOSEVELT has to say in his letter is most worthwhile, and I commend it to the attention of my fellow Members:

AUGUST 1959.

DEAR FRIENDS AND CONSTITUENTS: Since I last wrote to you, the Landrum-Griffin labor bill has been passed by the House, and, thus, almost 6 months of hard work in the labor-management field has gone right out the window. The Landrum-Griffin bill, apparently originally written by Senator GOLDWATER, of Arizona, is a bad bill, which was put over by the systematic distribution of hokum through virtually all our channels of communication.

For months we have been subjected to a steady drumbeat of propaganda about the need for a "strong" labor bill, which rose to crescendo with Mr. Eisenhower's impassioned radio and TV appeal for the Griffin-Landrum bill. Throughout this long campaign the technique was identical—first a recitation of the evils discovered by the McClellan committee and then the plug for a "strong" bill, thus leading the reader or the viewer to believe that what was meant by a "strong" bill was a bill that would oust the racketeers and thieves and clean out the corruption.

Actually, nothing could have been further from the truth. What the administration and the Republican leadership and some of the southern Democrats and the National Association of Manufacturers and all their assorted payrollers and mouthpieces meant by a "strong labor bill" was a bill that would contain amendments to the Taft-Hartley Act slyly calculated to cripple and penalize perfectly honest, legitimate unions. It was simply a situation in which an old-fashioned, all-out, NAM union-busting drive was being cloaked by a sanctimonious plea for ousting the racketeers.

If you have any doubt about this, just read the three bills that the House fought over: the Landrum-Griffin bill, the Elliott bill, and the Shelley bill, or as it is sometimes called, the Shelley-Roosevelt bill. You wil find that in the areas where the McClellan committee recommended that action be taken, the three bills are virtually identical, except that the Shelley bill extended its penalties to employers and laborbrokers as well as union officials. In other words, the Shelley bill hit everybody that was in any way concerned in labor racketeering or stealing or illegal profiteering at the expense of the worker.

But, because the Shelley bill was an honest, straightforward attempt to correct the abuses found by the Senate committee, and because it did not attempt to use these abuses as an excuse for undercutting legitimate union activity, and because it contained no sly, antiunion phraseology—it was labeled the "weakest" bill; whereas, the Landrum bill, which did not cover nearly the ground that the Shelley bill did in the area of corruption, but which did contain provisions extremely damaging to honest labor activity, was labeled the "strongest" bill and plugged for by everybody from Mr. Eisenhower to the lowliest NAM lobbyist in an all-out, and apparently successful, drive to convince the country that the "strong" bill was strong in the sense of protecting the worker.

Such are the uses of propaganda, and Lord help us all if we don't learn to distinguish between truth and hokum before Madison Avenue swamps us completely in syndicated piffle.

Exactly the same applies to the anguished caterwauling about inflation that emanates from the White House every time Congress considers any type of bill that might possibly do the general public some good. If you spend a dime for a general improvement, says the administration, you add to the perils of inflation. And if you build a school or aid a housing program or add a couple of dollars to a pension to enable somebody to stay alive, then you have breached the dam irretrievably and allowed the floodwaters of inflation to sweep everything before them.

Probably no sillier thesis was ever maintained by presumably sane men but this administration, aided by its corps of publicity experts, is making a lot of people believe it. Meantime, the same administration, having successfully diverted the public attention by yelling about public extravagance, shovels money to the bankers with both hands by progressively raising Federal Reserve interest rates and fighting to raise interest rates on Government bonds.

This is the basic source of inflation and high prices that are hitting us from all sides. Interest rates are raised to primary borrowers, who, in turn, raise rates to secondary borrowers; eventually, the bank rates become too high and less and less money is borrowed for purposes of plant expansion and new products, with the result that new jobs do not open up, new products are not made, and the gross national product is thus arbitrarily limited to approximately what is being produced at the time. But, since the population continues to grow and the demand is consequently ever greater, the price of existing goods goes up and up while profits rise fantastically, the rich get richer, the poor get poorer, and the pensioner has to sleep under a bridge.

My friends, it's time to wake up. This is a bad administration, the like of which we haven't seen since the twenties and which will inevitably wind up in the same place the Coolidge-Hoover regimes did, because it is traveling the same road. When a government pursues a steady policy of squeezing the small businessman and the worker and beating the unions over the head in order that the banker may sit on bigger

and bigger bags of money and charge more and more for the use of some of it, that government is going to wind up in an economic crash, no matter how loudly it meanwhile screams about an inflation that it is itself creating and tries to blame it on unions and spenders. We're heading that way fast.

Fortunately, 1960 isn't far off, but even so, I sometimes wonder if it will get here in time. When it does come, we'd better not fumble it.

Since my last letter, the housing bill has been vetoed, as I said it probably would be. It was perfectly logical that it should be vetoed because it would have helped a considerable number of people and it was not written for the exclusive benefit of the bankers. So it got the ax, with the routine explanation that it was "inflationary." The charge was so preposterous and the veto so indefensible that when Senator SPARKMAN held hearings on it, he couldn't even find a member of the executive staff who would admit having written the veto message. We've gotten pretty well used to government by proxy since 1953, but this was the first time anybody had heard of government by pixie.

I have been appointed by Chairman SHEPPARD of the California congressional delegation, to head a bipartisan delegation committee which will look into the matter of the flood of narcotics which is apparently coming over the Mexican border. Our duties will consist of determining the areas of responsibility so that the proper committees may conduct the necessary investigations and see to it that the necessary liaisons are effected with the proper Mexican officials. We are getting excellent cooperation from both State and Federal officers, all of whom are as anxious as we are to solve the problem speedily. The first hearings will probably be held this month.

Congress is expected to adjourn before too long and it will be good to get home and see you again. Meantime, all best wishes.

Sincerely,

JAMES ROOSEVELT.

Establishment of a National Fuels Policy Is of Utmost Urgency

EXTENSION OF REMARKS
OF
HON. ELIZABETH KEE
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 20, 1959

Mrs. KEE. Mr. Speaker, a number of Members of the House who represent coal-producing areas have introduced identical concurrent resolutions calling for the establishment of a Joint Committee on a National Fuels Policy.

Those of us who introduced the resolutions are convinced, Mr. Speaker, that the establishment of a national fuels policy is a matter of utmost urgency.

This is a matter which does not concern coal only. Rather, it vitally affects all of the other fuels upon which this great industrial nation depends. Also, it directly concerns our national security.

I strongly believe, Mr. Speaker, that the responsibility for the establishment of national policy in a field as important as that concerning energy fuels should rest with the legislative branch.

In the resolutions introduced in the House, the sponsors seek to have Congress carry out this responsibility.

I trust that in the closing weeks of this session of Congress this tremendously important matter will not be overlooked. We need to get on with this job. By passing this resolution now, Congress can empower the joint committee to organize during the recess and be ready to get down to serious business in January.

I urge this House to act upon the resolution before adjournment.

Progress Toward Weather Modification

EXTENSION OF REMARKS
OF
HON. B. F. SISK
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 26, 1959

Mr. SISK. Mr. Speaker, I recently had the honor of acting as moderator of a panel of outstanding scientists and experts who discussed "Weather Modification and Space Exploration" at the 46th Annual Convention of the National Rivers and Harbors Congress, meeting here in Washington.

I consider the information provided by the three speakers so important and timely that I would like to make summaries of their remarks more generally available.

One of these papers is presented herewith. It summarizes the address of Capt. Howard T. Orville, U.S. Navy, retired, whose long career in meteorology includes his chairmanship of the important Advisory Committee on Weather Control, and whose report of this Committee is the Nation's basic document in this field.

Captain Orville's summary follows:

From time immemorial man has dreamed of controlling the weather. His efforts have encompassed three principal areas: religious ceremonies, mysterious rites and rain dances, and scientific research. Scientific research has yielded some potentially important findings during the past 12 years in particular. Weather modification using these techniques promises to be one of our most important sources of water supplies in the future. Small scale cloud-seeding efforts are already producing limited but important increases in snow pack in the western States.

Progress reports of research now underway at the University of Chicago, the Institute of Atmospheric Physics in Arizona, and the Santa Barbara project in California are most encouraging. Increases in precipitation of 10 to 25 percent with new and improved techniques for observing the results are not uncommon. The Navy's effort in developing new techniques with the use of carbon black are indicative of the importance of weather modification, military as well as economically.

The new research program developed by the National Science Foundation and the U.S. Weather Bureau, both of which we will hear about at this meeting, are of the greatest importance to the field of weather modification. Basic and applied research programs which will be undertaken, improved instrumentation, and new engineering techniques hold promise of substantially increasing our knowledge of weather modification, and eventually providing an important new source of water supplies over the entire United States.

More than likely research now being started will lead to successful large scale periodic seeding of entire weather systems which will be of greatest potential economic and military value.

The availability of great sources of energy derived from thermonuclear devices and the possible use of earth satellites may lead to eventual suppression or diversion from their tracks of hurricanes, tornadoes and other destructive storms, becomes a real possibility in the future.

Cancer, Not Guns, Sent Doctor From Jungle

EXTENSION OF REMARKS
OF
HON. STUYVESANT WAINWRIGHT
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, August 14, 1959

Mr. WAINWRIGHT. Mr. Speaker, the following AP story was in last night's Evening Star. From time to time in world history a really good man passes across the space of time. Dr. Albert Schweitzer is one of these. So is Dr. Thomas Dooley. The somewhat tragic turn of events in an already sacrificed life made me more than pause in the busy day. I think it will have the same effect on you:

CANCER, NOT GUNS, SENT DOCTOR FROM JUNGLE

NEW YORK, August 25.—Dr. Thomas Dooley, 32, is the sort of man who thinks treating 100 patients a day in a remote hospital in Laos is more important than the treatment of one cancer patient named Thomas Dooley.

He is the kind of fellow who chose to overlook it when the U.S. Government suggested that he had better leave his hospital because the Communists were shooting too close.

He is a member of the generation known as beat, who can say "I feel great," and talk about going back to resume his work in the jungles—right after he has told you that tests show a tumor on his chest is "all loaded" with cancer.

Dr. Thomas Dooley is, in other words, the classic young man with a mission.

And he seems angry at his own condition only because it may cut short the mission.

Five years ago Dr. Dooley was a medical officer on a Navy ship that was assigned to help hundreds of refugees fleeing from Communist North Vietnam. Touched by the sufferings of the Indochinese, he made up his mind to do something to help.

When he left the Navy he helped to found Medico (Medical International Cooperation) and build a three-building hospital at Muong Sing, near the China-Laos border.

The 30-mat hospital ("we don't have beds") now in handling 100 patients a day "and babies day and night." Some of the funds for operating it came from a book the doctor published, titled "The Edge of Tomorrow."

He started another book for the same purpose, and several times came back to the United States to lecture and appear on television—always hunting more money for Medico and the Lao.

His mission was helped along by the fact that Dr. Dooley is not only dedicated—he is also charming, boyishly handsome, witty and outgoing.

In recent weeks the Communists stepped up their offensive in Laos and intermittent action broke out near Dr. Dooley's hospital.

The U.S. Ambassador sent a meassage to the doctor suggesting he leave. He refused.

But 2 weeks ago a surgeon was visiting his hospital, and Dr. Dooley asked the visitor to remove a lump on his left chest. A sample of the tissue was flown here and analyzed. It was malignant. Dr. Dooley received an order he couldn't ignore, from Dr. Peter D. Comanduras, secretary general of Medico.

Dr. Comanduras, who lives at 4512 South 31st Street, Arlington, and Dr. Dooley are old friends whose conferences helped lead to the organization of Medico. Dr. Dooley lived at 4301 Massachusetts Avenue before returning to the Far East in 1956.

Last week Dr. Dooley flew back to the United States. He visited his mother in St. Louis, then flew back to New York for further diagnosis and treatment.

Yesterday he was settling down in his room at the Sloan-Kettering Cancer Research Center at Memorial Hospital.

"This is the most elegant hospital room I ever saw," he commented. "Not a single mat on the floor."

Almost gaily, he described what the doctors had done and planned to do. Tuesday morning, he said, the surgeons would "go in and take a look and see what's there," the first in a series of surgical procedures.

"Then they'll decide on the treatment—whether it will be radiation, or nitrogen mustard, or something else," he said.

As a doctor he has guessed that he may have 5 or 6 years to live with this capricious type of cancer.

As a missionary, he has decided that whatever the other doctors say, he's going to spend the time he has left at the hospital in Laos. He plans to return there in November.

As he relaxed in the big shining city hospital to wait for the ministrations of other doctors, he was asked how he was feeling.

"I feel great," he said with a laugh. "As great," he added, "as anyone feels who has cancer."

Ominous Change in Soviet Activities Based on Shifting of World's Balance of Power

EXTENSION OF REMARKS
OF
HON. LeROY H. ANDERSON
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 26, 1959

Mr. ANDERSON of Montana. Mr. Speaker, a searching analysis of the world's military balance of power is contained in an article by Joseph Alsop, columnist for New York Herald Tribune, Inc., which appeared in this morning's Washington Post.

I think the article is so vitally important to our national destiny that I strongly urge every Member of Congress to read it and ponder the dangers which many of us see facing America in the immediate future if the Red masters in the Kremlin decide the time is favorable for military aggression of their own choosing.

The article follows:

EN ROUTE TO VIENTIANE

(By Joseph Alsop)

These words are written amid the bustle and confusion of homely things that always rise, in any household, when a long journey has to be prepared. This reporter is off to Laos, to have a look at the new Communist aggression there.

Since this country has been fed so long on patented, government-issued tranquilizers, the trouble in Laos has as yet caused hardly a ripple. Maybe the aggression will soon be repelled, although it seems more likely that the key city of Sam Neua will soon turn into another Dienbienphu. In any case, what one will see in Laos probably will not be dramatic, if only because looking for jungle fighting in those particular jungles is usually far worse than searching a haystack for a needle.

Nonetheless, just as a symptom, this trouble in Laos is really dramatically serious. It is very much worse as a symptom of the ill-concealed contempt for the strength and will of the United States and its President that is plainly felt by the President's prospective guest, Nikita S. Khrushchev.

To prove this shocking point, a comparison offered in a previous report may perhaps be repeated. In brief, when Khrushchev first wanted a meeting with President Eisenhower, in 1955, he willingly paid for the meeting with the liberation of Austria and the restoration of normal relations with Yugoslavia. This time, threats to Berlin have got Khrushchev what he has always wanted most of all—an invitation to meet alone with the President, with no bothersome allies at the table. And this time, the invitation to meet was hardly extended by Eisenhower when the Communist attack on Laos was launched with Khrushchev's blessing.

What, then, is the explanation of this enormous and ominous change in the manners and methods of our enemy? In part, perhaps, the explanation lies in Khrushchev's consolidation of his personal power. Yet even in 1955, he needed very great personal power, in order to persuade Vyacheslav Molotov and the other Stalinists to agree to the ostentatiously "peaceful" Austrian and Yugoslav gambits.

Nine-tenths of the explanation of the change in Khrushchev must therefore lie elsewhere. It lies, beyond doubt, in the massive, unfavorable shift in the East-West balance of power that has occurred since 1953. In the Kremlin, the prevailing estimate of the power-balance is always the mainspring of policy. Nothing less than a great change in this Kremlin estimate can explain the great change in Khrushchev.

The stark fact of the change in the power balance is daily drowned, in this country, in floods of official soothing-syrup. Less than a year ago, the then Secretary of the Navy was happily denying that there were any indications of Soviet missile-launching submarines. Now Adm. Arleigh Burke has announced that the Soviets are building a serious force of these vessels.

Our Polaris submarines, Admiral Burke added, will of course surpass the Soviet submarines when we finally get them—several years from now. The admiral did not add that the program that could have given us extremely useful missile-launching submarines now was canceled because of the administration's budget mania. But Khrushchev then gleefully boasted with all the politeness of an oncoming house guest, that the new Soviet underwater craft, which he has now, would cover any target in the United States from the waters of Hudson Bay.

By the same token, the Chairman of the Joint Chiefs of Staff, Gen. Nathan Twining, was telling all and sundry only a few months ago that the Soviets probably did not have a true intercontinental ballistic missile, because no Soviet ICBM had been tested at full range. With his usual hearty bluffness, General Twining brushed aside the scientists' warnings that the Soviets were using special instrumentations to test their ICBM's over reduced ranges.

But now the U.S. Government has undisputed and, of course, unannounced evidence of at least two full-range Soviet ICBM firings which ended in the Pacific.

These recent ugly surprises for the administration's professional (one might even say careerist) optimists by no means convey the true extent of the shift in the world power balance. It would take a book to tell that story in full. It is an ominous but not yet quite fatal story—a story of diminution of our striking power and weakening of our deterrent balanced by Soviet gains in the same crucial areas.

Much can yet be done to give this story a better ending than now seems likely. But if Berlin and Laos mean anything, they mean that the needed action should not be delayed for another year, or another month, or even another day.

Friendship Airport

EXTENSION OF REMARKS
OF
HON. SAMUEL N. FRIEDEL
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 26, 1959

Mr. FRIEDEL. Mr. Speaker, it is an elementary proposition, universally acknowledged, that "justice delayed is justice denied."

The delays implicit in the judicial process were primarily responsible for the rise of administrative agencies. But today these administrative agencies are guilty of the same offense they were created to alleviate—delay in deciding cases.

As one of the elected Representatives from the great city of Baltimore, I rise to enter a vigorous and official protest concerning the unusual delay respecting the matter of Washington-Baltimore Adequacy of Service Investigation by the Civil Aeronautics Board, Docket No. 8148.

On May 3, 1956, a petition was filed requesting that the Civil Aeronautics Board investigate the inadequacy of service to the Greater Baltimore metropolitan area in accordance with sections 404 (a) and 1002 of the Civil Aeronautics Act of 1938, as amended. The hearings in this matter were concluded on September 18, 1957, and I submit that there can be no justification for the continued delay of the issuance of an order from the Board. It is a well-known fact that in the period of over 3 years since the institution of an investigation for adequacy of service in the Baltimore area, this area has continued to receive far less service than it is legally entitled to. This condition continues in spite of the institution of jetplane service to the west coast by two airlines. By no stretch of the imagination can the institution of this service be construed as providing a pattern of service which is necessary to meet the test of "adequacy."

On July 31 of this year, I wrote to the Civil Aeronautics Board about this matter, so vital to the interests of the large population of Greater Baltimore. In reply the CAB stated:

We agree wholeheartedly with your statement in your letter of July 31 as to the need for a prompt decision in our Baltimore-Washington adequacy-of-service case. Let us assure you that we are striving to make our findings, based on a very ponderous record, as quickly as possible.

As you are aware, and as the record before us makes so clear, the issues in this complex proceeding are of considerable economic consequence to the airlines and to the public. We feel that the fairness and soundness of our decision are equally as important as its promptness.

In addition, scores of matters of many types must be given attention by the Board so that we do not find ourselves able to devote the continuous hours to this case which would be desirable. We have had, for instance, the Northeastern States area investigation before us in which we recently voted tentative approval for service between Washington, Baltimore, and Boston via Allegheny Airlines.

Acknowledging that the record may be ponderous, certainly sufficient time has elapsed since November 7, 1958, when oral arguments were completed, for a decision to have been reached.

As to the "scores of matters of many types [which] must be given attention by the Board so that [they] do not find themselves able to devote the continuous hours to this case which would be desirable," does the Board expect its caseload to lighten? Is it hoping for a slack period in order to devote time to this case? Or is the Board merely offering weak excuses for failure to have performed its function?

Obviously the reasons ascribed do not justify the delay.

The people of Baltimore erected a truly magnificent airport in 1950. The Friendship International Airport was immediately hailed as one of the truly excellent facilities in the world, especially due to the fact that when this airport was planned, the use of fast jet planes was clearly envisioned.

I should like to point out that the CAB's own examiner estimated that well over 75,000 Baltimoreans are obliged to travel to and from Washington's National Airport each year. This proves conclusively that Baltimore does have the present potential of adequate numbers of passengers that desire to travel by air. Also, recent figures of passenger service at Friendship reveal a 36 percent incease over last year—additional and conclusive proof that when the service is here, the passengers are, too.

On August 14, 1959, I again wrote to the Civil Aeronautics Board that I could not understand the reason for the long delay in reaching a decision in this particular case. As a member of the Interstate and Foreign Commerce Committee of the House of Representatives, I feel that if a decision is not reached by the CAB within a reasonable time, an investigation and searching inquiry would be indicated respecting this matter. The urgent needs of almost 2 million of our citizens must be given due and proper recognition.

The Workmen's Benefit Fund: Providing Mutual Help in Time of Economic Crises

EXTENSION OF REMARKS
OF
HON. LUDWIG TELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 26, 1959

Mr. TELLER. Mr. Speaker, 75 years ago, a group of German-American immigrants founded the Workmen's Benefit Fund of the United States of America, to provide mutual help in times of economic crises. This year, this organization celebrates its 75th anniversary. Under leave granted I include an address by Mr. Morton B. Lawrence before the 24th National Convention of the Workmen's Benefit Fund of the United States of America, in Atlantic City, N.J., on June 14, 1959:

DEMOCRACY IN ACTION

The history of the Workmen's Benefit Fund to work for the common good. It is a familiar story for Americans, but it can never be told too often. For it repeats in its own special way the pattern of America and its growth.

The story begins—like the American story—with a group of men who sought political asylum. With their families they fled the oppressive laws of Germany under Bismarck, the Iron Chancellor, in the 1880's. They came to the United States. They came as freemen—machinists, cigarmakers, and other skilled craftsmen, to work and to raise their families in freedom. A major part of that freedom is the right of men to organize to protect themselves—from political tyranny, from economic exploitation, from the poverty which follows upon the sickness or death of the family's provider.

Wage earners in the 1880's could not fall back upon savings, as their paychecks were small. Neither was there any aid from the Government, or organized charity to which they might turn. On September 24, 1884, a group of those exiled German workers met for the purpose of forming an association which would protect its members in times of sickness or death. Scandals had brought the established profitmaking insurance companies into disrepute. "Order of the day" (the minutes of that meeting read): "self-help." Less than a month later, on October 19, 1884, that association was founded—the General Workmen's Sick and Death Benefit Fund of New York and Vicinity.

The beginnings were modest enough: payments to begin when the organization had 75 members; weekly sick benefits of from $6 to $9; a death benefit of $75. These payments seem insignificant in the light of today's wages and the cost of living, but it should be remembered that 70 years ago $7 a week was the salary of a skilled working man. Only a few months after the establishment of the society, it was faced with a dramatic challenge. Two members died. The $150 needed in death benefits had not yet been collected in the treasury. Had the society failed its members in that crisis, it could not have survived. But the enterprising treasurer raised the money by borrowing from friends. The death benefits were paid, and the society's reputation for honesty and reliability was thereby established.

The membership rolls expanded. By 1887 there were 4 branches with 527 members. By the end of 1888 there were 733 members and 15 branches in 3 States—New York, New Jersey and Massachusetts. Growth was so rapid and so extensive that the society's name had to be changed to include the wider territory; it was now called—Workmen's Sick and Death Benefit Fund of the United States of North America. (The designation "North" was later dropped. After 1888, sick benefits were extended to 26 weeks, with another 25 weeks at half benefit, and death benefits were raised from the original $75 to $150 in 1888 and $250 in 1891.

With such rapid growth, there was a sharp need for new administrative machinery. The small group of German workmen who founded the society had provided a completely democratic organization, and the organization proved flexible enough to meet the needs of expansion. Headquarters were expanded too—from a small office on East Fourth Street at $6 a month to a store at $12, and by 1889 the society leased larger quarters in the Metropolitan Savings Bank Building on Third Avenue, which remained its home until 1930 when it moved into its own building at 714 Seneca Avenue in Brooklyn.

The problem of coordinating the activities of the member branches with the main administration was met and solved by holding a convention. The first was held in November 1892 and there all branches were represented. A second convention met in 1895 and a third in 1898. In 1898 the national executive board applied for incorporation of the society. There were now 161 branches in 21 States and over 20,000 members. Eminent personalities began to join the organization, among them the genius in the field of electricity, Charles Steinmetz, who for a time was the financial secretary of one of its branches, Daniel Hoan and Jasper McLevy, many term mayors of Milwaukee and Bridgeport, respectively.

By 1905, the society had grown so large that it needed its own publication to spread news of its activities to its membership. At the convention of that year, a motion was passed authorizing the publication of a paper, Solidarity. Its first issue appeared in April 1906 and it has since been published regularly for half a century as the official organ of the society. Its policy was stated clearly in that first issue: "Our paper shall be a means of enlightenment and conciliation. Its best efforts will be given to that great work of culture: the winning of the workers to the goal which we must set for ourselves. * * * Enlightenment, teaching, education are the prerequisites."

The Workmen's Sick and Death Benefit Fund had been founded by German immigrants, and in its early years it remained essentially German in composition. The convention of 1910 proposed, among other things, the organization of English-speaking branches. During World War I the society, like all German-American groups of the times, was subjected to a certain amount of harassment by self-styled superpatriots. Its loyalty to America, however, was never questioned, and the society grew in strength during the war. Soon after World War I, the U.S. Department of Labor asked the society for permission to scan its records for statistical purposes, because the organization's sick benefit figures were at that time practically the only source of health insurance statistics. The society gladly cooperated with various Government agencies, for it had been an early advocate of a system of Government-run social security. Even to-

day, the society is urging broader coverage and higher benefits under the social security laws.

The postwar period was one of expansion and consolidation for the society. In 1928 the organization adopted new additions to its benefit structure: women could now join the sick benefit group, and children were also admitted to the society. Membership rose to a new peak in 1929. In 1934, when it celebrated its 50th anniversary, it could look back with satisfaction over its half-century with the knowledge that it had survived war, labor unrest, and the great depression. During the period of great unemployment, its relief fund had helped thousands of members to survive. No person was dropped from membership for nonpayment of dues, so that regardless of the members' economic condition, they were eligible for benefits in times of sickness and distress.

In a new era, which recognized the rights and duties of men to organize in their own interests for their security and protection, the society moved ahead steadily. In 1939, at the 18th convention, its name was officially changed from Workmen's Sick and Death Benefit Fund to Workmen's Benefit Fund. Once again, as it had done many times before, the Workmen's Benefit Fund asserted its firm opposition to fascism, nazism, and communism, with their intolerance, hatred, persecution, and destruction of culture, freedom, and peace. At this convention, too, the medical care and hospital plan was adopted on a national basis, following the institution of similar services by local branches a few years earlier.

The Workmen's Benefit Fund continued to expand its activities and its services to members. The 20th national convention of 1943 set up a life insurance program of regular and endowment policies. The emergency relief fund had been greatly strengthened and is constantly being used to help member families that suffer from unemployment or other financial distress, such as that caused by floods or other disasters. District committees were set up to coordinate the activities of the many branches. These include not only the insurance and health benefits, but such varied services as camps for children in various parts of the country, homes for the aged and convalescent. Local branches are, of course, also engaged in social and educational activities and support national and community drives for charitable and health purposes. Many branches provide general practitioner care and, in metropolitan areas, an excellent medical specialist service.

By 1959, the membership had greatly expanded—embracing all economic groups, ethnic and national backgrounds, and religious faiths—with branches in 26 States and the District of Columbia. Its economic strength was reflected not only in the reports of its activities by the Insurance Department of the State of New York which carefully supervises fraternal societies, but in such increased services to members as providing life insurance policies up to $25,000 and the addition of major medical coverage.

With its membership a representative cross-section of American citizens, the organization continued its opposition to all forms of totalitarianism. Publication of a photograph of a 14-year-old Hungarian Freedom Fighter on the cover of Solidarity—soon after the Soviet suppression of the Hungarian rebellion—reflected the membership's violent disapproval of Communist imperialism and the subjugation of free peoples. Many of the new members were refugees from Communist oppression and they needed no reminder that democracy was still the finest form of government.

Over the years of growth there have been many changes, but the fundamental structure of the Workmen's Benefit Fund has remained unchanged. At the 70th Anniversary celebration in 1954, guest speakers Mayor Robert F. Wagner of New York and U.S. Senator Herbert H. Lehman, praised the society in glowing terms for its years of dedicated service to democratic ideals and to the enactment of forward looking social reforms and legislation. The editor of its magazine, Solidarity, reiterated briefly just what their organization means to its members: "In itself, the society is a very sober-minded affair, a purely protective institution, organized for self-help on a nonprofit basis. The very purpose gives the organization its idealistic aims. For this reason, progressive thinking men and women of all national origins, and of all occupations, can be active in the Workmen's Benefit Fund as they are active in political, educational and economic organizations."

Release of Rabbi Urged

EXTENSION OF REMARKS
OF
HON. FRANCIS E. DORN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 28, 1959

Mr. DORN of New York. Mr. Speaker, one of my constituents, Max Hendler, of Brooklyn, has brought to my attention, a letter published in the New York Times of August 6, 1959, concerning Rabbi Alexander Zissu Portugal. If calling the attention of my colleagues to the plight of this self-sacrificing and dedicated man can help in some measure to bring about his release, I do so with earnest hope:

RELEASE OF RABBI URGED—FEAR VOICED FOR HEALTH OF CLERIC IMPRISONED IN RUMANIA

To the EDITOR OF THE NEW YORK TIMES:

A large concern for man's fate begins with emphathy with one man's fate. It is in this belief that we feel impelled to call attention to the tragic situation of a remarkable religious figure now under detention in Rumania, and to voice a public appeal of conscience in his behalf.

His name is Rabbi Alexander Zissu Portugal. Since April 23, when he, his son and several friends were arrested on suspicion of "treason," he has languished in prison under investigation by the Rumanian authorities, and without trial. Anyone who has ever known this dedicated man, or who has been touched by his charism, even at a distant remove, can only regard the charge against him as a tragically grievous error.

During World War II Rabbi Portugal was deported by the Nazis to Trans-Dniestria. His first act at the end of the war was to gather orphaned Jewish children and provide a home for them. When the authorities would not let him keep "his" children, he simply proceeded to make them his literally—he adopted them.

He then took a large group of the children with him to the city of Czernowitz, then under Soviet occupation. His fame as a father to children spread widely in the immediate postwar years. At one time he had as many as 40 boys and girls sharing his living quarters. At another point a group of Jewish children in a Russian orphanage in Odessa left that institution to join the rabbi in Czernowitz, as a result of which the Soviet authorities detained him for a few days.

FURTHER ARRESTS

Following this, the rabbi removed to Bucharest, where he taught the children of the Jewish orphanage. When the Rumanian authorities undertook in 1948 to dissolve this institution, the younger children especially pleaded that they be permitted to remain with the rabbi and not be transferred to the State orphan asylums. In consequence, the rabbi was once more arrested and confined for investigation for a period of 4 months.

In recent years Rabbi Portugal traveled from town to town in Rumania, visiting the Jewish communities, dispensing what alms he could gather, counseling the troubled and himself living a life of poverty. He was twice warned that he must cease this activity and stay at home. It was after he had complied with the second warning that he was suddenly arrested last April.

This time he is far less able than before to cope with the harsh circumstances of imprisonment and investigation. He is 65, frail, and sickly; his weight has reportedly dropped to 90 pounds, in part, probably because he has been unable in prison to obtain the kosher food which his faith enjoins upon him.

His very survival, then, may depend on his being released. And this letter is written in the prayerful hope that the Rumanian authorities, aware of the profound concern felt for Rabbi Portugal and mindful of the most elementary demands of humane charity, will be moved to release him and so to spare him the rigors which he cannot withstand in his enfeeblement and advanced years.

Lambert E. Broad Has Served 25 Years as President of Mining and Mechanical Institute, Freeland, Pa.

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 26, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Hazleton, Pa., Plain Speaker of August 19, 1959, disclosing that Mr. Lambert E. Broad has served 25 years as president of Mining and Mechanical Institute, Freeland, Pa.:

LAMBERT BROAD OBSERVES 25TH YEAR AS MMI PRESIDENT

Lambert E. Broad, president of the Mining and Mechanical Institute, Freeland, today marks his 25th anniversary as head of that educational institution.

Broad, who became president of MMI in 1934, graduated with high honors from Lehigh Universtiy with the degree of bachelor of arts. He became a member of Phi Beta Kappa National Honor Society while at Lehigh.

Graduating from the University of Pittsburgh with the degree of master of arts, he became a member and was a former officer of Phi Delta Kappa Graduation Education Honor Society.

A member of the American Association of School Administrators and Secondary School Administrators, he is also active in civic, industrial and church affairs in the Freeland-Hazleton area.

Among these are: president, Freeland Industrial Development Corp.; past president, Freeland Rotary Club; vice president Community Concerts Association; director, Anthracite Motor Club, director, Freeland Chamber of Commerce; past president and director, and chairman of trustees, Freeland YMCA; chairman of trustees, St. John Reformed Church, Freeland; officer and past officer of various Masonic bodies; and member, Valley Country Club.

Before coming to Freeland, Broad was head of the Science Department and director of visual instruction at Aliquippa schools from 1927 to 1934.

Broad's 25th year as MMI head coincides with the school's 80th anniversary. Founded in 1879 by the late Eckley B. Coxe, pioneer coal operator, its initial objective was to make better miners and mechanics out of boys and men, who had little or no primary schooling.

Started as a night school, it evolved into a fully accredited, full-time college preparatory school under Broad's leadership and has received excellent ratings since that time. Over 700 young men have received their diplomas during Broad's tenure.

Hallmarks of Our Society

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 26, 1959

Mr. BOGGS. Mr. Speaker, under leave to extend my remarks in the Record, I include the following attached article which appeared in the July 1959 issue of the Tulanian:

[From the July 1959 issue of the Tulanian]

HALLMARKS OF OUR SOCIETY

(By Dr. Rufus C. Harris, president, Tulane University)

American education today should strive to impress young people more with our country's basic freedoms than with its high standard of living.

I refer generally to our civil liberties and particularly to our freedom of thought, expression and assembly. We should show what these mean, and how they apply in daily living.

As a people we have, I suspect, made a mistake in our international posture by boasting too much of our high standards of living and our exciting achievements in technocracy, instead of reflecting the image of a people whose daily life cherishes the exchange of ideas, the give and take of debate, the freedom of learning and the liberty of conscience.

These are more the hallmarks of our Western culture than anything produced from stone, steel, or technocracy.

Our more important efforts in foreign aid should be to strive to assist all peoples, of all tongues and of every race to find the secrets of freedom as well as the secrets of science and technocracy. That could be our best example of world leadership. But it must stem from a basic educational philosophy.

The world today makes it necessary that education produce men of character and principle for it is obvious that our safety cannot reasonably be entrusted to men merely of skill. Skills are neutral and may be employed for good or evil.

How do schools and colleges best build character?

They do so when they require the best academic performance. The conditions conducive to high performance in teaching and learning are precisely those that are chiefly conducive to the development of character and principle. Large or small, wealthy or poor, each educational institution can be such a force if it really wants to.

The principal determinate is the level of performance expected.

The sad part is that on most campuses it is low and only a few persons are performing to full capacity. Where trustees, officers, faculty and students live by the conviction that learning demands excellence, and nothing short of high performance will be settled for, character is strengthened, principle is exalted and students will reflect it.

In fact, all worthwhile ingredients of the college exprience flow from this, including good teaching, the satisfactory curriculum, student responsibility and effective religious responsibility and practice. Where there is firm commitment to academic excellence, college courses gain meaning and relevance, and students today have a greater concern for finding meaning in life than this century has heretofore seen.

We must produce all the superior trained young people we can find to see to it that a historical review of these times does not record that actually we were an immature, irresponsible, and confused people; that revolutionary changes occurred in our generation to which we never really became awakened; that our Nation was propelled into a new educational era to which we did not wisely respond: that there was a convergence of powerful and even marvelous forces on a worldwide scale, which produced an unparalleled necessity for uncompromised excellence in education, but that we lacked either the imagination, the courage, or the maturity to provide it.

Most of the Tulanian readers reside in the great southern portion of the United States. It is the section from which we stem and which we wish to advance. It has our earnest thought and labor and solicitude. It is proper that we ask: Are our youth in this area being educated with proper regard for the needs and opportunities that await them in adult life in the world as it now is, with all of its stresses and competition?

Are the cankers of trivia and materialism which in so many ways are eating at the heart of American society today similarly gnawing at the vitals of our educational standards and vision?

Our solemn purpose must be to liberate the mind and to broaden and deepen the sense of tolerance, personal usefulness and responsibility; to provide this area with the best possible educational institutions; to educate and morally develop its youth; to move them away from prejudice, ignorance, and absorption with self and community trivia toward noble dedications to the great religious and social endeavors; to inspire lofty pursuit in superior learning; and to assure generous and unselfish public performance.

This constitutes our chief, if not our only, obligation to this area.

It constitutes the best measure of our duty to Mr. Tulane and Mrs. Newcomb. It constitutes the South's best promise for advancement; and indeed, it constitutes the best way that our time may be made one of peace.

Everything we do in education for this, experimentally or otherwise, must be measured by high quality levels if we really wish to raise the sights and the performance of southern endeavor.

There can be no compromise with standards and integrity in this.

The integrity of character we strive for within ourselves is dependent upon the measure of our own inner quality. The integrity of any system of education we embark upon inevitably will be the result of the same ingredient.

No educational program can be any finer, deeper, more humane, more qualitative than those who are its architects or those who are taught according to its ways.

In the last analysis the quality of our southern performance in education or anything else is the qaulity of each of us in the South.

Protest on Khrushchev Visit

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 26, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Letters to the Editor column of the Wilkes-Barre Times-Leader of August 19, 1959, submitted by Mr. James J. Walsh, of Wilkes-Barre, regarding the upcoming visit of Nikita Khrushchev to this country:

PROTEST ON KHRUSHCHEV VISIT

EDITOR, TIMES-LEADER NEWS:

The announcement that Nikita Khrushchev and President Eisenhower will exchange visits has stirred the entire Nation.

Only recently, President Eisenhower remarked about the apathy of so many Americans concerning the dangers of communism. And yet, it is this same Mr. Eisenhower who has invited the very leader of this deadly menace to visit the United States.

Just a few weeks ago our Congress adopted a resolution denouncing the enslavement of the captive nations. Perhaps Congress should have added the United States to the list of nations under Red domination. Our leaders have been taken in by the Communists so often, figuratively speaking, we are a captive nation. It would appear the United States is being used as a doormat by the Kremlin.

By dealing with this man of treachery, doublecrossing, mass murders, etc., we are automatically putting a stamp of approval on the status quo in Europe, China, Tibet, etc. Have our leaders lost sight of what happened in Hungary, Poland, Korea, etc? What of those 450 Americans still being held in Communist prisons in Red China? Try to picture the heartache of those boys' parents. I wonder if any of those parents have ever been invited to the White House and been given the assurance that everything possible is being done to bring about their release?

It is shocking, to say the least, to read in our newspapers that Governors, business leaders, and the like are extending invitations to Mr. K., while in this country.

Khrushchev made this statement to Western diplomats at a Moscow reception on November 18, 1956:

"If you don't like us, don't accept our invitations and don't invite us to come to see you. Whether you like it or not, history is on our side. We will bury you."

So we invite our self-announced undertaker to call.

As an American, I strongly protest this mass murderer coming to the United States. I fail to see where he has made the slightest concession in the interests of justice and peace in the world to warrant a visit to this country.

Several years ago Marshal Tito, of Yugoslavia, sought an invitation to the United States, but he was denied such a visit be-

cause the American people flooded the White House with letters of protest. The American people can do the same regarding Khrushchev. We can take him at his word, "if you don't like us don't accept our invitations, and don't invite us to come to see you," by writing to the President urging him to cancel the invitation.

I'm in agreement with Senator THOMAS DODD (Democrat, Connecticut) when he says: "It's a national disgrace."

Dr. Carl O. McIntire, who heads the International Council of Christian Churches, calls Khrushchev the chief spokesman of the devil who repudiates God. Dr. Clyde Kennedy, president of the American Council of Christian Churches branded the Red tyrant "the bloody butcher of Hungary."

Pope Pius XI and XII warned: "Communism is intrinsically evil and no one can cooperate with it in any manner whatsoever. The fight between the forces of God and anti-God must be fought to a finish."

These are wise words and worth heeding.

JAMES J. WALSH.

WILKES-BARRE.

Oakridge's One-Woman United Nations

EXTENSION OF REMARKS

OF

HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, August 24, 1959

Mr. PORTER. Mr. Speaker, communication may not lead to understanding but understanding cannot come without communication.

The peoples of this earth do not want war. They want peace.

These are propositions to which we all can subscribe. With them in mind we certainly commend my constituent, Mrs. W. H. (Hazel) Walwyn, of Oakridge, Oreg., who corresponds with 200 persons in 41 different countries all over the globe and has been doing this for more than 40 years.

Under a previous consent, I am now including an article from the Eugene Register-Guard for August 5, 1959, written by Ruby Lund, the Register-Guard correspondent at Oakridge, about this remarkable woman and her important hobby. What a different world this would be if we had a Hazel Walwyn in every community.

LETTERWRITER SEEKS GOOD WILL

(By Ruby Lund)

OAKRIDGE.—This upper Willamette Valley community has its own "United Nations" trying to create good will in many foreign lands.

It is a one-woman organization—Mrs. W. H. (Hazel) Walwyn.

She corresponds with more than 200 persons in 41 different countries all over the globe.

Mrs. Walwyn writes long letters to all these people, describing the American way of life. In return, she receives descriptions of the ways of life in the many foreign lands.

Her friends-by-mail include people from many different walks of life—a teacher in Australia, a businessman in Iraq, a professor on the Ascension Island. Among her many correspondents are native North and South Africans and the people on Ascension Island.

To many of these people, Mrs. Walwyn sends magazines depicting America. Many of her friends have hobbies to which she contributes, adding to their collections American examples of the items in which they are interested. Among the things she has sent to the foreign nations are view cards, snapshots, salt and pepper shakers, cups and saucers.

Her home, in turn, contains examples of arts and crafts from all over the world.

Mrs. Walwyn began her unique letterwriting some 40 years ago when she began to collect first issue stamp covers. Her hobby has grown so much since then that now she maintains businesslike records to keep it going.

She has rows of metal filing cabinets which contain all of her correspondence and a large looseleaf notebook which serves as an address record.

In these alphabetical files, she keeps a record showing the interests of each of her friends and data on their families.

Mrs. Walwyn says her hobby isn't an expensive one. All her letters are sent by surface mail. Often it takes them from 6 weeks to 3 months to reach their destination. The same time often elapses before she receives a reply.

The magazines she sends are those she buys anyway as well as some her friends give her to send to one of her correspondents. The gifts are small, inexpensive items representative of the country.

Kennedy and Anfuso Honored by Morgenstern Foundation

EXTENSION OF REMARKS

OF

HON. VICTOR L. ANFUSO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 26, 1959

Mr. ANFUSO. Mr. Speaker, Senator JOHN F. KENNEDY and I were honored today by the Morris Morgenstern Foundation of New York which presented to us, at a special ceremony in Senator KENNEDY's office, parchment replicas of the famous letter written by George Washington in 1790 to the Touro Synagogue in Newport, R.I. These awards were presented to us by Mr. Morris Morgenstern, the founder of the foundation bearing his name, for "their inspirational efforts in combatting bigotry."

Senator KENNEDY and I were privileged to be the first to receive this award, which will be presented annually by the foundation to national figures for their efforts in combating bigotry and persecution. The award has as its text President Washington's statement in his letter of 1790 in which he assured the Jewish congregation of Newport that the United States will give "to bigotry no sanction, to persecution no assistance."

In the summer of the year 1790, after the troubled years of the American Revolution, the first President of the United States made a tour of the country. He came to the little seafaring town of Newport, R.I., in the part of the country colonized by the great champion of religious liberty, Roger Williams. The people of Newport turned out to greet President Washington.

Moses Seixas, sexton of the Hebrew congregation of Newport, who was a friend of Washington's, sent him a warm letter of welcome. Washington's reply to this letter of welcome, addressed to the Hebrew congregation of Newport, is today one of the Nation's most cherished historical documents. It is an eloquent expression of American freedom and religious harmony. In 1946 the Touro Synagogue in Newport, which is now about 200 years old, was dedicated as a national shrine.

The words "to bigotry no sanction" have played a vital role in the life of Morris Morgenstern, well-known millionaire financier, philanthropist, and realtor, who resides in Long Beach, N.Y.

Owner of the original letter by George Washington, in which this quote appears, Mr. Morgenstern is a firm believer that George Washington was the personification of the American ideal of freedom. As long as he can remember, he has been a crusader of the principles of tolerance expounded by our first President.

Through his efforts, the Washington letter has been seen by millions as part of the Freedom Train Exhibition and at universities in various parts of the country. It is now on display at the B'nai B'rith Building in Washington, D.C.

The 78-year-old president of Morris Morgenstern & Son is more anxious today to spread the word of George Washington than ever before.

Morris Morgenstern, as an individual, has probably financed more building than anyone else in the United States. But he is not happy being just a successful businessman. For years he has found time to help good causes and actively support various organizations, regardless of race or religion.

In 1949 he created the Morris Morgenstern Foundation, "to aid men and women of every creed, race, and ancestry to contribute their highest gifts to the development of our national culture."

Through his efforts, the Levittown Jewish Center was enabled to expand from its original facilities accommodating a handful of children to a synagogue of prime status in Long Island.

He was also drafted by the directors of the West Side Branch of the YMCA to be chairman of a committee to raise funds to provide decent recreational facities for the boys living in Hell's Kitchen.

Judge Albert Conway brought to Mr. Morgenstern's attention the fact that atlhough children of other faiths were provided with houses of worship at the Ten Mile River Boys Scout Camp, the Jewish boys were not so provided. Mr. Morgenstern made the necessary funds available for construction of what is now known as the Synagogue in the Pines.

The list of agencies which he helps is endless. They include the Brooklyn Hebrew Home and Hospital for the Aged; the Infants Home of Brooklyn; the Cathedral Club; Yeshiva University; Cardinal Spellman's Foundling Home, among others.

Born in Russia, Morris was brought to the United States at the age of 4. Because his family was poor, he had to give up school and start working. At 14, he borrowed some money and went into the business of manufacturing seltzer bot-

tles. Eventually he began dabbling in real estate and founded the finance firm he now heads.

Mr. Morgenstern — known affectionately as "M.M" by his friends—has been the personal guest of Vice President NIXON. Dr. Jonas Salk, the conqueror of polio, recently hailed Mr. Morgenstern for his humanitarian work. He has received citations from Presidents Roosevelt, Truman and most recently Eisenhower, for his invaluable efforts in behalf of the sick, poor, and needy of all races and creeds.

The text of the George Washington letter follows:

To the Hebrew Congregation in Newport, R.I.

GENTLEMEN: While I receive, with much satisfaction, your address replete with expressions of affection and esteem, I rejoice in the opportunity of assuring you, that I shall always retain a grateful remembrance of the cordial welcome I experienced in my visit to Newport, from all classes of citizens.

The reflection on the days of difficulty and danger which are past is rendered the more sweet, from a consciousness that they are succeeded by days of uncommon prosperity and security. If we have wisdom to make the best use of the advantages with which we are now favored, we cannot fail, under the just administration of a good Government, to become a great and a happy people.

The citizens of the United States of America have a right to applaud themselves for having given to mankind examples of an enlarged and liberal policy, a policy worthy of imitation. All possess alike liberty of conscience and immunities of citizenship. It is now no more that toleration is spoken of, as if it was by the indulgence of one class of people that another enjoyed the exercise, of their inherent natural rights. For happily the Government of the United States, which gives to bigotry no sanction, to persecution no assistance requires only that they who live under its protection should demean themselves as good citizens, in giving it on all occasions their effectual support.

It would be inconsistent with the frankness of my character not to avow that I am pleased with your favorable opinion of my administration, and fervent wishes for my felicity. May the children of the stock of Abraham, who dwell in this land, continue to merit and enjoy the good will of the other inhabitants, while every one shall sit in safety under his own vine and figtree, and there shall be none to make him afraid. May the father of all mercies scatter light and not darkness in our paths, and make us all in our several vocations useful here, and in his own due time and way everlastingly happy.

G. WASHINGTON.

The Late Ken Regan

EXTENSION OF REMARKS
OF
HON. GEORGE H. MAHON
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, August 17, 1959

Mr. MAHON. Mr. Speaker, I wish to pay tribute to the late Ken Regan, who served in the House from August 1947 to January 1955. I had not met Ken Regan until he came to Washington as the Representative of the great 16th Congressional District, which joins on the south and west the district which I have the honor to represent.

Ken Regan was a man of good will. As colleagues from west Texas we worked together on many problems for the public good. Ken was cooperative, understanding, and effective in his work.

Ken Regan had a big district. He had a big heart. He was big in his thinking. He loved his district and the people of his State and Nation. He served them well in Washington. I wish to join with others in paying tribute to a departed friend. I wish also to extend sympathy to his wife, Roberta Regan, who survives him, and who shared his interests during their years in Washington.

DAV Services in Oregon

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, August 24, 1959

Mr. PORTER. Mr. Speaker, an exceptional record of vital rehabilitation services freely extended to thousands of Oregon citizens has recently come to my attention. These splendid humanitarian services are not sufficiently appreciated by those who have benefited thereby, directly and indirectly.

Among the several congressionally chartered veteran organizations, which have State departments and local chapters in Oregon, is the Disabled American Veterans. The DAV is the only such organization composed exclusively of those Americans who have been either wounded, gassed, injured or disabled by reason of active service in the Armed Forces of the United States, or of some country allied with it, during time of war. Formed in 1920, under the leadership of Judge Roberts S. Marx, DAV legislative activities have benefited every compensated disabled veteran. Its present national commander is another judge, David B. Williams, of Concord, Mass. Its national adjutant is John E. Feighner, of Cincinnati, Ohio. Its national legislative director is Elmer M. Freudenberger; its national director of claims, Cicero F. Hogan; and its national director of employment relations, John W. Burris—all located at its National Service Headquarters at 1701 18th Street NW., Washington, D.C.

Inasmuch as less than 10 percent of our country's war veterans are receiving monthly disability compensation payments for service-connected disabilities—some 2 million—the DAV can never aspire to become the largest of the several veteran organizations. Nevertheless, since shortly after its formation in 1920, the DAV national headquarters, located in Cincinnati, Ohio, has maintained the largest staff of any veteran organization, of full-time trained national service officers, 138 of them, who are located in the 63 regional and 3 district offices of the U.S. Veterans' Administration, and in its central office in Washington, D.C. They have ready access to the official claim records of those claimants who have given them their powers of attorney. All of them being war-handicapped veterans themselves, these service officers are sympathetic and alert as to the problems of other less well-informed claimants.

The two DAV national service officers in Oregon are Mr. Gerald S. Kelsey and Mr. James W. Hudson, located at the VA Regional Office, 208 South West Fifth Avenue, Portland, Oreg. The department commander is Mr. Dan Cole, 2520 J Street, Springfield, Oreg., and the department adjutant is Mr. T. F. Van Laningham, 429 South West Fourth Avenue, Portland, Oreg.

The three VA hospitals in Oregon are a 1,000-bed DOM hospital at Camp White, a 567-bed GM hospital at Portland, and a 670-bed NP hospital at Roseburg. VAVS representatives: Camp White, Patrick Graham; Roseburg, Charles T. McCoy; Portland, George Youmans.

During the last fiscal year, the VA paid out $52,414,000 for its veteran program in Oregon, including $13,730,806 disability compensation to its 17,408 service-disabled veterans. These Federal expenditures in Oregon furnish substantial purchasing power in all communities. Only about 11 percent—1,859—are members of the 27 DAV chapters in Oregon.

This 11 percent record is strange, in view of the very outstanding record of personalized service activities and accomplishments of the DAV national service officers in behalf of Oregon veterans and dependents during the last 10 fiscal years, as revealed by the following statistics:

Claimants contacted (estimate)	31,357
Claims folders reviewed	26,131
Appearances before rating boards	12,892
Compensation increases obtained	2,634
Service connections obtained	792
Nonservice pensions	828
Death benefits obtained	430
Total monetary benefits obtained	$933,996.15

These above figures do not include the accomplishments of other national service officers on duty in the central office of the Veterans' Administration, handling appeals and reviews, or in its three district offices, handling death and insurance cases. Over the last 10 years, they reported 83,611 claims handled in such district offices, resulting in monetary benefits of $20,850,335.32, and in the central office, they handled 58,282 reviews and appeals, resulting in monetary benefits of $5,337,389.05. Proportionate additional benefits were thereby obtained for Oregon veterans, their dependents and their survivors.

These figures fail properly to paint the picture of the extent and value of the individualized advice, counsel, and assistance extended to all of the claimants who have contacted DAV service officers in person, by telephone, and by letter.

Pertinent advice was furnished to all disabled veterans—only about 10 percent of whom were DAV members—their de-

pendents, and others, in response to their varied claims for service connection, disability compensation, medical treatment, hospitalization, prosthetic appliances, vocational training, insurance, death compensation or pension, VA guarantee loans for homes, farms and businesses, and so forth. Helpful advice was also given as to counseling and placement into suitable useful employment—to utilize their remaining abilities—civil service examinations, appointments, retentions, retirement benefit, and multifarious other problems.

Every claim presents different problems. Too few Americans fully realize that governmental benefits are not automatically awarded to disabled veterans, not given on a silver platter. Frequently, because of lack of official records, death or disappearance of former buddies and associates, lapse of memory with the passage of time, lack of information and experience, proof of the legal service connection of a disability becomes extremely difficult, too many times impossible. A claims and rating record board can obviously not grant favorable action merely based on the opinions, impressions or conclusions of persons who submit notarized affidavits. Specific, detailed, pertinent facts are essential.

The VA, which acts as judge and jury, cannot properly prosecute claims against itself. As the defendant, in effect, the U.S. Veterans' Administration must award the benefits provided under the laws administered by it, only under certain conditions.

A DAV national service officer can and does advise a claimant precisely why his claim may previously have been denied and then specifies what additional evidence is essential. The claimant must necessarily bear the burden of obtaining such fact-giving affidavit evidence. The experienced national service officer will, of course, advise him as to its possible improvement, before presenting same to the adjudication agency, in the light of all of the circumstances and facts, and of the pertinent laws, precedents, regulations and schedule of disability ratings. No DAV national service officer, I feel certain, ever uses his skill, except in behalf of worthy claimants, with justifiable claims.

The VA has denied more claims than it has allowed because most claims are not properly prepared. It is very significant, as pointed out by the DAV acting national director of claims, Chester A. Cash, that a much higher percentage of those claims, which have been prepared and presented with the aid of a DAV national service officer, are eventually favorably acted upon, than is the case as to those claimants who have not given their powers of attorney to any such special advocate.

Another fact not generally known is that, under the overall review of claims inaugurated by the VA some 4 years ago, the disability compensation payments of about 37,200 veterans have been discontinued, and reduced as to about 27,300 others at an aggregate loss to them of more than $28 million per year. About eight-tenths of 1 percent of such discontinuances and reductions have probably occurred as to disabled veterans in Oregon, with a consequent loss of about $224,000 per year.

Most of these unfortunate claimants were not represented by the DAV or by any other veteran organization. Judging by the past, such unfavorable adjudications will occur as to an additional equal number or more during the next 3 years, before such review is completed. I urge every disabled veteran in Oregon to give his power of attorney to the national service officer of the DAV, or of some other veteran organization, or of the American Red Cross, just as a protective measure.

The average claimant who receives helpful advice probably does not realize the background of training and experience of a competent expert national service officer.

Measured by the DAV's overall costs of about $12,197,600 during a 10-year period, one would find that it has expended about $3.50 for each claim folder reviewed, or about $8.80 for each rating board appearance, or, again, about $22.70 for each favorable award obtained, or about $123 for each service connection obtained, or about $54 for each compensation increase obtained, and has obtained about $14.10 of direct monetary benefits for claimants for each dollar expended by the DAV for its national service officer setup. Moreover, such benefits will generally continue for many years.

Evidently, most claimants are not aware of the fact that the DAV receives no Government subsidy whatsoever. The DAV is enabled to maintain its nationwide staff of expert national service officers primarily because of income from membership dues collected by its local chapters and from the net income on its Idento-Tag—miniature automobile license tags—project, owned by the DAV and operated by its employees, most of whom are disabled veterans, their wives, or their widows, or other handicapped Americans—a rehabilitation project in thus furnishing them with useful employment. Incidentally, without checking as to whether they had previously sent in a donation, more than 1,400,000 owners of sets of lost keys have received them back from the DAV's Idento-Tag department, 3,538 of whom, during the last 8 years, were Oregon residents.

Every eligible veteran, by becaming a DAV member, and by explaining these factors to fellow citizens, can help the DAV to procure such much-needed public support as will enable it to maintain its invaluable nationwide service setup on a more adequate basis. So much more could be accomplished for distressed disabled veterans, if the DAV could be enabled, financially, to maintain an expert service officer in every one of the 173 VA hospitals.

During the last 10 years, the DAV has also relied on appropriations from its separately incorporated trustee, the DAV Service Foundation, aggregating $3,300,000, exclusively for salaries to its national service officers. Its reserves having been thus nearly exhausted, the DAV Service Foundation is therefore very much in need of the generous support of all serviced claimants, DAV members, and other social-minded Americans, by direct donations, by designations in insurance policies, by bequests in wills, by assignments of stocks and bonds, and by establishing special types of trust funds.

A special type of memorial trust fund originated about 3 years ago with concerned disabled veteran members of the DAV chapter in Butte, Mont., which established the first perpetual rehabilitation fund of $1,000 with the DAV Service Foundation. Recently it added another $100 thereto. Since then, every DAV unit in that State has established such a special memorial trust fund, ranging from $100 to $1,100, equivalent to about $5 per DAV member.

Each claimant who has received any such rehabilitation service can help to make it possible for the DAV to continue such excellent rehabilitation services in Oregon by sending in donations to the DAV Service Foundation, 631 Pennsylvania Avenue NW., Washington, D.C. Every such serviced claimant who is eligible can and should also become a DAV member, preferably a life member, for which the total fee is $100—$50 to those born before January 1, 1902, or World War I veterans—payable in installments within 2 full fiscal year periods.

Every American can help to make our Government more representative by being a supporting member of at least one organization which reflects his interests and viewpoints—labor unions, trade associations, and various religious, fraternal, and civic associations. All of America's veterans ought to be members of one or more of the patriotic, service-giving veteran organizations. All of America's disabled defenders, who are receiving disability compensation, have greatly benefited by their own official voice, the DAV.

Prelude to Annual Report by Congresswoman Edna F. Kelly

EXTENSION OF REMARKS
OF

HON. EDNA F. KELLY

OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, August 24, 1959

Mrs. KELLY. Mr. Speaker, every year it has been my practice to submit a report to my constituents in the 10th Congressional District in New York on important legislation enacted during the session of Congress. In my report, which of necessity is brief, I try to be factual on key legislation enacted. The report this year will only cover the first session of the 86th Congress and should be sent out shortly after the adjournment of Congress. It is, of course, impossible to predict with accuracy when Congress will adjourn and, more important, what specific legislative measures

will be enacted into law. At this point I have, therefore, decided in a preliminary statement to describe to the people of my district the difficult and complicated atmosphere hovering over this session. This, then, is the prelude to my report.

The first session of the 86th Congress convened and will adjourn with war clouds engulfing the entire world. The density of the clouds fluctuated with the actions of the leaders of the Kremlin. As heavy and ominous as the clouds were with the appearance of the sputnik and lunik, they increased with the overt, aggressive actions of the "comrades" in the Middle East, the Far East, Tibet, Latin America, Central America, including Cuba, in Europe again with the Berlin impasse and once more in southeastern Asia, Laos.

A diminishing of the war clouds followed appeasement of the comrades in the Ministers' meeting, a pending but never accomplished summit meeting, and finally plans for an exchange of heads of state.

Thus, it can be said with no exaggeration that Congress met and will adjourn in one of the most trying times in the history of the United States.

The international outlook for the Democratic-controlled Congress was not made felicitous by the Republican-controlled executive branch of the Government. Congress convened labeled by President Eisenhower, in his role as leader of the Republican Party, as being controlled by "political radicals, spendthrifts, and gloom-dogglers."

Bear in mind that when Congress convened, President Eisenhower, in his state of the Union message, promised "a sensible posture of defense against the growing might of the Soviet Union," and in the next breath he warned we must "guard against feverish building up of vast armaments." The observing public saw Congress placed publicly between the horns of the dilemma.

Congress was faced with the problem of meeting the Soviet menace, of placating the administration in its request for the highest budget in "peacetime," of grappling with a $9 billion interest on the national debt, of increasing the limit on the national debt, and of passing a Mutual Security Act. Domestic issues became secondary and/or dependent upon the cost of meeting the Soviet menace, balancing the budget and controlling inflation.

The entire policy of the Republican administration was in a state of fluctuation. A cooperative state of mind and action on the part of Democratic legislators was tried to the point of frustration. President Eisenhower requested legislation and then vetoed bills because they were too much or too little. Most of the bills passed to date have been cut below the President's recommendations.

A most astounding turnabout has been the long negotiations for exchange visits of Khrushchev and President Eisenhower. The same man who recently lamented the apathy of Americans in the face of the Soviet menace has invited the head of the Soviet regime to be a guest of the United States. This appears to many to be a colossal swallowing of principle, a betrayal of our civilization, a quashing of the loyalty we owe to American youths who perished at the hands of Soviet treachery, and a gross insult to the millions of once free men enslaved by that dictatorship.

Adherence to the absolute moral principles upon which our country was founded should dissuade us from conferring respectability and legitimacy to the dedicated enemy of free men and free institutions.

This action, preceded by the humiliation inflicted upon the Western representatives at Geneva, makes it more difficult to understand. President Eisenhower predicated a summit meeting on progress made at Geneva. What progress? The West did not bring up the question of the captive nations. East German observers were given equal status with the observers of West Germany which conferred de facto recognition of East Germany. What happened to the demand that the Berlin and Germany problems be considered as one? The West capitulated and conceded them as separate issues. What happened to the challenge of the blockade of Berlin? This has been shelved. The United States now speaks of "rights of access" after proving that the West had rights of occupation since 1945. Now we are practically conceding that the Soviet has rights to terminate this agreement.

The intended visit of the Soviet Premier is repugnant to me because no credence can be placed upon the word of a Mikoyan, a Kozlov, or a Khrushchev. The gain, if any, does not outweigh the loss of trust by our allies, the creation of more apathy and misinterpretation by Americans, causing a quasi-insecurity among free people everywhere, and the propaganda use this visit will be made of in Moscow and other capitals inimical to the U.S.S.R. All of this created confusion in Congress on legislation without positive leadership from the executive branch.

The reversal of policy and the confused and confusing pattern of weak executive leadership has, in effect, pulled the rug from under the Congress. Despite this background, I predict that the record of the 86th Congress, 1st session, will make history on the positive side of the ledger, thanks to a strong and dynamic democratic leadership.

Dr. Condon's Review of "The Great Decision"

EXTENSION OF REMARKS

OF

HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 26, 1959

Mr. PORTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a book review in Science for July 3, 1959, by Prof. E. U. Condon, department of physics, Washington University, St. Louis, Mo. He reviews "The Great Decision," which is subtitled "The Secret History of the Atomic Bomb," and which was written by Michael Amrine. It was published by Putnam's, New York, 1959:

This is a valuable and interestingly written contribution to a particular chapter of the history of atomic energy for military purposes. It begins with the afternoon of April 12, 1945, when Vice President Harry Truman was informed by Eleanor Roosevelt of the death of the President.

That evening Harry Truman was sworn in as President of the United States. Later there was a brief Cabinet meeting, and Secretary of War Henry L. Stimson lingered for a private word with the President. That was Truman's first official knowledge of the atomic bomb project, which at that moment had about 100,000 persons working in secret laboratories and factories. The great bulk of these persons were unaware of the overall objective of the factories in which they worked.

This was just 116 days before the whole character of war was changed by Americans when they dropped one atomic bomb on Hiroshima, Japan. This was followed 3 days later, August 9, 1945, by the dropping of another bomb on Nagasaki, Japan. During the afternoon of August 14, the Emperor of Japan announced his acceptance of the terms for ending the war contained in the Potsdam Declaration, and World War II was at an end.

Michael Amrine has given a brilliant synthesis of the peculiar circumstances of those less than 4 momentous months in history. He has searched carefully and told the story as well as anyone could in view of the fact that not all of the essential information has been made public. He is aware of the incompleteness of his narrative, for he says in the concluding chapter: "We look back, with troubling questions, at these events, which helped so much to set new limits and choices for man. Were the atomic bombings necessary for an early end to the Pacific war? Were the atomic bombs used in haste, without proper thought of the consequences?

"This book was written to help people answer these questions for themselves. There is also a hope that if the available record is set down, as far as it can be, other people who have not yet spoken may tell the full story of their participation. There are official records that should be opened now. Some contain no official secrets. Others contain technical secrets now outmoded. It is time for these records to be opened, but, so far, the doors have remained shut to journalists, historians, and sometimes to former officials, even to famous American officials who lived through these events. A nation, like a man, cannot fully understand its future if it does not understand some of the secrets of the past."

As we begin to appreciate the vastness of the consequences of atomic energy with its millionfold multiplication of war's horrors which now threaten humanity, one of the most important tasks of scholarship becomes the writing of a really definitive history of atomic energy. This is not a project to be undertaken by one or two men; it calls for the coordinated efforts of a major group of physical scientists, social scientists, and historians. These scholars should subject the stories of the various groups to searching critical analysis so that men may know what a great change atomic energy has worked in every facet of their lives.

My part of the project was finished by February 1945 and, in any case, since I was

never associated with it at a level that could influence policy, I have little first-hand knowledge of the story that Amrine gives us. But what I do know confirms the essential accuracy of the story as he tells it. It may be useful to point up some comments on the parts of the story which seem most significant.

A complete history would tell how the project was born in complete and equal cooperation between the United States and Great Britain. We did very little on the project between 1939 and the fall of 1941 while the British accomplished a great deal in spite of the distractions caused by the disaster at Dunkirk and the German's mass-bombing of English cities.

Our scientists were indecisive and ineffectual in this early period. It was mainly the push afforded by the British scientists which led to the organization of a major project in the late fall of 1941. At that time it was agreed that the British would shift their work to this country and that we and they would work together on the project as equal partners.

In 1942 Gen. Leslie Groves was put in charge of the project. The full story has not yet been told of how he worked to hobble and frustrate this cooperation. Amrine mentions it briefly. He tells how, by February 1943, Sir Winston Churchill's irritation reached such a point that he cabled Harry Hopkins the following message: "I should be very grateful for some news about this, as at present the American War Department is asking us to keep them informed of our experiments while refusing altogether any information about theirs."

By August 1943 this had become a major issue and was discussed at the Quebec Conference between Churchill and Roosevelt. After this it was no longer possible for Groves to frustrate cooperation with the British. It was not until that time—but it happened with great speed immediately thereafter—that a large, able group of the best British scientists came to the United States to help in every phase of the project at the many different laboratories and factories.

It was about this time that Churchill, feeling that the Americans under General Groves, were intent on squeezing out the British, made the somber decision to go it alone by setting up an independent effort at Chalk River, Canada. This conduct on our part which, in my judgment, was clearly aimed at hampering Britain's development of atomic energy for industrial purposes after the war, put a severe strain on Anglo-American cooperation.

Another topic that needs fuller exploration, as Amrine indicates, is the kind of specific detail about the bomb that was available to our policymakers at the time policy decisions on how to use the bomb were being made. Amrine tells us (p. 132) that General Groves, in a memorandum to Gen. George Marshall dated December 30, 1944, vastly underestimated the power of the bomb. He estimated the power of the bomb at only 500 tons of TNT, whereas it was actually 20,000 tons when used on Hiroshima. As Amrine says, our military planners "were only given reason to think it was a spectacular improvement in bombs, not another kind of warfare."

Now I know that General Groves did not know enough physics to make his own estimate, and I do not believe that anyone at Los Alamos would have made such a low estimate. How, then, could Groves have erred by a factor of 40? Could it have been intentional, so that the top policy planners would not be aware of the horribly serious nature of the decision they were taking?

It would have been quite easy to mislead the White House, especially since Admiral Leahy, the staff military adviser, who had had a long experience with explosives, long thought the project a gigantic boondoggle because "this bomb did not fit anything he knew about explosives" (p. 134).

Moreover, it would be natural for Leahy to discount the bomb because the thing, if a reality, horrified him. To use it, he believed, was to adopt "an ethical standard common to the barbarians of the Dark Ages. * * * I was not taught to make war in that fashion. * * * These new and terrible instruments of uncivilized warfare represent a modern type of barbarism not worthy of Christian men" (p. 170).

I believe that an erroneous view of the magnitude of their responsibility was planted in the minds of the Nation's leaders by the December 30, 1944, memo of General Groves, and that this erroneous view was not changed by the later brief coded messages. Truman learned of the Alamogordo test on July 17 by this message which was sent to him at the Potsdam Conference, "Babies satisfactorily born." This was certainly designed to minimize the seriousness of a new development of which the President had first become aware in sketchy outline just 3 busy months earlier.

At Potsdam it was decided that Truman should inform Stalin of the new weapon. We do not know exactly what he said when he did this. Truman has written (p. 187), "On July 24 I casually mentioned to Stalin that we had a new weapon of unusual destructive force. The Russian Premier showed no special interest."

But apparently, Truman had not used the key words "nuclear" or "atomic" and, perhaps because of the December 30, 1944, memo, may not have himself at that time fully realized the magnitude of the revolution in warfare that had occurred.

Amrine's account of this affair (p. 190) is fascinating: "No one at Potsdam had time to think much about the lack of reaction from Stalin to the news. Perhaps they thought that (like Admiral Leahy) Stalin found it hard to believe in these superweapons." But had he really been told of a superweapon? "Perhaps, like James Byrnes, he found it hard to understand scientific matters."

The book tells in detail of the sustained efforts of the scientists on the project to get our Government to give some kind of demonstration or warning to the Japanese before actually using the atomic bomb against them. It has often been said that the Potsdam Declaration met this minimal moral demand. But one may very well ask whether it really did so, when this is all that it said that might be so construed (p. 191): "We call upon the government of Japan to proclaim now the unconditional surrender of all Japanese armed forces, and to provide proper and adequate assurances of their good faith in such action. The alternative for Japan is prompt and utter destruction."

The last chapter, "Conscience and Questions," is a searching analysis of the troublesome questions that still perturb the thoughtful, about whether or not the bomb should have been used.

Because the entire attack on Hiroshima involved only three planes, the air-raid alarm was not sounded and people did not take shelter. Amrine writers: "That accidental happening cost the lives of tens of thousands of women and children who were not military targets and whom we had no intention of killing" (p. 229).

Amrine says that his "personal observation is that many Asians and Americans thought differently about Western man's supposed respect for human life. These bombs did not improve our reputation and win us allies in Asia" (p. 233).

It is a sad story, one that many would like to forget or, if possible, never to learn. But it only involved two bombs of the type, now called conventional, which we stockpile by the hundreds or thousands and recklessly issue to our ally, West Germany, where ex-Nazis get greater political power day by day. In the meantime hydrogen bombs, which are a thousand times more powerful than the obsolescent toys of World War II, are in the hands of Americans, British, and Russians, and the means to deliver them halfway around the world are being perfected by both sides.

Thus there is probably no exaggeration in the assertion by Congressman CHARLES O. PORTER, Democrat of Oregon, in his May newsletter to his constituents when he says: "Two very prominent authorities, one on disarmament and the other on science, stated in my presence the other day their belief that we would all be dead in 10 years and that the earth would be an incinerated relic."

There is no doubt whatever that the technical means of achieving such a goal do exist at the present. Amrine's story of a few months in 1945 gives one a foretaste of how this larger catastrophe may come about, and not as a result of a free choice by the peoples of the world.

Address by Maj. Gen. Rinaldo Van Brunt

EXTENSION OF REMARKS
OF
HON. HERMAN TOLL
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 26, 1959

Mr. TOLL. Mr. Speaker, on Saturday evening, August 15, 1959, I had the privilege of attending the reunion banquet of the 4th (Ivy) Infantry Division Association in the Benjamin Franklin Hotel, Philadelphia.

The guest speaker on this pleasant occasion was Maj. Gen. Rinaldo Van Brunt, deputy commander, Second U.S. Army. Because General Van Brunt's address was so timely and so well received, I am including it in the RECORD so that Members of Congress and other interested persons may have an opportunity to read it:

ADDRESS DELIVERED BY MAJOR GENERAL VAN BRUNT AT THE FOURTH DIVISION REUNION, AUGUST 15, 1959, AT THE BENJAMIN FRANKLIN HOTEL, PHILADELPHIA, PA.

It is a real pleasure for me to have the opportunity to address this 41st annual reunion of the 4th Infantry Division Association. I am particularly pleased to share this occasion with you because I am proud of the Ivy Division, which I had the privilege to command a few short years ago. I know, too, that you are proud of the division because you have come to Philadelphia from all parts of the country for this annual get-together.

To me, the spirit of this gathering represents the spirit that has been a stimulating influence in the division from the time it was first organized in 1917 at Camp Greene in North Carolina. Your division, and mine, has performed meritorious service in combat for our country in World War I and World War II, and it has a fine record as a fighting outfit. For the past 12 years, it has been performing an equally important service to the Nation, and it continues to perform that service today as an element of the Strategic Army Corps.

As an example, I would like to tell you a little of the division's accomplishments during 1955 and 1956. Division headquarters was located in Frankfurt and the regiments were spread out through Butzbach, Friedburg, and

Geinhausen. The engineer battalion was in Hanau, the tank battalion in Friedburg, and the artillery throughout the division sector. We had the job of manning an important sector of the 7th Army zone opposite the Fulda Gap, a critical avenue of approach from the east.

During this period our units distinguished themselves above all others in Germany through their esprit de corps which enabled them to succeed in every mission given them. The spirit of pride carried over into many fields.

Our division virtually walked away with top honors in every USAREUR sponsored athletic tournament. Our marksmanship teams led the list consistently and, gentlemen, this can only be attributed to an esprit which marks a division as a winner in peacetime or in war.

In the field of community relations, the regiments and battalions contributed much to the furthering of German-American friendship and cooperation which is so vitally important today in NATO. Each year at Christmas time, our units organized parties for orphanages where many hundreds of dollars were collected to buy German children gifts and food which otherwise could not have been provided to make the holiday memorable.

In times of civil disturbance such as is caused by fire or flood, the 4th Division was always prepared to aid a stricken community with engineer or medical assistance, and when it gyroscoped in 1956, the entire city of Frankfurt turned out to honor the Ivy Division. The mayor and his staff gave a reception and each unit was represented in a parade through the center of town.

You men who have experienced combat, and you men who are serving with the 4th Infantry Division, do not have to be told why the United States finds it necessary to maintain STRAC and the other Army Forces we have today. You know that the expansion of international communism is the principal threat to the peace of the world and to the national security of the United States. It is a threat that makes use of military strength to promote its political objectives, and it extends its influence over a large part of the globe.

We know that the Communist bloc, led by the Soviet Union, is willing to expend unlimited effort in men, money, and materials to maintain armed forces to support its objectives. These are the formidable forces that exist in the Soviet Union, in Red China, in North Korea and in some of the Communist satellite states. No less an authority than Gen. Maxwell D. Taylor, who retired as Army Chief of Staff just 6 weeks ago, has given us an idea of the development of the Communist military forces. In his final report, he pointed out that the Soviet Union has concentrated on improving its armed forces in the last few years. It has spent large sums of money to reequip its army with all types of modern weapons for ground combat. These weapons include a wide variety of atomic missile delivery systems and large tactical air armies. In addition, the Soviet Union has developed a substantial submarine fleet, and it has established a long-range bomber force that could possibly try an attack on the United States.

Furthermore, the Soviet Union has made major developments in intercontinental missiles, and it has acquired a significant stockpile of nuclear weapons. With this development, the Soviet Union has acquired a roughly equal atomic parity with the free world that could only result in destruction of both sides in case a general atomic war should break out. At the same time, the Communist bloc continues to follow its technique of military and political aggression to achieve limited objectives. All this adds up to a dynamic military threat that requires the free world to maintain armed forces as a deterrent to war.

The national policy for the deterrence of war has been fundamental in shaping the philosophy and actions of the Army. It is the Army's philosophy that our national deterrent forces operate at two integrated and concurrent levels of effort. One level of effort is directed at the deterrence of general atomic war. The other is intended to cope with the piecemeal type of aggression that could seriously affect our national position if it could not be successfully curtailed.

Those elements of the integrated deterrent to general war must have a range of capability that can make appropriate response to the nature of the threat. They must be so organized, equipped, trained, and deployed so that they can stand up under the first strike of an enemy and then strike back on centers of enemy power with a level of damage unacceptable to him. Of course, such a situation is not likely to occur except through miscalculation or blunder.

Those forces especially suited to deter limited war must be capable of rapid employment within a wide range of military operations. Such operations could vary in degree from small patrol actions to major combat operations of considerable duration and scope. These forces must have the ability for effective combat against limited war action before it can spread into a general atomic war. If deterrence should fail, despite all efforts, these forces must also be capable of reinforcing general war operations.

All the armed services have their respective roles and missions in this deterrent force. We have a powerful force which uses the strategic means of the Air Force and the Navy as visible evidence of our capability to destroy any aggressor who would start a general war. In turn, this striking force has a defensive counterpart in the air defense of the continental United States. Making up this defensive force are the interceptor aircraft of the Air Force and the Army's surface-to-air missile units with supplemental assistance from the Navy and our Canadian allies.

The third essential category of our deterrent forces is the land power we have deployed overseas. The Army is the principal element of this land power, which serves as a shield against Communist expansion on the ground. You all know that any enemy who wants to take control over free peoples will use his ground forces to move in and dominate the people. If we are to defend the free peoples, we, too, must have ground forces which can meet the aggressor's ground forces and defeat them. Their physical presence on the ground is much more effective than the threat of mass destruction weapons that may never be used.

In order to meet its responsibility in this area, the Army keeps forces deployed in strategic areas overseas. These forces serve a double purpose. They show our friends in the collective security system that we stand ready to assist them in defense against an aggressor. At the same time, our Army deployments overseas are a clear sign to any prospective enemies that we will hold firm against attack and that we will fight to keep the aggressor from seizing the land and the people we are obligated to defend.

At this point, I want to mention the splendid work being done by the Army for collective security aside from the Army's operational forces overseas. This is the work being done by our Army advisory groups and military missions in the 42 countries throughout the world. They are performing a vital service by helping our allies to develop their own military resources to the fullest extent. These Army groups and missions not only help the allied armies to expand their effectiveness, but they also make a contribution to a basic element of government stability in allied countries. Stable governments which have capable and well-equipped armies are not open to successful attack by such Communist techniques as subversion, infiltration, or revolution.

Our oversea forces must have strategic mobile reserves to back them up if they should be attacked or to move quickly to other areas of the world that may be threatened by Communist aggression. The Army element of these reserves is the Strategic Army Force in the United States. It consists of units which provide a base for expansion in case of mobilization and which also supply trained unit and group replacements to support the Army forces we have deployed overseas. The combat-ready striking force of this strategic mobile reserve is the Strategic Army Corps, which consists of the 4th Infantry Division and two other divisions together with some combat and administrative support units.

Backing up these forces are the civilian components which the Army trains as a source from which it can draw qualified units and individuals to meet general war requirements or to replace STRAC units that might be called overseas in an emergency. These requirements are met by the Army National Guard and the United States Army Reserve. The primary emphasis throughout the Reserve Program is to attain increasing standards of quality. Considerable progress has been made in this area during the past two years. A major step in this progress is the reorganization of the reserve components to the pentomic concept, which was started early this year. This reorganization gives the reserves the same divisional structure as the active Army, and it seeks to modernize nondivisional reserve units to meet possible mobilization requirements.

Finally, in the fifth category of our deterrent strength are the air and naval forces which must have the capability to keep the air and sea lanes open for deployment and support of the other categories of forces in the event of war.

What I have told you shows that modern military operations are not restricted to any particular element. Instead, our deterrent military operations are an integrated team effort which employs the special capabilities of each of the services. As a member of this team, the Army has the overall mission of providing forces for prompt, sustained combat on land in any type of war. It also has the mission to furnish surface-to-air missile defense of the United States and our forces overseas.

In order to perform its share of the military mission with proper effectiveness, the Army must be as modern in its functional area as the other services. It must have maximum effectiveness in the essential areas of firepower, mobility and communications. If it is to be fully effective in these functions, the Army must first of all have modern weapons and equipment.

The Army's firepower must be versatile and it must have the range of capabilities to deal with those of the enemy which may be directed against it. Army weapons are intended to be used selectively and with discrimination against all types of targets. Weapons ranging from small arms to tactical missiles have been developed which would provide the Army with the ability to meet any degree of force desired or necessary to meet various conditions. However, some have not yet been put in the hands of troops while others are being produced slowly because of funding problems.

The second essential characteristic of a modern Army is mobility, which derives from modern weapons and equipment. Mobility is necessary, both for the protection of our own installations, and for getting the best results from our firepower potential. This mobility is present in our Army weapons, which have the built-in ability to oper-

ate in the field without elaborate installations or launching sites. They are precision weapons which can employ firepower exactly appropriate to the need, and their mobility enables one unit to do the job of several units.

The modern Army's mobility has strategic and tactical aspects. In the area of tactical mobility, it has various types of aircraft which make up Army aviation. These are an important new development in ground force operations. In the past, land forces were limited in their freedom of action by the barriers of the terrain. Now, with the considerable development in Army aircraft, we can look forward to the time when mountains and rivers and terrain features will no longer be obstacles to the Army in the performance of its ground combat mission.

With modern firepower and mobility, we must also have modern communications. The increased ranges and effectiveness of firepower, combined with increased mobility, would involve wide tactical dispersion on any modern battlefield. Consequently, the great dispersion of tactical forces increases the requirement for efficient, reliable and extensive communications. The increased range capabilities of our weapons require that our communications be equal to the job of locating targets at the greater distances our weapons can reach.

In line with firepower, mobility and communications, the modern Army must have adequate logistical support. This is a problem which must be met under modern conditions of extensive tactical dispersion and the complexity of modern weapons. If the Army is to be fully modern and effective, it must meet the specialized requirements of materiel and personnel, and it must overcome the increased danger to logistic operations that can be expected from nuclear weapons.

I have covered the more important requirements of the modern Army, but there is also the most important requirement of personnel. We have all sorts of modern weapons from missiles and rockets to airborne guns and tanks, but they cannot be any more effective than the men who operate them. Man still is the indispensable element who must use these modern weapons and operate this equipment. It is man who must meet the enemy on the ground, defeat or destroy him and occupy his territory before the victory can be a reality.

We all know from history that there have been times when groups of determined, dedicated and well-trained forces have won victories over much larger and much better equipped armies. In the present time, man is just as important in warfare despite all the advances of the nuclear and space age. In fact, he is more important than he ever was before in the history of war because he must be more equal to the challenge of the weapons and equipment he is given to use.

Problems of training Army manpower have increased tremendously as weapons have become more complex and as nuclear-age warfare has revised tactical concepts. A major problem is to find and keep the manpower which has the skills and aptitudes to handle the weapons of the modern army. There is a great need for the development of small unit leaders who are needed to commend the type of units of modern warfare. The Army has made considerable progress in attracting, training and retaining the people on whom it must depend to discharge its responsibilities for national security. While the progress in this area has been gratifying, there must be continuing successful efforts to build and maintain a professional force, which is essential to a modern army.

While I stress the need for a highly trained professional force, I do not mean to overlook the need for Reserve component units to be so equipped, trained and organized that they can take their places side by side with Active Army units after only a minimum of additional training. I can say that our Reserve components, both the National Guard and the Army Reserve, are doing very well and that they have achieved the highest state of readiness they have ever had in our peacetime history. In this respect, the Reserves fulfill their mission in the modern concept of one army which is united in its effort to serve the Nation to the utmost.

In summary, I want to emphasize that land power is an indispensable element of our national military strength and that it is increasing in importance despite nuclear-age weapons development. I also want to repeat that, if the Army is to be fully effective in modern warfare, it must be fully modern in its weapons, its equipment, its organization, its doctrine and its outlook.

The Army depends on the efforts of our civilian leaders and our patriotic organizations throughout the country to support its objectives. Many of our civilian leaders and organizations are doing an excellent job in this regard. One of these organizations is the Association of the United States Army which speaks with a single, strong voice on behalf of the Army and its proper role in our national defense. Every citizen owes it to himself to promote the interests of the Army, and I can think of no better way in which he can do so than to add his voice to the thousands of other friends of the Army who have joined forces in the AUSA. Coming together here is strong evidence of your continuing interest in the Army and representing as you do, the entire country, it is appropriate that I urge you, upon return to your homes, to give the Army your support through active participation and membership in the AUSA.

The Army has achieved significant success in meeting its requirements as a modern Army. It is modern in its outlook and in its thinking. It is modern in its doctrine, in its tactics, and in its organization. It is forward-looking and diligent in preparing itself for whatever it may be called upon to do for the country. The Army faces the future fully determined to perform its service to the Nation with the competence and energy that its essential role in the national defense team demands from it.

World Congress

EXTENSION OF REMARKS
OF
HON. PETER W. RODINO, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 26, 1959

Mr. RODINO. Mr. Speaker, I would like to note the meeting of the second World Congress of the Sodalities of Our Lady which was recently held in the Archdiocese of Newark. It was a significant and historic event—for here many thousands gathered to reaffirm their faith and dedication to the highest principles of Christianity.

Delegates to the World Congress have come from all over the world, and many of them have fled from countries behind the Iron Curtain. Their meeting serves as a poignant reminder that all the peoples of the Christian world must constantly be alerted and aware of the Communist danger. We must not permit ourselves to be deluded by Mr. Khrushchev's Communist sophistry. It is a tribute to the great ability and leadership of the Episcopal host of the congress, Archbishop Thomas A. Boland, that it was marked with such acclaim and success.

I am privileged, Mr. Speaker, to insert the following editorial from the Newark Evening News in the Appendix of the RECORD:

WORLD CONGRESS

Catholic delegates from 24 countries, some of them exiles from behind the Iron Curtain, are gathered in the archdiocese of Newark for the second World Congress of the Sodalities of Our Lady, with Archbishop Thomas A. Boland as Episcopal host.

Theirs is a movement designed, in the words of Pope John XXIII, to hasten the inevitable victories of the King of Peace, victories which are to be achieved by striving together to excel in virtue.

The chosen means are the invocation of faith, hope, and charity, the giving of thanks for benefits received, the offering to God of the labors of the day, and the seeking of forgiveness for transgressions.

The universality of the movement is reflected in the faces and voices of the delegates. The Pope's message had to be recorded in five languages. In a world where strength is falsely measured by arms and material possessions, the congress speaks for the greater power of the spirit, that force with which even the most potent of dictatorships must ultimately reckon.

Poison in Your Water—No. 159

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 26, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the CONGRESSIONAL RECORD an article appearing in the Little Rock (Ark.) Democrat of March 21, 1959, entitled "Biggest, Worst Drainage Channel":

BIGGEST, WORST DRAINAGE CHANNEL

Dumping of raw sewage into the Arkansas River doesn't cause serious problems now, said G. T. Kellogg, chief sanitary engineer of the State health department, but he warned that sewage treatment will be necessary when the river is converted into a commercial waterway.

Then, from Catoosa near Tulsa, down to the Mississippi, the Arkansas will be a chain of lakes. Raw sewage discharged into the pools between locks and dams would create sanitation hazards.

With regard to waste disposal, the river now is the biggest and worst drainage channel in Arkansas. On the river in our State, only Mulberry, Russellville, Morrilton, and Conway already have sewage treatment plants, and Little Rock is building one.

It is incongruous that the papermills at Pine Bluff treat their waste before discharging it into the river, yet the city which has made great industrial gains and hopes for more, has not got around to treating its sewage.

Desiltation units of the U.S. Corps of Engineers projects for the comprehensive development of the river will clear up the stream. Clean looking water will make the stream more desirable for recreation.

High salt content keeps Arkansas River water from being suitable for irrigation and industrial purposes. However, the U.S. Pub-

lic Health Service regional office at Dallas is working on that problem, along with a similar one in the Red River basin, and the day may come when waters of these two streams can be made great assets to agriculture and industry.

A Memo on Mismanagement

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 11, 1959

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith a reprint from the August 1959 issue of Armed Forces Management entitled "A Memo on Mismanagement," written by Leland B. Kuhre, director:

A MEMO ON MISMANAGEMENT

To: Armed Forces Management.
From: Leland B. Kuhre, director, Academy of Organizational Science.

Your May 1959 issue reads to me like the bewildered confessional of an old craft admitting its shortcomings under the pressure of advancing new systems all around it. The articles on the mismanagement of time in the Army, the Navy's big reorganization debate, and the random flow of information in a naval ordnance test station—all tell the same story.

The ominous part is that such confessions continue to appear, unabashed, as they have appeared since the military was overtaken by the swift onrush of science, technology, and specialization after World War I. And the insidious thing is the fault-free attitude with which the confessions are made; they appear to have no chargeable responsibility because they are tacitly agreed to be "the nature of the beast."

Starting about the mid-19th century, craft has been steadily overtaken by system in all dynamic structures for using material energy. But, in collective human energy, the military is still using accumulated lore and the master-apprentice method of learning where the head of any collective is, ex officio, an acknowledged master craftsman. He often calls his maxims and proverbs principles even though each has its opposite; he calls his management scientific when the term is really limited to material-system accessories; and he calls his collectives organizations even though they do not contain the organic system which is implicit in the word.

The craft method for devising internal arrangements in a human effort collective has its earliest recorded model in Plato's 400 B.C. model, "one man writ large;" and this is still the craft model today in different words, such as, "it's all a matter of leadership" and "there are no bad companies, only bad company commanders."

Leadership has always been the military starting point for internal arrangement in a collective of people. Leadership is a personal, and therefore, an unknowable and unpredictable thing. Its metaphorical referent acts are four: the whip, the carrot on a stick, personal magnetism, and the palliative. Leadership builds a network of personal tensions that is the so-called structure of the collective.

The network's stability is of the moment, and it has existence only in the minds of the people caught in it. As new functions evolve, they attach themselves at points in the network by evolution, by force of circumstance, or by personal attraction. The so-called organization chart is formed with the rudimentary graphics of the craftsman, and it is limited to formalizing the authority of people over people. The chart cannot possibly, in its present stage, show how a network of personal tensions is supposed to work.

To try to systematize and control the flow of ideas in a network of personal tensions, and thereby really do something about the Army's self-confessed mismanagement of ideas—to do this has less chance of success than trying to systematize the flow of invisible electrons for a purpose in a spider's web.

Before internal-arrangement craftsmanship in collective human effort can become organizational engineering, and thus advance the military from dealing with the nature of the beast to dealing with system, we need a more solid starting point than leadership. We have to change the assumed relation of the force of personality to the force of impersonal ideas. We have to recognize the flow of ideas as the flow of energy which develops organizational power. Then, from a governing law of idea flow, the organizational engineer can design a stable dynamic structure as a purposive systematic whole; and ideas can be formed, dispatched, and transmitted to the point of application for developing needed organizational power.

In such a dynamic system, personality and personal relations become subordinate to impersonal ideas and are adjusted to them. The source of power in the system is, of course, the fully contributing, free mind of each and every individual—executive and administrative, managerial and supervisory, generalist and specialist, professional and scientific, clerical and artisan.

Shall we change a 4,000 years-of-record unbroken tradition of leadership as the thing about which the military revolves, and from which it is supposed to draw its power? Yes, a fundamental change, when man is capable of handling it, is a prerequisite for vitalizing a tired past into a fresh future; and we need, obviously, a burgeoning future progress to overtake the 50-year head start that technology already has over craftsmanship.

Let's answer that question with questions: Can we afford to continue with craftsmanship when the best it has done to date is to bring us to an almost 2-to-1 disadvantage with Russia in the time it takes for an idea to grow to actuality in research and development? If that isn't enough reason, can we afford the man-hours and the money it takes to indulge in the periodic and sweeping reorganizations that take place every 2 or 3 years in the Department of Defense, the Army, the Navy, and the Air Force? And if that still isn't enough, think of the loss due to the inefficient use of manpower, money and material that must go on for a long time before a situation gets so bad that only a drastic, sweeping, and expensive reorganization can palliate it, and then only for a few years.

The choice is clear: Continue with leadership and we continue with craftlore, craftsmanship, master-apprentice-learning, and the kind of structures we get when a craftsman is trying to build something he can't visualize. On the other hand, start with ideas as governing and we can have systematized knowledge, organizational engineering, applied-theory learning, and the kind of structures we get when the engineer designs the skyscraper that the master craftsman could not even visualize, much less build.

Inconceivable? No, I speak from experience. While in the Army I tried the change from leadership to idea flow as governing, and, with the help and participation of thousands of people, worked out the organizational engineering in the proving ground of actual organizations. For 13 years, the predicted results came true, time after time. It can be done.

Cardinal Cushing Alerts Yankee Division to Reds' Cold War Tactics

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 18, 1959

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include Cardinal Cushing's stirring address given at Camp Drum, N.Y., on August 16, 1959:

CARDINAL ALERTS YANKEE DIVISION TO REDS' COLD WAR TACTICS

During the past 75 years, warfare as we know it, has been revolutionized three separate times: First, by the machinegun, the trench, and the long-range artillery of World War I; second, by the 1,000-plane raid, the amphibious assault, and the armored spearhead of World War II; third, by the missiles, electronics, and nuclear weapons of today.

We are now embroiled in a third world war—although by past standards it is an unconventional, highly irregular, and undeclared type of war. It is called the cold war. In this unorthodox war, Reserve officers are on the forward edge of the battle area, while Regular officers, in a sense, are on the flanks.

SIX MEN

Because of six men, those trained in psychological warfare, or in any of the tactics of a cold war are on the frontline of defense; while many officers on full-time active duty are barred from some of the most violently contested sectors of the protracted conflict.

Thus the order of battle has been reversed. Who did it? Six men, none of them Americans.

Two Germans—Hitler and von Clausewitz; three Russians—Lenin, Stalin, and Khrushchev; and one Chinese—Mao Tse-tung.

Those six men have so revised the rules of warfare that a cold war can bring about victory whereas a war of bullets and bombs, thanks to scientific progress, could wipe out all the contestants.

Today, in the cold war that is worldwide in extent the masters of ideology, psychology, and every type of deceit are the shock troops in the only battles that may be fought in our lifetime. In the arena of economics, public opinion and the underground wars are now fought and won. If these wars are lost by citizen-soldiers, any shooting war will certainly be defaulted in advance to the enemy.

In the cold war the Communist leaders have forced us to believe that the traditional battlefield is only a small part of modern warfare. To them conflict between nations is not limited to an artillery duel, or a clash between naval vessels and aircraft. The struggle for power is waged in politics with propaganda, fifth column, intelligence agents, intrigue, spies and ideological stockpiles.

SPECIALISTS

From this arsenal the battle is three-quarters over when the guns begin to fire. The truly modern military genius must labor to break his opponent's will to resist, or fight, in advance of any formal declaration of war. Communists try to frighten freemen into inaction and divide all sectors of society into hostile, suspicious groups who cannot stand together.

The masters of the Khrushchev style of warfare cloak their own preparations for conquest in peace offensives or tempting offers to expand trade. They practice subversion and economic infiltration so subtly that honorable men have difficulty in recognizing these threats as aggression.

For the Communists, the front is everywhere; anything goes; whatever advances their cause is legitimate—whatever obstructs it is false. That's the thinking behind the visit of Khrushchev to the United States. He has desired to come here for a long time to further the cause to which he is dedicated. The moral of all this, my frends, is the necessity of thousands of specialists trained in the techniques and methods, the thought and ideology that goes by the name of the cold war. Every foreign visitor of any rank who has come or will come to this country from behind the Iron Curtain is a master of deceit. He is by long and thorough training the best equipped soldier for a warfare of words and treachery and anything else short of the firing of atomic weapons. Hundreds of thousands of Communists in Russia, in the captive nations, in Africa and Asia, everywhere are mastering all the tricks, some of them diabolical, for success in this type of warfare. Their teachers have the know-how. In the Korean war our soldiers were seemingly helpless under their varied form of brainwashing.

It is for that reason that I have been advocating the teaching of communism with a moral directive, and why I urge you to know not only the weapons of a shooting war, but also those of the war in which we are now engaged; the cold war. If we continue to lose this cold war we will lose our Nation. We will be so softened by this enemy of our civilization that their military weapons could find us an easy prey for conquest. The preservation of this Republic must be our ambition and the objective of those worthy of public office and trust.

It is for civil leaders, experts in every lawful phase of propaganda and international leadership to take the intiative in this cold war. For them our greatest weapon is the truth. But they have failed to spread it. Our propaganda programs have been ineffective to say the least. We have lost the initiative. We must attain it.

It is for me to urge you to aspire to moral and spiritual leadership by following the pathway of virtue marked by the Laws of God. The one thing feared by the Communists is Religion. Let me urge those of the Christian faith to duplicate in their lives the life of Christ. A Christian should be a follower of, a double for Christ. Live in accord with the teachings and the precepts of the Gospel. Rich and poor—capital and labor, each one of us must do that and become free men in a nation under God. Otherwise we shall inevitably become slaves in a totalitarian state. Not until we live what we believe about God and His laws shall we assume moral leadership; not until then shall we give the multitudes behind the Iron curtain the hope and courage that they will never get from our boasted material power and wealth.

Marx - Engels - Lenin - Stalin - Khrushchev have made the Communist Man. Christ and His Gospel have made saints; the only ones who have conquered the world and every false ism that ever blighted the world. If we follow Christ and His teaching we will create a revolution more fundamental, constructive, and extensive than Communists ever contemplated. Communism is a revolution trying to change man from a creature of God with dignity a little less than the angels to a creature of the state with the status of a slave. Christianity is a revolution capable of elevating man to the image of the Creator.

As we face the future it is Christ or chaos. Freedom under God or survival under a slave state. Capitalism must reform itself under a program of charity and justice. Communism must go. Every good system must take the road chartered by the laws of nature and of God. It may take 1,000 years to reach the desired goal but let us begin. Man is hundreds of thousands of years old. The Gospel is less than 2,000 years old. We are still in the sowing, the planting season. Let us sow the good seeds of jutice and fraternal charity and stop cultivating by our apathy, our ignorance, our lack of security laws, our cultural exchanges, our red carpet invitations to murderers and liars, the sowers of evil seeds that will result in a harvest capable of destroying this great country and civilization as we know it.

Interesting Angles on the New Ohio Fair Trade Act

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 26, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I insert into the Appendix of the CONGRESSIONAL RECORD a letter sent out by the American Fair Trade Council, Inc., questioning the constitutionality of the Harris fair trade bill, H.R. 1253. Some language in that communication, which is signed by Mr. John W. Anderson, reveals the very interesting fact that even stanch fair-traders question the constitutionality of H.R. 1253 in the following words:

Federal fair trade legislation as proposed in the Harris bill carries even more serious doubts as to its ability, if enacted, to withstand court tests as affecting intrastate transactions—comprising about 90 percent of all retail sales.

The letter follows:

INTERESTING ANGLES ON THE NEW OHIO FAIR TRADE ACT

AMERICAN FAIR TRADE COUNCIL, INC.,
Gary, Ind., August 18, 1959.

To All Members of and Contributors to American Fair Trade Council, Inc.:

Although the record indicates otherwise, some fair trade attorneys give hope that the new fair trade law in Ohio may be upheld when tested as to constitutionality by the courts of that State.

A new statute in Florida, with major substantive changes and a 7-point legislative "Findings of Fact," convinced fair-traders 10 years ago that the State supreme court's objections to previous fair trade legislation had been overcome. The Florida court considered the new statute—then reaffirmed its holding that fair trade legislation as applied to nonsigners was invalid.

Another part of the pattern was Georgia. After the State supreme court's ruling as to invalidity, fair-traders went back to the legislature and a new fair trade law was enacted—one that, in the opinion of most competent attorneys, answered each previous objection of the Georgia Supreme Court.

Hopes were short-lived. A quick court test followed and again the Georgia Supreme Court struck down the fair trade statute as applied to nonsigners. The Georgia Supreme Court said:

"It is argued that this court cannot hold the Georgia fair trade act unconstitutional without questioning the motives of the legislature and imputing dishonesty to that body. We reject this fallacious argument in its entirety. We simply disagree with the general assembly for the reasons pointed out in this opinion."

Obviously fair-traders should have believed Chief Justice Duckworth of the Georgia Supreme Court. When the Georgia fair trade act was held invalid the first time, Chief Justice Duckworth rendered a nonjudicial opinion to the newspapers in which he was quoted as saying that each time the legislature passes a fair trade law the Georgia Supreme Court will hold it unconstitutional.

Thus fair-traders have been left with partially or wholly invalid legislation in Arkansas, Colorado, Florida, Georgia, Indiana, Kansas, Kentucky, Louisiana, Michigan, Nebraska, New Mexico, Oregon, South Carolina, Utah, and West Virginia. No fair trade legislation has been enacted in Alaska, Missouri, Texas, Vermont, or the District of Columbia.

In the light of language used by State supreme courts in decisions adverse to fair trade, experienced fair trade lawyers say they believe amendments to State constitutions would be necessary to perpetuate the State-by-State contract system of fair trade. Such amendments are regarded as virtually impossible to achieve.

Federal fair trade legislation as proposed in the Harris bill carries even more serious doubts as to its ability, if enacted, to withstand court tests as affecting intrastate transactions—comprising about 90 percent of all retail sales. Therefore, recent strong shifts—to the quality stabilization concept—in congressional opinion become more and more understandable. Such shifts are evidenced by increasing congressional resistance to the Harris bill.

Reports indicate a growing conviction in Congress that enactment, perhaps in the next session, of a quality stabilization bill, based upon the Madden bill, H.R. 3187, would end, once and for all, costly failures of fair trade litigation and legislation—at both State and National levels.

The State-by-State fair trade system unquestionably has added great strength to our national economy since the enactment of the first State fair trade law in 1931. Except for the ability of leaders of a single industry to dictate, to their particular taste, faulty provisions in Federal legislation affecting fair trade—the institution of fair trade might have grown stronger instead of weaker—over the years—greatly to the benefit of resellers, labor, and the public.

Fair trade proponents in Ohio were undaunted by the case histories of Florida and Georgia. A new fair trade bill was passed by the Ohio Legislature, then vetoed by the Governor. The legislature then overrode—most convincingly—the Governor's veto. Leading the fight for the new legislation which becomes effective October 22d of this year was the Ohio Small Business Committee, a diversified group of resellers.

Some lawyers point to the Ohio constitution itself for hope that the story of Florida and Georgia will not be repeated in Ohio and that the new Ohio statute will survive court tests. They look to article XIII, section 2, particularly the last sentence, of the Ohio constitution, which reads:

"Corporations may be formed under general laws; but all such laws may, from time to time, be altered or repealed. Corporations may be classified and there may be conferred upon proper boards, commissions or officers, such supervisory and regulatory powers over their organization, business and issue and sale of stocks and securities, and over the business and sale of the stocks and securities of foreign corporations and joint stock companies in this State, as may be prescribed by law. Laws may be passed regulating the sale and conveyance of other personal property whether owned by a corporation, joint stock company or individual."

Perhaps the language of the Ohio constitution emphasized in the quote does give a glimmer of hope in that State. Even so, in view of fair-traders' experience in Florida

and Georgia, the situation in Ohio appears, at best, unique.

Cordially,

JNO. W. ANDERSON,
President.

P.S.—Enactment of quality stablization legislation by Congress, as provided in the Madden bill, H.R. 3187, would avoid all uncertainties as to the validity of State laws. Quality stabilization legislation would also avoid the grave uncertainties of a Federal Fair Trade Act based upon the Harris bill, H.R. 1253. Federal quality stabilization legislation, in the opinion of outstanding leaders of diversified industries, offers the only clear and permanent solution of the problem of price stabilization for top value trademarked quality products, not only for Ohio but also for all other States, including States now with disabled fair trade legislation and States with no fair trade legislation.

Hatred, Revenge Cannot Win

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, August 24, 1959

Mr. PORTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following communication with our enemies may not lead to peace—but lack of communication certainly cannot lead to peace.

Many of our colleagues and other citizens outside of Congress are deploring the President's exchange of visits with Khrushchev. They interpret this as softness either of the heart or the head or both. It is neither. It is commonsense.

This point is well made in an editorial "Hatred, Revenge Cannot Win," which appeared in the Oregon Journal, August 17, 1959, included here by unanimous consent previously granted:

HATRED, REVENGE CANNOT WIN

An elderly, white-haired gentleman of Polish extraction visited our office the other day.

His faded blue eyes could not hide the depth of his feeling against the Russian beasts who enslaved his fatherland and murdered countless numbers of his former countrymen and against Soviet Premier Nikita Khrushchev, the symbol of aggression and brutality.

In broken English, he related details of mistreatment and enslavement suffered by members of his own family.

Yet his manner was gentle, and his words did not speak of revenge. They appealed rather for some kind of settlement between East and West on the basis of peaceful negotiation. His purpose in coming, he said, was to ask us to write something in approval of the manner in which Vice President NIXON conducted himself in Russia and Poland, and he expressed hope that visits of this kind would have some real influence for good on the Russian people and Russian leadership.

While not overjoyed at the prospect of Khrushchev's visit to the United States, he nevertheless thinks the Soviet Premier ought to be shown common courtesies and ought not to be subjected to ugly incidents. He expressed the hope that Polish-Americans, whatever their feelings, would not create them.

His visit was followed by a telephone call from a man who had come to America from one of the Baltic States with vivid memories of the brutal crushing of those tiny nations. His tone was harsh and bitter. He spoke resentfully of NIXON's performance and of the plan to have "that murderer" Khrushchev come to America. He implied that U.S. leaders have lost their senses in even talking to that man. He hinted that the hatred which millions in this country feel for Khrushchev would find ugly expression when he comes here.

The bitterness which all these people hold is understandable. But if their hope for ultimate redress lies in the violent removal of the Russian oppressors from their fatherlands, they are on the wrong path, for in this kind of upheaval, the civilized world would be destroyed, and nobody would win.

To be willing to talk to the Russians is not to surrender to them or to accept as a permanent condition their occupation of the lands we have mentioned. U.S. policy is based on the hope that gradual changes will come within Russia itself which can lead to freedom for these peoples, not that perfect justice for all past wrongs can ever be won. In this most imperfect of worlds there is no such thing as perfect justice.

The elderly Polish gentleman has thought this matter through a little better than some of the others. Time and wisdom have given him a philosophy which tempers hatred and the thirst for revenge. These passions by themselves are poor answers in an age of nuclear weapons.

John A. Burns, of Hawaii, Great Statesman and Good Friend

SPEECH
OF
HON. HENRY S. REUSS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 20, 1959

Mr. REUSS. Mr. Speaker, our association with the Delegate from Hawaii over the years has been warm and pleasant, and it is with sadness that we bid him farewell. I have high hopes, however, that his absence from the Halls of Congress will be only temporary, and that we soon will welcome him back as a member of the legislative branch—the next time with a right to vote as well as to speak.

While JOHN BURNS served in this House as Delegate, he could not vote. Yet no man did more than JOHN BURNS to bring into reality those statehood dreams of Alaska and Hawaii. Had it not been for the energy, the dedication, the statesmanship, and the facing of political realities by JOHN BURNS, it is quite likely that neither the people of Hawaii or Alaska would now have gained their deserved status as first-class citizens of the United States. That the 48 States are now 50 will forever stand as a tribute to JOHN BURNS.

As I extend my warmest wishes and the best of good fortune to JOHN BURNS, I want also to welcome with all my heart the first Member of the House of Representatives from the State of Hawaii, DANIEL INOUYE. We know his great record of service to the United States and to Hawaii, and that he will continue this fine record in the House of Representatives.

America's Greatest Fishing Hole

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 11, 1959

Mr. EVINS. Mr. Speaker, Center Hill Lake, a Corps of Engineers reservoir, on the Cumberland River, in the district I have the honor to represent, has acquired a national reputation for the number and size of the fish it has yielded to fishermen from every part of the country. When, on occasions, I have mentioned some of the experiences of fishermen at Center Hill Lake, my remarks and fishing stories are sometimes suspect. As evidence of their truthfulness, however, I should like to call the attention of my colleagues to the article in This Week magazine for August 2, 1959, entitled, "America's Greatest Fishing Hole." This article points out that Center Hill fishermen do not need to lapse into the traditional exaggerations of angling—the article gives the literal truth about fishing in Tennessee. I ask unanimous consent to have this article inserted in the Appendix of the RECORD. The article follows:

AMERICA'S GREATEST FISHING HOLE—50 TONS OF FISH IN 30 DAYS—THAT'S NO FISH STORY

(By Robert G. Dundorfer)

CENTER HILL, TENN.—Not long ago a Tennessee doctor traveling through northern Wisconsin came upon a jubilant fisherman loaded down with a string of 2- and 3-pound bass. It was the sort of catch you like to talk about—with pictures. And yet the visiting physician was impressed not at all.

"Doesn't seem right to break up a family by hooking only the babies," he said. "Why, down home around Center Hill we use these little fellows for bait."

The doctor was kidding—but not much. He was talking about Center Hill Reservoir, a great sprawling Government waterway of 23,060 acres, puckered with draws, coves, and rocky inlets. It is the consensus of experts that this is America's greatest fishing hole.

DEEP-SEA FISHING IN A FRESH-WATER LAKE

As anyone who ever developed a backache pulling whoppers out of Center Hill knows, it comes by that reputation honestly. The deep-dredged Tennessee lake yields practically everything. Inventory figures show small-mouth, large-mouth, and spotted bass. The crappie, bluegill, sunfish, sauger, and walleyes are beyond any number, not to mention the muskellunge, brook, brown, and rainbow trout from the feeder streams.

Men, women, and children by the thousands fish the great bulge on the Caney Fork River with everything from flyrods to bows and arrows. What's more, the few hardy sports who bring out deep-sea tackle have just cause. The supply of giant catfish, red horse, carp, buffalo fish, alligator gar, sturgeon, and paddlefish produces an occasional 150-pounder.

Under the circumstances, it isn't surprising that visitors to Center Hill rarely lapse into the traditional exaggerations of angling. The literal truth is hard to improve upon.

Despite those awesome credentials, any number of America's 20 million fishermen have their own favorite spots. Dozens of prize-winning lunkers have come out of neighboring Dale Hollow Lake, the Eagle River country in Wisconsin, Maine's picturesque Rangeley Lakes, the White River

washing through the Missouri Ozarks—just to mention a few.

But with authorities who know dorsal fins best it's Center Hill by 2 to 1. "There isn't any doubt about it," says Tackle Manufacturer Billy Burns, dubbed America's best fisherman by several outdoor magazines. "Center Hill offers more big buster fish of different kinds than any lake in the country."

Bill Padgett, of Paris, Ky.; Shorty Groom, of Nashville; James Long, of Cincinnati; Bob Dykes, of suburban Chicago; and countless others echo that testimonial. Why shouldn't they? What other lake has yielded 50 tons of assorted game fish during an official 30-day audit?

ALL THE LAW ALLOWS

A skillful Carlisle, Ky., addict named Stanley Feeback recognizes the staggering potential of Center Hill. One afternoon last year he started casting a feathered 4-B pork-rind combination toward a rocky ledge along shore. He hadn't spun the reel long before the rod quivered furiously. Up boiled an angry bass, husky as a fullback, spraying water, walking on its tail, flashing in the sun. Moments later Feedback scooped his first fish into the net.

At dusk he returned to Hurricane Dock near Silver Point with 10 whopping bass, all the law allowed. But in spite of his enormous haul, Feeback wasn't happy. His grumpy irritation casts a revealing light on the bonanza at Center Hill. What upset him was the fact that his biggest fish didn't scale much more than 9 pounds.

Plainly, hippy old bass, the dimensions of a man's daydreams, are fairly easy to come by in Center Hill. Young Jim Sarvis, of Cincinnati, established a "believe it or not" of some sort in June of 1957 when he took 10 large bronzebacks in 35 minutes. And a dock owner, intrigued by volume, counted 621 bass between 7 and 11 pounds brought into his pier one season.

The glandular cases aren't confined only to bass. Succulent, sweet-tasting crappie and bluegill grow to outrageous sizes—2, sometimes even 2½ pounds. In Pine Creek and in the tailwaters below the hydroelectric dam anglers hook 5-pound rainbow trout without causing any public demonstrations. The walleyes average 8 pounds, topped by a magnificent 21¼ pounder, an American record at the time.

Catfish—well, it's like this: One misty morning in April, Bill Duke of Silver Point was hauling in his trotline, shucking catfish and bluegills off the hooks. All of a sudden a monstrous thrashing shook the line. For 30 minutes Duke and his partner tugged and strained before a vast flatheaded, whiskered fish turned in the water. Even Duke said the 103-pounder was a fairly respectable catfish.

The secret of all that size and plenty is easily explained. The deep, cold water simply offers an ideal combination of what fish need—good oxygen supplies at various depths, limitless quantities of plankton and soft, bony gizzard shad. Besides, little pollution or erosion muddies the waters at Center Hill.

THE FISH DIE OF OLD AGE

As yet the pressure of heavy year-round fishing and generous daily limits haven't had any effect. The fish are still there waiting to be caught. Just a few weeks ago an experienced Center Hill angler named Ben Wineoke, of Columbus, Ohio, hooked a 10-pound bass. What is the cause of all this plenty? It just seems to be that the fish keep right on breeding at a dizzy rate. After studying tables of harvest, a TVA ichthyologist remarked, "We are forced to conclude that most of the fish never sample an angler's lure, but die of old age."

Not enough of them die of old age as far as the resident wardens are concerned. While wardens in other parts of America get sore arms writing tickets for offenders who take undersized fish, the usual violations at Center Hill show an oddly different picture.

"Too many people get so excited they forget how to count, or so it seems," one young warden told me. "Then we have to go around and pick them up for exceeding the daily limits."

Progress Toward Weather Modification

EXTENSION OF REMARKS

OF

HON. B. F. SISK

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 26, 1959

Mr. SISK. Mr. Speaker, I recently had the honor of acting as moderator of a panel of outstanding scientists and experts who discussed "Weather Modification and Space Exploration" at the 46th annual convention of the National Rivers and Harbors Congress, meeting here in Washington.

I consider the information provided by the three speakers so important and timely that I would like to make summaries of their remarks more generally available.

One of these papers is presented herewith. It summarizes the address of Dr. Richard W. Porter, chairman of the technical panel of the earth satellite program for the International Geophysical Year.

Dr. Porter's summary follows:

INTRODUCTION

A first step toward the exploration of space has now been taken by mankind in the form of high altitude sounding rockets which carry his instruments well beyond the earth's atmosphere for brief periods of time, and earth satellites which can sustain instrumentation packages at distances all the way from the upper fringes of the ionosphere out to many times the earth's radius. One of the major scientific achievements during the International Geophysical Year, which could not have been accomplished without the use of rockets or satellites, was the discovery of the presence of intense zones of radiation in the vicinity of the earth which consist of rapidly moving charged particles, trapped in the earth's magnetic field. This type of radiation is sometimes referred to as Van Allen radiation after Dr. James Van Allen, of the State University of Iowa, under whose direction the instruments carried by the first U.S. satellite were designed and constructed, and who first provided the correct interpretation of the rather startling measurements transmitted back. Rocket and satellite experiments made during the International Geophysical Year also provided additional data concerning the meteoric dust which pours into the earth's atmosphere by the thousands of tons per year. They made possible significant refinements of our knowledge and understanding of the ionosphere and the fluctuations of the earth's magnetic field and especially of their relationship to the great solar disturbances which occurred frequently during the International Geophysical Year, and they contributed to a better understanding of the interrelation of all these effects with variations in the intensity of cosmic rays, best described as "stripped down," "hot rod" atomic nuclei that seemed to come mostly from the very deep reaches of space outside our galaxy.

A Russian satellite apparently demonstrated the ability of highly organized forms of life, such as a dog, to endure and function effectively for long periods of time without the normal acceleration of gravity. The rather crude space probes successfully launched by both the United States of America and the U.S.S.R. during this period proved our ability to escape the earth's gravitational field and yielded invaluable knowledge about the radiation environment and the magnetic field at greater distances from the earth.

Important though these results may be, the rocket and satellite experiments conducted during the international geophysical year are only a beginning. Plans for the next few years will carry the work much further, and it is difficult to talk about the decade ahead without sounding like science fiction. It is my intention today, however, to limit my remarks to the existing and potential use of earth satellites for scientific experiments in the fields of geodesy and meteorology.

GEODESY

Geodesy is primarily concerned with measuring the size and shape of the earth and deducing from these parameters some facts about the physical structure of the earth. One could theoretically achieve these objectives by carrying out a high precision survey connecting selected points all over the earth's surface. If it could actually be carried out, this process would result in a map of the earth's surface as a many faceted polygon, approximating a spherical figure. The points of the figure, of course, would not be at the same level.

The first complication of geodesy is introduced by this word "level." It implies the existence of a reference figure whose surface is all "at the same level," that is, one which is everywhere perpendicular to the combined force of gravity and the centrifugal force arising from the earth's rotation. Two prominent geodesists, Heiskenen and Meniesz in their book "The Earth and Its Gravity Field," divided the history of geodesy into three periods according to the shape of the reference figure in current use. The first period was the spherical era dating from around the third century BC. The second or ellipsoidal era began with Newton and merged finally with the third or geoidal era of this century.

The geoid is defined as the equipotential surface of the earth's gravitational field at sea level. It is a somewhat wavy or bumpy surface that approximates a mean ellipsoid, the deviation from it being not more than 50 meters upward or downward. For convenience, the location of the geoid is specified by its height above or below the ellipsoid as a function of spherical coordinates. Although the geoid is simple in concept, and although you can actually see it at the seashore, it is quite another matter to tell its actual location with respect to the ellipsoid, or any other standard coordinate system in midocean where there are no triangulation points, or to trace its position under the surface of continents.

Among the principal problems of geodesy to which the use of earth satellites can contribute are the following:

1. The tying together of widely separated geodetic datums.

2. Fixing of the various datums with respect to the gravitational center of the earth.

3. Determination of the shape and size of the earth.

4. Determination of the gravity field of the earth both broadly and in detail.

Perhaps the most straightforward way in which satellites may be used is as a moving triangulation point whose coordinates with respect to each separate geodetic datum may be observed more or less simultaneously. It should be noted perhaps that high alti-

tude rockets can also be used for this purpose, and also have a slight advantage in that they do not move so rapidly, with respect to the earth's surface. However, a single satellite may be used for many repeated observations, thus improving the precision of the observations to any desired extent, whereas the rocket can be used at best for only a small number of observations. A satellite can be observed and photographed against a star background during twilight periods, as was done during the IGY, or it can carry a suitably instrumented flashing light, as had been suggested by a number of people, which will aid in identifying corresponding observations and have the obvious additional advantage that it can be observed at any time during the night. The addition of some sort of precise radar ranging system would, of course, greatly strengthen the fixing of the three dimensional position of a satellite by methods which essentially amount to trilateration.

By an extension of these methods it should be possible to determine the displacement of the geoid from the reference ellipsoid at any desired spot on the earth's surface. This could be accomplished, at least theoretically, by determining the space coordinates of a ground station by precise observations, or back sights, of a satellite whose position is precisely known in a coordinate system defined by a minimum of three standard stations. If the field station is also connected by a geodetic net and precise leveling to the same three standard stations, then its known geodetic coordinates can be compared with its space coordinates to yield the desired transformation from the ellipsoid to the geoid. This procedure will, of course, demand observations of the highest possible accuracy inasmuch as the geoid height is only a few tens of meters at most.

One of the most effective ways in which an earth satellite can be used in geodesy is by careful observation of the perturbations of its orbit. If the effect of the earth's atmosphere can be eliminated, either by selecting an orbit far enough away from the earth to make the effects negligible or by applying appropriate corrections, and the gravitation influences of the sun, moon, and other planets are either corrected for or found to be negligible, it is possible to derive exact mathematical relationships between the motion of the satellite and the earth's gravitational field expressed in spherical harmonics. Thus by careful measurements of a satellite orbit, it is possible to determine the deviation of the geoid from a sphere. This procedure has actually been carried out using the tiny Vanguard test sphere known as 1958 Beta or Vanguard I. One of the startling results of this analysis is the discovery of a third zonal harmonic in the earth's gravitational field having an amplitude on the order of .0047 cm/sec². This gravity variation implies some 15 meters of undulation in the geoid, or mean sea level shape of the earth, in the form of a 15-meter rise at the North Pole, 15 meters of additional flattening at the South Pole and flattening on the order of 7½ meters in the middle latitudes of the Northern Hemisphere balanced by an equivalent bulging in the middle latitudes of the Southern Hemisphere. Thus the shape has been referred to in the newspapers as somewhat resembling that of a pear.

This finding is in conflict with the basic hypothesis of geodesy of Heiskenen and Meniess which assumes that the earth's gravitational field closely approximates that of a fluid in equilibrium and the deviation from such an ellipsoid may not exceed .0030 cm/sec² over an area 1,000 kilometers on a side, a number sometimes referred to as 30 milligals per square megameter. According to 1958 Beta, however, each of the polar areas has a deviation of about 120 milligals per square megameter and each of the equatorial belts deviate more than twice as great. Hence there must be a very substantial force acting on the surface of the earth which would create stresses down to the core of the earth, which implies that the core is solid rather than liquid, or alternatively requires the assumption of stresses in the crust and mantel beyond the mechanical strength this material is usually assumed to have. Another alternative explanation might be large-scale convection currents in the interior of the earth. In any case, I think you will agree that the geodetic value of this minimum satellite has been very great indeed.

METEOROLOGY

Meteorology is one of the more important branches of applied science. It involves the application of knowledge and understanding of the fluid dynamics, thermodynamics and chemistry of the earth's atmosphere to the prediction and eventual control of weather and the climate. The end result to most of us is, of course, weather analysis and forecasting. But progress in the accuracy, dependability and span of forecasts will depend on our ability to extend our knowledge and understanding of all of the processes which go on in the atmosphere. This will require scientific work of the most basic kind.

It might be well to remember that meteorological observations were first plotted on a map for the purpose of obtaining a synoptic picture of weather events only a little more than a century ago. These first weather charts covered an area of only a few thousand square miles. Although the charts were gradually expanded to cover many land areas and oceanic shipping routes, they still cover only a small portion of the earth's surface and until recently failed to depict what was happening above the surface except as it could be deduced from clouds and precipitation. The introduction of balloon-borne, radiosonde equipment has extended the upward reach of the meteorologist; however this marked upward thrust has not been accompanied by a similar expansion laterally into the vast island-free oceanic areas, except along principal airplane and shipping routes. Thus even today somewhat less than one-fifth of the total atmospheric mass is adequately probed by conventional meterological sounding techniques, so that large storms can reside undetected for days in oceanic areas, deserts, or polar regions.

With a proper distribution of meteorological satellites orbiting about the earth and looking downward at the cloud pattern, it should be possible to keep track of each major storm on earth, to note the birth of new storms, and the death of old ones. Furthermore, such cloud observations from satellites will be valuable in meteorological research after they have fulfilled their immediate function in forecasting. For example, they can be used to establish a truly global cloud census for the first time, and to prepare average charts of world cloud cover for studying long-time variations in amount and distribution. No less important will be the contribution of earth satellites to basic knowledge of atmospheric physics, for example, through the measurement of global distribution of net radiant energy absorbed and emitted by the earth-atmosphere system. The effects we know as weather result from winds that are attempting to equalize the nonuniform distribution of energy received from the sun or radiated back into space. It is highly important, therefore, to keep an accurate account of the global distribution of this basic radiant energy which drives the atmospheric heat engine. As our understanding of the way this engine operates is improved it may be possible to formulate a new system of long-range forecasting based on the availability of such information. For example, it is known that Poleward transport of excess energy from the Tropics can vary considerably. When meridianal energy flow persists it gives rise to prolonged spells of the same general weather type, such as fair weather, drought, floods, or storms, depending on the location of the stalled weather pattern with respect to a particular geographical region. Thus radiation balance measurements from a satellite, by enabling meteorologists to note the space and time variations in energy storage and transport, will provide an opportunity for a new quantitative approach to extended weather prediction.

Other types of satellite measurements of immediate importance in meteorology will include:

(a) Radiation measurements in the infrared spectral window in the vicinity of 8 to 11 microns (water vapor) to yield surface temperature and extent of nocturnal clouds.

(b) Measurements of water vapor emission in the 6 to 7 micron region to yield temperature of upper levels of the troposphere.

(c) Frequency of lightning discharges at various portions of the earth's surface.

(d) Radar measurements of precipitation, atmospheric turbidity, and the like, and

(e) Observation of unusual solar radiations, energetic particles, or meteoric dust from space which may be correlated with unusual weather behavior.

The very elementary meteorological satellites were included in our plans for the U.S. IGY satellite program. The first of these, actually launched on February 17, 1959, contained two infrared sensitive photocells looking out from opposite sides of the satellite at an angle of 45° with spin axis. The primary objective of this experiment was to record the distribution of cloud cover over the daylight portion of the sphere's orbit. It was expected that the spinning motion of the satellite would enable the field of view of each photocell to scan a narrow path from horizon to horizon on the earth below. As the satellite progressed in its orbit these paths were expected to be traced side by side in such a way that during one complete orbit the two photocells together would view a belt from 1,600 to 100 miles wide on the surface of the earth below. The output of the photocells was stored on magnetic tape in the satellite for a period equivalent to one complete orbit and telemetered in compressed form as the satellite passed over an interrogation station. A special device was constructed to translate this telemetered information into continuous strips of film which could be fitted together in the manner of an aerial photograph. Unfortunately, as a result of unanticipated dynamic effects associated with the separation of the satellite from the third stage booster rocket, the satellite acquired a motion drastically different from that expected. Thus, although the satellite went into the orbit successfully and telemetered data were recovered, it is now extremely difficult to derive meaningful cloud pictures from the recorded signals. Work is still progressing on this data reduction but it is not certain at present whether satisfactory results can be achieved.

The second IGY meteorological satellite is intended to measure the three significant components of radiant energy seen by the satellite, namely, the total radiation received from the sun, the radiation reflected from clouds and the earth's surface, and the energy which has been absorbed and reradiated as longwave length thermal energy from the earth and its atmosphere. These measurements are made by recording the temperatures of four small spheres placed at the ends of the four satellite antennas. Different coatings and radiation shields make it possible to determine the three components of radiant energy from these four temperature measurements with 1° of redundancy. This satellite should be launched by the NASA in the very near future. We hope for its success.

A third and post-IGY meteorological satellite known as Tiros will carry two television cameras and several infrared sensors in one

package. One of the cameras will cover a path of about 800 miles wide and several thousand miles long with a ground resolution of approximately 2.5 miles. Another camera with a smaller field of view will simultaneously photograph the centers of the larger photographs with a higher degree of resolution. The infrared sensors are designed to measure the infrared radiation from the earth, the total albedo of the earth, water vapor emission in the 6.3 micron belt, and temperature at the earth's surface or at the top of dense clouds by measurements in the water-vapor spectrum "window."

The ultimate meteorological satellite system might include as many as six polar satellites in circular orbits 4,000 miles high and oriented 60° apart. These satellites would be synchronized in such a way that three of them would be moving northward at the same time that the other three were moving southward on the opposite side of the earth. With such a system, no important cloud cover may remain unobserved for more than about 1 hour. In order to obtain more details of fine structure for identification of smaller weather systems, such as fronts, squall lines, thunderstorms or even winds (by tracking the motion of identifiable cloud elements), it might also be desirable to add one or more low-flying satellites at say 600 miles altitude in an equatorial orbit. One such satellite could observe the earth's surface along a belt 30° to 45° in width centered around the equator.

These are but a few examples of the new horizons in meteorology and in meteorological research which will be opened up by the availability of satellite data. The great flow of data which will pour forth from even a small number of satellites will pose many additional problems in communication, data reduction and interpretation, which have not yet received adequate attention. However, it is expected that the satellites themselves will contribute to the overcoming of our limitations in communication capability and the advent of high speed electronic digital computers are making possible the reduction of data in quantities and at speeds heretofore undreamed of.

CONCLUSION

It might well be asked why space vehicles should be used to study the Earth; one might expect perhaps that space research would more probably be directed toward the planets or the stars. However, at the present state of our technology it seems to be easier for us to send our instruments far out into space than it is to penetrate deep into the crust of the Earth. Therefore, if we want to learn more about the inside of the Earth, paradoxically, we must send our instruments out in a satellite in order to gain the synoptic information about the Earth's gravitational field from which we can deduce what we would like to know about the interior of the Earth. Furthermore it is apparent that the disturbances of the Earth's atmosphere which we call weather are caused by external effects, primarily the radiant energy from the Sun. What better means could we find for measuring these external effects on a synoptic basis than the Earth satellite? In fact, as we look more closely, it appears that most of the questions posed by space science affect the Earth and its inhabitants in an important way. A few such questions are: How old is the Earth, the Sun, the galaxy, the universe? How were they created? What is happening to them? Is there other life in the universe? How did life come into being? I think you will agree that scientific explorations into space, like those into the nucleus of the atom are not only of interest or concern to a few scientists, engineers, or military experts, but rather to all of us who live on Earth because they can so profoundly affect our lives and our thinking.

The Specific Issue at Stake in the Sullivan Amendment—Comment on Washington Post Editorial on Food Stamp Proposal

---

EXTENSION OF REMARKS
OF
HON. LEONOR K. SULLIVAN
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 26, 1959

Mrs. SULLIVAN. Mr. Speaker, the Washington Post carried an editorial today under the heading "Surpluses for the Hungry" discussing the food stamp amendment which I submitted here last Thursday to the Agricultural Trade Development and Assistance Act, known as Public Law 480, governing the disposal of surplus food here and overseas. While endorsing generally the idea of getting more of our huge surplus of farm produce to the needy in our own country, the Post raises some questions about my amendment which I am glad to try to answer, and which I think should be answered.

Otherwise, in view of the prestige of the Washington Post and its reputation for fairness, accuracy, and humanitarianism, many of the Members of the Congress who voted for my food stamp amendment last week may begin to wonder whether it was they rather than the editorial writer of the Post who misunderstood what it was we were voting for.

COMMITTEE REPORT COVERED ALL CRITICISMS

All of the reservations about the bill made in the editorial, particularly those quoting opponents on the Republican side, were, I thought, fully answered in the debate which preceded passage of the bill, as well as having been answered thoroughly, I thought, in the report of the House Committee on Agriculture on H.R. 1359, the bill which I added to the surplus disposal bill as an amendment. The committee views are stated in House Report 907.

Taking the statements in the editorial one by one in order, however, might be a good way to set the record straight. The editorial starts out as follows:

SURPLUSES FOR THE HUNGRY

It is easy to see why the House added to the surplus disposal bill the amendment by Congresswoman SULLIVAN authorizing the Secretary of Agriculture to set up a food-stamp plan for distribution of surplus commodities to needy families in this country. There is a strong sentiment in Congress behind the use of crops that bulge Government warehouses to help friends abroad. Along with this goes a general feeling that surplus food should also be going into empty stomachs in this country. So the House voted by a large majority to let the Secretary of Agriculture distribute such food, preferably through commercial channels, along with stamps that would entitle needy persons to obtain the food, up to the value of a billion dollars a year.

We think the general principle on which the House acted is unquestionably sound. So long as there are hungry people in the United States, surplus food held by the Government ought to be used to relieve them. It would be strange, indeed, to subsidize the shipment of unneeded farm crops abroad to relieve hunger and deny similar relief to American people. But that is not the specific issue at stake in the Sullivan amendment.

FOREIGN DONATIONS OF FOOD FAR EXCEED DOMESTIC

Mr. Speaker, I interrupt the editorial at that point to say that it is exactly that fact which is and was a specific issue at stake in the Sullivan amendment. We have spent over $5 billion since 1954 in gifts and "sales" of food to nations overseas whereas in the same 5-year period the total of all domestic donations of food—including the school lunch program and food given to State institutions, and so forth, as well as the total value of all food given to needy persons—has come to less than one-tenth of the value of the food given away or "sold" abroad.

I place the words "sales" and "sold" in quotation marks because, as we all know, foreign "sales" under title I of Public Law 480 are sales for foreign currency which is then given or lent back to the country "buying" the food.

To be scrupulously fair about donations as opposed to "sales," the record shows that the Federal Government spent $1,232,419,000 on outright donations of food to the peoples of other countries under title III of Public Law 480 in the 5-year period, and an additional $546,130,000 under title II—famine and similar emergency relief—and in the process we spent $100 million on ocean freight charges alone. This was to help feed the needy of other countries—a very worthwhile cause. But in that same period, of 5 years, we have given away only about $400 million worth of food to all recipients in this country—and the preponderant share of that went to the school lunch program.

In the 1958 fiscal year, $272 million worth of food was given to needy persons overseas, and $75 million was given to needy persons in this country, outside of the school lunch program. They received $76 million worth of surplus food. State institutions received another $33 million. Obviously, therefore, we have not done, and are not doing, enough to help our own needy, compared to what we are doing for those of other countries. The record shows it. This, therefore, was very definitely one of the specific issues at stake in the Sullivan amendment and one of the reasons why 232 Members of the House voted for it.

Now, to continue with the Washington Post editorial, Mr. Speaker, it said:

Representative LAIRD pointed out that 20 million school children and needy persons, in this country, are already benefiting from Federal surplus food. The Government packages food and ships it to the States free of charge, leaving the distribution to local agencies. According to Congresswoman MAY, the Sullivan amendment would do nothing more than relieve the States of the expense of distributing these surplus foods.

REACHING THE NEEDY ON PUBLIC ASSISTANCE

Mr. Speaker, to say that we do not need any expansion of the surplus food distribution program in this country because 20 million school children and needy persons are receiving some of the food now is to lump more than 14 million school children into the category of

"needy." This figure includes all the children now participating in the Federal school lunch program. Many of them are indeed from needy families. As the Washington Post's own Eve Edstrom pointed out in her series of articles on hungry children in the District of Columbia, a school lunch would be the only hot and nourishing food some children would get. But most school children participating in the school lunch program in the Washington area or in any other area of the country are not hungry children from substandard homes.

Furthermore, out of the 5 million or so needy people now receiving surplus food under the Department of Agriculture program now in effect, the preponderance are not people on public assistance, but are workers temporarily unemployed in the hard-hit distressed areas. They and their families need the help of this surplus food, that I do not dispute. But less than half of those receiving food are the people on public assistance for whom the food stamp plan is most necessary. Furthermore, the 2⅓ million people on public assistance who now receive surplus food, usually because they live in the distressed areas, make up only about one-third of the total of Americans on various forms of public assistance. As I pointed out in the debate, if you are on public assistance, you can be just as hungry in a city which has low unemployment as in one which has unemployment of a high enough level to justify the expenditure of large amounts of local funds for surplus food distribution.

LOCAL DISTRIBUTION COSTLY AND INEFFICIENT

The food stamp plan would not only save these huge and burdensome local costs—so high as to prevent about two-thirds of the Nation's counties from participating—but would also allow for a more orderly method of distributing the food through the stores, rather than on a once-a-month basis at some central depot. And the Federal Government, in utilizing the regular stores in this plan, could save many hundreds of thousands of dollars in packaging and processing and storing the commodities and shuttling these surplus foods around the country.

Primarily, however, we would get away from this grim spectacle of poor old people once a month being called to line up at a central depot for a great big package of dried and powdered food items for them to lug home however they can. A food stamp plan operating through the stores would permit them to obtain food items as needed, weekly or oftener, and in fresh rather than powdered form.

Mr. Speaker, the Washington Post editorial then adds:

One other factor has been emphasized by Secretary Benson. The Commodity Credit Corporation, he says, is not a giant supermarket. More than 85 percent of its surpluses consist of corn, cotton, wheat, rice, peanuts, and tobacco. Since the CCC could distribute only surplus crops, obviously it could not provide a well-rounded diet. It is not clear how much actually would be gained by a food stamp plan to make the products of a few surplus commodities available in commercial stores.

NOT JUST STORABLE BASIC COMMODITIES

I interrupt the editorial at this point, Mr. Speaker, to say that here the Washington Post has apparently completely misunderstood the purpose of the food stamp proposal and the suggested mechanics of such a plan. The committee report on H.R. 1359, House Report No. 907, went into this whole question in great detail. I included relevant excerpts from the House committee report as part of my remarks in the CONGRESSIONAL RECORD of August 20, prior to House passage of the bill.

Let me acknowledge that Mr. Benson does not want a food stamp plan, or any other plan for expanding the present food distribution program. He has said he does not want it because it would involve some additional expenditures. But on this point quoted by the Post editorial, he cannot be speaking of the food stamp plan contained in H.R. 1359 and agreed to by the House last week as part of Public Law 480. For under my amendment, not only storable items in surplus but all agricultural commodities, including the perishables, in periodic surplus and eligible for removal by use of section 32 funds, could be included in the food distribution. Right now, this could include, in addition to the cornmeal, flour, rice, and powdered milk now being given out, and the butter and cheese previously donated, such items as poultry, fresh—rather than powdered—eggs, pork products, fresh—(rather than powdered—milk, other dairy products, and any fresh vegetables in such temporary surplus as to depress the market. In other words, all of the items the Secretary can now legally donate to the school lunch program under section 32 or sell for foreign currencies under Public Law 480 could also be included in the food stamp plan.

He has limited his use of section 32 funds almost entirely to foods which can be used in the school lunch program. The farmer complains about this, pointing out that section 32 has much broader powers than that Members of Congress from areas now partipating in the surplus food distribution program also complain, pointing out that section 32 funds can be and should be used to provide a greater variety of surplus foods for the needy. Under the food stamp plan, the market for these additional items of surplus foods would be ready made. The need is certainly there from the standpoint of both the farmer and the needy.

Mr. Speaker, the Post editorial states in conclusion:

Probably the flow of these commodities into consumption by needy families ought to be stepped up. But there are substantial advantages in letting the States choose their own means of distributing help to their needy citizens. From the national point of view the important thing is making the food available—not a particular method of distribution.

In reply to that, Mr. Speaker, I might say that nearly all of the Senators who recently testified before the Senate Agriculture Committee on the surplus food disposal program in their areas made the point that adequate help is not getting to the people who need it most because of the deficiencies of the present distribution program. And they nearly all urged a food-stamp plan be adopted.

WASHINGTON POST DEMONSTRATED GENUINE CONCERN

The Washington Post has been an active and effective proponent of feeding our hungry in this country out of the great abundance of our harvests, and I want to make clear that in making these comments on the editorial which appeared today I am in no sense implying any lack of sympathy by the Post for the people who would benefit from a food stamp plan. The newspaper has proved its humanitarianism in many, many ways.

But I know the Post likes to present its case accurately, and in this instance I think it made a mistake in taking as its text for the editorial the casual and inaccurate statements of a Secretary of Agriculture who sees in this surplus food only a big storage and budgetary headache, not the blessing it could be in meeting poverty and want in our midst. His objections to the food-stamp plan were fully reported to the House Agriculture Committee. All of these issues were brought up in the hearings.

The report of the House committee fully explains why the Secretary's objections were rejected. I recommend to anyone interested in knowing both the good and bad things about the present distribution program and the good and bad of the proposed food stamp plan that he read the report of the House Agriculture Committee on H.R. 1359, House Report No. 907.

There is one big fault with the food-stamp bill as reported by the committee and as included as an amendment to Public Law 480. It is that it merely provides discretionary authority to the Secretary of Agriculture to initiate such a program. As I introduced the bill, it would have directed and required him to institute it.

Agriculture: The GOP's Most Expensive Failure

EXTENSION OF REMARKS
OF
HON. HARRIS B. McDOWELL, JR.
OF DELAWARE
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 26, 1959

Mr. McDOWELL. Mr. Speaker, for 6 years, Secretary of Agriculture Ezra Taft Benson has been saying that lower farm prices will discourage production of crops, eliminate inefficient farmers and leave the rest with a larger share of farm income, to the benefit of farmer and consumer alike.

Because I have come to the conclusion that some more realistic programs must be sought if we are to deal with the farm problem I am introducing today a resolution expressing the sense of the House of Representatives with respect to the reduction of Federal expenditures and calling on President Eisenhower to develop sound proposals for reducing subsidies to big business and big farmers by

25 percent and applying the resulting savings to reduction of the Federal income taxes.

One of the leading spokesmen for the Eisenhower administration, Senator CLIFFORD P. CASE, of New Jersey, in a recent speech to a group of Republican women, urged reform of the Nation's farm program which he termed "fantastic." According to the New York Times he asked:

How much longer will the American people tolerate a net expenditure of $4,500 million a year for an unfair and self-defeating farm program which constitutes a major obstacle to a balanced budget?

And, he added:

Only a quarter of American farmers benefit from this program. The average American family is beginning to realize, too, that it is hurt as a consumer of foodstuffs by our high price-support program.

Recently the distinguished Prof. Sumner H. Slichter of Harvard University, in a letter to the New York Times, suggested that we stop paying subsidies for farm products and use the savings to reduce taxes. He made the valid point that we are paying to subsidize the overproduction of wheat, cotton, corn, rice, and tobacco. The Government then takes the surpluses off the hands of the producers and stores them at a cost of about a billion dollars a year.

I include as part of my remarks the text of Professor Slichter's letter as well as some information compiled by the Democratic Digest of August 1959, which shows how the Republican farm program has failed, and how it has become the Republican's most expensive failure:

TO CURTAIL FARM SURPLUSES—ENDING SUBSIDIES WITH ECONOMIES USED TO CUT TAXES PROPOSED

TO the EDITOR OF THE NEW YORK TIMES:

Five of the most overproduced commodities in the United States are wheat, cotton, corn, rice, and tobacco. And yet we persist in paying large subsidies to keep up the overproduction of these goods.

The Government takes the surpluses off the hands of the producers and stores them at enormous expense—at the cost of about a billion dollars a year. So large are the accumulated surpluses that the problem of finding physical facilities in which to store them has become acute. And yet the payment of the huge subsidies to induce still more production of the overproduced commodities still goes on.

What should be done: It is obvious that the United States is losing an important opportunity to raise its standard of consumption. The amount of labor and capital now devoted to finance the production of surpluses could be devoted to increasing the supplies of goods that are scarce and that people would consume in larger quantities if the goods were produced and were available for consumption. How can this diversion of resources from producing unwanted wheat, corn, cotton, rice, and tobacco be brought about?

A simple way to accomplish the shift would be for the Government simply to stop paying subsidies and to use the money thus saved to cut taxes. Consumers would then decide how the released production power would be used because tax cuts would enable them to step up promptly the buying of a vast variety of goods.

The additional demand by consumers would pull workers and capital out of the wheat, cotton growing, corn, rice and tobacco industries into more productive uses. In order to mitigate the problems of transition it would probably be desirable to eliminate the subsidies by gradual steps over a period of about 4 years. In order to provide new sources of demand to pull resources out of the excessively expanded industries, the tax cuts should be timed to coincide or slightly precede the subsidy cuts.

But though tax cuts could provide alternative demand for that now supplied by subsidies, the Government would not need to use all of the savings from the termination of subsidies in this way. The country has enormous public needs. It needs more schools, low-cost housing, better roads, flood control, pollution control, more hospitals, more recreation areas with roads to them, its cities need much replanning and rebuilding.

Hence, the Government would be wise to divide the savings from terminating subsidies into two parts—one part going to individuals in the form of tax reductions, the other part going to the public in the many forms of public works that the country badly needs but cannot now afford.

AGRICULTURE: THE GOP'S MOST EXPENSIVE FAILURE—HOW THE REPUBLICAN FARM PROGRAM HAS FAILED

WHAT THEY PROMISED ON FARM INCOME

"The Republican Party will create conditions providing for farm prosperity and stability." (GOP platform, 1952.)

"I am for programs to put a firm foundation under farm prosperity and to strengthen the family farm as the mainstay of our agricultural production * * *." (Eisenhower, Columbia, S.C., Sept. 30, 1952.)

"The Republican Party is pledged to work for improved farm prices and farm income." (GOP platform, 1956.)

WHAT THEY PROMISED TO FARM INCOME

	1952 (millions)	1958 (millions)	Percent increase or decrease
Gross farm income	$37,016	$38,000	+2.6
Farm expenses	22,669	24,900	+10.0
Total net farm income	15,337	13,000	−15.5

N.B.—The $13.1 billion farm income in 1958 was $2.3 billion above 1957, $1 billion over 1956, and $1.6 billion above 1955. In the last 4 Benson years (1955–58), farmers' net income has averaged $11.9 billion, compared to the $14.15 billion average in President Truman's last 4 years—a decline of 19 percent.

WHAT THEY PROMISED ON FAMILY FARMS:

"We will seek that improvement boldly, in ways that protect the family farm." (GOP Platform, 1956.)

WHAT HAS HAPPENED TO FAMILY FARMS

	1952 (millions)	1958 (millions)	Percent decrease
Farms under the plow	5.4	4.7	−12.9
Farm population	24.2	20.8	−14.0

WHAT THEY PROMISED ON PRODUCTION

"Farmers increase production of a commodity when the demand for it is strong and just as logically they reduce the output when prices soften." (Ezra Taft Benson, Hearings, Senate Agriculture Committee, March 5, 1954.)

"Does a lowered price reduce production? The answer is 'Yes.'" (Benson, Hearings, Senate Agriculture Committee, February 17, 1955.)

WHAT HAS HAPPENED TO PRODUCTION

Farm output (1947–49=100):

1948	104
1949	101
1950	100
1951	103
1952	107
1953	108
1954	108
1955	112
1956	113
1957	113
1958	123

Source: Farm Output Index, Agricultural Marketing Service.

WHAT THEY PROMISED ON SURPLUSES

"This program [the soil bank] is a sound aid to removing the burdens of surpluses which Democratic programs placed on farmers. It is now moving into full operation" (GOP platform, 1956).

"What this administration has proposed is a direct and effective attack on the surpluses themselves * * *" (Benson, Chicago, March 6, 1956).

"Our major agricultural problem is now surpluses * * * we can lick this problem if we have the sound program the President has proposed" (Benson, Tucson, Ariz., April 4, 1956).

"We have passed the peak of our surplus accumulations * * *" (Benson, Fifth Annual Republican Women's Conference, April 2, 1957).

WHAT HAS HAPPENED TO SURPLUSES

The value of the inventory of the Commodity Credit Corporation has increased 5½ times between January 1, 1953 and January 1, 1959—from $1,053,429,000 to $5,448,400,000. It is estimated that 1960 will show another increase of about $3.6 billion (figures from CCC monthly reports).

"* * * there is no positive assurance that he [the farmer] will produce substantially less if price supports are sharply reduced" (Senator AIKEN, CONGRESSIONAL RECORD, May 13, 1959).

Amounts as well as values of surplus commodities have increased alarmingly, in spite of Mr. Benson's claims:

Commodity	Unit	Amount (thousands)		Percent increase	Value (thousands)		Percent increase
		January 1953	January 1959		January 1953	January 1959	
Wheat	Bushel	132,000	777,000	+588.6	$252,000	$2,192,000	+622.7
Corn	do	279,000	1,167,000	+418.2	447,000	2,037,319	+455.7
Cotton	Bale	236	1,582	+670.0	32,000	226,133	+706.6
Grain sorghum	Hundredweight	194	161,000	+82,969.6	882	407,700	+70,051.5

Source: CCC Commodity Stabilization Service.

The total cost of administering the price support program alone—the total CCC interest, administration, and other general costs—has increased from $34.6 million in fiscal 1952 to a staggering $364.9 million in fiscal 1958 (figures from Senate Agriculture Committee hearings, Feb. 16, 1959, p. 40).

"He [Benson] has not solved the problem of the surplus * * * The surpluses are getting larger despite decline in farm population and the decline in the number of farms under the plow" (Washington Post and Times Herald, Sept. 9, 1958).

"He chose the device of reducing the support price—the percentage of parity on which the loan is based. The idea was that it would discourage production and encourage consumption. It did neither * * * It did not discourage production because most farmers had no alternative but to keep on producing—in greater volume, if possible, because they got less return per bushel or per bale. The problem became, if anything, worse * * *" (New York Times, Aug. 24, 1958).

"Crop production in 1958 reached an all-tme high—11 percent larger than the previous record" (Crop Production, 1958 Annual Summary, USDA).

WHAT THEY PROMISED ON INCREASING USE OF FARM PRODUCTS

"To me, the answer to this problem suggests itself in letters of fire a mile high: Eliminate as rapidly as practicable ineffective controls and use price supports at levels that will preserve and build markets." (Benson, Senate Agriculture Committee, Feb. 16, 1959.)

WHAT HAS HAPPENED TO INCREASING USE OF FARM PRODUCTS

Civilian per capita food consumption (1947–49=110):

1951	98
1952	100
1958	101

Source: National Food Situation, July 1958.

WHAT THEY PROMISED ON CUTTING COSTS

We have streamlined the operations of the Department of Agriculture—have cut away much costly deadwood and inefficiency—through a major reorganization. (Benson, Boston, Nov. 20, 1953.)

WHAT HAS HAPPENED TO CUTTING COSTS

The number of employees at USDA has been increased from 67,406 as of December 31, 1952, to 85,543 as of January 1, 1959—an increase of 26.9 percent.

"Secretary of Agriculture Ezra Taft Benson seems destined to go down in history as the spendingest Secretary in the Department's history.

"A Library of Congress study shows that Agriculture Department appropriations from 1862 to 1931 totaled $2.4 billion. From 1932 to 1953 expenditures were $25.2 billion. Since Benson took over in 1953 net budget expenditures have reached $31 billion.

"In other words, the present Secretary has spent more than all his predecessors combined." (Washington Post and Times Herald, June 1, 1959.)

THE SQUEEZE IS ON FOR THE FARMER

Cost of farm necessities in bushels and pounds

Item	Cost in bushels of wheat		Cost in bushels of corn		Cost in pounds of cotton	
	1952	1958	1952	1958	1952	1958
Self-propelled combine, 12 foot	2,671.7	4,481.7	3,057.8	5,381.3	142.8	206.3
Power takeoff combine 5- to 6-foot cut	737.3	1,109.7	843.9	1,542.3	39.4	50.1
20- to 29-belt horsepower tractor	1,000.0	1,408.5	1,144.5	1,957.6	53.4	75.0
2-row tractor cultivator	127.7	192.0	146.2	266.9	6.8	10.2
½-ton truck	818.1	1,164.6	936.4	1,618.6	43.7	62.0
Wringer-type electric washer	66.6	87.1	76.3	121.1	3.5	4.6
4-burner gas stove	82.3	107.3	94.2	149.1	4.4	5.7

Source: Crops and Markets, 1953, USDA; Agricultural Prices, July 1958.

"The farmer cannot indefinitely accept higher cost and lower income at the same time." (Representative FRED MARSHALL, CONGRESSIONAL RECORD, May 18, 1959).

THE SQUEEZE IS ON FOR THE CONSUMER

"Consumer prices in U.S. cities rose 0.2 percent between March and April 1959, according to the U.S. Department of Labor's Bureau of Labor Statistics. Prices were higher for transportation, medical care, recreation, and personal care, due largely to advances in service rates. Commodity prices were unchanged on the average, despite a slight decline in food prices." (Consumer Price Index for April 1959.) "In short, food alone has kept the Consumer Price Index from leaping from peak to peak during this phase. If food is lifted out of a city family's market basket, the stability disappears." (Sylvia Porter, Washington Star, Apr. 29, 1959.)

"Only the fact that some surpluses are produced holds retail prices for foods as low as they are today." (Senator GEORGE AIKEN, CONGRESSIONAL RECORD, May 13, 1959.)

	1952	1958
Consumer Price Index on food	114.6	120.3
Parity ratio	100.0	85.0

"Retail food costs have risen 20 percent in the last 10 years, the House Agriculture Committee reported Monday, but the prices received by farmers have fallen 8 percent." (Associated Press, the Denver Post, June 1, 1959.)

Anti-Communist Confederation of Polish Freedom Fighters Voice Opposition to Khrushchev's Visit

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 18, 1959

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include two open letters directed to President Eisenhower by Mr. Jozef Mlot-Mroz, president of the Anti-Communist Confederation of Polish Freedom Fighters in the United States of America, 18 Boardman Street, Salem, Mass., in opposition to the Khrushchev visit:

OPEN LETTER TO THE PRESIDENT OF THE UNITED STATES

AUGUST 2, 1959.

DEAR MR. PRESIDENT: The bondage of the enslaved nations of central Europe is one of the reasons causing the international conflict and the real reason for failure of bringing about world peace. As long as the enslaved people will be forbidden to decide about their own fate, so long will last the great war tension in the world. Such was the opinion of the world and that of you Mr. President, just a few months ago.

Your statements on behalf of the enslaved nations at different times, especially your proclamation of the Week of the Captive Nations was an assurance that the miracle of obtaining freedom for these nations among which is found Poland must and should come from the West.

Unfortunately the news, radio, and television announcers for the past few days remark about the cordial invitation extended to Khrushchev to visit the United States. This invitation breaks up the hope of the Polish as well as other nations enslaved behind the Iron Curtain.

Just at the moment when the Polish people are preparing to celebrate the 20th anniversary of losing their freedom, when Khrushchev wishes to succeed in breaking up this feeling of hope, the eyes of Poland are turned at the United States of America with the hope that it will become their defender. To confirm this we see no better picture than the hearty welcome of Vice President NIXON in Poland.

That is why the visit of Mr. Khrushchev in the United States of America will be a vivid expression of breaking up the hopes of the people as well as the nail added to the coffin of Poland. The hearty handshake with the murderer Khrushchev, the smiles of both leaders will naturally break up the spirit and morale of the people of central Europe and certainly will rule out any American doing in obtaining their peace and freedom.

Therefore as the president of Anti-Communist Confederation of Polish Freedom Fighters in United States of America, I permit myself on behalf of the organization to ask you Mr. President not to invite Mr. Khrushchev to the United States of America.

We, the people of Poland, found in all parts of the world, betrayed Yalta, begrudged a native land, loyal to God and country, beg of you:

It is not proper and permissible to invite Mr. Khrushchev to the United States to break up the spirit and hope of the enslaved nations, to go into partnership with communism, the menace of the 20th century, it is not permissible to join in any work for the coexistence of communism.

It is therefore our duty to safeguard the enslaved nations and bring forth their day of freedom, we must bar the way of communism in their plans of possessing the entire world, embedding within them the communistic ideas, ideas which cripple and destroy the health of the nations.

Only on sound principles will grow up an idea of freedom among the enslaved nations and upon such principles will there evolve a stable world peace and once again will return the peace and happiness for which American people yearn.

These are our pleas which we send to the leaders of the American people.

We, the Polish people of America do not wish that Mr. Khrushchev be invited to the United States. If necessary I will give my life on the altar for the love and freedom of Poland.

Seven days before the arrival of Khrushchev to the United States and in defense of freedom I will go on strike of dry starva-

tion and continue it until I offer my life for my country and freedom.

With respect,

JOSEF MLOT-MROZ,
President, Anti-Communist Confederation of Polish Freedom Fighters in United States.

AUGUST 13, 1959.

SECOND OPEN LETTER TO THE PRESIDENT OF THE UNITED STATES

DEAR MR. PRESIDENT: The sun of freedom shines the same to all countries, and we must understand the meaning of this motto. There will be no peace at home where harm and misfortune is brought about to our neighbor and friend. Therefore, your friendly clasp with Khrushchev, the Poles may well compare to the Ribbentrop-Molotov pact of 1939, when symbols of communism, nazism, and fascism embedded itself in the hearts of Poland.

The President of the United States should consider that those who now are the enemies of God are also our enemies and therefore there should be talk or even thought of cooperation and unity.

The invitation of Khrushchev to the United States brought about an unfavorable reaction in Congress. The bill of Congressman LANE, who demands public opinion on inviting Khrushchev here, is the voice of a wise and intelligent politic as well as a defender of enslaved peoples.

President Eisenhower should be convinced and aware that communistic Khrushchev through his visit is trying to ease the tension and probably the carefulness of the American people and in this way build up a cradle of peace and bring about an initiative of communistic politics.

Through his visit Khrushchev is trying to lower the morale of the people as well as their desire of courage and firmness in opposition to communstic designs.

The psychological approach for many years taken step by step was a success for Krushchev, and the last resort an invitation to the communistic leader to visit the United States is the most unfortunate step in the career of the great fighter, leader, and politic, our President, Mr. Dwight D. Eisenhower.

President Eisenhower must remember that Khrushchev is a murderer who with cold blood sacrified the lives of millions of innocent people just to build up communism. To Khrushchev a human being is nothing more than an animal, a machine, less valuable than modern invented apparatus. Therefore this human being, machine, must be sacrificed for the victory of communistic ideas.

Khrushchev admits that there is no God, he laughs at our feelings and belief, he laughs at the American slogan "We trust in God." Just as Governor Harriman admitted Khrushchev is more dangerous than Stalin.

Khrushchev attempts to possess the world by epitaphs. The first being to force the West to admit the up-to-date communistic ideas of capture, thus to liquidate cold war. Second, to bring about communistic revolts in Asia, Africa, and Latin America. Third, the gradual overcome of Western Europe and complete preparation to rule the whole world. The fourth, to break down the carefulness and the morale of the American politics during his penetrations into the various countries, that is why Khrushchev so willingly accepts the American invitation.

The invitation is also a sign of our agreement to the continuation of the sufferings of the millions of people behind the Iron Curtain.

It is wrong to believe that the Kremlin has changed its tactics in reference to politics and that in the future it promises to live in accordance with the different pacts made. The Soviets only wish to have peace as mentioned by His Eminence Cardinal Cushing, a peace that will give them entire possession of the entire world, and each word of Khrushchev is only an empty phrase. Therefore, there can be no talk of real peace, without freedom granted to the enslaved nations.

O Misery, to this fire of enslavement behind the Iron Curtain President Eisenhower inviting Khrushchev added fuel, therefore further comments are fruitless.

Therefore I call to the conscience of all Americans: America awake, the Red Curtain enfolds you, and the fire of enslavement awaits thee, and you with your Ike dream only of your happiness and success and peace, dream only of clear skies and eternal fairness. Awake America, before it is too late. Khrushchev told you: "We will bury you." This threat can hold only one moral for us: Wake up America—facing Communist danger.

That is why President Eisenhower has no authority to invite and entertain Khrushchev and he cannot confer with him for as history teaches us every such conference is a victory for communism and defeat for freedom. This was affirmed by no one else but Khrushchev who stated that he places the victory of communism above freedom and peace. Khrushchev has the ability and slyness of a fox.

That is why in the name of the Polish people in this country and in all other countries I am not begging for grace or alms but for that what is just and ours. Poland is an alpha and omega of happenings in the world. Help Poland America it was betrayed by you. It is your duty. Helping the suffering nations you defend the future and success of your own country.

The kingdom of this world suffers now, and you wish entertain the greatest enemy of peace? Be ashamed America.

As protest I feel that I must use the only alternative left. As I have stated in my first letter to the President. Seven days before the arrival of Khrushchev I will go on a hunger strike and I will not break it even if I have to give my life on the altar as a sacrifice for the love of my country.

Even though some will consider this a foolish idea, that will not hinder any of my intentions. Only this way and in the face of opposition and foolishness my demonstration is a protest of the feelings of the enslaved nations and the sacrifice of my life is nothing compared to the sufferings of the millions of murdered and being murdered in the Communistic regime.

I place forth the call of all those who are still suffering in defense of their own country, for they cannot do so themselves. I speak on behalf of those murdered by the Communists, the Americans who gave their lives in Korea and those still alive in Communistic prisons. I belief in the justice of truth for which I will sacrifice everything even that what is the dearest wordly happiness, health and life.

My protest in the form of a hunger strike, let it be a verdict for Khrushchev and warning to America. My death on the altar of sacrifice for the love of country may it be an awakening of the Americans who in luxury and success forget the sufferings of others especially the enslaved nations among which is Poland.

With respect,

JOSEF MLOT-MROZ,
President, Anti-Communist Confederation of Polish Freedom Fighters in U.S.A.

The Costly Vegetable Pest

EXTENSION OF REMARKS
OF
HON. THOMAS F. JOHNSON
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 26, 1959

Mr. JOHNSON of Maryland. Mr. Speaker, under leave to extend my remarks, I would like to include an article published in the Vegetable Growers Messenger, edited by Mr. Max Chambers, Preston, Md.

Mr. Chambers is one of Maryland's most vigorous and articulate editors. I commend the article to the attention of all.

COSTLY VEGETABLE PEST

One of the biggest and most dangerous problems vegetable growers, and vegetable processors will have to contend with, until controls are found, or some more reasonable attitude is adopted by the U.S. Food and Drug Administration, is the tiny vinegar gnat, officially known as Drosophila (Drosahph-ill-ah).

The Drosophila is a tiny flylike insect which has a life cycle of about 8 days. It's the same little so-and-so that lights on your new paint as well as your peaches and apples and occasionally gets up your nose or in your throat.

During a mid-June game this year "Howie" Wilhelm, Baltimore Oriole baseball pitcher, had to stop the game for 16 minutes while umpires fanned and sprayed and finally set off a smoke bomb to get rid of pesky gnats which were swarming in the pitcher's box. Wilhelm is a right hot tomato with eight straight pitching victories.

No one wants to purposely or dangerously adulterate food. It is believed that a great majority of the food processors are anxious to pack a high quality product of which they can be proud. Even Dr. William V. Eisenberg, Chief Microanalyst of the Food and Drug Administration, USDA, Washington, has stated that there is no danger to the public health, welfare and safety, from the insignificant, and up to now, noncontrollable tiny vinegar gnat or its eggs.

Processed foods in cans and jars are automatically heat sterilized which kills any organisms that might accidentally get into the container.

Drosophila's favorite abode is in the crack or skin of a ripe tomato, cucumber and other vegetables. Yet the grape, peach, and wine people in California have much trouble with this pest whose eggs or fragments are difficult to discover without a microscope.

As far back as 1930 the University of Maryland (Dr. Lewis P. Dittman is a national authority) was trying to find a solution to this problem which many feel is highly exaggerated since no one has ever been reported to have been made ill by these microscopic parts, sometimes found in canned foods, no matter how carefully packed.

The Food and Drug Administration has been campaigning hard to keep waste material breeding places from accumulating in the vicinity of the processing plants. Most canneries now have screens but the size mesh screen that would keep out a vinegar gnat would also keep out the air and most of the light. Are the Food and Drug Administration demands leading to air-conditioned fields and processing plants, and the boiling and dehydration of all waste? Most processors feel there must be some better

way and they have high hopes of finding a solution that will give them peace of mind before the 1960 season.

Canners say the old and unintelligent rule of "guilt by association" started this whole problem in the Food and Drug Administration which erroneously thought (and it has been proved to them many times since that they are wrong) that the presence of fly eggs, maggots, and fragments was a positive indication of rotten fruit.

The most troublesome Drosophila month is September, when the swarming gnat invasion hits the East and Middle West. It's October in California. And a cantaloup field half a mile away from a cannery might be the worst breeding area.

It is believed that the problem is not so much one of insanitary conditions as it is one of an uncontrolled and so far uncontrollable insect.

The USDA Beltsville Plant Industry Station has done some research on Drosophila control but some believe the subject has not been allocated sufficient research funds to start a real program to swat this ornery little one.

The USDA 1958–59 budget for investigating Drosophila (which cost one canner $10,000) was a paltry $35,000. It is estimated that for 1959–60 research $100,000 allocation would be sufficient to get an intensive USDA program started to study the gnats' biological aspects (sex life), feeding habits, and reaction to insecticides. Some canners advocate a minimum of $200,000 to get the program into high gear, now.

This year the Government is spending an additional $2 million on fire ant control and $157.8 million on overall agricultural research.

The Food and Drug Administration's total enforcement budget for 1959 is $10,597,000. The President's budget request for FDA for 1960 is $11.8 million ,an increase of $1.2 million. And Congress could increase the allocation.

The National Canners Association has been actively engaged in attempting to find Drosophila controls for years. Dr. Charles Mahoney, states that some NCA investigators and its special committee feel the only sure way to control vinegar gnats is by insecticide spray treatment in the fields and around processing plants, but no spray yet tried will do the job. However, several agricultural chemicals are showing promise.

One NCA report states that the majority of gnat eggs are laid in ripe tomato cracks between the hours of 6 to 8 a.m. and from 4 to 6 p.m., during the dull light and low temperature periods. NCA is urging all canners to put into practice the best known field and plant control methods.

Vegetables processed the same day picked show much lower infestation. Harvested vegetables should not be allowed to remain in the fields overnight. Processing plant refuse dumped in fields should be spread thinly on the surface for rapid drying. All farm baskets, hauling and processing equipment inside and outside the plant should be carefully cleaned daily. Raw stock should be thoroughly culled and washed.

Since this insect does not have any effect on yield, or production in the field, many growers feel that this is a processing rather than a production problem. In several areas last year processing plants were forced to close down several weeks ahead of schedule because they wouldn't take the chance of handling tomatoes infested by the vinegar gnat, or tangling with the FDA. This caused heavy loss to the growers.

It appears that FDA hangs its authority and zealous enforcement attitude on sections 402 and 704 of the Federal Food, Drug and Cosmetic Act. Some inspectors are reported to be young and immature, some of them apparently having little acquaintance with vegetable processing.

FDA inspectors are required to leave written reports with processors, but it has been observed that some of their reports and recommendations have all the earmarks of trying to pick flyspecks out of pepper.

Most canners are reluctant to admit a brush with the FDA or to discuss complaints, or actions filed against them. They are scared to death of this Federal agency because they know it literally has the power to put them out of business, which certainly is not the intent of the congressional act and the opinion of at least one Federal court judge.

In every business there are a few who skirt the law and try to skin the public. For those no defense is intended here.

It has not been possible to get FDA Drosophila tolerances, though court cases indicate that FDA does show a fragmentation go-no-go allowance.

Several tomato canners are believed to have been financially hurt by recent FDA confiscation of 69,000 cases of several canned foods which inspectors said were adulterated with gnat eggs and fragments. Twelve thousand seven hundred cases were destroyed. November is top month for seizures, Pennsylvania leads seizures with 8; New Jersey, 4; New York, 4; 25 seizures were made in 14 plants in 18 months since January 1, 1958.

Federal courts, with two exceptions, have consistently upheld FDA inspectors in their charges. It is estimated that many vegetable canners and cucumber processors across the Nation have been heavily fined, or took the loss without contest (by default) feeling they had no chance to win.

There is reason to believe that most of the seizures and prosecutions have been in the eastern half of the country. This is depriving growers of markets for their vegetables and creating a scar condition.

Processors in several parts of the country who have felt the sting of the Federal court decisions and fines are reported hesitant about opening their plants for the 1959 season.

A caustic example is provided by the closing last year of one of the largest tomato products plants in the East. After spraying fields and plant and operating on short season basis trying to control the vinegar gnat and meet the rigid FDA requirements this national brand packer gave up. It was uneconomical to operate such a large plant on so short a season. A conservative estimate of the loss to the rural and urban community is $1 million a year.

It is interesting to observe that a processing plant spending $100,000 for raw stock also spends another $100,000 for labor and supplies, therefore, making its operation one of extreme economic importance to the agricultural as well as the urban community.

FDA is the government's guarantee to the American public and housewife that the products on the grocer's shelf are good for human consumption.

When an American housewife goes into a store to buy a can of spinach, or tomatoes she knows little about the quality of the product she is buying except to take the word of the canner. On July 1, 1927, Congress established the Food and Drug Administration for the purpose of administering the small group of statutes intended to secure freedom from adulteration, and to require truthful labeling of certain commodities.

Of all the FDA charges filed in the U.S. Federal courts against canners only two have been won, both since 1954, by Marion A. Hoy, a prominent Oak Park, Ill., attorney.

During one of Mr. Hoy's cases, defending an Indiana canner charged with Drosophila violation, in a Federal Court sitting at Chicago, Judge Honorable John P. Barnes said:

"This is not any light charge to make against a food processor. You (FDA) can put them out of business so quick it will make your head swim. I think you ought to keep that in mind. I think a warning (to canners) would have been all right, but I think you are insisting upon an impossibly high standard." "Take this last evidence that came in here. Take all the cases * * * 110. And the average got down to * * * 3.3 vinegar gnat eggs and on the maggots * * * 2. When you (FDA) look at that evidence you know we must be silly; you must not ask us (the court) to be silly. You must not ask me to destroy an industry and approve zeal which I think is misguided.

"And don't ask me to say that flies and maggots are not filth. I think they are, but it is said we all have to eat some dirt. Of course, we don't have to eat it all in tomatoes."

"I don't say these people (canners) should not have been warned; maybe they should be; maybe you (FDA) have to keep warning people (canners) in order to keep up to standard. But this kind of a case can break them, oh so easily."

Serious consequences could result from the growing practice of this kind of bureaucratic power. There is no such thing as a benevolent despot. And there is no denying the FDA is a tough adversary. One related industry observer and bitter critic suggested that Drosophila provides an almost perfect setting for bureaucratic operation and will continue until a more attractive subject is found.

One canner has asked if there is any reason why the FDA (or the Government) shouldn't reimburse a canner for damages which he has suffered because of legal action wrongfully brought against him by the FDA?

In some cases canners' merchandise has been held off the market for 2 years, all the while deteriorating. Canners have had expensive legal fees, gotten a bad name, had working capital tied up, which hampers the purchase of raw stock, factory operation and improvements and community economics.

Congressman THOMAS F. JOHNSON of Maryland (House Office Building, Washington, D.C.) is now actively engaged in investigating some of the actions of the FDA since several Maryland processors are reported to have been seriously handicapped by confiscation and "persecution" and fear of future citations.

Drosophila is an area in which growers and processors could well spend time discussing how to work with researchers and their Congressman, and then the FDA. Something can be done about it. Something has to be done about it.

The Maryland Congressman has suggested that the first step toward a permanent solution could well be a series of carefully planned and prepared high level conferences between canners, growers, and Congressmen. This should lead to constructive planning like a real research program and perhaps even an agreement, a moratorium period, effective until control measures can be discovered and put into practice, or a new crack-free gnat resistant tomato can be found.

Relief for canners, growers and communities from this total problem is long overdue.

Our Government does startling things. Here's a new challenge.

The call is for more research, less fear and pressure.

Appendix

Address by Hon. Lyndon B. Johnson, of Texas, to the National Convention of the American Legion, at Minneapolis

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE SENATE OF THE UNITED STATES

Thursday, August 27, 1959

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the very thoughtful and penetrating address delivered today by the capable majority leader of the U.S. Senate, the senior Senator from Texas [Mr. JOHNSON] before the national convention of the American Legion, in Minneapolis. I commend a reading of the address to my colleagues, and I urge that they give it their most serious consideration.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

KEEPING THE PEACE

Commander Moore, officers of the American Legion, delegates, and distinguished guests, I come to you today fresh from an inspection trip through the heart of America's counterattack forces—the SAC base in Omaha.

It is unfortunate that I cannot describe to you all that I saw. I cannot. There are considerations of military security. And, like most of you, I am not a professional military man. I am a "citizen soldier."

But there is one impression I carried away with me that is unmistakable. It is that I will stake the finest bull on my Texas ranch that the best Nikita Khrushchev has cannot match what I saw yesterday.

The heart of America's striking force is strong—because of organization, men, and determination.

I wish I could say—in good conscience—that everything in America could be described in these terms. The unfortunate fact is that there are many fields in which we must "catch up"—a term that is unfamiliar with most of our people.

STRENGTH OF UNITY

But there is something even stronger than SAC itself. It is the unity and the will of the American people themselves. And that is why I am here to visit with you today.

The American Legion is held together by a commond bond. Comrades all, we have shared in the experience of wearing our country's uniform.

I put on that uniform and went to the Pacific. That was in 1941 when, because we were not sufficiently prepared for an attack, we were taking a heartbreaking beating that—if I can help it—will never happen again.

The Legion is composed of men who did not stop serving their country when they took off their uniforms and put on civilian clothes. You realized that freedom—up to this point—has never been won by a single struggle.

And to that end, you banded together 40 years ago in memory of past comradeship and in anticipation of serve to come.

In the intervening years, you have welded together the unity and purpose of your Legion members and the inspiration and aid of the fine women of the Legion auxiliary.

The caliber and stature of your commanders—past, present, and, I am confident, in the future—exemplify the Legion itself.

A VOICE FOR A STRONG AMERICA

Men such as Comdr. Preston Moore are, have been, and will be an effective voice for a strong America. They have worked for a strong America. And they have worked for a strong Legion. Victory and success are their hallmarks. History will record the full accounting of their achievements.

In this connection, I'm happy to recall the majority support given by the U.S. Senate to the Kerr amendment to the Veterans Pension Act—for which I voted and which was strongly backed by the American Legion.

I am here today largely because of Preston Moore. He thought—and I knew—that I could learn something by this visit. It is our opportunity to exchange views on the most important issue before our people—the survival of freedom in this country.

Although both you and I have a direct interest in our Nation's defenses, I am not here to talk about military preparedness today.

It seems to me that there is another kind of strength which must be considered by Americans. And that is the moral and spiritual strength of our form of government and our order of society.

THE MAJOR ISSUE

All of us know the major issue in our world today: It is whether societies of freemen can maintain themselves. Such societies are faced by the greatest threat to Western civilization since John Sobieski raised the seige at Vienna and Charles Martel crushed the Saracens at Tours.

America is confronted by a brutal power, a totalitarian power, a supremely confident power whose chief spokesman boasts openly that my grandchildren—and your grandchildren—will be Communists. And this same chief of government brags openly that missiles can be delivered on this Midwest city from submarines in Hudson Bay.

If that Hudson Bay threat was intended to scare this Minneapolis Legion meeting, I suggest it was a mistake. Someone fed the brainwashing computer the wrong card.

Within a few weeks the present chief of communism—Nikita Khrushchev—will visit our shores. He will be the official guest of the President of the United States—and in the field of foreign relations that means the American people.

THE BEST INTERESTS

There have been strong expressions of concern and doubt about the wisdom of this invitation. There are those who feel that Mr. Khrushchev's visit is simply an elaborate facade for a two-man summit conference—which has been his publicly expressed goal since he attained power. Mr. Khrushchev's planned itinerary certainly does nothing to dispel this feeling.

But at this point, the wisdom of the invitation is academic. Khrushchev will be here. The issue remaining is whether we conduct ourselves in such a way as to serve the best interests of America.

On this, we must—and shall—stand behind our President.

Personally, I have no fears that Mr. Khrushchev can contaminate the American people. We can take in stride the best brainwashing he can offer, Marxist propaganda, threats of economic competition, limited war in the Far East, subversion in Latin America, submarines in Hudson Bay—or any other fine points of Soviet diplomacy.

In our lifetime, we have been through three wars, depressions and the ravages of cold war. Americans have been hardened to the realities of this world.

Our problem is how to see to it that Khrushchev will have a true picture of our country, a true picture of our people—and a true picture of our purpose.

PRISONERS OF HOPE

I hope that can happen. Because if it does happen that way, Nikita Khrushchev will return to the Soviet Union with his eyes wide open—and we will gain. We will gain because this Nation hs no fear of the truth.

Within the satellite nations are millions of people, most of them prisoners of hope. And that hope must be sustained until the day of freedom becomes for them an actuality.

Mr. Khrushchev has objected to the resolution of the U.S. Congress concerning captive nations. In my opinion, the biggest captive nation in the world today, next to Communist China, is represented in the brainwashed people of Russia. And I strongly suspect that, included among the captives is the ruling class of the Soviets—that keep the rest of the people captive. For we tend to forget that a slave state puts shackles on its masters as well as its subjects. Those who rule are in turn ruled by the channels of information which are open to them.

It is doubtful whether a man in Mr. Khrushchev's position can have a true picture of the United States.

He may know about our military strength. He may know about our economic power. But there are many other things he can learn only by coming to our country and talking to our people.

UNITED DETERMINATION

I want him to know about America's willingness to fight for its freedoms.

I want him to know about America's united determination to preserve our independence.

And I want the Russian people to know about America's desire for peace—the Russian Army which fought so bravely as our ally in World War II; the Russian scholars, such as the Pasternaks and the brilliant Russian scientists; the ordinary Russian people who want, rather than an armaments race, only a few of the everyday consumer goods shown at the U.S. exhibit in Moscow. These are the ones who must ultimately feel the pulse and the heartbeat of America's deep desire for peace.

There are, of course, dangers in this visit to which we must be alert. But I believe our country can withstand exposure to those dangers. Americans are kindhearted; but they are not softheaded.

THE MARKED DECK

It would be tragic if we fell into the illusion that Mr. Khrushchev is coming here with a deal that would mean peace with honor or peace in our time. Because another man—a kindly, good man—once suffered that illusion, you and I had to spend many years in uniform defending our country and millions of people died.

Of course, Khrushchev would like to make a deal. Every dictator would like to make a deal—with a marked deck.

He would probably like to divide the world into two spheres of influence—with a nice, big slice marked out for the Soviet Union.

But the American people are not going to make such deal. We do not believe in a world divided into spheres of influence. We believe in a world in which the people have freedom of choice.

And so long as there is a Soviet sphere of influence which includes Hungary, Poland, East Germany and other satellites, no one can say that this is a world of free choice.

It would be tragic if we suffered from the delusion that Mr. Khrushchev can be charmed into changing his course. I do not know whether he would be amused or insulted by such a suggestion.

I do know that any Soviet official who has survived the Communist blood purges of the past 25 years is not to be beguiled like a schoolchild.

THE GREATEST TRAGEDY

But the greatest tragedy would follow if we came to the conclusion that this visit meant a thaw in the cold war. This is the delusion that could lead us into letting down our guard.

I believe in visits between the American and the Soviet peoples. I am a firm advocate of talking instead of fighting—where possible.

But I think the advice given to our ancestors to "keep your powder dry" was good advice—and applies with especial force today.

We should meet Khrushchev or any other Soviet official in good faith. We should listen to any proposals that are made. We should not permit Communist bad faith or Communist bad temper to tempt us into bad faith or bad temper.

But we should, we must, remember that a few kind words will not release Berlin. A few kind words will not free Hungary. A few kind words will not unite Germany. And smiles and quips—however pleasant—will not bring us the peace we desire nor change Khrushchev's determination to bury us.

The day of true peace can and must arrive. We have devised weapons of such fantastic destructive power that we must either live together or perish together.

That realization will come eventually to the Communists—as it has come to our people already.

THE JOB AHEAD

Until that day arrives, however, we cannot relax America's strength.

We must maintain adequate strategic striking power.

We must maintain adequate capacity to fight limited wars when they are forced upon us in remote corners of the globe.

And we must continue to help other people to remain free.

We do not ask other nations to come under our rule. We ask only that they remain independent.

But no nation will remain independent if we permit the balance of military power to shift to the Soviets. We cannot afford to be second best—even in weapons which we pray we never have to use.

This is the one field in which "second best" means last—and lost.

MAINTENANCE OF STRENGTH

We need not only be sure that we have adequate deterrent power to avoid nuclear war. We must also be sure that we have effective deterrent power against limited war—which might easily become a nuclear war. And this requires that we maintain our Army, Navy, Marine Corps, and Air Force in such strength that we can land at Beirut if we have to land at Beirut; that we can patrol the Straits of Formosa if we have to patrol the Straits of Formosa; that we can keep the NATO shield intact; that we can deny enemy control of our sea lanes by submarines whether in Hudson Bay or the Caribbean, or on the convoy route to our oversea bases and oversea allies.

We do not live, merely to build weapons. There must be more to life than that.

The day must come when even the most fanatical Communist yields to the pressure for peace. And there are roads to that goal.

There have been a number of Soviet officials parading through our country during the past few months. They have made visits which have been reciprocated.

CRACKS IN THE IRON CURTAIN

Little has been gained from these visits in terms of specific proposals to relax tensions of the cold war. But much may have been gained in opening chinks through the Iron Curtain.

This is the direction in which true peace lies. If Khrushchev can visit the United States, it will be difficult to persuade other Soviet citizens that they cannot visit also.

And at every turn, we should confront Khrushchev and his fellow Communists with a demand to break through the Iron Curtain and let in the light.

We should beset the Soviets at every turn with demands to bring the Russian people the facts about us that have been kept from them. They may respond, if they wish, by presenting their propaganda to Americans.

RAYS OF TRUTH

In a land like ours where speech is free, our citizens are armed against propaganda. But in a nation where the ruling group controls not only speech but thought itself, a few rays of truth are devastating.

We are a people of basic beliefs.

We are a people of basic desires.

For our children we desire a better life than we have lived.

We believe in our country. We believe in our form of Government. We fought for it before and we will fight for it again, if necessary.

We will talk and we are prepared to negotiate, for we are a reasonable people.

But we will not talk surrender. We will not negotiate away freedom—for ourselves or others, now or ever. We never have; we never will.

This has been true of America's past.

It holds true today and forever.

These are the truths for which our forefathers died. Trusting in God and keeping our powder dry, these are the truths by which our children and grandchildren shall live.

Statement on Death of Elizabeth A. Smart

EXTENSION OF REMARKS

OF

HON. MARGARET CHASE SMITH

OF MAINE

IN THE SENATE OF THE UNITED STATES

Thursday, August 27, 1959

Mrs. SMITH. Mr. President, a few days ago death came to a good friend of mine—Elizabeth Allen Smart—the very effective and respected legislative agent of the National Temperance and Prohibition Council.

Dr. Charles X. Hutchinson, Jr., president of this fine organization, so capably summarized the story of Elizabeth Allen Smart in the statement which he issued to the members and friends of the national council that I believe his statement should be printed in the Appendix of the RECORD.

I ask unanimous consent that his statement be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT ON THE DEATH OF ELIZABETH A. SMART

To the members and friends of the national council, the notable career of Elizabeth Allen Smart came to a quiet end on August 16 at the Washington Sanitarium. The victim of cancer, she had battled for almost a year to win her fight with the disease. Immediately following the 1958 convention of the National Woman's Christian Temperance Union held in Washington, she entered the hospital with no idea of her precarious condition. She lingered between life and death for several weeks, and with great courage and infinite patience won her way back to partial health. Returning to her apartment, she took up her work with surprising energy in spite of her apparent weakness. After a period of weeks, she recognized that her condition was deteriorating, and made her plans to return to the hospital. She did not go until Bishop Hammaker had gone to his summer home and Mrs. Hutchinson and I had sailed for Europe. She did not want to give us any uneasiness. We found a beautiful bouquet from her in our stateroom when we boarded the *Queen Elizabeth*, and did not know that she had reentered the hospital that very day. On our return, there was only time for a few precious conversations with her at her bedside. Her strength was gone and she spoke in a whisper. She awaited in faith her blessed release.

Elizabeth Smart was the daughter of the parsonage. Her father, the Reverend John Gardiner Smart, was a minister of the Dutch Reformed Church in Schoharie, N.Y., when she was born. She attended Smith College, graduated cum laude, and was elected to Phi Beta Kappa. She decided to enter the law and matriculated in the New York University Law School. She was admitted to the New York State bar in 1915 and was a practicing attorney in that State. Her special interest at that time was in "Business Law" which was the title of a book of which she was coauthor. She became interested in journalism as the medium through which public opinion is molded and motivated and launched a career as editor, and publisher, and later owner, of the oldest weekly in New York State, the Washington County Post of Cambridge, N. Y. In law and in journalism her concern was the direction in which our society was drifting, and she supported every movement for moral and social betterment. It was during that period that the conviction crystallized that beverage alcohol was at the root of most of our social ills, and from that time Elizabeth Smart's name became synonymous with temperance reform.

In 1940 Elizabeth Smart came to Capitol Hill as the director of legislation for the National Woman's Christian Temperance Union. Her legal and journalistic background had prepared her for her public relations task as she made her approaches to

the Members of the Congress in behalf of pending moral and social, particularly temperance, legislation. She looked upon herself as the voice of the thousands of women in her organization. She had a sense of calling that few, if any, lobbyists have ever had. Her penetrating mind and judicious temper won the respect and confidence of congressional leaders. She was far removed from the doctrinaire reformer. She had an understanding of the difficulties of the legislative process in a democracy. She used her power to persuasion in urging the Members of Congress to move in the direction she was convinced we had to go for the sake of the moral health of the Nation. She kept her constituents informed as to what was happening in Congress through her Washington Letter in every issue of the Union Signal, the national journal of the WCTU. She never wearied. She was always patient. She took her defeats in her stride as temporary setbacks. She lived and died in the faith that her cause would ultimately triumph because it is right.

Elizabeth Smart was related to many organizations including the League of Women Voters, the General Federation of Women's Clubs, the American Bar Association, the National League of American Pen Women, and the American Academy of Political and Social Science. Her most active interest apart from the WCTU was given to our National Temperance and Prohibition Council which includes 23 organizations working in the field of temperance reform. She was the secretary for many years, and was chairman of the legislative committee at the time of her death. She has been the key person in our organization for so long that her passing is almost an irreparable loss.

Above all and through all, Elizabeth Smart was a good woman. No finer or truer thing could be said. During the years we worked together my regard for a gallant lady grew, and my affection deepened. For she was great as a person. We shall miss her sadly, but we shall carry on in her faith that "Though the wrong seem oft so strong, God is the Ruler yet."

The value of the life and work of Elizabeth Smart during her many years on Capitol Hill is suggested in the tributes of many Members of the Congress. I close with a few of the testimonies.

"It was my privilege to know Miss Elizabeth Smart personally. I had frequent conferences with her and was greatly impressed with her dedication to the cause of temperance. For nearly 20 years she faithfully and consistently served as director of legislation in the National WCTU and never failed to advance its purposes at every opportunity. She was courteous, intelligent, considerate, and of unimpeachable character. Her memory will live long in the minds of those who knew her as a fine Christian woman, devoted to a righteous cause."—Senator HARRY F. BYRD, Virginia.

"It was with great sadness that I learned of the passing of Miss Smart. She and I have worked together ever since I have been in the Senate, and I have had the highest regard for her. The cause of temperance has lost a great champion, and Miss Smart will be sorely missed by all those who felt as she did." (Senator WILLIAM LANGER, North Dakota.)

"I knew Miss Smart personally and talked with her on numerous occasions regarding her work. I found her to be most energetic in urging legislation which she considered to be of great benefit to our young people particularly, and the country in general. She will be greatly missed, and it will seem unusual here not seeing her testify before congressional committees on matters of moral and social importance." (Senator FRANCIS CASE, South Dakota.)

"May I express my deep regret of the passing of Elizabeth Smart. She was not only one of the most effective legislative agents in Washington, but she was a good friend of mine. It was a pleasure to work with her on the most worthy objectives she championed. She was intelligent, reasonable, and cooperative. I shall miss her." (Senator MARGARET CHASE SMITH, Maine.)

"It was with much regret that I learned of the passing of Miss Elizabeth A. Smart, and I paid my respects at the funeral home because of the high esteem in which I held her. Miss Smart was a fine Christian lady who rendered an outstanding service. I had the pleasure of working with her in our efforts to win passage of my airline safety bill and the Langer antiliquor advertising bill. She was a very able and diligent worker for the cause of protecting the public against the evils of alcohol. She will be missed on Capitol Hill and by all those she so ably served throughout the country." (Senator STROM THURMOND, South Carolina.)

"I was greatly shocked and saddened when I learned of the passing of Miss Elizabeth A. Smart. Miss Smart was a welcome visitor to my office during my entire service in Congress. She had a most gracious personality, and was able to present her cause in a convincing and effective manner. The passing of Miss Smart is an irreparable loss to the temperance movement, and she will be sadly missed by her many friends on Capitol Hill. It was indeed a great privilege to have had her as a friend, and my life is richer because of our acquaintance." (Congressman J. EDGAR CHENOWETH, Third District, Colorado.)

"No exponent of a worthy cause in Washington, during the entire quartercentury of my experience here, has done so much—so quietly and effectively—as Elizabeth Smart. Her devotion to the cause in which her faith never wavered was equaled by an acumen and balanced judgment that never failed to amaze even those who had learned to know how effectively she worked. She lived her beliefs, as well as preached them. When she came into an office, she put fresh vigor and higher level in the whole day's work. I shall miss her sorely; her judgment, her dedication, and most of all, her personal friendship." (Congresswoman MARGUERITE STITT CHURCH, 13th District, Illinois.)

"I was deeply distressed at the passing of Miss Elizabeth A. Smart for whom I had a high regard. I am placing your statement concerning her in the CONGRESSIONAL RECORD today (August 21)." (Congressman EDWARD H. REES, Fourth District, Kansas.)

"Miss Elizabeth A. Smart was a woman of great usefulness and capacity and she will certainly be missed by her friends and all those who came in contact with her. She was zealous and relentless in pursuing the cause of temperance, and yet she was never hostile or vindictive. Certainly she was one of God's great women and we will miss her and her good counsel and effective efforts in the great cause of temperance in the days ahead." (Congressman EUGENE SILER, Eighth District, Kentucky.)

Funeral services for Miss Smart were held in Washington on Wednesday morning, August 19. Bishop Wilbur E. Hammaker was in charge as Miss Smart had requested. He was assisted by Mrs. T. Roy Jarrett representing the National WCTU and the writer. Interment was in Cambridge, N.Y.

ADDENDUM

The following tribute to Miss Smart appeared in the CONGRESSIONAL RECORD of August 25, 1959:

"I doubt if I ever met an advocate of a cause who was more fair, more understanding or more gentle and kindly than Miss Elizabeth A. Smart of the WCTU, who died last week of cancer. Miss Smart was an educated woman of infinite patience, who represented the temperance movement with dignity, integrity, and fairness. She was never intolerant or antagonistic of those who disagreed with her. She never threatened, bullied, or attempted belligerence. A person of brilliance, she made no effort to display her learning ostentatiously. * * * She rarely touted her own prowess. I counted her as my friend. * * * Members of the WCTU are fortunate, indeed, to have been represented in our Capital for nearly two decades by this woman of refinement, education, and compassionate motives. All who knew her will continue to honor and respect her memory. Miss Elizabeth A. Smart was a remarkable and gifted person." (SENATOR RICHARD L. NEUBERGER, Oregon.)

Restoration of UNICEF's Tax Exemption Status

EXTENSION OF REMARKS

OF

HON. EUGENE J. McCARTHY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Thursday, August 27, 1959

Mr. McCARTHY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement containing information relative to the restoration of the tax exempt status of the United Nations Children's Fund, a status which has been denied by a recent ruling of the Internal Revenue Service.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

BILLS TO RESTORE UNICEF'S TAX EXEMPTION STATUS

PURPOSE OF THE BILLS

On July 23, 1959, Senators JAVITS and DOUGLAS introduced S. 2426 which was referred to the Senate Committee on Finance. Two identical bills have been introduced in the House (H.R. 8355 by Mr. LINDSAY and H.R. 8583 by Mr. METCALF). The House bills are before the Ways and Means Committee of which Mr. METCALF is a member. These bills would restore to UNICEF donations the same classification they held prior to January 1, 1959. The bills provide that contributions by individuals and private groups in the United States made directly to UNICEF shall receive the same Federal tax exempt status now accorded donations to charitable organizations operating in the United States.

BACKGROUND OF TAX LEGISLATIVE HISTORY

The need for legislation proposed in these bills has grown out of the following developments. On February 6, 1959, Mr. Dana Latham, Commissioner of Internal Revenue, notified UNICEF that contributions made to or for UNICEF are not deductible under the provisions of section 170 of the 1954 code. Bequests, legacies, devises or transfers to or for UNICEF are likewise not deductible for U.S. estate tax purposes as provided by sections 2055 and 2106 of the 1954 code. Gifts of property are also not deductible in computing taxable gifts for the U.S. gift tax purposes as provided in section 2522 of the 1954 code.

This ruling reversed the original interpretation of UNICEF's tax status as established July 10, 1947, by Internal Revenue, a ruling made shortly after UNICEF was created (in

December 1946). At this time contributions made to UNICEF were determined to be deductible by donors in arriving at their taxable net income in the manner and to the extent provided by section 23 (o) and (q) of the Internal Revenue Code as amended. Bequests, legacies, devises or transfers to or for UNICEF were deductible in arriving at the value of the net estate of a decedent for estate tax purposes in the manner and to the extent provided in sections 812 (d) and 861 (a) (3) of the code. Gifts of property were likewise provided for in section 1004 (a) (2) (B) and 1004 (b) (2) and (3) of the code.

The reversal of the ruling concerning UNICEF's status for tax exemption purposes comes as a result of the decision that the United Nations Children's Fund is an integral part of the United Nations itself which was designated as a public international organization under the International Organizations Immunities Act (Public Law 291, 79th Cong.) and therefore its tax status must be determined under such act. Internal Revenue concluded from its analysis of this act that UNICEF was exempt from income tax under section 892 rather than section 501 (c) (3) of the code of 1939 which made no provisions for the deductibility by donors of contributions made to public international organizations. (This code was amended by Public Law 7, 80th Cong., to allow deductions for contributions or gifts to the United Nations during the period from January 1, 1947 to December 1, 1947, but only if used exclusively for acquisition of a headquarters site in New York City. The 1954 code contains no provisions similar to those added to the 1939 code by Public Law 7.)

Mention should be made of the fact that the provisions of the Revenue Code affecting UNICEF have not changed since the establisment of the Children's Fund, nor have the functions and operations of the Children's Fund changed in any fundamental respect.

AMOUNT OF MONEY INVOLVED

From the Treasury's point of view, the amount of money involved in contributions to UNICEF, whether the taxes are collected or not, is too small to have any effect on the Federal budget. From UNICEF's point of view, however, the importance of the contributions is twofold:

1. They afford an important, even though relatively small, source of income;

2. More important than the matter of actual financial support, such gifts represent evidence of effective voluntary participation by private citizens. UNICEF has made possible a broad program of aid by which over 100 countries have been able to provide food, medicine, and disease-destroying chemicals to benefit over 50 million children and nursing or pregnant mothers. This humane program has undoubtedly saved the lives of countless children. To remove this sense of direct participation by American citizens in such a program by the deliberate handicap of withdrawing tax deductibility of contributions to it would be a serious mistake in public policy. By its leadership in encouraging nations to learn to help themselves, UNICEF offers charity in the broadest and most enlightened sense of the word.

Since January 1, 1959, when the Internal Revenue ruling took effect, the report for the first 6 months of this year indicates that donations to UNICEF have dropped by more than 30 percent below the figures for contributions for the first 6 months of 1958. Although governments are the principal support of UNICEF, the continuation of individual participation through contributions by private citizens is vitally important and should be encouraged through appropriate tax law provisions.

SUPPORT OF THE BILLS

There is no evidence of opposition to this legislation from any source—State, Internal Revenue, the Congress, or the public.

The Citizens Committee for UNICEF, along with a number of other national organizations interested in the work of the Children's Fund, is deeply concerned for the enactment of such legislation before Congress adjourns. The fact that these bills were not introduced earlier in the session is intensely regretted. However, until very recently the hope remained that Internal Revenue could be induced to reverse again its position and restore UNICEF's previous tax status. A number of tax lawyers seem to uphold the correctness of the Internal Revenue interpretation as it now stands, however, and, therefore legislation showing the intent of the Congress in this case is urgently needed before adjournment in order that the Children's Fund not lose the benefit of possible contributions during the remainder of 1959. Unless action is taken immediately, the impact of the present ruling would inevitably continue well into the calendar year 1960.

A way to insure prompt action would be for the Finance Committee to attach this legislation as an amendment to H.R. 8725, or other bill reasonably sure of passage, now pending before the committee. May we have your support for such action?

Moving Migrants From Overpopulated Countries to Countries Where Manpower Is Needed

---

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 27, 1959

Mr. McCORMACK. Mr. Speaker, in the publication of the George Washington University Federalist, fall 1959, there appeared an article, entitled "An Episode in My Political Career of Which I Am Especially Proud: Moving Migrants From Overpopulated Countries to Countries Where Manpower Is Needed," written by our distinguished colleague from Pennsylvania [Mr. WALTER]. There is no man in the Congress of the United States or elsewhere who is better qualified to discuss or write about the subject matter of his article than my close and valued friend from Pennsylvania. In my remarks, it is a pleasure for me to include therein the article written by Congressman WALTER:

AN EPISODE IN MY POLITICAL CAREER OF WHICH I AM ESPECIALLY PROUD: MOVING MIGRANTS FROM OVERPOPULATED COUNTRIES TO COUNTRIES WHERE MANPOWER IS NEEDED

(By FRANCIS E. WALTER, Representative from Pennsylvania)

When the victorious Allied armies liberated Western Europe and entered Hitler's Reich, they found over 8.5 million displaced people. Part of that mass of humanity were slave laborers conscripted into Hitler's war machine. Part were the wretched inmates of concentration camps. Part were refugees from bombed cities and villages milling aimlessly around the countryside and camping under the open skies.

UNRRA (United Nations Relief and Rehabilitation Administration), with the active assistance of the military forces of the Allies, provided food, shelter, and assisted those who could be sent to their countries quickly. By 1946, the number of displaced persons who could not be sent home due to the fact that their homelands were overrun by Soviet forces and Soviet-installed regimes, was close to 1.3 million. It soon became evident that these people would have to be resettled outside of Germany and Austria.

IRO (International Refugee Organization) took over where UNRRA and the military left off. By the summer of 1951, over 800,000 displaced persons found new homes in countries which offered them resettlement opportunities.

However, in 1951, it was realized that with the expiration of IRO scheduled to occur at the end of that year, the problem of resettlement of refugees and displaced persons would not be fully and successfully resolved. More than that, another problem was facing the free Western World: "surplus population," an ugly definition, meaning that there were too many people in Western Europe for whom work and opportunities for a decent livelihood could not be found.

At the same time, many overseas countries—Canada, Australia, and several of the Latin American Republics—indicated their interest in acquiring new settlers in order to increase their agricultural and industrial productivity.

In the late summer of 1951, I gathered in my office a few officials representing various agencies of the U.S. Government and submitted to them a tentative plan calling for the creation of an organization designed not only to take over the functions of IRO with respect to the resettlement of refugees and displaced persons, but also build an efficiently operated machine which would stimulate and carry out migratory movements from Europe to overseas countries.

My idea was to create an intergovernmental organization, outside of the United Nations for the obvious purpose of eliminating Communist interference, and to offer to the countries of emigration and the countries of immigration efficient shipping services, as well as assistance in their selection of immigrants and their vocational preparation for migration.

In a series of sessions, which continued in my congressional office for about a month or two, my plan began to take shape and before the year 1951 was over, we succeeded in obtaining the cooperation of the Government of Belgium, which invited 27 governments to participate in an international conference which convened in Brussels, Belgium, in November 1951.

A provisional organization was created by the Brussels Conference for the purpose of "making arrangements for the transport of migrants for whom existing facilities are inadequate and who could not otherwise be moved from certain European countries having surplus population to countries overseas which offer opportunities for orderly immigration." It was further decided that the new organization would provide and arrange for land, sea, and air transportation, assume responsibility for the charter of ships, work out a shipping program and take over actions as may be directly related to these ends.

The name of the organization is the Intergovernmental Committee for European Migration (ICEM). Its headquarters are in Geneva, Switzerland, and its present director is Mr. Marcus Daly, an American industrialist and civic leader. He succeeded two distinguished American diplomats, the late Hugh Gibson and Harold H. Tittmann. I have served as the U.S. delegate at all of the semiannual sessions of ICEM's Council, the organization's governing body.

Since the Conference in Brussels established ICEM, 897,788 European emigrants (including 13,171 European refugees stranded in the Far East) went to 17 overseas countries where they were able to start a new life. In this figure are included both refugees and "surplus workers" who became useful workers in the lands which accepted them. Also included are 110,000 Hungarian refugees who fled Hungary in the aftermath of the 1956 revolution.

The emergency operation undertaken by ICEM in October 1956, in connection with the Hungarian revolution, and the ensuing exodus from Hungary has earned that organization recognition and praise of the entire free world. Practically overnight ICEM's machinery sprung into action, and its helping hand was extended without delay and with the greatest degree of efficiency when and where such assistance was most desperately needed.

ICEM now comprised a membership of 29 nations of the free world. Since its inception, ICEM has spent close to $200 million, of which $72 million was contributed by the United States. What did this money buy? In addition to a wealth of experience, which would permit ICEM to expand its activities in the future and in addition to an imponderable but easily detectable capital of international goodwill, ICEM has created in close to one million hearts the feeling of happiness and purpose in living where war and misery had planted the seed of despair and hopelessness. But these humanitarian achievements do not tell the entire story of ICEM's usefulness. It should be stressed that ICEM is not solely a relief organization. By moving migrants from overpopulated countries to countries where manpower is needed, it achieves three purposes:

1. It relieves pressures on the U.S. immigration quotas by permitting European immigrants to resettle in countries other than the United States.

2. It relieves economic, social, and political pressures in European countries contributing to their stability, thus strengthening the free Western World.

3. It contributes to the economic development of overseas countries by supplying them with European manpower in the most desirable age bracket.

Newsmen See President in Full Command of Office

EXTENSION OF REMARKS
OF
Hon. EVERETT McKINLEY DIRKSEN
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Thursday, August 27, 1959

Mr. DIRKSEN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the column written by Roscoe Drummond, entitled "Newsmen See President in Full Command of Office," published in the Washington (D.C.) Post and Times Herald, on August 26, 1959. I feel sure this article will be of interest to my colleagues.

There being no objection, the column was ordered to be printed in the RECORD, as follows:

NEWSMEN SEE PRESIDENT IN FULL COMMAND OF OFFICE

(By Roscoe Drummond)

Veteran Washington correspondents—not given to overstatement—assessed Dwight Eisenhower's 169th presidential press conference Tuesday as a stirring moment of history.

To one whose White House reportorial experience goes back to the crackling, opinion-laden meetings with F.D.R. and the tense, explosive, yes-and-no hours with Harry S. Truman, this was one of the most moving and momentous press conferences of a quarter century.

If there was any lingering doubt that Mr. Eisenhower is in decisive and full-fledged command of his awesome office—in foreign affairs, in domestic matters, in congressional relations—it was totally removed by this impressive performance.

But it did far more than that. It was moving and momentous—

Because it showed Mr. Eisenhower irrevocably intent upon using his "last atom of strength"—there appeared to be plenty of it—and his "last atom of prestige" to try to bring about a more peaceful world.

Because it revealed the President speaking with such depth of feeling and conviction that few, if any, of the 233 reporters had any doubt that, in the bold peace moves he is now making, there is not a partisan or personal motive in his whole being.

Because it made clear that Mr. Eisenhower is not going to let small-minded arguments of protocol and propriety sway him from his venturesome diplomacy with Premier Khrushchev since, as he put it, the issue is "too tremendous"; it is the survival "of the human race."

Because it disclosed that the President's unabated determination is to find a way to reduce the crushing burden of armaments before they explode in Soviet hands and that, without yielding ideals or principles he will spare nothing of himself to bring it about.

Because it showed that Mr. Eisenhower is zestfully wielding the presidency as at no other time since his first inauguration.

Yes, Mr. Eisenhower still got his syntax a little tangled. Occasionally he would stop a sentence in midstream and then start over. But his ideas didn't get tangled; his clarity of purpose stood out and there was never any doubt about what he meant.

When a correspondent asked whether Mr. Eisenhower thought that his trip to the Soviet Union might "erode the prestige of the President," it was obvious that this question stemmed from Mr. Truman's latest newspaper article in which he advised Mr. Eisenhower not to make the trip lest "it dissipate" presidential leadership.

Mr. Eisenhower's instant response was that while his personal prestige might or might not be eroded, the prestige of no future President would be eroded by anything but his own actions.

Mr. Eisenhower was completely in charge of his press conference all the way. It was clear that he knew what he wanted to say and why he wanted to say it; what he intended to do and why he wanted to do it.

The reason there is no doubt in the President's words is that there is no doubt in his mind and this stems from three factors: (1) The loss of Secretary of State Dulles; (2) the resignation of Sherman Adams; (3) the visible and continued improvement in his health.

All of these factors have contributed to making Mr. Eisenhower a full-length participant in the development of administration decisions. For months now he has had to be part of the staff which does the staff work on major policy decisions. He no longer comes in only at the end.

He did not want to lose Mr. Dulles. He didn't want to lose Mr. Adams. But my impression is that he thoroughly likes the kind of harder work he now has to do.

For the first time Dwight Eisenhower seems to enjoy being President.

Medical Care, the American Way

EXTENSION OF REMARKS
OF
HON. RICHARD M. SIMPSON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 27, 1959

Mr. SIMPSON of Pennsylvania. Mr. Speaker, in recent years the citizens of our Nation have given increasing attention to proposals and plans that would ease the impact upon the family budget of major medical expenses.

With its jurisdiction over tax and social security legislation, the Committee on Ways and Means is devoting more and more time to the study of this problem. It will be recalled that the Republican 83d Congress authorized a significant liberalization of the medical expense deduction available to our citizens in computing their income tax liability. In addition, the 83d Congress, approved legislation protecting the social security benefit entitlements of persons who sustained disabilities. Congress has also provided for the payment of disability benefits and dependency benefits where the primary provider in a family has become disabled.

The Committee on Ways and Means recently concluded public hearings on a proposal to provide medical and hospital care benefits under the social security program for OASI beneficiaries. This proposal has created considerable controversy. It has been criticized on the ground that it is discriminatory in that it would impose on the present working population the cost of medical care for the present aged, on the ground that it would result in bureaucratic Government intervention in the practice of medicine and on the ground that it would interfere with the doctor-patient relationship that is such an important element in the medical care of our citizens. The proponents of medical and hospital payments under the social security program support their position by stating that their proposal represents the most feasible method of meeting this problem. They say that medical and hospital insurance programs are not adequate.

I disagree with this latter contention. In my opinion, our insurance industry and the medical profession are making tremendous strides in their endeavors to assure adequate medical care for all our citizens on a nondiscriminatory basis and within the framework of our free enterprise system. This progress is being made without subjecting the medical profession to domination by the dictates of Government bureaus and without launching our Nation on the discredited path of national health insurance. It is encouraging to me that we have made such remarkable progress in meeting our medical and health needs by individual and collective initiative without reliance on Government paternalism.

An article appearing in the Wall Street Journal today presents some very interesting factual information regarding the gains which have been made in this area. Mr. Speaker, I ask unanimous consent to include as a part of my remarks the text of this report.

[From the Wall Street Journal, Aug. 27, 1959]

HEALTH INSURANCE—MORE PLANS FIND WAY TO BOOST BENEFITS: IGNORE MINOR ILLS—GE'S PROGRAM SETS PACE, AVOIDS RISE IN PREMIUMS; 12,000 OTHER FIRMS FOLLOW BUT AFL.-CIO DISLIKES IT

(By Jerry E. Bishop)

NEW YORK.—In the fast-changing field of health insurance, a new product is beginning to make spectacular gains at a time when

many of the older types of policies are beginning to run into trouble.

Like most successful new products, this one—called comprehensive coverage—has many features not found in the older health policies. But, in one sense, it offers quite a lot less. Under this plan, for example, if a person goes to the hospital for minor repairs for just a day or two he'll probably have to pay all the bills himself.

The theory behind this: By not paying the small claims—whose aggregate cost is very high because they're so common—the insurer can offer more extensive benefits to cover serious illnesses. And he can do this without the frequent, stiff premium boosts which some insurance officials blame partly on a tendency by policyholders to go into the hospital for minor ills that would be treated at home if hospital care weren't free.

FIRST DOLLAR COVERAGE

The new policies are a radical departure from the old philosophy of first dollar coverage that has been the cornerstone of most of the major health insurance plans. First dollar coverage—providing payment of smaller as well as larger hospital bills—was one of the key attractions that enabled the Blue Cross to grow from a small, local experiment in Dallas in 1929 to a mammoth collection of 79 regional associations with more than 54 million members. Private insurance companies also relied heavily on the first dollar idea as they built their hospital and surgical coverage to more than 70 million people in the last 20 years.

Now, however, financial problems are increasing for plans which attempt to cover almost all their subscribers' hospital expenses up to an agreed limit. Last year the Nation's Blue Cross plans ran up a deficit of $40 million after paying out some $1.4 billions in benefits. New York's Associated Hospital Service alone plunged $30 million into the red.

With the cost of medical care rising faster than any other component of the cost-of-living index (it was up 4.4 percent in July over a year ago and now is more than 50 percent higher that it was 10 years ago), employees who are covered in group health plans are being hit with wave after wave of premium increases. Blue Cross plans in Concord, N.H., Atlanta, Chicago, Cleveland, and Detroit have boosted their rates from 20 to 30 percent this year . Similar premium boosts are slated for Pittsburgh and New York City in the next few weeks. Insurance companies, which provide similar health coverage on both an individual and group basis, also have had to increase premiums or to quietly prune out some former benefits from their policies in order to balance dollar intake with rising claim payments.

A RISING BUSINESS COST

Many employers pay part or all of their employees health insurance premiums, so the rising premium rate is also becoming a rising cost of doing business. At the same time, there is growing pressure from unions for more extensive health coverage. Broader benefits are among the major demands being made on the steel and aluminum industries by the United Steelworkers, now on strike against the steel companies. And the big United Auto Workers union is reported to be preparing demands for more liberal health insurance at its next bargaining session.

Meanwhile, pessimism is growing about how present insurance systems can survive without further drastic rate increases. "Ten years from now, health insurance as we know it will be dead as a dodo," one leading insurance executive declared recently in an off-the-record talk. What he and an increasing number of other insurance officials envision as a substitute is a system of medical protection that covers the major expenses of a serious illness, but leaves the minor costs to be met by the individual.

The leader in this new trend is, strangely enough, not an insurance company, but the General Electric Co.—better known for such products as light bulbs, refrigerators and turbine generators.

In 1949, a group of G.E. executives organized a plan to insure themselves against the catastrophic costs of a major illness. The plan was the forerunner of what is known today as "major medical" insurance; it was quickly borrowed by other firms and is now the fastest growing type of health insurance, covering at least 13 million persons. The number of persons covered has doubled each year for several years.

The basic provisions of major medical insurance are: (1) High maximum benefits, ranging from $5,000 to as much as $15,000. (2) A deductible amount. This is a specified amount, $300 to $500 in early plans, which the individual must pay himself before reimbursement by the insurer starts, (3) Coinsurance. This applies to a percentage, usually 20 or 25 percent of covered expenses in excess of the deductible amount. The individual must pay this portion of the covered expenses himself. The plan does not provide reimbursement of this amount.

COMBINATION OF COVERAGES

While major medical insurance has the key advantage of softening the crippling financial blow that a catastrophic illness can deliver to a family, its weakness is that the deductible amount is so high that lower income workers still would be hard hit in case of a severe medical emergency, having to pay out $300 or $500 on their own before insurance payments are received. For this reason, many employers in recent years offered their employees a combination of coverages—Blue Cross and Blue Shield (surgical insurance) for basic medical costs and major medical insurance for the most serious and expensive illnesses, for which Blue Cross and Blue Shield benefits would be insufficient.

It was almost inevitable that an attempt be made to merge the two forms of protection into one. The first major experiment in this direction was attempted in late 1955—again by General Electric. GE sought to cover not just a few executives but all its 250,000 employees and an estimated 500,000 dependents. GE's lead has since been followed, in a variety of forms, by thousands of other firms.

The GE comprehensive plan greatly broadened the benefits formerly available under its employee medical care program. The new plan covers major bills running as high as $7,500 a year or $15,000 in a lifetime. In addition, it poses few restrictions on the kind of medical bills that will be covered. Besides the usual hospital and surgical bills, the plan also covers such items as drugs, nursing care, blood transfusions, anesthetics, X-rays, ambulance services, and iron lungs, which are often extra-cost items for persons with ordinary health insurance. The plan also provides that medical bills will be paid whether they are run up in a hospital, at home, or in the doctor's office.

However, GE requires the employee to shell out some money from his own pocket. Expenses are divided into two classes. On A expenses—hospital and surgical bills— the employee must pay the first $25 himself; the plan pays the next $225 in full and then 85 percent of the balance. B expenses include physicians, nurses, drugs, and use of laboratory and diagnostic equipment. Here, the employee pays the first $50 in a calendar year and the plan pays 75 percent of the balance. If both A and B expenses are incurred in 1 year, the total deductible amount for both is only $50, much smaller than the usual deductible in major medical insurance.

This differs from basic plans which cover most expenses from the first day of hospitalization on, but which also set top limits on the number of days of hospitalization for which they will pay and the amounts they will pay for specific operations. These payments frequently do not cover full costs.

"With our provisions, the individual takes a greater interest in the fees he's being charged and he's not likely to abuse the plan," says Russell Hubbard of GE's employee benefit department.

"Most existing plans force people into a hospital," says another GE executive. "For example, they provide that a $15 diagnostic X-ray is not reimbursable unless the patient enters the hospital, so many doctors will stick him there for a day or so in order to qualify and thus run up a lot of extra costs. In our plan, we've tried to leave it so that a doctor can practice medicine as it should be practiced without prescribing such things as a hospital stay just so the patient's plan will pay the bills."

The $25 and $50 deductibles also eliminate many of the small $5, $10, and $15 claims, which cost just as much to process as a $100 claim. "It doesn't make economic sense for insurance to pay for bills that an employee can easily budget for himself," says the insurance specialist of another company, adding that it sometimes costs his firm $8 to process a $5 claim.

The "coinsurance" feature of GE-type plans, under which the employee pays a percentage of the total bill, also is helping to curb abuses, some companies say. "We know of any number of instances where doctors had two schedules of fees—one for patients with insurance and one for those without insurance," says Gordon Thayer, director of industrial relations of Vitro Corp. of New York, another firm which has embraced comprehensive health insurance recently.

Helping win employees to GE's new plan was the implied promise that the plan, by discouraging abuses of medical insurance, would prevent premium rates from climbing as rapidly as they otherwise would. So far at least, the promise seems to have held good. "Our premium rate hasn't gone up since 1956," comments GE's Mr. Hubbard. Claims, it's true, have increased in average size from year to year but only about half as much as the national average increase in medical care costs. And offsetting this has been a 30-percent decline in the number of petty claims—those under $25.

The broader benefits available under the plan evidently appealed to GE employees right from the start. Given a choice between the new plan and the company's older "first dollar" type program augmented with expanded major medical type benefits, 99.2 percent of GE's eligible employees have switched to the new plan. (For a GE employee earning $6,000 a year, the new plan costs $154 a year, including all dependents, compared to $95 for family protection under the previous plan. For single employees there is no difference, the annual premium being $54 in both cases.) Handling the actual coverage are the Metropolitan Life Insurance Co. and Aetna Life Insurance Co.

GE's experience is attracting a horde of other employers to comprehensive plans. The big electrical appliance manufacturer estimates that some 12,000 other companies have adopted comprehensive plans since it set up its program, 4,500 of the new additions coming in 1958 alone. American Cyanamid, Douglas Aircraft Co., the San Francisco Hotel Employers' Association, and Caterpillar Tractor are just a few of the newcomers into the field.

Equitable Life Assurance Society, one of many insurance firms which now are offering comprehensive plans, says it has issued such policies to 327,000 persons, 8 times as many as were covered in 1956. According to the Health Insurance Institute, 5,175,000 persons were covered by comprehensive plans at the end of 1958, compared with almost none 3 years earlier.

Now, the idea of doing away with full coverage of medical bills is creeping into Blue Cross-Blue Shield plans, formerly the stronghold of "first dollar" philosophy.

Late last year, Philadelphia's Blue Cross plan, known as Associated Hospital Service of Philadelphia, began offering a program which, in return for more liberal benefits, calls for the subscriber to pay the first $5 of each day's hospital charges up to 15 days a year. So far, says a spokesman, more than 500,000 Philadelphians have switched to the new co-pay comprehensive plan, or about one-third of the Blue Cross subscribers who are eligible. Deductible provisions in various forms also have popped up in Blue Cross plans in Missouri, Texas, and Kansas.

Officials at New York City's big, deficit-plagued Blue Cross plan, known officially as Associated Hospital Service of New York, concede that they too are considering adding comprehensive features to their coverage. The New York program is under pressure to broaden its benefits, after receiving permission recently from State insurance officials for a 26.5-percent rate increase, which followed a 22.3-percent rate boost in June of last year.

Comprehensive health insurance, despite its recent breath-taking growth, is far from universally popular. "The deductible feature is a very sensitive point with unions," admits an executive of one big industrial company which has been trying unsuccessfully to persuade its employees to switch over. "The coverage of the $6 or $8 claim, because it turns up so often, seems to be more important to most people than coverage of the bigger but less frequent expenses."

Last month, members of the Oil, Chemical & Atomic Workers Union turned thumbs down on a comprehensive plan offered by the Sinclair Oil Co.

The AFL–CIO on several occasions has leveled criticisms at comprehensive and major medical insurance. One charge is that the deductible provision might discourage prompt use of medical facilities and might become an incentive for letting minor illnesses become major ones. Another complaint is that comprehensive medical insurance takes away protection from the many and only seems to give additional protection to the few. According to the AFL–CIO, only 1 out of ever 100 families ever incurs medical expenses as high as $1,000 in a year's time.

Insurance officials are quick to offer rebuttals. Says an official of New York Life Insurance Co., "Health insurance has become a means of spreading small payments over all employees. We have lost sight of the imortant principles of insurance. There is no point to insuring a cost which is apt to fall regularly on the people, because such an item should be allowed for in the family budget, and the cost of insurance administration merely adds to the inevitable basic cost."

General Electric, prior to introducing its plan, held hundreds of meetings with union officials (the big company bargains with more than 100 different unions), salaried employee groups, doctors, and hospital representatives. It still carries on intensive followup work to be sure that costs stay in line. In one midwestern town, it discovered that frequency and duration of weekly sickness and accident claims were more than double the company average. A meeting was held with the local medical society. "Following this meeting the frequency and duration of disabilities were so reduced that the cost was cut in half. Hospital and surgical rates also dropped," says a GE health insurance specialist.

On a national basis, the frequency of hospital admissions for GE employees, excluding maternity cases, is now 90 per 1,000 in a year, compared with about 112 for Blue Cross organizations. Surgical claims average 75 per 1,000 employees, compared to 125 per 1,000 in a typical Blue Shield large city plan.

Khrushchev's Visit

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Thursday, August 27, 1959

Mr. WILEY. Mr. President, we recognize that the pending visit of Premier Khrushchev to this country in the minds of our citizens across the country is a major consideration.

In itself, it marks a unique pattern of negotiations between nations with conflicts of interest—as strongly as freedom versus communism—when the leaders of two opposing camps exchange visits.

A big question before the American people is: Just how should he be received?

In view of the fact that Khrushchev is the No. 1 Communist—which represents the most serious threat to our security existing in the world—there are widely differing views on his reception.

Recognizing that the President, in agreeing to the exchange visits, felt that such an interchange might well contribute to solving some of the East-West differences and lessening tensions, the American people, I believe, have a responsibility—which I am confident they will meet—of acting in a way that will provided the best kind of climate for whatever results may be obtained from such an exchange.

Commendably, our mass media—publishing, radio, television—are assuming a fine responsible role in attempting to create the climate that augurs best for the visit.

Particularly, I refer to a splendid editorial recently published in the Janesville Daily Gazette, Janesville, Wis., entitled "Khrushchev's Visit."

Representative of constructive editorializing for the upcoming event, I ask unanimous consent to have the editorial printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Janesville (Wis.) Daily Gazette, Aug. 25, 1959]

KHRUSHCHEV'S VISIT

Khrushchev's visit to the United States next month will be one of the most extraordinary events of its kind in American experience.

Of all the famous foreign visitors, from Lafayette of Revolutionary War days right down to the recent visits of Baudouin of Belgium and Queen Elizabeth II, there seems to be no parallel.

The Russian leader comes as an official visitor, and the top man of the Russian Soviet, and is thus entitled to all the red carpet treatment accorded heads of state. He has talked like an enemy, but comes as a friend. He heads not only a state which operates under a political and economic system hostile to ours, but also is the nominal head of the entire Communist bloc.

The hostility of many Americans toward Russian communism, of which Khrushchev is the symbol, and especially of newcomers to America recently escaped from behind the Iron Curtain will make security arrangements for the visit particularly difficult. The impending visit has so baffled Congress that it has been tacitly decided to adjourn prior to the arrival of the Russian leader, so that the customary invitation to any visiting head of state to address a joint session may be avoided.

Some Americans hope that the visit here, and President Eisenhower's trip to Russia will improve relations between the two countries. Others regard the exchange of visits as a mere formality, with Khrushchev having the edge of the bargain because of his obvious eagerness to see this country. Certainly it may be predicted that Americans will not change their views toward communism as a way of life because of the visit, and it seems equally certain that Russia will not change either. The gain may be in a degree of understanding on some special problems of today, rather than in basic philosophy.

How then should Americans treat a guest who comes without anything more than a surface and official welcome? The best course, it seems, is to follow the lead of Washington in extending a coldly polite reception, going no further than necessary to meet standards of international good conduct, but being certain to observe strictly the niceties and conventions usually extended to a visitor of his importance.

It will be a trying few days because impulsive Americans can be expected to show their active dislike for Russian communism before its foremost leader, or at the other extreme, react involuntarily with the usual warm greeting ordinarily extended famous visitors from abroad.

Self-control and a degree of reserve are needed because Khrushchev must not be permitted to go home in the belief that Americans are actively hostile toward himself and his country. But it is just as important that he sense the fact that America is completely opposed to those things which he represents, and that his visit here is tolerated rather than sought.

One Hundredth Anniversary of the Petroleum Industry

SPEECH
OF
HON. LEON H. GAVIN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 27, 1959

Mr. GAVIN. Mr. Speaker, today marks the 100th anniversary of the petroleum industry in the United States. On August 27, 1859, Col. Edwin L. Drake completed the world's first successfully drilled oil well at Titusville, Pa.

The petroleum industry has contributed more than any other single group to the evolution of man from the era of the candle and the horse and buggy to the supersonic jet.

Its achievements are legend; not the least of which was the event which we celebrate today. Although we cannot overlook the contributions of the refiners, the pipeliners, the engineers and technicians, this first 100 years in the petroleum industry shall go down as the century of the wildcatter.

Oil lay valueless in the ground millions of years before the wildcatter found a way to bring it to the surface for others to refine and develop into the thousands of commonplace items in our daily lives.

At the beginning of the second half of oil's first century, petroleum supplied less than 10 percent of the total energy of the United States. Today, less than

50 years later, that industry supplies nearly 70 percent of all our energy needs. The opportunities open to this dynamic industry over the next 100 years are limitless, providing it remembers its birthright of individualism.

Yes, it was the century of the wildcatter. It was the wildcatter who made the petroleum industry the moving force in our lives today and it will be the same spirit of determination to overcome all obstacles, be they natural or manmade, which will lead the industry to the realization of those opportunities.

I am proud that I represent in our Nation's Congress the area in which the first great wildcatter showed the way to those who were to follow. Little did anyone in 1859 dream of the fountainhead of abundance which would spring from that one hole in the ground. Today there are more than 280,500 such wells which have been drilled in Pennsylvania alone. In each instance they contributed to the strength of the industry and the Nation.

In each instance those wells were drilled by men who were instilled with the spirit of the oilfinder, the "Man of the Century" in petroleum's first 100 years.

The assistance and inspiration received from those associated with this vital industry in the 23d District of Pennsylvania, which I represent, have helped to shape Federal policies which have encouraged the wildcatter to take the risks inherent in the development of our petroleum reserves. With this continued help to all in Congress, our Nation can be assured of an abundance of petroleum for peace and throughout any emergency.

I congratulate the industry on the success of its first century and I am confident that it will continue to meet its obligations as it continues to provide the Nation with the blood of its industrial economy and national defense.

Personal Income Gains in the Southeast

EXTENSION OF REMARKS
OF
HON. HERMAN E. TALMADGE
OF GEORGIA
IN THE SENATE OF THE UNITED STATES
Thursday, August 27, 1959

Mr. TALMADGE. Mr. President, the Atlanta Journal of August 24, 1959, published an article concerning the national per capita income and the per capita income of the States in the southeastern region. The article points out that during the last 25 years the national advance has been 656 percent, whereas the increase in income in Georgia has been 843 percent.

I wish to point out that Florida, with a gain of 1,794 percent, leads every State in the entire Nation.

We are proud of the economic progress we are making in our State. We are proud of the economic progress we are making in our region. We are also proud, Mr. President, of the economic progress we are making throughout the entire Nation.

While our per capita income in Georgia is still much lower than the national average, I wish to point out it is increasing relatively faster than the national average. I therefore ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objections, the article was ordered to be printed in the RECORD, as follows:

[From the Atlanta Journal, Aug. 24, 1959]

DIXIE INCOME GAINS $35 BILLION IN 25 YEARS—GEORGIA'S $5.6 BILLION IS 843 PERCENT INCREASE; FLORIDA'S 1,794 PERCENT LEADS ALL OF NATION

Personal income in the seven-State Southeast increased more than $30 billion—from $3,291 million to $34,896 million—during the past 25 years, the U.S. Department of Commerce has reported.

The increase in Georgia was from $602 million in 1933 to $5,678 million in 1958, according to Merrill C. Lofton, manager of the Atlanta field office of the Federal agency.

Other increases were Alabama, $40 million to $4,364 million; Florida, $440 million to $8,334 million; Mississippi, $266 million to $2,302 million; North Carolina, $678 million to $6,297 million; South Carolina, $305 million to $2,929 million; and Tennessee, $560 million to $4,992 million.

Florida's increase of 1,794 percent was the Nation's greatest gain in personal income during the quarter of a century.

Included in the income computations were wages and salaries, proprietors' income, dividends, pensions, and income from other sources.

Comparing personal income estimates of the Commerce Department's Office of Business Economics for 1958 with those of 1933, Mr. Lofton said the past quarter of a century also brought almost unbelievable gains in per capita income, ranging from a 724 percent advance in Alabama down to 560 in Florida.

In Alabama per capita income went from $165 in 1933 to $1,359 last year; Florida, $284 to $1,876; Georgia, 204 to $1,487; Mississippi, $131 to $1,053; North Carolina, $207 to $1,384; South Carolina, $174 to $1,218; and Tennessee, $204 to $1,439.

In both total and per capita income, the gains made in the Southeast have not only been among the most impressive in the country, but substantially exceeded the average for the Nation as a whole. In total income, compared with a national advance of 656 percent, were Alabama's 892 percent, Florida's 1,794, Georgia's 843, Mississippi's 765, North Carolina's 829, South Carolina's 860, and Tennessee's 791 percent.

In per capita income in the 25 years, all of the gains made in the Southeastern States also forged ahead of that for the Nation. Compared with a U.S. uptrend of 448 percent were the 724 percent in Alabama, 560 in Florida, 629 in Georgia, 704 in Mississippi, 568 in North Carolina, 600 in South Carolina, and 605 percent in Tennessee.

In total income, 4 of the 7 Southeastern States have moved upward among the 48 States of the Nation in rank. Alabama climbed from 28th position in 1933 to 24th last year; Florida, from 28th to 12th; South Carolina, from 34th to 31st; and Mississippi, from 37th to 33d. Georgia, however, slipped back 1 notch, from 19th to 20th; North Carolina, 1, from 17th to 18th; and Tennessee, 2 places, from 20th to 22d.

None of the 7 did too well in change in rank upward in per capita income, however. Alabama remained in 45th position; Florida advanced 1 place, from 29th to 28th; Georgia dropped back from 41st to 42d; Mississippi, from 48th to 49th; when counting the District of Columbia, North Carolina went from 40th to 44th; South Carolina, from 44th to 48th; and Tennessee, from 41st to 43d.

One Hundred and Fiftieth Anniversary of the Birth of Hannibal Hamlin

EXTENSION OF REMARKS
OF
HON. CLIFFORD G. McINTIRE
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 27, 1959

Mr. McINTIRE. Mr. Speaker, the finger of fate points in curious fashions, for had Hannibal Hamlin of Maine been Vice President during President Lincoln's second, instead of first, term of office, he would have been elevated to the high position of President of the United States.

Destiny's dictate has not, however, served to diminish Vice President Hamlin's stature as a statesman, and he will hold in the future, as he has held in the past, a well-deserved place in our Nation's and the State of Maine's hall of fame.

Today, August 27, marks the 150th anniversary of the birthday of Hannibal Hamlin, and I was privileged to participate in today's ceremony when, in honor of this event, a wreath was laid at the base of Hannibal Hamlin's monument in the Capitol.

Maine newspapers have heralded this 150th birthday anniversary with special articles about Maine's truly great statesman, and because the following article has a political theme, I am commending it to the attention of my colleagues.

[From the Portland (Maine) Press Herald, Aug. 22, 1959]

HANNIBAL HAMLIN LETTERS REVEALED—A FENCE MENDER EXTRAORDINARY

(By Frank Sleeper)

Hannibal Hamlin was mending fences in 1847–48.

The man who was to become Maine's only Vice President of the United States had been defeated in his attempt at election as U.S. Senator in 1846. A deadlock in the State senate brought that result.

Hamlin's second term as a Democratic Congressman ran out as 1847 began—and he did not choose to run again.

Instead he ran for and was elected to the State house of representatives. From that perch, he marshalled the antislavery Democrats of Maine and, in May 1848, was elected to the U.S. senatorship he wanted.

There's no better day than Saturday—the day the 150th anniversary of Hamlin's birth is being celebrated in Paris Hill—to throw a little more historical light on the man.

Five letters from Hamlin to Hugh D. McLellan of Gorham are being made public Saturday for the first time. All are political in tone.

They cover the period January 25, 1847 to February 6, 1848. About 10 years ago, a customer gave the letters to barber Frederick L. Grant of 15 Morning Street.

"He was a cabinet finisher and found the five letters in a cabinet on which he was

working. He knew I collected old stamps and envelopes so he brought them to me," Grant explains.

"I can't think of a better time than the 150th anniversary of Hamlin's birth to reveal the contents of the letters publicly," the Casco Arcade barber says.

There's good reason for the political tone of the five letters. McLellan was a leading Democrat in Cumberland County in 1847. He aspired to be speaker of the House of Representatives—and was successful in that quest.

The final letter of the group was written to McLellan in Washington where he was a clerk in the Treasury Department.

That looked like a reward for a job well done. If it was, it's not to be wondered at.

Hamlin speaks in these letters of rewarding McLellan for throwing his support to the future Vice President.

As the Maine historian, Dr. Louis C. Hatch, put it in his "Maine, A History," "He [Hamlin] had entered politics at the time of the triumph of the spoils system and, like most men of his day, including Lincoln, he accepted and used it."

The five letters build to a peak. The fourth is marked confidential. The fifth and last is labeled strictly confidential.

It's a blow-by-blow account of Hamlin's words to a politician whose support he felt was essential to his election as U.S. Senator.

The salient points of the first letter, January 24, 1847, written from Washington, are few.

"Well, we have finally got the House of Representatives in order after a close fight," Hamlin wrote McClellan. "Well, you will be Speaker, I hope. I will do what I can for you with all pleasure. You must work yourself and make your friends do so too," he concluded.

The second letter is dated March 16, 1847, written from Hampden, Hamlin's residence at that time. It was getting closer to legislature time (sessions started in May then) and the letter showed it.

"Charles Stetson of Bangor would like very well to be elected State treasurer if he can be as well as not," Hamlin said. "I write you at the request of his friends to learn what your views are and how you are situated. Will you do me the favor to give me your views and much oblige me by so doing?"

"How comes on the speakership?" the future vice president continued. "I am at home and ready to serve you to the best of my power. I will aid you all I can and you must be elected. You and your friends too must work. Let me know what I can do. I shall be at Augusta at the organization and will do what I can with our delegation and others."

The third letter is dated 8 days later, March 24, 1847. Again it's from Hampden and, again, goes deeper into the Maine political scene of the times.

"I trust you will be finally so situated that you will join with us in electing Stetson State treasurer. You and ——— and a few others can do it," Hamlin wrote. (Apparently, they were not successful or McLellan held with a man from his area because one Moses McDonald of Limerick was named State treasurer in 1847).

"I have written to Johnson of the Age (a newspaper or magazine), Bradbury (U.S. Senator James Bradbury, elected as a compromise candidate in 1846) and Parker, urging them all to go in for you," he continued. "I will do all I can. When I hear from them, I will let you know the result."

And then the future Vice President moved to one of his pet opponents:

"I did suppose that there was no doubt but Governor Dunlap (a four-term governor, arden Bowdoin man and a friend of Hamlin's) would be appointed collector at Portland (he eventually was). I think he will yet but Mr. Anderson, I learn, will press hard for a reappointment." (This was Gov. Hugh J. Anderson of Belfast, the man with whom Hamlin had deadlocked for U.S. Senator in 1846, probably a proslavery Democrat and one of Hamlin's opponents for U.S. Senator in 1848).

"I trust he will be defeated and that Governor Dunlap will be the man. He will fulfill his promise to me in your behalf, I have no fear," and thus Hamlin put McLellan more in his debt.

"Shall meet you at Augusta. Don't be backward in calling on me. Make the demand and it shall be answered if I have the power to do it," he concluded.

The fourth letter—marked "confidential"—is dated May 5, 1847, and was written from Hampden. The legislature was about ready to begin.

"You will have most probably learnt before this reaches you that I have been elected to our legislature. I trust I shall meet you on Monday at Augusta. You shall have my support for speaker," Hamlin declared. (Good support—McLellan was elected speaker.)

Then came a twist—but one which politicians have used before.

"For reasons which I will state when I meet you, I will now say that I should like well to be nominated for that office (speaker) and then decline it. I think too that it might help you. (Hamlin had been speaker early in his political career. Perhaps he wanted the publicity that such a move would bring or perhaps he wanted the eyes of the legislature focused on him by the move.) But let it all be in confidence until I see you when we will fully understand each other and will pull together," the letter ends.

The legislature ended. Hamlin continued mending fences. U.S. Senator John Fairfield suddenly died at the end of 1847. McLellan went to Washington as a clerk in the Treasury Department. Hamlin was backed by the antislavery Democrats in Maine for the senatorship.

There were four against him—Anderson, Nathan Clifford, attorney general of the United States from 1846 until March 1848, Samuel Wells, a former Whig, and John D. McCrate, a persistent officeseeker who liked Hamlin.

On February 6, 1848, Hamlin wrote the following "strictly confidential" letter from Hampden to McLellan in Washington:

"I was pleased to hear from you and to learn that you were not committed to anyone. I was also quite sure I should have your good wishes," he said.

"I hold truly to the doctrine that a representative should follow the wishes of his constituents. That is sound doctrine but the dicta of politicians are not always the will of constituents.

"For some reason, and really I cannot tell what, the office-seeking politicians opposed me in 1846 and will do so now, I presume. All the customhouse influence was against me in 1846, so I suppose it will be now. I suppose it may nearly all go for Clifford, on the ground, in fact, that he will go for them.

"That may be for the personal interest of the officeholders but not for the mass of the party. I have not time to go into an extended review of the subject but I think you will see fully the tendency of the suggestions which I have made.

"So far as I can learn from different sections of the State, my success looks better than it did in 1846. We have no Pillsbury in our delegation this year and I can carry a large majority of the East overall.

"I shall have or may have some of your friends in your county as well as in other sections of the western part of the state. If you shall be willing to give me your influence, you can secure my election and, if elected, I should be in a situation to reciprocate your favor.

"It is said that Clifford talks with all confidence of success. But let me tell you it is all * * *. He does it for effect. He cannot be elected. I may not be but he cannot," Hamlin asserted.

He emphasized that even if someone else were elected U.S. Senator it would not be Nathan Clifford.

"Your position will be such that, with such of the friends in your county as I have, yours can secure me a majority of your county and I secure my election. I think you will rely upon my good faith to you from my past acts. Upon that you may rely with full confidence," the letter ended.

Hannibal Hamlin mended Maine fences well in 1847–48.

He built so well that—with the shift to the Republican Party which he made—he became Vice President and, eventually, one of the most powerful Members of the Senate.

Lack of Public Access to the Nation's Shores

EXTENSION OF REMARKS

OF

HON. WILLIAM PROXMIRE

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Thursday, August 27, 1959

Mr. PROXMIRE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Capital Times, of Madison, Wis., protesting the lack of public access to the Nation's ocean shorelines.

Because I think the story in the Capital Times contains an eloquent quotation from the Saturday Review, I want to take the time of the Senate just for a minute or so to read what the situation is on public access to our ocean shorelines at the present time.

The Saturday Review writes:

If any explorers landed on our shores today, the way they did several hundred years ago, they'd have a difficult time making their way inland. It's private property. Almost every attractive seashore area on the Atlantic, Pacific, and gulf coasts has been taken for private or commercial development, according to the National Geographic Society.

The spectacularly beautiful Pacific shoreline of the United States stretches 1,700 miles from Mexico to Canada. In a recent survey, the National Park Service found that 1,448 miles of it are privately owned and not available for public recreation.

Only 240 miles of the Atlantic and gulf coasts—3,700 miles long—are owned by the people as a whole. More than half of that 240 miles is in three places: Cape Hatteras National Seashore Recreation Area (North Carolina); the Acadia (Maine); and Everglades (Florida) National Parks.

Fortunately, the property lines stop at the high water mark. Once you're in the water it's all yours—and the jellyfishes' and the planktons'.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Madison (Wis.) Capital Times, Aug. 25, 1959]

STATE BETTER OFF THAN NATION IN ACCESS TO LAKE WATERS

It is just possible that Wisconsin is better off than the Nation in public access to shore areas. A recent survey of ocean shorelines of America shows that if one of the great

explorers like Columbus or Hudson arrived now, he would have to pinpoint his landing with great accuracy, not to land on private property.

Governor Nelson, a champion of greater access by the public to Wisconsin lakes, has estimated that fully 35 percent of Wisconsin's 8,000 lakes do no provide access to the general public.

That's a lot of lakes closed to the public, but many of them are small. Most big lakes have some access, though more is needed.

Here are the figures on the ocean shores, as reported in the August 22 issue of the Saturday Review—appropriately, in the Trade Winds section:

"If any explorers landed on our shores today, the way they did several hundred years ago, they'd have a difficult time making their way inland. It's private property. Almost every attractive seashore area on the Atlantic, Pacific, and gulf coasts has been taken for private or commercial development, according to the National Geographic Society.

"The spectacularly beautiful Pacific shoreline of the United States stretches 1,700 miles from Mexico to Canada. In a recent survey, the National Park Service found that 1,448 miles of it are privately owned and not available for public recreation.

"Only 240 miles of the Atlantic and gulf coasts—3,700 miles long—are owned by the people as a whole. More than half of that 240 miles is in three places: Cape Hatteras National Seashore Recreational Area (North Carolina); the Acadia (Maine), and Everglades (Florida) National Parks.

"Fortunately, the property lines stop at the high-water mark. Once you're in the water it's all yours, and the jellyfishes' and the planktons'."

Voice of Government Reports

EXTENSION OF REMARKS
OF
HON. JOEL T. BROYHILL
OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 17, 1959

Mr. BROYHILL. Mr. Speaker, one of my constituents, Connie B. Gay by name, has instituted a service worthy of note at this time. Mr. Gay, a man formerly in Government and more recently a well-known figure in the entertainment world, purchased a Washington radio station on June 1, 1959. This station, bearing the call letter identification of WGAY, has been in service since 1945. Up to its purchase on June 1, other than playing phonograph records and an occasional announcement of public interest, the station did little to distinguish itself from the 13 other stations in the area.

On June 1, Mr. Gay instituted an idea and format that should be of particular interest to all of us. Every day this station broadcasts announcements called "Voice of Government Reports." These reports are approximately a minute long and are broadcast every 15 minutes. In addition, Mr. Gay calls his station the Voice of Government People, and as such relays Government news and information to the over 400,000 Government workers in the Washington area. Mr. Gay's thinking is outlined and reviewed in the June 1 edition of the Washington Post and the Evening Star. The results of just 2 months of programing Government reports and exceptionally fine music are reviewed in the Washington Daily News, July 21. Under unanimous consent to extend my remarks, I include excerpts from both articles in the Appendix of the RECORD:

[Excerpts from the Washington Post and the Evening Star, June 1, 1959]

A WIDE OPEN WASHINGTON LETTER TO AMERICA'S 5,697 IMPORTANT RADIO ADVERTISERS AND TO THE WASHINGTON AREA'S MOST IMPORTANT MILLION CITIZENS: OUR FEDERAL GOVERNMENT'S EMPLOYEES, THEIR FAMILIES, AND FRIENDS

FOREWORD

This is the first personal message I have ever addressed to—and in behalf of—the tremendously important Washington area consumer market * * * in many ways the most important of its kind in America today. Seldom, if indeed ever, in this country's brilliant advertising and marketing history, has a radio station been planned so completely to surround, saturate and sell a market so rich in potential, as the 250,000 Government Employees whose listening ear this station now specifically serves. Those who fail to read the following statement will miss a business message of inestimable value.

CONNIE B. GAY,
President and Chairman of the Board
Radio Station WGAY (Now With Studios in Maryland, Virginia, and the District of Columbia).

* * * * *

With the publication of this announcement, there comes to you the first news of an entirely new technique in shaping an advertising medium to exactly, specifically fit a rich, and vitally important consumer market.

It is (so far as is known) the first successful attempt to apply to the great field of radio broadcasting the only basic principle ever found successful in designing a primary consumer advertising medium of any kind.

Nowhere else in America (so far as is known) is there a radio broadcasting station beamed so directly and exclusively at—and for—a large prosperous group of free-spending consumers and their families and friends, as the Washington's new radio station WGAY.

With a specialized broadcasting service that includes news of, and for, the Federal Government and its dedicated Washington area workers, WGAY announces the final triumph of years of careful planning.

Planning which now makes this station—alone of all advertising facilities available to those who wish to advertise in this rich, important consumer market—the finest and most profitable selling medium available.

* * * * * *

But nowhere in the entire Washington market area has there been a radio station or broadcasting facility which is designed specifically and exactly to select, reach, interest, and sell the U.S. Government employee, and his or her circle of family and friends.

* * * * * *

No city on earth, no matter where, is quite like Washington, D.C.

Advertisers and marketers who judge it by other markets, or try to sell in Washington by generally accepted marketing procedures, sometimes miss this fact.

It is the Government employee, at all levels, who makes this so. Washington is a city of government, and of the men and women who make good government in this country possible.

* * * * *

It has been a challenge to me to find a way of providing constant, scheduled, tailormade broadcasting news and comment of and for this market within a market, within the Washington area. The all-important people who help run the U.S. Government.

Recently, with the purchase of station WGAY, this challenge became an opportunity.

* * * * *

We are concentrating specifically on the men and women of Government, and through them, their families and friends, who comprise the market within a market of our great Washington Community.

* * * * *

It is the calculated policy of the new radio station WGAY to broadcast Government news bulletins each quarter-hour throughout the broadcast day.

Plus the kind of good music that has been responsible for the sale of millions upon millions of albums and single records. Records by such great artists as: Perry Como, Percy Faith, Frank Sinatra, Patti Page, Doris Day, Peggy Lee, and scores of others.

In this way, the entire area of governmental activity will become public knowledge.

And employees of Government will, themselves, keep abreast of the activities and decisions of their own agencies, departments, divisions, and offices—whether at home or in the car—by staying tuned to WGAY.

* * * * *

The opportunity of giving function, life, and significance to an idea that has long occupied my time and thought.

By publishing this announcement, I want to pledge the facilities and abilities of station WGAY and its staff to genuine, heartfelt service.

While we hope to entertain and inform many thousands of others * * * our first consideration, and our dedication of service, is to those who serve our Government.

CONNIE B. GAY,
President, Chairman of the Board.

[Excerpts from the Washington Daily News, July 21, 1959]

WGAY PIONEERS IN MAJOR PROGRAMING BREAKTHROUGH

WASHINGTON, D.C.—WGAY, maintaining studios in Maryland, Virginia, and the District of Columbia, has pioneered in two major breakthroughs in present-day stereotyped programing. All newscasts are presented without commercial interruption, and the station features "Music-Casters" playing a wide range of music—from Mantovani to Crosby.

Nearly a million Government employees and their families now have their own "Voice of Government" radio station in this rich Metropolitan area, according to WGAY president and chairman of the board, Connie B. Gay.

Verified figures already obtained from home interviews and car-pool drivers show that over 62 percent of these high income Government people turn first to 1050 on their radio dial (WGAY's better music frequency) to find out what goes on in their own departments. As a result, sponsors are experiencing results unheard of in Washington area merchandising.

Forthcoming Visit of Premier Khrushchev

EXTENSION OF REMARKS
OF
HON. CLIFFORD P. CASE
OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Thursday, August 27, 1959

Mr. CASE of New Jersey. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD

an open letter to the President of the United States from the Paterson Evening News. The letter is concerned with the forthcoming visit of Premier Khrushchev and the President's later visit to the Soviet Union.

The letter rightly calls attention to the importance, whatever one's regard for the individual, of courteous treatment of an official guest of our country. For, as this forceful editorial points out, the American people surely expect that the President will be accorded respectful recognition in the course of his state visit to Russia.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

[From the Paterson (N.J.) Evening News, Aug. 24, 1959]

DEAR MR. PRESIDENT: A PERSONAL MESSAGE TO GENERAL EISENHOWER ON THE EVE OF INTERCHANGE OF VISITS WITH KHRUSHCHEV

Gen. DWIGHT D. EISENHOWER,
President of the United States,
White House, Washington, D.C.

You are about to launch the greatest and most far-reaching peace-seeking program in the history of modern man.

Greater than the peace of Versailles, vastly more encompassing in its universality than the treaty at the end of the last war to end all wars.

You were the civilized world's man first in war, first in the hearts of all allied countrymen. You summoned millions of men to battle, you led the forces which crushed the totalitarian dictator who had menaced the free world. You trod the bloody battlefields and suffered with the boys who were your very own from America, fighting at the side of other soldiers who were the allies.

Now you are the civilized world's man of peace.

You are about to launch a new Battle of Armageddon, but this time not on the field of military strife but in tenuous diplomacy, the outcome of which may decide the fate of the universe.

You have invited to our midst the Premier of Soviet Russia, Nikita Khrushchev, who in his world dealings has been anything but our ideal of a statesman or humanitarian.

In turn, you have accepted an invitation to visit in Russia and to bring to those people a message of peace from America from our own man of peace.

Now, there are many, many people in this country who sincerely oppose presence in this country of Khrushchev. To some he stands for the inherently abhorrent communism with which he has threatened to engulf the world. To others, he represents the horrors of oppression, the mass killings in Hungary—hated totalitarianism. For these people and their attitudes we have a complete sympathy. We don't like him, either.

Still others declaim against Khrushchev in America because they are platform hams looking for headline space and playing on the sympathies of minority groups embittered by past Soviet indignities. Add to this a fringe of pinheads with no genuine concept of reason but with an eye to sensationalism.

We believe with you as America's man of peace that anything that can be done to throttle the murmurings of international strife must be essayed. You have decided that an interchange of visits with Khrushchev may help still the storms of world discord and perhaps establish a more ordered existence between nations.

You are our Commander in Chief, in peace as in war. You have decided to receive Khrushchev and in turn, to go to Russia. That's good enough for us, and it should be good enough for all Americans.

We know that certain phases of such an interchange must be distasteful and almost intolerable to you. And yet, in your dedicated desire for peace, you are willing to undergo all the rigors of Mr. K.'s visit here, your own trip to see our allies in Europe to keep them happy, and finally, the trip to Russia.

That's an ordeal, especially for a man who less than 2 years ago was gravely ill, not once but twice.

Under the circumstances do the malcontents, sincere or hypocritical, have a right even to whisper their dissent from what you have planned? For shame.

We in America do not have to stew Mr. K.'s course with archids, nor shout our huzzahs of delighted camaraderie.

But we must be respectful, we must accord him the recognition due him as a head of state.

And above all, we must remember this: As we do to him, his people will do to our President.

Mr. President, we agree with you that it is better that our leaders meet on the field of friendly interchange than on the bloody battlefield of war.

So we respectfully suggest to you, sir, that:

1. You are the man who will be dealing with Khrushchev. You'll inspire more respect and confidence in the man and his people than all the others who visited him combined, and we say this with full deference to the splendid performance of Vice President NIXON. Don't permit politicians or needling newspapers to persuade you to pop off in advance about how and what you're going to tell Mr. K. Keep that to yourself and for your own conversations. In other words, don't make the fellow angry with advance notice of your own toughness before he is able to get it firsthand from you.

2. Before Mr. K. arrives, we earnestly and respectfully urge that you summon all America to sit around their television sets for 5 minutes of a given evening to have a chat with you. And in this chat, we suggest, Mr. President, that you call on all your people to receive Mr. Khrushchev in the spirit in which you have invited him; that he is a guest of this country; that people don't have to love him but that they must not under any circumstances commit an overt act; that they must bear in mind the truth of the commandment that what you want done to yourself, do unto others. That if we want Russians to be cordial to our President, we must respect their head of state.

This personal message from you, on every television set, on every radio, in every newspaper, will hold off the malcontents, will stay the hands of those who may secretly be plotting some nefarious scheme. Heaven forbid a crackpot should attempt an assassination.

You, Mr. President, are our man of peace.

The Lord bless you as you prepare to sail for Europe to meet our allies. May He bless, as well, your deliberations and return you safely to our midst as the man to whom we look, with devout prayer on our lips, for the great peace which has through the ages so tragically eluded us.

Respectfully yours,

THE EDITORS,
Paterson Evening News.

Hope Deferred: Public Welfare and the Blind

EXTENSION OF REMARKS
OF
HON. WALTER S. BARING
OF NEVADA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 27, 1959

Mr. BARING. Mr. Speaker, many of us have introduced bills during the present session of Congress dealing with our social security and welfare system. I wish to take this opportunity to call the attention of the Members of this House to a book which I have just read and which I believe every Congressman concerned with these issues will want to read.

The book is "Hope Deferred," written by Prof. Jacobus tenBroek and Floyd W. Matson, of the University of California, and published recently by the University of California Press.

Although its subtitle, "Public Welfare and the Blind," indicates the specific subject matter with which the book is concerned, "Hope Deferred" goes far beyonod that special province to shed light on many of the most critical and vexing problems of government today. It deals directly, for example, with the issue of federalism: with the question of what in truth the relationship is—the respective rights and powers— of the State and National Governments under our system. The book deals no less directly with the sensitive issues of congressional-executive relations, which are more than ever in the forefront of our attention. Congress now possesses various committees, such as the Committee on Legislative Oversight, for the purpose of reviewing the work of executive agencies; still others of our committees are empowered to seek information from the executive. Most recently of all, the courts have made a renewed effort to define the role of congressional committees generally in relation to the executive branch. On all of these pressing and perennial problems "Hope Deferred" has a close and instructive bearing—not least of all in showing how Congress has come increasingly to exercise a reviewing and supervisory, rather than an initiating, role in developing our public programs and seeking to hold them to responsible account.

On still a different level, this book also casts new light on the relationship of the individual citizen, whether organized or unorganized, to the great programs of welfare and security which have been erected in our country in recent years—as well as his relationship to the executive agencies which administer those programs and the legislative machinery which enacts them.

Perhaps the most signal service provided by this book lies in its demonstration that our entire system of social se-

curity, ever since its adoption in 1935, has been the storm center of a continuous struggle between Congress and the executive branch of the Federal Government, in which two theories of the nature of social security have been in direct conflict. On the one hand officials of the social security administration have adhered to a policy of subordinating public assistance to the preferred concept of social insurance, on the assumption that those receiving public aid are a residual element to be minimized and disparaged: a policy utterly barren of any constructive element. This policy is the direct descendant of the medieval poor laws and workhouse, and has preserved that outmoded spirit through the imposition of a rigorous means test—a virtual pauper's oath—which effectually discourages the blind and the disabled from rising above the poverty and dependency that have been the requirements of eligibility for the program. Moreover, the executive theory has sought to enforce absolute Federal control over the assistance programs of the States and to disallow any departures, however legitimate and progressive, from its own administrative precepts—while at the same time permitting the Federal administrator the broadest latitude of discretion in ruling upon the programs. By contrast, Congress has consistently expressed a very different and opposed theory of public assistance, and moreover has held to it despite repeated reversals and opposition by the executive agencies: a theory which has sought to introduce constructive elements into the program, which while placing a floor under relief permits the individual States complete freedom in devising liberal provisions of their own, and which above all is conscious of the need to maintain firm legislative control over the system.

In specific terms, "Hope Deferred" is a study of the most significant social provisions established for the blind over the past generation, most notably the programs of public assistance and vocational rehabilitation. The harsh point of the title is that, despite a number of genuine advances, the hope of the blind men and women of America for a recognition of their real capacities and needs is still deferred in both of these crucial areas. And I may add that there is another deferred hope which emerges from this book: the hope of Congress to have its will and intent, as expressed in some of the most important legislation of our time, carried out in the face of persistent hostility by appointive administrative officials.

Just as significant, I believe, is the evidence this book provides of the pressing need for legislation such as that contained in H.R. 14, which I introduced in the present session, and which was subsequently contained in some 60 bills submitted in the House, along with a similar bill introduced by Senator KENNEDY, of Massachusetts, and 32 other Senators: legislation expressly designed for the purpose of protecting the right of the blind to organize and to be consulted by Federal agencies in the conduct of programs for their welfare. Our bill recognizes the fact that independent organizations of the blind, as opposed to agencies for the blind, have in the past been systematically excluded from consultation in the development and administration of such programs, and indeed that these organizations have found themselves the targets of harassment and threat on more than a few occasions by officials of public agencies making use of Federal funds in their programs. The right to organize, in the case of such disadvantaged groups as the blind, is practically tantamount to the right of free speech and self-expression; and, by the same token, the right to consultation for the blind constitutes a right to be heard in the expression of their needs.

Although "Hope Deferred" does not deal directly with this legislation, it furnishes a convincing argument for it by exposing the negative and backward policies of aid and rehabilitation for the blind which might easily have been avoided if representative organizations of the blind themselves had been brought in for consultation in the formative stages.

On the same score, the opening section of the book in particular should be required reading for all administrators and workers in programs for the blind; for it clearly exposes the false stereotypes about the nature of blindness which have been largely responsible for these mistakes in policy and administration. More affirmatively, the authors draw upon the extensive literature of medical science and social science for a realistic appraisal of blindness and of the capabilities of blind persons. Their conclusion is "that the blind as a group are mentally competent, psychologically stable, and socially adaptable; and that their needs are therefore those of ordinary people, of normal men and women, caught at a physical and social disadvantage." Like other persons the blind "have a need for shelter but not a need to be sheltered: a need for adjustment and acceptance but not a need for toleration or patronage." The authors propose that every social program and institution for the blind be judged by the straightforward test of "whether it meets or defers meeting these needs; whether it presupposes the normality and equality of persons who are blind or presumes their abnormality and inferiority." It is a shocking commentary on the state of our welfare system that few if any of the numerous programs described in "Hope Deferred" come off with a passing grade when put to that test. This is notoriously the case with the sheltered workshops presently supported by the public rehabilitation program, wherein neither the goals of vocational rehabilitation nor the standards of fair employment are remotely approximated. The situation is not much improved in the remaining areas of rehabilitation, and is only beginning to be reformed in public assistance—where the existence of the means test and other onerous conditions of eligibility continues to frustrate the objectives for which the system was devised by Congress.

The authors of "Hope Deferred" are particularly well qualified to undertake such broad examination of public welfare as it affects the blind. Professor tenBroek—who is well known to Members of both Houses for his many articulate appearances in committee hearings—has been for nearly 20 years the president of the National Federation of the Blind, which represents affiliated statewide organizations of the blind in all but four of our States and is almost certainly the largest voluntary association of blind people in the world. Having lost his own sight in childhood, Dr. tenBroek began to play a significant role in organizations of the blind while still a very young man. He helped to organize the California Council of the Blind in 1934, and was the principal founder of the national federation 6 years later. In 1950 he was appointed to the California State Board of Social Welfare, a position in which he still serves and which has given him a solid background of administrative experience in all aspects of public welfare. What is most remarkable about all this is that these manifold activities are only avocations for Dr. tenBroek, whose main career is that of a scholar and teacher. At present he is chairman of his department at the University of California, where he has built a national reputation as a constitutional scholar. He has earned five degrees, most of them in law, and in addition to the present book has written two other substantial volumes and more than 50 articles on various problems of Government and welfare. It would indeed be difficult to find a man anywhere in the land more qualified to write on the particular public issues with which "Hope Deferred" is concerned.

Mr. Matson, who is also a member of the faculty of the University of California, is himself experienced in government and administration as well as broadly trained in the social sciences. He served as a Government analyst under General MacArthur during the occupation of Japan, and later was the administrator of a University of California educational program conducted for our military services in the Far East. He has been closely associated with the National Federation of the Blind for several years, and was a coauthor with Professor tenBroek and E. N. Barnhart of an earlier book, "Prejudice, War, and the Constitution," which 5 years ago won the highest award in political science, the Woodrow Wilson Foundation prize, as the best book on democracy and government.

"Hope Deferred" is, in my view, an equally significant contribution to our understanding of democracy and our knowledge of government. It is my earnest hope and belief that the book will serve to fortify Members of Congress in their efforts to create and maintain a sound system of public welfare; that it will bring an end to the opposition of professional and public welfare administrators to these constructive purposes; and finally that it will be instrumental in giving the general public a true picture of the capabilities of our

blind citizens for normal lives and productive careers in the mainstream of American society.

Stop Fine-Tuning the Economy; Editor of Construction Equipment Magazine Writes Boldly

EXTENSION OF REMARKS
OF
HON. JENNINGS RANDOLPH
OF WEST VIRGINIA
IN THE SENATE OF THE UNITED STATES
Thursday, August 27, 1959

Mr. RANDOLPH. Mr. President, I believe, as the editor of Construction Equipment magazine, Michael A. Spronck, has written in an editorial for the September 1959 issue of that publication, that "Congress and the administration must stop using construction as a panacea for its fiscal headaches and political bellyaches."

In fact, there is so much that is right and sensible in the editorial by Mr. Spronck that I bring it to the attention of my colleagues.

I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

STOP FINE TUNING THE ECONOMY

(By Michael A. Spronck)

We said it before and we'll say it again:

Congress and the administration must stop using construction as a panacea for its fiscal headaches and political bellyaches.

Public works are not patent medicines. They cannot be prescribed when business slides into a doldrum, then be withdrawn at the first sign of financial recovery. Nor are they bromides to be dispensed by politicians who seek to still irate voters.

Government officials are ill advised when they listen to economic quacks who tell them that by "adjusting" construction programs and appropriations they can "regulate" the economy. Contrariwise, these shifts induce chaos. They disturb the clockworklike balance necessary in engineering and building public works.

The Federal highway program is a classic example. Virtually every segment of our economy will benefit from a stable long-range highway program. It is vital to our military defense. It will save thousands of lives and prevent hundreds of thousands of crippling injuries. It will stimulate commerce. And through reduction of auto, truck, and bus operating costs will repay more than half of its cost immediately.

Yet just as the program rolls into its productive stage and the benefits begin to accrue the economic adjusters propose we turn it off. Why? It lacks funds, they say. The truth is they are attempting to fine tune the economy, which they now think is moving ahead too fast.

I question their ability to gage our economy with any degree of accuracy. Certainly any significant reduction in the highway program would have a disastrous effect on the construction industry.

The highway trust fund does lack money. But this can be remedied. Congress can stop the diversion of existing highway-use revenues and, if necessary, increase some taxes. Motorists are already paying for modern highways they don't have through needless loss of life, property damage, and high operating costs on obsolete roads. They will not tolerate proposals to sack the interstate program.

At the time I write this Congress has not passed necessary corrective legislation. I am certain, however, that it will do so.

Unfortunately, the protracted debate and threats to the stability of the program has already caused irreparable damage: A halt in new contracts and in right-of-way acquisition. Unemployment. Reduction in capital investments for new plants and equipment. General lack of confidence. And loss of momentum in prosecuting the work. This will impair the efficiency of the program and increase its cost.

It is an expensive lesson—exposing the dangers inherent in a "planned" economy.

As the Nation's leading industry, construction requires judicious, stable public policy. Assured that Government will not default in its public-works programs, construction will continue to contribute to the Nation's prosperity.

It cannot, and will not, serve as the instrument of would-be social planners attempting to fine tune or govern the Nation's economy.

Playing Politics With the Public Debt

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, August 10, 1959

Mr. ALGER. Mr. Speaker, Members of Congress have a responsibility, as members of various congressional committees respectively, to colleagues and to the people of this Nation to do their work which includes understanding, exploring, and solving problems confronting us. The interest rate ceiling removal as an issue before the Ways and Means Committee needs such understanding and exploration. For the information of colleagues and the people throughout this Nation I want to present an editorial from the New York Herald Tribune concerning the interest rate:

PLAYING POLITICS WITH THE PUBLIC DEBT

The question of lifting the 4¼-percent ceiling on interest rates for marketable Treasury bonds, according to SAM RAYBURN, is a dead issue in this session of Congress. But he did leave the door open yesterday for a possible boost in the ceiling on series E and H savings bonds from the present 3¼ percent to 3¾ percent.

The Democrats have hoped to use the bond issue to tag the Republicans a "high interest rate" party. But it would be politically ticklish to oppose a clearly merited rise in interest rates on savings bonds, which are held by 40 million Americans, most of them voters.

The 3¼-percent rate now makes these bonds a poor buy; for the past 12 months, in fact, sales have lagged behind redemptions. In July $350 million were sold, $507 million redeemed. Not only is the Treasury over a barrel but the small investor isn't getting a fair shake.

Action to provide an equitable rate on these bonds is needed, but action to free rates on regular Treasury bonds is equally urgent. Bonds already issued are selling in the open market at prices yielding more than 4¼ percent, so that new long-term issues (the only ones to which the ceiling applies) can't be sold. Sound management of the Nation's $290 billion debt is one of the pillars of fiscal stability and is impossible without long-term borrowing. Within the next 12 months the Treasury will have to borrow $85 billion to cover maturing securities, redemptions and seasonal cash needs. Unless Congress acts, this will have to be done without access to long-term funds. Speaker RAYBURN knows this. Senator JOHNSON knows it. It's up to them to put politics aside, and act promptly to free the Treasury from artificial and fiscally dangerous restrictions.

Professor's Salmon Crops Migrate to Sea, Return to Washington State

EXTENSION OF REMARKS
OF
HON. WARREN G. MAGNUSON
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES
Thursday, August 27, 1959

Mr. MAGNUSON. Mr. President, when my Senate Interstate and Foreign Commerce Committee was considering the National Fish and Wildlife Act of 1956, we consulted many recognized leaders in the field of conservation.

One of these was Dr. Lauren Donaldson of the Uinversity of Washington. I knew firsthand the work which Dr. Donaldson had done in restoring salmon runs in the State of Washington.

Now Dr. Donaldson's achievements have been saluted in an article published in the Tuesday, August 18, edition of the Seattle Times.

I ask unanimous consent that the article may be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PROFESSOR'S SALMON CROPS MIGRATE TO SEA, RETURN HERE

(By Stanton H. Patty)

Dr. Lauren R. Donaldson, of the University of Washington, has proved that man can grow crops of salmon.

Donaldson said today that over a 10-year period he has established runs of choice Chinook salmon that migrate to the high seas and return in quantity to his laboratory ponds at the University of Washington.

This is a major breakthrough in the effort to establish fish farms to produce unlimited numbers of salmon, Donaldson said.

Donaldson is a professor of fisheries and director of the university's laboratory of radiation biology.

STATE GETS FINGERLINGS

The State fisheries department has received 100,000 of Donaldson's surplus fingerlings for planting in the State's new fish farms.

By 1961 some 10 million excess Chinook salmon eggs will be available to the fisheries department from Donaldson's experiments.

"This has been a team operation with Milo Moore, the State fisheries director," Donaldson said.

"Once we get the seed that is needed for fish farms, it becomes the State's job. The university cannot go into the fish farm business."

PROJECT BEGUN IN 1949

Donaldson's project began on a modest scale in the spring of 1949, when he released

40,000 fingerlings in Portage Bay near the Seattle Yacht Club.

Three years later, 42 of the marked salmon returned—a recovery of one-tenth of 1 percent.

Donaldson plugged ahead year after year, multiplying the returns with each cycle.

Last November, 440 of 26,240 chinooks that had been released in the spring of 1956 splashed into Donaldson's ponds.

FISH BIG FOR AGE

But these were no ordinary salmon.

The usual cycle for Chinooks is 4 years. But because of Donaldson's selective breeding, the 1959 returns were 3-year-old adults averaging more than 18 pounds each—larger than full-grown 4-year-olds.

Donaldson expects still more of the "class of 1956" Chinooks to return in the coming fall as 4-year-olds.

Dr. Lauren R. Donaldson, like any cautious scientist, waited several years before announcing results of his experiments at the University of Washington, with Chinook salmon.

Like many another scientist, Donaldson was the target of considerable scoffing as he sought to prove that selected laboratory salmon will return in volume to their birthplaces to spawn future runs.

Success in fisheries research is nothing new to the blunt-talking director of the university's Laboratory of Radiation Biology.

Earlier, Donaldson had toiled patiently for 28 years to develop supertrout weighing many times more than their natural-hatched cousins.

Here is the chronology of Donaldson's Chinook-salmon experiments:

Spring 1949: 40,000 fingerlings were released in Portage Bay near Donaldson's university laboratory.

Fall 1952: 42 of the salmon returned as adults. Donaldson cross-bred these fish and recovered 48,000 eggs—more than his original seed.

Fall 1955: 48 salmon from the 1952-year eggs returned to the university as 3-year-old adults. Forty more returned the next year as 4-year-olds.

The 3-year-olds were the key fish. They included 40 males and 8 females. Donaldson inbred them and selected 26,240 of the offspring for release.

Spring 1956: The 26,240 fingerlings were released as migrants.

Fall 1956: Surprisingly, 52 of the 1956-year fingerlings returned as 1-year jacks weighing about 1½ pounds each.

Fall 1957: 228 more returned as 2-year jacks.

Fall 1958: 440 Chinooks returned as 3-year-old adults. The normal cycle for chinook salmon is 4 years. The 3-year-olds averaged 18 pounds each—larger than most 4-year-olds.

Meanwhile, in the 1956 through 1958 period, commercial and sports fishermen caught about 4,000 of the university salmon released in the spring of 1956.

This meant a total recovery for the cycle of 18 percent.

Donaldson said 16 Chinooks were caught last fall in the Seattle Milk Fund derby. Nine of the 16 were Donaldson's products.

Spring 1959: Donaldson released 261,154 chinook fingerlings.

Fall 1959: Donaldson expects still more of the salmon released in 1956 to return as 4-year-old adults.

The returning salmon last fall included 168 females. They produced 650,000 eggs.

"We had fish everywhere," Donaldson recalled.

About 100,000 of the fingerlings from the 650,000 eggs were given to the State fisheries department for fish-farm plantings. Others were turned over to the Army's Corps of Engineers and the Hanford Atomic Works for experiments.

The 261,154 fingerlings released from the university last spring are about 10 times as many as were turned out in the spring of 1956.

In the fall of 1961, Donaldson expects 4,000 to 5,000 chinooks to return to his ponds. Sports and commercial fishermen should catch 20,000 to 30,000 more of this crop.

Donaldson is enthusiastic about the projected 1961 return.

"That is the first year of the Century 21 Exposition," he said. "If the salmon come back as we expect, there will be thousands of visitors at the university each day to watch them."

FIFTEEN MILLION EGGS EXPECTED

The 4,000 or so Chinooks due home in the fall of 1961 will produce 15 million eggs.

Donaldson plans to keep 500,000 and from that number and select the best 250,000 for release.

"We will keep doing this and build up to the point where we can take 15 million eggs as seed stock each year," he said.

Some 10 million excess eggs from the 1961 return will be made available to the State fisheries department for fish farms.

Donaldson said preliminary studies indicate a survival rate of 60 percent in the fish farms.

"So if 6 million fish can be released from the fish farms, at least 10 percent should survive at sea," Donaldson said. "That would be 600,000 fish for the sports and commercial fishermen to catch.

MONEY GAINS CALCULATED

"Figuring the value of chinook salmon to fishermen at $10 apiece, that means $6 million worth of fish."

Donaldson said the fish farms can be prepared by cleaning out weeds and predators from ponds, lakes, and lagoons. The next step is to add fertilizers to supplement the fingerlings' diet.

The magic of atomic energy can increase the productive capacity of fish-farm waters.

"This is what we call trace-mineral metabolism," Donaldson explained. "Radioactive materials will serve as tracers to tell us what fertilizers should be added to the waters."

Donaldson is talking in terms of fish-farm lakes producing 300 pounds of fish for each surface acre of water.

"In other words," Donaldson said, "you would need only 200 acres of (fish farm) water to produce the 6 million migrants that will return as 600,000 fish to be caught.

"This is all excess, so let them be caught. No escapement is needed. We will have more seed for the future coming to the university."

PLANS WORLD TRIP

Donaldson will leave Thursday for a 4½ month world trip to study fisheries management and the peacetime uses of atomic energy in fisheries.

His itinerary includes Iceland, England, Norway, Sweden, Denmark, Germany, Italy, Turkey, India, Thailand, the Philippines, Hong Kong, and Japan.

Tunkhannock (Pa.) Church Observes 75th Anniversary

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 27, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following newsstory from the Wilkes-Barre Times-Leader of August 18, 1959, which reports the 75th anniversary observance of the Church of the Nativity of the Blessed Virgin Mary at Tunkhannock, Pa.:

CHURCH TO OBSERVE 75TH ANNIVERSARY—TUNKHANNOCK CATHOLIC PARISH TO CELEBRATE EVENT SUNDAY, AUGUST 23

Parishioners of the Church of the Nativity of the Blessed Virgin Mary, Tunkhannock, will celebrate the 75th anniversary of the dedication of the first Catholic Church in that community on Sunday, August 23. Joining them in the celebration will be members of the congregations at the missions at Lake Winola and Lake Carey.

A high mass at 11 will be followed by a jubilee banquet at 1 p.m. in the Tunkhannock Elementary School. Reservation applications, mailed to all parishioners, must be returned by August 20. Others may secure tickets from Mrs. Robert Gaughan or Tony Talerico, Tunkhannock; Mrs. Helen Matalavy, Lake Winola, or Joseph Langan, Lake Carey.

The jubilee will commemorate the dedication of the Church of the Nativity on September 7, 1884, by the Right Reverend William O'Hara. The church building dedicated at that time was constructed by the Presbyterians in 1833 and was used by them for 34 years. It then was acquired by the Baptists, who worshiped in the church until 1884, when it was purchased by the Catholic society. Moved to the rear of the church property when the present church was constructed in 1954, the structure still is used for many parish activities and has served the community as a teen canteen.

RECORDED HISTORY

Recorded history of Catholicism in Tunkhannock dates back much further than 1884, however. In the early 1850's, mass was celebrated in the home of John Code—a contractor on the canal then being built along the Susquehanna River. There also are records of mass being celebrated in Tunkhannock at irregular intervals from 1870 to 1873.

In 1873, there began a cycle which ultimately resulted in the establishment of the Church of the Nativity of the Blessed Virgin Mary and the Wyoming Catholic Missions, as they are constituted today. At that time, the first regular series of Catholic religious services was inaugurated, as Father Patrick J. Murphy came from Auburn to Tunkhannock to celebrate mass in the home of Patrick Boyce. These masses were attended by about 15 people, and in addition to the sacrifice of the mass, the Boyce home was the scene of baptisms, marriages and confirmations. The affiliation with Auburn continued through the pastorates of Fathers Felix McGuckin, Michael Shields, Thomas J. Rea and Eward J. Lafferty, until the first Catholic Church was dedicated in Tunkhannock.

In 1876, a hall was rented on the second floor of the building which now houses the Billings Furniture Store, Bridge Street. Mass was said there until 1879, when the congregation became so large that arrangements were made to celebrate mass in Platt's Opera House, which was located where the A. & P. store now stands. After 5 years of this arrangement, with Father Lafferty traveling over primitive roads from Auburn to Tunkhannock, the church building was acquired from the Baptists.

BECOMES SEPARATE PARISH

Some time later, the Tunkhannock church became a mission of Nicholson, and continued as such until 1931, when Bishop Thomas C. O'Reilly purchased the Joseph Wood Platt estate, located next to the church. The Platt home became the resi-

dence of the first resident priest of the Church of the Nativity—the Reverend James J. Reilly—and Tunkhannock became a separate parish.

With the separation of Tunkhannock from Nicholson, the Wyoming Catholic Missions came into being. On June 28, 1931, Father Reilly and his newly-appointed assistant, Rev. Gerald F. Cannevan, began conducting masses at Lake Carey, Falls and Lake Winola.

Rev. James P. Holleran became pastor of the Church of the Nativity in 1932, serving in that capacity until 1944. He was succeeded by Rev. Harold T. Kennedy, who remained in Tunkhannock until 1948.

At that time, the present pastor, Rev. Joseph J. Nallin, was assigned to the Church of the Nativity. During Father Nallin's pastorate, three new churches have been built—the present Church of the Nativity in Tunkhannock; St. Mary's of the Lake, Lake Winola, and the Chapel of the Blessed Sacrament, Lake Carey.

Working with Father Nallin and assistant pastor Rev. Patrick D. Healey on arrangements for the celebration are: Charles Charles and Robert Dempsey, co-chairmen; Frank Friedel and Mrs. George Kukucka, program; Mrs. Vincent Bishop and Cecil Krewson, Jr., publicity; Mrs. Eugene Corbett and Mrs. Murray Fisk, entertainment; Mrs. Robert Gaughan and Tony Talerico, tickets.

Mr. Truman's Comment on the Eisenhower-Khrushchev Discussions

EXTENSION OF REMARKS
OF
HON. HUGH SCOTT
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Thursday, August 27, 1959

Mr. SCOTT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Getting Into the Act," from the Washington Evening Star of August 26, 1959, relating to the comments by ex-President Truman on the Eisenhower-Khrushchev discussions.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

GETTING INTO THE ACT

The President obviously was annoyed, and justly so, by Harry Truman's unsolicited contribution to the Eisenhower-Khrushchev discussions.

One might think that Mr. Truman, as a former President whose own ventures in dealing with the Russians were something less than spectacularly successful, would hesitate, especially in advance of the event, to pour cold water on the Eisenhower undertaking. But that would be out of character. If the spirit moves him, and it generally does, Harry S. Truman is going to speak his piece.

In this instance, Mr. Truman, on the eve of the President's departure for important preliminary talks with our allies, let it be known in an article written for the North American Newspaper Alliance that he thought it was all right for Mr. Khrushchev to come to the United States, but all wrong for Mr. Eisenhower to go to Russia. The power and leadership of the Presidency, according to Mr. Truman, should not be dissipated in ceremonial visits.

This brought a sharp retort from Mr. Eisenhower when he was asked about it at his news conference. He didn't mention Mr. Truman by name, but he said he was getting a "little weary" with "facile critics" who are fretting about "this terrible blow to Presidential prestige." He made it clear that he intends to use every bit of his prestige and all of his energy in trying to thaw out the cold war. What is at stake, he added, is the future fo the human race, not prestige, and he thinks that any President who does less than his utmost in such a situation would deserve to be condemned by the American people.

We think that Mr. Eisenhower is right. Of course, his visit to Russia may not produce any tangible result. But the effort should be made, and if it is made in the right spirit and with eyes open there will be no harmful consequences. Mr. Truman should stop worrying about Presidential prestige—and also should stop tossing monkey wrenches into the works.

Assistance in the Construction of Fishing Vessels

SPEECH
OF
HON. E. Y. BERRY
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 26, 1959

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H.R. 5421) to provide a program of assistance to correct inequities in the construction of fishing vessels and to enable the fishing industry of the United States to regain a favorable economic status, and for other purposes.

Mr. BERRY. Mr. Chairman, during the past week we have witnessed in this body the growing decline of the free enterprise system in America.

When we consider that the economy of the Nation consists solely of the production and removal, the processing, transportation, reprocessing and disposal of the basic raw materials which come from the fields, the mines, or the sea, we understand how important these basic raw materials are.

Within the past week the House has acted upon three bills, either enacting, extending, or anticipating a subsidy program to prevent domestic production of the three basic raw materials from being completely destroyed by cheap foreign imports:

First. Thursday of last week we extended Public Law 480 by which the U.S. Treasury through gift, barter, or exchange for foreign currencies which are then spent in that country, disposes of domestic farm production acquired under the so-called agricultural subsidy program. This is a program carried on to purchase domestic agricultural products displaced by cheap foreign imports.

Second. Monday we had on the floor a resolution in which Congress asked the executive branch to submit a program for the solution of the domestic mining industry, which industry has been displaced through cheap foreign imports.

Third. Today we are considering a subsidy for the fishing industry, which is the first step in an overall subsidy program to save the fishing industry from being completely displaced through cheap foreign imports.

THE PATTERN

In order that we may have a clearer picture of what is shortly in store for the mining and fishing industries, let us look at the purpose and operation of the agricultural program. Last year we imported $3.9 billion worth of agricultural commodities. These commodities were placed on the domestic market and went directly to the dinner tables of the homes across the Nation.

Those basic raw materials coming from the fields of the Nation were made surplus by the displacement of millions of acres of domestic production through these foreign imports. The Nation was faced with two alternatives, either to stop imports or to buy up the displaced domestic production. The Federal Treasury purchased this displaced farm production, which we term surplus. It is surplus only because it has been supplanted by imports.

In order to dispose of this mounting surplus, the taxpayers through Public Law 480 gave away last year, either directly or indirectly, $1.5 billion worth. Through the International Wheat Agreement and other such programs, the taxpayers subsidized the sale on the world market of another $1.2 billion. This was subsidized at the rate of about 50 cents per bushel on wheat and a related figure on other grains. The rate has been 6 cents per pound on cotton; it has now gone to 8 cents per pound.

In other words, $2.7 billion of the $4 billion agricultural exports from the United States last year were either given away or the sale was very highly subsidized in order to make room for the $3.9 billion of agricultural imports.

OTHER BASIC MATERIALS

The domestic mining industry is in much worse shape than the domestic agricultural industry because foreign mineral imports can be indefinitely stockpiled. If, however, the domestic industry is to be preserved, even on a standby basis, the taxpayers must buy the domestic production at a cost of production subsidized price and then arrange some program similar to Public Law 480 to give away that which is produced in this country.

The fishing industry faces the same fate. Cheap foreign imports have supplanted the best efforts of the domestic industry on both coasts. Either the taxpayers step in or the fisheries step out.

THE PROBLEM

You ask why a great industrial country like America, with the best means of production that modern science can produce and with a class of labor that is the most efficient in the world, cannot meet competition from abroad.

The first answer is that the American farmer the American miner, and the American fisheries are given a serious handicap before they can even enter the race of free world competition.

The American taxpayer, which includes every farmer, every miner, everyone engaged in the fisheries, every processing industry and every laborer, must first pay his pro rata share of defense, not just the defense of America, but the defense of the entire free world. This defense is the first handicap placed upon domestic industry and labor.

The bill for the defense of the free world is approximately $40 billion annually. Broken down on a per capita basis, this annual expense amounts to $800 for every family in America. This $800 must be added to the production cost of every pound of food, every ton of mineral, and every item of clothing or product of industry which is produced domestically.

The foreign producer and foreign laborer has no defense item to add to his product—we defend them.

The domestic producer must raise another $3 to $3.5 billion annually for foreign aid. This amounts to from $70 to $75 annually for every family in the Nation. This amount is not only given to our agricultural and industrial competitors to maintain their defense, but to their governments as well to help keep them solvent, to help run their schools, to build roads, powerplants irrigation projects and every other item of their national expense.

Certainly these people can work for lower wages when the American taxpayer not only foots the bill for their defense but contributes toward the operation of their governmental functions and then puts $1.5 billion worth of food on their tables free of cost.

Can any degree of efficiency, can any technical development met this kind of competition?

THE SOLUTION

In 1936 the Congress of the United States passed a minimum wake and maximum hour law so that one section of the Nation would not have an unfair advantage over the other in trade moving in interstate commerce.

The countries of the world are closer today than were the States in 1936. If wage-and-hour legislation was necessary then for fair interstate trade, worldwide wage and hour standards are just as important today in international trade.

This, you say, is not possible. You likewise contend it is not possible to require the other nations of the free world to contribute their proportionate share of the cost of free world defense. But, Mr. Chairman, it is possible to require them to make their proportionate contribution at least on the products they export into the United States.

Call this an equalization tax or a defense tax, or call it what you please; if they expect the American taxpayer to be their consumer, then they must contribute toward the terrific burden being carried by that consumer as a free world taxpayer.

I do not advocate a punitive tariff; I do not advocate a destructive tariff; I do not advocate a tariff which would place an import wall around the Nation, but I do contend that the Treasury of this Nation cannot long continue to defend the free world, raise their standard of living by subsidizing their governments, financing agricultural, mining, and industrial development in competition to ours, place free food upon their tables, and then subsidize American agriculture, American mining, American labor, and American industry when these foreign products, produced through these unfair competitive means, idle the domestic producers.

The defense of their countries is as important to them as it is to us. Trade with us is vital to them. I see no other means of requiring them to carry even a portion of their share, except to place an import tax upon food, goods, and products imported in competition with domestic production.

The patient is dying with a malignant import cancer. Congress continues to treat the patient by placing bandages over the open sores, but does nothing about the malignancy. It is Congress and Congress alone that is to blame for this condition. When will it face up to the facts and assume the responsibility required of it by the Constitution?

United States Lags in New, Economic Phase of Cold War, McCormick Warns

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Thursday, August 27, 1959

Mr. KEFAUVER. Mr. President, Charles P. McCormick, chairman of the board of McCormick & Co., and an outstanding businessman and civic leader of Baltimore, Md., was one of the delegates to the Atlantic Congress.

The Atlantic Congress, which was held in London last June, was attended by 650 delegates from the NATO countries, to discuss the future of NATO.

The Baltimore Sun of August 5, 1959, carried an interview with Mr. McCormick, who is also a member of the Business Advisory Council of the Department of Commerce, in which he points out that we must realize that we are entering a new era of competition in the world, in which we have reached a stalemate militarily but during which we are going to be battling for our lives economically.

I ask unanimous consent that this thoughtful interview be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

UNITED STATES LAGS IN NEW, ECONOMIC PHASE OF COLD WAR, MCCORMICK WARNS

(By Louis R. Rukeyser)

The cold war has entered a new phase—and America is not winning it, Charles P. McCormick warned today.

"We must realize that we're entering a new era of competition," he declared. "We're not winning the cold war. We've reached a stalemate militarily, but we're going to be battling for our lives economically."

Mr. McCormick, an international businessman and civic leader with headquarters in Baltimore, said industry and labor no longer can afford to be complacent about American technological know-how.

BACK FROM EUROPE

The rest of the world is catching up, he said.

Mr. McCormick has returned from a crowded European trip that included a world food convention, the commencement exercises of the University of Maryland's overseas branch and the first Atlantic Congress in London.

The last-named meeting, a gathering of 650 delegates from 14 NATO nations, was designed to make the Atlantic group something more than just a military alliance.

While the week-long congress ended with only a vague communique about closer cooperation (military, economic, political, and cultural), Mr. McCormick feels that it was a valuable first step in what he considers the new cold-war phase.

"I think we aroused a great many people who had been thinking that NATO militarily was enough to win the cold war," he said.

As for the possible importance of the Atlantic Congress, in the free world's future, Mr. McCormick says: "The average American will not think that this is as important as NATO. But is religion more important than a battleship?

"If you already have the battleship, it may be."

His belief that the cold war is increasingly an economic conflict was intensified at the food convention, where the merchant says he found that the United States no longer has an automatic advantage in packaging and advertising.

He adds: "Five years ago I found Europe very backward. On this trip I was shocked at the activity, the intensity, and the modernization of European industry."

Some products produced by Germany and Switzerland in particular, he said, are well made, well packaged and manufactured and distributed locally at lower cost than in the United States.

UNITED STATES NEEDS BLUEPRINTS

America needs new blueprints if it is going to hold its own in the economic competition, Mr. McCormick maintains.

"Labor and business must realize that foreign manufacturers are getting to the point where they can beat the United States in product, in package, and in price," he adds.

"Otherwise, we are going to have vast unemployment, leading to the creation of a superstate in which we would be even more out of the market.

"Labor must be conscious that strikes are not always good, and business must be wary of excessively high profits. American prices must be lowered—and the interest of the employer and the laborer is exactly the same."

Seeds of Destruction

EXTENSION OF REMARKS
OF
HON. ROBERT W. HEMPHILL
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 27, 1959

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the Ap-

pendix of the RECORD, I include the following editorial from the Lancaster News, Lancaster, S.C., of August 24, 1959:

SEEDS OF DESTRUCTION

What is the future of the United States of America? For more than 100 years it has been a generator of wealth and public prosperity. Has it now reached its peak with only a downhill prospect ahead? Quite a few sensible people have begun to wonder if this is not so.

No nation in all the history of civilization has ever embarked on such a giveaway program as this country undertook after World War II. In the heyday of her empire, Great Britain policed and financed a large part of the world. She furnished the money for development of her colonial possessions and even supplied the bribes for recalcitrant trouble-makers. But all her efforts were devoted to keeping the British Isles top dog in military, naval and commercial.

The United States took over this job after World War II with no clear-cut program in mind. Instead of following the British pattern of enlightened self-interest, the United States encouraged independence and self-development in every geographical and racial subdivision of the world. We have tried, and often vainly, to sell democracy in areas where democracy is an alien philosophy. To make it work, we have provided financial aid, factories, manufacturing know-how and raw material without stint or consideration.

The result has been a Pandora's box of political and economic troubles. No nation has ever applied the Golden Rule more consistently in its international affairs. No nation has ever received less return for this effort. We are receiving in payment, not the greatful thanks of cooperative nations, strong in their democracy, but the strident demand that we open markets in this country for their slave-labor products.

If we follow through on our global do-gooder policies, as the State Department seems determined to do, these low-wage products will shortly replace every major item of American industry in the domestic market.

The Rockefeller Family and Wyoming—How Grand Teton National Park Has Benefited a State

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Thursday, August 27, 1959

Mr. NEUBERGER. Mr. President, I should like to include in the CONGRESSIONAL RECORD an excellent article by Tracy S. McCraken of Cheyenne, Wyo., entitled "The Rockefellers and Wyoming."

In this article Mr. McCraken, who is a distinguished resident of Wyoming, cites the vast benefits brought to his State by the eleemosynary donations of John D. Rockefeller, Jr., and his family toward the Grand Teton National Park and the very outstanding lodge and cabin facilities provided there on Jackson Lake.

I am particularly eager to call to the attention of my colleagues the article by Tracy S. McCraken for one reason. Thirty years ago there was voiced against the Grand Teton National Park much of the same argument now used to oppose national seashore parks on Cape Cod, in the Oregon Dunes and Indiana Dunes, and elsewhere along America's scenic shorelines.

Yet, today, an eminent citizen of Wyoming heralds the Grand Teton National Park and the Rockefeller family, whose generosity and public-spirited donations of land helped to make possible not only the Grand Teton National Park but also the exemplary accommodations available there for travelers and tourists.

I ask unanimous consent that this informative article, "The Rockefellers and Wyoming," be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE ROCKEFELLERS AND WYOMING

(By Tracy S. McCraken)

It's the contention of our Mrs. that all during our married life, which really constitutes a spell of time, we've rushed back to home and office from a vacation in advance of the time we'd promised to stay. The allegation is not without some semblance of fact. But there are exceptions. We never abbreviate the time we contemplate spending on our annual trek to Jackson Hole.

That's where this is being written—in our cabin at Jackson Lake Lodge. We came here for the yearly summer meeting of Wyoming University's trustees, a 2-day affair. A desk full of work at home notwithstanding we unreluctantly said we'd stay an extra day. Now it's 3 days later and we're not leaving till the morrow—and then will prolong the safari by 2 days more for a couple of days in Jackson.

Great wealth, as we suspect someone may have said before us, can be a wonderful and fortunate thing for others—if it is used wisely and beneficently, which, as we might superfluously add, it always isn't. However, it's impossible to escape the observation of what wondrous things private wealth can do when one sees first-hand what we have today, including not just the several million dollar Jackson Lake Lodge, but the vast Colter Bay development a few miles down the highway toward Yellowstone.

Between these two places are accommodations and cuisine to fit most anyone's pocketbook. The Colter log cabins (about 100 of them) are excellently, but not plushly furnished. The decor is distinctly western. For a family of four the cost is about $12 a day. We lunched at the Colter cafeteria yesterday. Like the cabins it's spotlessly clean and the food fine. The price of our much too big luncheon which featured chicken livers: $1.10. The trailer park at Colter is something to behold. In it are sites for 112 trailers. Cost per day: $1.50, which includes electricity, running water and sewage and bathing facilities. No less interesting are the camping grounds with 112 sites. There is no chage to campers. Although they must supply their own tents, there are water hydrants and rest rooms within a stone's throw of every site, and a cooking grill for each.

Of course there is divided reaction as to the Grand Teton National Park taking over so much of Teton County. Nor are the adverse comments confined to the fact that by removing so much taxable land from tax rolls the county faces a difficult financial situation. In years past many fine private homes had been built in the area, especially around the lakes. But there's no more of that now; fact is, those there when the Park Service took over (including the late Wallace Beery's) either have been or will be taken over from private ownership.

Which, in a way, seems to bad. Yet it is only by preservation of the domain which is the Jackson Hole that its majesty and its grandeur in its native state can be saved for all the people to enjoy in perpetuity. At least it will never be defaced by countless shacks and hot dog stands such as is the case in the otherwise beautiful Big Thompson Canyon of Estes Park.

The Jackson Hole Preserve, Inc., the nonprofit organization endowed by the Rockefellers, as you know, originally bought up and gave to the National Park Service, most of the area now embraced by Grand Teton National Park. It also owns the Jackson Lake, Jenny Lake, and Colter Bay lodges and trailer park facilities. No one dislikes more than do we to see private lands or private business pass to Government control. But only by such procedure and by the untold millions that few if any outside of the Rockefellers could supply in gift form, could this area be preserved in its virgin state. And if in the long run countless millions of people from all over America and, indeed, the world are better for it we too must subscribe to its long-range desirability and feasibility.

Following through in their thinking that the area and its facilities must always be made available for the enjoyment of the greatest possible number of people, the Rockefellers have seen to it that their lodges are open to conventions only in the spring and late summer. So enticing a convention site is Jackson Lake Lodge that it could be booked solidly with conventions all summer long. But that way fewer people could be accommodated. Hence, the restrictions.

Frequently one hears that Jackson Lake Lodge is not the imposing looking structure, exteriorly, that would be expected of a $7 million layout. But that to is on purpose. Its benefactors insisted it be so designed as to blend into the landscape. The same principle has been applied to the spacious grounds. For its cooling and restful attributes about half of the grounds are of rich, green well-manicured grass. But the other half is still in its native condition with an abundance of wild flowers and shrubs.

Not only has a lot of money been put into this huge project, but so has an awful lot of thought. Of both, millions of people have been and everlastingly will be the beneficiaries.

On Air Safety

EXTENSION OF REMARKS
OF
HON. EDGAR W. HIESTAND
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 17, 1959

Mr. HIESTAND. Mr. Speaker, the following editorial on air safety deals primarily with the problem of mid-air collision. It brings to our attention an important point, namely that even with the development of mechanical devices, the human element, the pilot, remains the most significant safety factor. And this is likely to be the case for many years to come. It is important that the public realizes this, and of course, that our pilots know it. The editorial follows:

VISIBILITY AND VIGILANCE

In March of this year Mr. E. R. "Pete" Quesada, Administrator, Federal Aviation Agency, solicited the cooperation of the Air Force in his continuing crusade against mid-

air collisions. In a letter to the Honorable James H. Douglas, Secretary of the Air Force, Mr. Quesada, himself a noted Air Force pilot, points up the need for pilot vigilance. We quote: "I feel compelled to call your attention to the increasing number of reported near-misses of recent weeks. I know that you are well aware of this problem and the responsibilities we all share relating to it and feel certain that the Air Force, by constant emphasis on the importance of vigilance, can materially assist us in their prevention.

"The current rash of near-miss incidents forcibly points out that all pilots must be more vigilant to the presence of other aircraft in the airspace. This is particularly true when operating IFR under VFR conditions. An IFR flight plan, as has so often been indicated, in no way reduces the necessity for continual visual surveillance.

"We must all candidly recognize the existing limitations of our control system and cockpit visibility, as well as the vast mixture and speeds of modern aircraft. We must also recognize that there is no substitute for maintaining a thorough and vigilant watch for other air traffic at all times.

"I am convinced that beneficial results will be obtained from again enlisting the support of the Air Force in a program designed to bring forcefully to the attention of all pilots the necessity for constant vigilance and continuing awareness of this pressing problem.

"While I fully realize that pilot vigilance alone is not the entire answer to the near-miss problem, I am confident that it will serve to lessen the hazard until the positive and constructive program we now have under way to expand and improve our air traffic management facilities becomes effective.

"I want to point out that a similar letter has gone to the other military services and civil aviation organizations to insure that this message reaches all users of the airspace. I am sure that we can reduce the exposure and alleviate to a considerable extent the near-miss hazard."

In answering Mr. Quesada, the Secretary says, in part, "The Air Force is in full agreement with the need for increased pilot vigilance by all users of the airspace. Your letter complements the strong measures, including continual emphasis of pilot vigilance, currently in effect throughout the Air Force.

"While your correspondence is primarily directed toward air operations in the United States and possessions, the Chief of Staff has directed that your letter will be brought to the attention of all Air Force aircrew members and air operations personnel worldwide. You may be assured of continued Air Force emphasis on this subject, and of our full cooperation in your efforts to reduce air collision potential."

In passing the word to Air Force personnel worldwide, Gen. Curtis E. LeMay, Vice Chief of Staff, notes that, "The see and be seen concept has recognized limitations. This concept, despite these limitations, will remain a fundamental means of collision avoidance in the foreseeable future of world aviation. Constructive progress is being made in air traffic management; however, the most sophisticated system of air traffic control and airspace management will never entirely replace the requirement for maximum aircrew vigilance.

"The primary responsibility for vigilance rests with the pilot at the controls of the aircraft. Equally important, to offset cockpit visibility and aircraft control limitations, is the vigilance support given to the pilot by his crewmembers and the air operations personnel who control and advise him."

As General LeMay points out, all the concern and emphasis in high places will go for nothing if the individual crewmember doesn't conform. As usual, pilots, it's up to you. To be vigilant is to be awake and on the alert to insure safety or to discover and ward off danger.

The Atlantic Congress

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES

Thursday, August 27, 1959

Mr. KEFAUVER. Mr. President, one of the delegates to the recent Atlantic Congress, held in London last June 5–10, was Paul Van Zeeland, the distinguished former Premier of Belgium. Mr. Van Zeeland has written an article in the August issue of Western World magazine, pointing out the significance of the Congress and calling for the growth of NATO into more than just a military alliance—into a "smoothly running community."

I ask unanimous consent that Mr. Van Zeeland's article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

UNITED WE STAND

(By Paul Van Zeeland)

Two main ideas emerge from the meetings of the Atlantic Congress.

The first is that the Atlantic Pact, which up to now has in fact been merely a military organization for European defense, must expand in all directions. It must first be extended to various other fields: political, cultural, economic and social. It should become more than an alliance: a smoothly running community.

The second is that the Atlantic nations are actually related to the other nations of the free world by ties of interdependence which should be taken into account both materially and morally. More specifically, it is their duty to aid the underdeveloped countries.

THE ATLANTIC COMMUNITY

The countries known as the Atlantic nations each have their own customs, distinct regions, widely differing languages, different living standards. Yet, they all share the deep conviction that they belong to one great family of nations. The ties between them are so many and so strong that it may truly be said that culturally and morally a living and striving Atlantic Community exists.

The first of the five great committees constituting the Congress was devoted to the study of the basic elements of this common cultural community. Its conclusions were clear and unequivocal. The Atlantic cultural community is mainly based on a set of moral values, on an ethical code, on a certain way of life, on similar reactions to the fundamental concepts of life and happiness.

One of the most urgent and the most glorious tasks which lies before the Atlantic nations is to point out to the world what exactly is their ideal, their way of life, to restore its dynamism and its prestige of old; to present their way of life to the world, and particularly to the younger generation as a course of action, as a hopeful answer to the destructive, specious and dangerous communist propoganda.

The Congress met to celebrate the tenth anniversary of NATO. On this occasion, NATO wanted to summarize what it had done so far, and especially to discover the new lines along which the Atlantic community should develop in the future.

It can thus be acknowledged in all fairness that NATO did the free world a great service; but it will be admitted at the same time that the present situation cannot last: It is impossible for a military alliance of a defensive nature to maintain its efficiency indefinitely if it remains unaffected by the profound changes undergone by circumstances. It has to grow and adapt itself.

A military alliance like NATO must, if necessary, be able to rely on general and trustful cooperation in political matters. The military alliance had to be completed by a political alliance. Here again, events should determine the extent of such an alliance and the structure that will assure its success.

Extended to the political realm, the alliance urgently needs sound and basic economic foundations. This already was the opinion of those who set up the important groundwork represented by the Atlantic Pact.

As they were all following a hardy and generous social policy, the Atlantic nations could not separate social and economic aspects of the various problems. And that is why in London it was decided that Atlantic cooperation should be extended without delay to the greater aspects of social life. The final declaration contains some very important advice:

"The time has come to set up an Atlantic Community whose responsibilities are to extend to many fields, military, political, economic, social, and scientific."

The Congress studied another aspect of the problem the necessity of tightening the bonds between member nations. It is with this in mind on all occasions that the Congress used the expression "Atlantic Community." No attempt was made to define this term and this very abstention appears to me a proof of wisdom. Actions alone will tell: it rests with the old organizations or with the new institutions that will actually direct the first steps of this community to determine the rules of its functioning and to apply them with realism to changing circumstances.

In any case, it is obvious that the community is superior to the alliance; it contains the foundations and the principles of a tighter, more intimate cooperation.

AID TO LESS DEVELOPED COUNTRIES

Having dealt with the main lines of the cooperation which from now on was to exist between them, the Atlantic nations turned towards the outside world. They immediately stressed their interdependence with the other nations of the free world. Each year the Atlantic nations have taken new steps on the road of economic and social progress. But can this gradual enrichment, this rise in the standard of living of the Atlantic countries continue as we wish, if, beyond our borders, other nations of the free world continue to live in poverty, and even in misery? Can the Atlantic nations facing the Communist world be expected to continue in their course if the underdeveloped countries which still believe in liberty are left without help, to struggle alone with their difficulties? Certainly not.

Aid must be given, not only efficiently, but in such a way that what we give will be gladly accepted; we must give, but give without neglecting the cultural and moral aspirations of those who receive and carefully protect their right to make their own decisions.

In the last resort, it is up to these peoples themselves to conduct their affairs as they see fit. The responsibility for their actions lies with them. But we can and we must help them, on a basis of complete equality, by resorting to forms of association convenient and profitable to both parties. This is the meaning of an expression which came up very often during the Congress: what we can and must do is to enable them to solve their own difficulties, in other words, we must "help them help themselves."

We must succeed in reestablishing the general conditions that will induce private capital to invest in foreign countries, however poverty-stricken or remote.

On the other hand, time is an essential factor in the maturing of everything that lives. This is true for mankind as it is true for civilizations and their growth as groups. There are no miracles in economics and politics. The standard of living reached by the countries of our ancient Western civilization is the result of the efforts of millions of men of good will over hundreds of years.

Lastly, and this needs to be emphasized, Western civilization consists not only of capital and techniques, but also of moral values, of conceptions of life and happiness, duty and right, and ethical rules, which are far more important than the purely material level and without which it is impossible to explain the Atlantic nations' strength and progress.

Such an undertaking demands a great deal of good will, mutual understanding, and time. This is no reason why we should delay in putting the most powerful means to work: the time to act is now.

Personally, I had hoped that the Congress would show more daring, more dynamism, more originality particularly in its final recommendations. It seems to me that it could have done this without going beyond the limits of what could reasonably be expected. The Congress could have further developed its mission as a source of inspiration.

We should not forget that it was a gathering of individuals acting on a purely personal basis, on their own responsibility, who had been asked to open the way to new hopes for the Atlantic peoples. In fact the Congress brought together exceptionally eminent men who practically all held or had held positions of considerable public responsibility. They acted and talked with prudence and reserve, which was quite understandable in view of the gravity and urgency of the questions on the agenda. But surely more enterprising and original attitudes would have made a greater impression on public opinion and on governments.

WHAT THE CONGRESS ACHIEVED

However it would be a great mistake to minimize the results obtained during this Congress.

First of all an atmosphere prevailed which was surely far ahead of average government opinion.

In the committees the discussions were keen, even impassioned, they bore evidence of the conscientiousness with which the participants tried to accomplish a task that they had freely set themselves, but they also showed how convinced they were of the gravity of the moment and of the necessity of rapidly promoting the Atlantic community.

That is particularly true of the final declaration voted at the last minute by the Congress in plenary session. The debates of the Declaration Committee, made up of the principal chairmen of the large committees, were long and arduous. More than anywhere else, one could sense in this committee the oppositions which arose as soon as it was necessary to get down to brass tacks.

Besides it would be a mistake to believe that the final declaration represents the sum total of the Congress's efforts. It is but an echo; it attempts to briefly summarize some of the essential points by giving some important examples of what has been achieved. But in order to evaluate what the Congress actually wanted, and summarize the main points, it is essential to take into account the resolutions of the five main committees.

Among the conclusions reached by the political committee, there are some which go as far as one could hope under present circumstances.

Resolution I takes up again the recommendation published by the experts in their report of 1956. The final declaration summarizes this recommendation in these terms: "National governments should not take important decisions affecting the unity of NATO without previous consultation."

If all the governments of NATO, big and small, were strictly to apply this rule of conduct, a real political community between nations would soon ensue. Indeed, from then on, not one of the members of the alliance could by itself take any decisions that might endanger the policy, the security, or the cohesion of the group of Atlantic nations; even if this decision clearly fell under its authority.

On the level of economics, new ways have been opened up which can lead as far as will prove necessary.

Let us take, for example, resolution C of the Economic Report. It is clear enough: not only should governments refrain from any protectionist practices, but they should do all they can to remove the obstacles to trade between Atlantic Nations. Likewise, they should do everything in their power to maintain monetary stability.

The resolution in question gives its blessing to the various organizations which resort to multilateral economic cooperation. Amongst the examples that are mentioned are both the OEEC and the European Economic Community. The text is careful to place on the same level any other economic organizations which might be formed in the future, as long as they strive toward multilateral cooperation. This is a direct and obvious allusion to the free trade zone. The declaration takes its real character from the use of the very clear expression, "economic integration."

It could not be more clearly stated, in the eyes of those who approved the resolution—and it was approved unanimously—that the choice has been made: the Atlantic countries should move in the direction of growing economic integration.

We should also point out the significance of another resolution which would imply that the United States and Canada, which up to now have been simple observers with the OEEC, would become full members sharing the same responsibilities of the European members. This modification would make the OEEC the economic instrument of the Atlantic community, a role to which it seems naturally destined.

On the military level, the opposition of views which exist between the members of NATO naturally found their echoes and repercussions. When the Congress was meeting in London, the French Government reached some unilateral decisions which led to surprise and criticism. Obviously it was not the Congress duty to try to resolve the difficulties which had appeared, nor to set itself up as a judge. As always in such cases, the best policy lies in mutual sincerity.

What the Congress tried to do was to set the bases for an eventual solution; it used some formulas which, interpreted and carried out by men of good will, can lead to rapid agreement.

In any case, the Congress continually stressed that all the Atlantic powers must work toward integration, in a spirit of true equality; none of the members can expect to draw a unilateral advantage from its position, its strength, or its advance in any particular field.

CONCLUSION

If I interpret it correctly, the position adopted by the Congress as regards cooperation on an Atlantic basis appears to me most wise and most realistic.

The Congress takes cognizance of the many organizations of economic cooperation already existing and notes their main achievements. It hopes that new organizations will be set up. One preoccupation seems to underlie all the committees' efforts: to pool more and more closely the resources, the means of action, the ideas, the knowledge, and the resolution of the several Atlantic countries.

But while recommending strengthening the ties between the Atlantic nations, the Congress was careful to point out that the organization set up must remain liberal and that it must remain attentive to the outside world. This appears to me to be a sound position. We should persevere in the organization of Europe. In our eyes the Common Market was and remains a great step forward, and should eventually lead to the creation of a Greater Europe.

Personally, I hope that a free trade area will be created which will work closely with the six countries of the Common Market. Such a wish is far from utopian. It would only take a minimum of good will to find a way that will allow all the nations to work together without either of the two groups losing face or being penalized in any way.

As Scripture says, there are many mansions in our Father's house. That is still true. But we must remember to keep the doors of each open wide to the outside world.

The 6 of the Common Market cannot withdraw into themselves any more than the 16 or 17 of greater Europe. Neither can Europe withdraw within itself. And the Atlantic community too must keep, in its freedom to act, all its contacts with the outer world.

Alas. We are forced to admit how slowly the integration of Europe is proceeding: we are being overtaken. The increase in production is still lower in Europe than in the United States and, with all due allowance, than in Soviet Russia.

Perhaps the creation of the kind of Atlantic community that the committee has been striving for may well short-circuit some of the difficulties which now oppose the Common Market and future free trade area.

In any case, what matters at the present is that the advice given by the Congress should soon be followed by results. The Congress was addressing itself to individual governments and to international organizations; and most of all it was speaking to world opinion.

Representatives to the Congress will warn their respective governments of the urgency of the resolutions passed in London; public opinion will surely support any goverment that undertakes clear and decisive action aimed at the strengthening of the West.

It is for others to carry on the good work. Henceforward, the immediate responsibility for action along the lines proposed rests fully with the governments concerned. But the latter only act when obliged to do so. Herein lies the particular responsibility of all those who are in contact with public opinion. If the general public were to assert their fears, hopes, and aspirations more forcefully, how much more energetic and lively the Atlantic Alliance would soon be. If only this could be so. Every opportunity should be taken and not lost like many of the others.

Before concluding these comments, I should like to mention the hospitality shown by Great Britain to the congress. Its kindness was beyond bounds, cordial, great, comprehensive, and understanding. Some of the ceremonies were impressive. The congress was officially opened in Westminster Hall by Her Royal Highness Queen Elizabeth II with a dignity and simplicity which were both regal and charming.

This was done in keeping with the highest traditions and was so impressive that none could remain indifferent.

Finally, it does seem that the London congress did attain several of its main aims. It served the cause of civilization. Through its work, it has prepared and facilitated the

necessary integration of the Atlantic powers. It has brought new hopes of peace and progress not only to the peoples of the Atlantic nations, but also to all men of good will throughout the world.

The Interest Ceiling Issue

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 27, 1959

Mr. PELLY. Mr. Speaker, under unanimous consent, I include for printing in the Appendix of the RECORD an editorial from this morning's New York Times dealing with the interest rate on Government bonds.

Again I remind the House that we have a responsibility to face up to the interest ceiling issue.

The above-mentioned editorial follows:

THE INTEREST CEILING ISSUE

President Eisenhower at his news conference Tuesday renewed—and in the most emphatic manner—his request first made to Congress on June 8 that the existing ceilings applying to interst rates on Government bonds be removed or liberalized.

The ceiling on marketable securities is 4¼ percent, and applies to issues with maturities of 5 years or longer. This legislation is in the nature of an anachronistic accident. It has no logical relationsship to present conditions in the bond market. It was enacted in 1918 in connection with the second Liberty Loan financing of World War I, and was based on conditions then contemporary but today purely history.

What makes this legislation imperative is that the Treasury must raise vast sums in the months ahead in order (1) to fund a constant procession of maturing obligations, and (2) to raise new money to pay for the appropriations voted by Congress and not covered by taxes. As much as possible of such financing should take the form of securities designed to appeal to savers, since, when money is raised through savings, it has no inflationary effects. In practice this means that, broadly speaking, it should be raised through the sale of long-term securities. But with business in a boom phase at present, the demands of borrowers of all categories in the money market are extremely heavy. These demands, competing for a compartively limited supply of funds, have driven interest rates sharply upward. With the market rate on compartively long issues above 4¼ percent, the Treasury finds itself in a position in which it has no alternative but to raise its funds through the sale of short-term paper, a procedure inflationary in its implications because it involves the creation of bank credit or expansion of the money supply.

The present ceiling on savings bonds, from which the President has also asked relief, is roughly 3¼ percent, a rate that makes it impossible for the Government to compete actively with other available outlets for savings. This is not only a grave injustice to the 40 million patriotic holders of savings bonds in the Nation, but it is a potential threat of the most serious kind to the whole Government savings bond program, itself a major bulwark against monetary inflation.

Savings bonds outstanding total $50.5 billion. That figure exceeds by $2 billion the total of all publicly held marketable issues of the U.S. Treasury with maturities of 5 years or longer. Every dollar that is withdrawn by a savings bond holder is a dollar that the Treasury will have to replace, and that, so long as present interest limitations remain in effect, it will have to replace by raising the money through methods highly inflationary.

Prison Plight Poses a Crisis

EXTENSION OF REMARKS
OF
HON. THOMAS C. HENNINGS, JR.
OF MISSOURI
IN THE SENATE OF THE UNITED STATES
Thursday, August 27, 1959

Mr. HENNINGS. Mr. President, in my capacity as chairman of the Senate's Subcommittee on National Penitentiaries I have come to know and admire James V. Bennett, Director of the U.S. Bureau of Prisons.

For many years Mr. Bennett has urged the Congress to ease the explosive situation facing our overcrowded Federal correctional institutions by authorizing and providing the funds for construction of new prisons. Congress has been reluctant to meet this mounting crisis and only this year, after five annual requests, was the Bureau of Prisons granted $2 million to begin construction of a maximum security prison at Marion, Ill.

The danger of overcrowded prisons, Mr. President, is the prison riot and the loss of life and destruction of property which go hand in hand with such riots. Prison riots, unfortunately, have become almost regular events in our Nation's overburdened prison system and they illustrate the need for more penal facilities.

The rehabilitation of prisoners is seriously hampered by overcrowding in our prisons. Without new prisons and with our Nation's prison population increasing annually rehabilitation will soon be a thing of the past. Prison officials simply will not have the time to carry out rehabilitation programs.

This crisis facing our prison system is well documented in an article prepared by Congressional Quarterly. I ask unanimous consent that the article, which appeared in the Kansas City Star, be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Kansas City (Mo.) Star, Aug. 19, 1959]

PRISON PLIGHT POSES A CRISIS—RISING CRIME RATE STRESSES NEED TO ALLEVIATE CROWDED CONDITIONS—FEAR OF RIOTING GROWS—FACILITIES MUST BE EXPANDED TO HEAD OFF THREAT, OFFICIALS SAY

WASHINGTON, August 19.—The problem of overcrowded prisons is approaching crisis proportions, according to James V. Bennett, director of the U.S. Bureau of Prisons.

And public apathy handicaps penal officials in their efforts to obtain larger budgets to ease the problem.

RIOTS IN 38 PRISONS

A Library of Congress survey of prison riots for 1954–59 reveals that 47 riots occurred in 38 prisons, reformatories, and jails in 24 States.

During this period four prison riots occurred at the Nebraska State penitentiary, three at the Montana State prison, two each at the Washington State penitentiary, the New York women's house of detention, the Bexar County jail in San Antonio, Tex., and two at two Massachusetts State prisons. More than 100 prisoners participated in 18 of these prison riots.

Representative THOMAS J. O'BRIEN, Democrat, of Illinois, has said that if additional prison facilities are not provided Uncle Sam is going to have a major prison riot on his hands like that which occurred at Alcatraz in 1946. At that time nearly 300 prisoners attempted a mass escape from "the Rock." Since then two flareups have occurred in Federal institutions, at the Chillicothe, Ohio, reformatory in 1952, and at the U.S. Medical Center for Federal prisoners, Springfield, Mo., in June of this year.

Overcrowding of prisons is due to three main factors: Increased U.S. population, the higher crime rate, and the failure of the States and the Federal Government to build new prison facilities.

CITE CRIME RISE

Preliminary FBI figures indicate a higher increase in crime in 1958 than in 1957, when an 8 percent increase in major crimes occurred. The FBI reported an alltime high of 2,796,400 major crimes were committed in 1957.

Then there's the problem that not enough new prison facilities are being built. After 5 years of making annual requests, the U.S. Bureau of Prisons this year finally got $2 million in its appropriation to build a $10 million 600-man maximum security prison for hardened criminals at Marion, Ill.

A major problem with prison overcrowding is that prison officials have less opportunity to rehabilitate young prisoners. At the end of the 1958 fiscal year the number of prisoners 21 and under comprised a record 18.9 percent of the total Federal prison population.

In recommending expanded prison facilities for young offenders, Senator THOMAS C. HENNINGS, JR., Democrat, of Missouri, chairman of the Senate Subcommittee on National Penitentiaries, points out that commitments of youthful offenders aged 18–24 already comprise 28 percent of Federal offenders. And he adds that commitments in the 18–24 age group are expected to increase 52 percent by 1956 and 87 percent by 1970.

White House Text on Flag Lists Its Use and Background

EXTENSION OF REMARKS
OF
HON. WALTER M. MUMMA
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 27, 1959

Mr. MUMMA. Mr. Speaker, I am proud to be a citizen of the United States, a nation that takes so much pride in displaying the flag. In the Washington Post for Sunday, August 23, 1959, there appeared an article which is a statement issued by the White House, giving background on the history of the flag.

On occasion, I have supplied a flag that was flown over the Capitol Building of the United States, to various indi-

viduals for some church, civic, or social function in my congressional district.

Over these years I have become deeply impressed by the closeness of our people to our flag and I thought this article which appeared in the newspaper would therefore be very interesting. So I am taking this opportunity of asking that it be printed in the RECORD in order that others who may have missed it might now have the opportunity of reading up on it.

The article follows:

WHITE HOUSE TEXT ON FLAG LISTS ITS USE AND BACKGROUND

In connection with the admission of Hawaii as a State of the Union, the President today issued an Executive order adding the 50th star to the Union of the flag. The new flag will supersede the 49-star flag which was prescribed on the admission of Alaska as a State of the Union.

By law, the new 50-star flag will become the official flag of the United States on July 4, 1960, the birthday of the Union. Display of the new flag before that time would be improper. However, it would not be improper to display the 48-star flag or the 49-star flag after that date; with limited exceptions agencies of the Federal Government will continue to display the 48-star flag and the 49-star flag so long as they remain in good condition and until existing stocks of unused flags are exhausted. It is appropriate for all citizens to do the same.

Following is certain information with respect to the historical and symbolic aspects of the national flag.

HISTORY OF NATIONAL FLAG

Before we became a nation, our land knew many flags. Long ago the Norsemen probed our coastal waters sailing under the banner of the black raven. Columbus carried a Spanish flag across the seas. The Pilgrims carried the flag of Great Britain. The Dutch colonists brought their striped flag to New Amsterdam. The French explored the continent under the royal fleur-de-lis. Each native Indian tribe had its own totem and insignia. Immigrants of every race and nationality, in seeking a new allegiance, have brought their symbols of loyalty to our shores.

During our Revolution, various banners were used by the not-yet-united colonies. A green pine tree with the motto, "an appeal to heaven," was popular with our young Navy. The rattlesnake's warning, "Don't tread on me," was displayed by aroused colonists along the Atlantic seaboard. The Moultrie "liberty" flag, a large blue banner with a white crescent in the upper corner, rallied the defenders of Charleston, S.C., in 1776. The Bunker Hill flag was a blue banner with a white canton filled with a red cross and a small green pine. The flag of the maritime colony of Rhode Island bore a blue anchor under the word "Hope." Strikingly similar to the Stars and Stripes was the flag carried by the Green Mountain Boys of Vermont at the battle of Bennington on August 16, 1777.

When Washington took command of the Continental Army at Cambridge, Mass., in 1776, he stood under "the grand union flag" which continued to show a dependence upon Great Britain. The canton of this flag was filled with the crosses of St. George (England) and St. Andrew (Scotland).

The first Stars and Stripes was created by the Continental Congress on June 14, 1777. This date is now observed nationally as "Flag Day."

In this flag the 13 stars, representing a constellation, were arranged in a variety of designs. The most popular, with the stars in a circle so that no State could claim precedence over another, is known as the Betsy Ross flag, in honor of the seamstress who is supposed to have sewn the first one.

As the American frontier expanded, two new States were added to the Union, and these were incorporated into the flag. This meant that two stars and two stripes were added to the design, making a total of 15 each. It was this flag that withstood enemy bombardment at Fort McHenry, Md., September 13–14, 1814, and inspired Francis Scott Key to write "The Star Spangled Banner."

Later, when other States were added to the Union, the Congress, feeling that more stripes would blur the basic design, returned to the original 13 red and white stripes.

Since 1818, each new State has brought a new star to the flag. This growing pattern of stars could be said to reflect the growing dimensions of America's responsibilities, as the 13 stripes reflect the constant strength of our country's traditions.

The 50 States and the dates of their entry into the Union:

Alabama, December 14, 1819.
Alaska, January 3, 1959.
Arizona, February 14, 1912.
Arkansas, June 15, 1836.
California, September 9, 1850.
Colorado, August 1, 1876.
Connecticut, January 9, 1788.
Delaware, December 7, 1787.
Florida, March 3, 1845.
Georgia, January 2, 1788.
Hawaii, August 21, 1959.
Idaho, July 3, 1890.
Illinois, December 3, 1818.
Indiana, December 11, 1816.
Iowa, December 28, 1846.
Kansas, January 29, 1861.
Kentucky, June 1, 1792.
Louisiana, April 30, 1812.
Maine, March 15, 1820.
Maryland, April 28, 1788.
Massachusetts, February 6, 1788.
Michigan, January 26, 1837.
Minnesota, May 11, 1858.
Mississippi, December 10, 1817.
Missouri, August 10, 1821.
Montana, November 8, 1889.
Nebraska, March 1, 1867.
Nevada, October 31, 1864.
New Hampshire, June 21, 1788.
New Jersey, December 18, 1787.
New Mexico, January 6, 1912.
New York, July 26, 1788.
North Carolina, November 21, 1789.
North Dakota, November 2, 1889.
Ohio, March 1, 1803.
Oklahoma, November 16, 1907.
Oregon, February 14, 1859.
Pennsylvania, December 12, 1787.
Rhode Island, May 29, 1790.
South Carolina, May 23, 1788.
South Dakota, November 2, 1889.
Tennessee, June 1, 1796.
Texas, December 29, 1845.
Utah, January 4, 1896.
Vermont, March 4, 1791.
Virginia, June 25, 1788.
Washington, November 11, 1889.
West Virginia, June 20, 1863.
Wisconsin, May 29, 1848.
Wyoming, July 10, 1890.

CUSTOMS AND USAGE AS TO FLAG OF THE UNITED STATES

Laws have been written to govern the display of the flag and to insure a proper respect for it. Custom has decreed certain other observances in regard to its use. As a symbol of the Nation, standing for our heritage of liberty and justice, the flag is naturally held in highest honor by all citizens.

In recent years, the Congress of the United States of America has drawn together "the Existing Rules and Customs pertaining to the Display and Use of the Flag." These can be found in Public Law 829 of the 77th Congress and in Public Laws 107 and 396 of the 83d Congress. Copies may be obtained from the Government Printing Office.

Oregon State College Agricultural Specialists Discuss Farmers' Plight, Possible Solutions

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Thursday, August 27, 1959

Mr. NEUBERGER. Mr. President, one of the most pressing domestic problems of this decade is the economic condition of American agriculture.

U.S. farmers are being drowned in a flood of goods created by their own efficiency.

In 1958 a third fewer farmers produced 55 percent more farm products than in 1938, and accomplished this feat with 30 percent less work and the smallest planted acreage in 40 years.

But net farm income has exhibited a downward trend for the last 10 years and farm production costs have increased almost fourfold since 1940. Hardest hit are small farms.

This situation is of crucial importance to my State. Oregon agriculture ranks as the State's second industry. Our 54,000 farms raise everything from alfalfa to zucchini. Most of the crops produced are not eligible for price support payments.

Mr. President, recently Dr. A. L. Strand, president of Oregon State College, and a group of that school's agricultural analysts, outlined in some detail conditions plaguing farmers in Oregon and throughout the Nation and advanced suggestions for long-range solutions to these problems.

Of particular interest to me was the recommendation that the price support program be re-evaluated. As I have frequently pointed out in the past, the present price support program does little to aid the Nation's small farmers. A complete overhaul of our Federal agriculture program is long overdue.

Mr. President, I ask unanimous consent that there appear at the conclusion of my remarks, in the Appendix of the RECORD, an article written by Joe Bianco, agriculture editor of the Oregonian, of Portland, Oreg., and which appeared in the August 23, 1959, issue of that daily newspaper.

I think that Mr. Bianco's presentation of the thoughtful comments of President Strand and his associates represents a very concise and cogent summary of the farm situation today, not only in Oregon, but in many other parts of the country as well. I hope that Members of the Senate will have an opportunity to read this article.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Portland Oregonian, Aug. 23, 1959]

OREGON STATE COLLEGE AGRICULTURAL SPECIALISTS DISCUSS FARMERS' PLIGHT, POSSIBLE SOLUTIONS

(By Joe Bianco)

Oregon is in an agricultural maelstrom that will continue to wipe out small farms, but, when the turmoil is over, a sound farm

economy will emerge in keeping with the time.

This is the opinion of Dr. August Leroy Strand, president of Oregon State College, and some of the college's highly respected agricultural analysts.

The group met with the Oregonian in a 3-hour conference and outlined a recovery program expected to direct farmers through what has been described as an "agricultural revolution."

The program is a reply to an appeal made earlier this week by H. D. Rolph, Sr., president of the Oregon State Farmers Union, who asked the college to investigate the "depressed conditions of agriculture" existing in the State.

Strand issued a brief answer to the OSFU president Tuesday, but enlarged upon it during the conference.

Present with Dr. Strand during the explanation of the school's long-range farm program.

Dr. Grant E. Blanch, professor of agricultural economics; Marion Dawa Thomas, extension agricultural economist; Wilbur Tarlton Cooney, associate dean of the school of agriculture; James Ralph Beck, Assistant Director of the Federal Cooperative Extension Service, and Robert M. Alexander, assistant director of the agricultural experiment stations.

Some of the existing conditions plaguing farmers, and not only in Oregon, were presented in the opening phase of the interview. They are:

1. A trend toward fewer farms and the disappearance of smaller farms.
2. Only 36 cents of the consumer dollar goes to the farmer, compared with 45 cents 10 years ago.
3. Change in eating habits from high calorie diet to low calorie foods, thereby reducing per capita consumption.
4. Dearth of nearby markets for goods.
5. Local markets invaded by outside competition.
6. Increase in cost of operation.
7. Overproduction.

ANSWERS SUGGESTED

Here are some solutions:

1. Retire more land to meet future needs. This should be applied nationally.
2. Oregon farmers should grow more trees, primarily alder and fir, because of the potential in the wood industry.
3. Small land farmers in the latter years of life who are unable to compete should liquidate, lease, or obtain part-time work. Young farmowners having small farms should increase holdings, improve efficiency or try for off-farm jobs.
4. Greater emphasis should be on Oregon specialty crops to eliminate outside competition and ease burden of rising freight rates.
5. Apply new farm technologies.
6. Reevaluate the price support program.

TECHNOLOGY BOOSTS OUTPUT

Blanch explained that the overproduction throughout the country has been brought on by forces growing out of an improved farm technology.

Unfortunately, the demand for agricultural products is inelastic and the surplus can't be absorbed by the consumer. Today's consumer is using his increased buying power to purchase nonagricultural commodities, such as television, cars, boats and other new goods.

"And while we are overproducing, which is required in order to exist in an agricultural economy, we are doing so with fewer farms because of tremendous strides in scientific farming," he added. In 1910, there were 13 million persons working on farms; today, there are 6 million.

Oregon must produce more than it consumes locally because half of the State's agricultural income is derived from products shipped out of the State.

FREIGHT COST ADDITIONAL

The State must maintain these markets and in so doing becomes involved in a highly competitive industry. Our products shipped to outside markets must compete in price with products from the market's local areas.

In addition, the Oregon farmer must pay freight costs to reach the outlets.

It is this situation, which Strand explained, is reason for Oregon farmers to concentrate on crops such as seeds, pears and timber that will not meet so keen competition. No other State is able to produce these products in equal quality or quantity.

The group expanded on its proposal to increase farm land retirement, a major factor in the growing agricultural problem.

Nationally, at least 50 million acres should be retired, and included in this would be 500,000 acres of Oregon farm lands. The States are so interdependent that one State can't solve the problem alone, they said.

ACCEPTANCE DOUBTED

The national figure includes the 22 million acres already in soil conservation. A decrease in land production will not increase farm prices, but allow the fruits of agriculture to be distributed more evenly among farmers.

Whether the farmers will accept this is something else. Too much effort and capital has been invested in the land, it was pointed out.

A major cause of this critical situation seems to have originated with the support price program.

Thomas said that "in an effort to ease the adjustment or impact of the economic forces we (Congress) devised support price programs and other forms of subsidies. From the standpoint of the farmer caught in the light of the line (wheat farmers and others), it was needed because he was threatened with sharply declining prices as competition increase.

"These programs in effect have conflicted with the technological developments that have made it possible for fewer and fewer to produce the needed food and fiber," he explained.

"The supports have tended to keep people in farming who might otherwise have turned to production of other food and services. We might have had a program that would have given the farmers a chance to go into other fields or combine agriculture and industry.

The group concluded by saying that despite these prospects there will be room for good farmers for a long time, perhaps forever. Those able to put new farm technology to work in time, before the rank and file, will be rewarded for their efficiency.

TV Petition Is Opposed

EXTENSION OF REMARKS

OF

HON. HARRIS B. McDOWELL, JR.

OF DELAWARE

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 27, 1959

Mr. McDOWELL. Mr. Speaker, as many of my colleagues know, there is presently quite a controversy over the pending allocation of VHF channel 12 in Wilmington, Del. Although this is a local problem, in a certain sense, it has ramifications of Federal import for it serves to illustrate some of the underlying complications in the ETV struggle raging in many areas of the country.

I have been greatly pleased to see the increasing enthusiasm among my constituents for the educational allocation of Wilmington's channel 12. One of the most encouraging aspects of this whole allocation debate occurred during a legislative session of the Delaware Boy's State. The young men of the Boy's State lawmaking body overwhelmingly passed a resolution in favor of operating channel 12 as an educational telecasting unit.

This has been a long and complicated battle, and one which will undoubtedly continue for some time. I have been informed that the Federal Communications Commission will not take up the channel 12 question officially until at least the middle of September, if then. There are four petitions before the FCC at this time for the rights to operate channel 12. Three of them are applications filed by persons who would operate the channel commercially, and one has been submitted by WHYY, Inc., a Delaware-Pennsylvania-New Jersey group which would broadcast only educational programs over the channel.

The most recent petition before the FCC is the one filed by Benedict Gimbel, Jr., of the WIP Broadcasting Co., in Philadelphia. Mr. Gimbel's is an interesting proposal and is one which will be given a great deal of thought by the ETV enthusiasts. Since most of us who are in favor of educational television are approaching this situation realistically, we are aware that the FCC rarely allocates a VHF channel for strictly educational use. If channel 12 were to be operated by a commercial group, Mr. Gimbel's offer is certainly the most attractive of that kind. He has indicated that he would, after obtaining operating rights, delegate 3 percent of the time of the air to educational programs.

I feel it necessary to say, however, as I have said many times before, that a commercial channel which grants a portion of its time to educational use is by no means a substitute for the full-time educational television channel. Commercial channels cannot broadcast educational programs in the evening when these programs would be beneficial to the vast number of adults who would like to watch educational programs. Since many of the TV watchers of the evening hours prefer to be entertained; and since a commercial station, in order to sell the products which sponsor its shows, must give the greatest number of people what they want when they want it; the educational shows are usually relegated to only morning hours.

I do not stand alone with these feelings pertaining to ETV in Delaware. It has been heartwarming to see the effort which is being expended by many Delawareans, Pennsylvanians, and New Jerseyites who feel the need of an educational television channel in the Middle Atlantic States. These public-spirited people have raised $863,000 so far, to support the channel, according to Alexander Greenfeld, president of the Delaware Educational Television Association. Again I offer my support to this project and urge that the ETV proponents keep up the good work in the hope that an

educational channel 12 may become a reality.

Inserted here is an article from the Wilmington Journal-Every Evening of August 12, which describes in more detail some of the local feelings on this matter.

[From the Wilmington (Del.) Journal-Every Evening, Aug. 12, 1959]

TV PETITION IS OPPOSED—PHILADELPHIA'S WIP TRY FOR CHANNEL 12 DRAWS CONTESTING STATEMENT

The Delaware Educational Television Association board of trustees today issued a statement opposing the application of Philadelphia station WIP for channel 12 in Wilmington.

The statement given by DETVA president Alexander Greenfeld said; "The application of station WIP, which commits 30 percent of its broadcast time to education, does not meet the needs of education in the Delaware community. DETVA maintains that adult education requires a large portion of the broadcast hours between 7 p.m. and 11 p.m. If educational TV is to grow and continue to be creative, participating organizations, and the schoolteachers must have access to studio facilities at all times.

"DETVA is happy to see a recognition of a commercial organization of the necessity and marketability of education on TV, but it does not believe that a grant of channel 12 to WIP would serve the best interests of the State of Delaware."

Others interested in getting channel 12 are the Rollins Broadcasting Co., Wilmington, a midwestern group, and WHYY, Inc., an educational corporation representing Delaware, Pennsylvania, and New Jersey. The latter is a nonprofit organization trying to obtain the channel to air education programs in the evening.

DETVA's proposal would have broadcasting from 9 a.m. to 11 p.m. From 9 a.m. to 3 p.m., there would be programs into the schools.

Mr. Greenfeld announced that hearings in Washington before the Federal Communications Commission, probably will not be held before October. At the hearing, Mr. Greenfeld said, he, and Delaware educators and leading citizens will testify in behalf of WHYY.

Mrs. Yvonne De Valenger, secretary, reported that the association has already received more than 1,000 signed petitions favoring WHYY's application.

The drive for the petitions will continue until the FCC hearing, Mr. Greenfeld said.

Georgia Bankers Honor Representative Paul Brown

EXTENSION OF REMARKS
OF
HON. HERMAN E. TALMADGE
OF GEORGIA
IN THE SENATE OF THE UNITED STATES
Thursday, August 27, 1959

Mr. TALMADGE. Mr. President, no Member of Congress has served with greater distinction to himself or with truer devotion to his constituents and Nation than has the Honorable PAUL BROWN of the 10th District of Georgia. In deserved recognition of Representative BROWN's long and outstanding service in the public interest, particularly in the field of banking and currency, the Executive Council of the Georgia Bankers Association recently adopted a resolution expressing its appreciation. I ask unanimous consent, Mr. President, that the text of that resolution be printed in the Appendix of the RECORD.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

The Executive Council of the Georgia Bankers Association has noted with pride:

1. That Representative PAUL BROWN of the 10th District of Georgia has served with honor for many years as a member of the Banking and Currency Committee of the House of Representatives.

2. That Representative PAUL BROWN as chairman of Subcommittee No. 2 of the Banking and Currency Committee, first established early this year, has demonstrated outstanding ability for constructive leadership.

3. That Representative PAUL BROWN introduced H.R. 5237 in the 86th Congress, a bill to amend the legal reserve requirements applicable to member banks of the Federal Reserve System to permit, among other things, the Federal Reserve Board to authorize member banks to include vault cash as a part of their legal reserves and that under his skillful direction this bill passed the House of Representatives and was subsequently enacted into law as Public Law 86-114.

4. That Representative PAUL BROWN has introduced much needed amendments to the national bank laws as bills H.R. 8159 and H.R. 8160 and has guided these bills to approval by his subcommittee and the full Banking and Currency Committee and thereafter to passage by the House of Representatives.

In view of the foregoing, the Executive Council of the Georgia Bankers Association hereby expresses its great and sincere appreciation of the notable service which Representative PAUL BROWN has performed in an effort to modernize the banking laws so that the banks of the country may more effectively serve their communities and assist in the economic growth of the United States and instructs the secretary of the association to make this resolution a part of the permanent records of the association and to transmit a copy to Representative BROWN, to the other members of the Georgia congressional delegation, and to the American Bankers Association.

Humanitarian Stricken

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 27, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following news story and an editorial from the Wilkes-Barre Times-Leader of Monday, August 24, 1959, announcing and commenting upon the illness of Dr. Thomas A. Dooley, who is characterized as "America's Dr. Schweitzer" for his great and humanitarian work in the field of medicine in the Far East, specifically in Laos:

DOCTOR DETERMINED TO RETURN TO LAOS

ST. LOUIS, August 24.—Dr. Thomas A. Dooley says cancer may let him live only 5 or 6 years, but he is determined to return to embattled Laos. He operates a hospital near the frontlines of Laos battle against Communist rebels.

The 32-year-old physician said a growth removed from his chest has been diagnosed as malignant melanoma.

"The outlook for this type of cancer is bleak," he said, as if he were talking about a common cold. "It usually means you have 5 or 6 years.

"I don't care what the outlook is. If it's 6 months or 16 years, I'm going back to Laos in November.

"The fate of Laos is more important than the Berlin crisis. The future of all southeast Asia rests with the outcome of the situation in Laos."

Dr. Dooley, who visited his mother here, flies to New York today for further diagnosis at the Sloan-Kettering Cancer Research Center.

He expressed concern over Communist reports in Laos that the American doctor had ducked out in "typical American" fashion.

HUMANITARIAN STRICKEN

The Associated Press dispatch from New York, appearing in this newspaper on Saturday, telling of the return of Dr. Thomas Dooley to St. Louis to visit his family before entering a hospital for treatment of cancer in the chest, will be cause for concern in this community, as it will be in many places, particularly in Laos which is taking up a great deal of space on the front page these days.

Dr. Dooley is America's Dr. Schweitzer. Whereas the famous French humanitarian labors in Africa, Dr. Dooley has been conducting a hospital and traveling clinic in the Far East, close to the border of Red China.

Dr. Dooley lectured at College Misericordia in January 1958 before his return to his post in the Orient where he was stricken recently. His moving recital of his experiences made a deep impression on his audience at Dallas.

Only 32 years or age and a former U.S. Navy officer, Dr. Dooley returned to Indochina where he and four fellow Americans, constituting a mobile medical unit, treated villagers and built a bamboo hospital where he looks after at least 100 patients daily and provides natives with an inspiring example of American brotherhood. His only compensation, apart from the honors he has received and the satisfaction of doing a good deed, consists of eggs, fruit and poultry which he shares with the needy. It has been estimated that he has served more than 600,000 refugees from China. He also has trained hundreds of natives to serve as midwives and in other capacities. He has used royalties from two books, as well as contributions from admirers, to buy medical equipment and supplies for his mission of mercy.

And now this unselfish man himself has been stricken. He will have the prayers of millions of his fellow countrymen and of orientals he has befriended for a speedy recovery and a return to his post. The world cannot spare, at this crucial period, one Dr. Dooley or one Dr. Schweitzer.

Hector Says Regulatory Agencies Try To Do Impossible—And Fail

EXTENSION OF REMARKS
OF
HON. GEORGE A. SMATHERS
OF FLORIDA
IN THE SENATE OF THE UNITED STATES
Thursday, August 27, 1959

Mr. SMATHERS. Mr. President, I ask unanimous consent that an article entitled "Hector Says Regulatory Agencies

Try To Do Impossible—And Fail" written by Carroll Kilpatrick, which appeared in the Washington Post of August 26, be printed in the Appendix of the RECORD.

The article sets forth quotes from a speech made by the Honorable Louis J. Hector, a member of the Civil Aeronautics Board before the convention of the American Bar Association in Miami, Fla., pointing out that our regulatory agencies are failing to achieve their purpose by virtue of the out-moded procedures which they are following today.

Commissioner Hector who hails from the great State of Florida leveled sharp, objective and constructive criticism at the present procedures followed by our regulatory agencies and expressed the view that a major overhauling of these procedures is vital if they are to serve the purpose for which they have been established by the Congress. I am pleased to state that the Transportation Study Committee of the Senate Interstate and Foreign Commerce Committee will look into matters of this nature. I hope we come up with a solution. Solutions to these problems are hard to come up with these days.

What Mr. Hector has said is what many of us have felt for some time. In my opinion, he has performed great public service. The views stated by him deserve the urgent and serious consideration of the Congress.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Post, Aug. 26, 1959]

HECTOR SAYS REGULATORY AGENCIES TRY TO DO IMPOSSIBLE—AND FAIL

(By Carroll Kilpatrick)

A sharp criticism of the practices of Federal regulatory agencies, together with an indictment of the basic premises on which they were established was made yesterday by one of the leading regulatory officials in Washington.

The critic was Louis J. Hector, a member of the Civil Aeronautics Board, who said in a speech before the American Bar Association in Miami that the regulatory agencies are trying to do the impossible.

His remarks were regarded as especially significant because of their source and because they reflect a growing criticism, from academic sources and from industry, of regulatory agencies and the role they are supposed to play.

Criticism of the agencies since they were created in the New Deal days has been muted. But of late they have been under increasing attack, partly because they have the effect of stifling economic freedom and because they attempt to do two opposing jobs: regulation and adjudication.

CALLS FOR OVERHAULING

"If we tried to make our foreign policy or plan our national defense in this way, we would still be a third-rate power," Hector said.

"And if we keep on trying to plan our national transportation system this way, we will wake up in a national emergency one day and find that it won't do the job.

"Clearly these procedures must be overhauled."

Hector indicated that he was not proposing minor reforms but major surgery. Agencies like the CAB, the Federal Power Commission, and the Federal Communications Commission are trying to combine policymaking and adjudication—in other words, be both Congress and the courts, he suggested. The basic premises are wrong, he charged.

Under growing criticism from Congress and the public and from the businesses they are charged with regulating, Hector said, the agencies have tried to protect themselves by insisting that they are acting more and more like courts of law.

"The paradoxical result," Hector said, "has been not a greater amount of real judicial process but a lesser amount—more judicial trappings, perhaps, but less of substance.

"As an organization tries to give the appearance of full judicial procedure in every matter, both big and small, inevitable compromises and subterfuges are required to get all the work done. These compromises inevitably spread throughout the organization and in the long run there is less true judicial process in any matter, big or small."

Hector recited the history of what is known as the Seven States case recently before the CAB. In 1955, it became apparent that railroad passenger service in the Dakotas, Nebraska, Iowa, Illinois, Wisconsin, and Minnesota was becoming so inadequate that new local air service was essential.

THREE YEARS FOR CASE

In December 1955, the CAB ordered an investigation to develop a new air program for the area. Because of what Hector called "the built-in inefficiency" of the CAB's process of reaching a decision in a matter of this kind, it took it 3 years to conclude the case.

Many witnesses were heard, but "neither the Board nor the examiner had specified just what sort of information they wanted," he said, so a number of witnesses "did not provide very much useful information."

"The Board never went out and actively sought the facts," he said. "Anyone who was interested just came in and brought whatever data he thought might be useful."

In the beginning, the Board gave the examiner "no real policies to guide him in the formulation of a major new local service plan," Hector said. The result was that "he floundered around for 2 years formulating his own plan only to have the Board disagree with him on basic policy and do the whole job over."

BASIC FLAW NOTED

The basic flaw is the belief that administrative agencies can combine policymaking and adjudication, Hector said.

"Administrators and judges have such completely different codes of ethics that a commissioner who tries to act like a judge is accused of trying to regulate in an ivory tower, while one who tries to act like an administrator is accused of becoming too friendly with the litigants," Hector said.

The CAB is now and for 2 years has been engaged in another major case. It involves an overhaul of airline fares. Possibly because he is still sitting as a judge in that case, Hector did not refer to it, but it promises to make the Seven States case seem brief and clearly managed by comparison.

Millions of words of testimony already have been taken in the fare investigation, while the traveling public and the airlines wonder whether one or both is being cheated in the meantime.

Hector urged the critics and defenders of the administrative agencies to recognize the need for major changes.

HE POINTS OUT NEED

"All the critics agree, I think, that adjudication must be performed by men occupying basically the position of judges, and that the executive and Congress must keep their hands off," he said.

"But policymaking is a different thing. This should be made by the executive, it is increasingly felt, within the broad policy determinations of Congress."

He indicated he agreed with critics who say:

"Give to the executive the functions of rulemaking, policy formulation, planning, and routine administration. Give to a special expert tribunal or group of tribunals the task of deciding major litigated cases and of hearing appeals from administrative decisions. If there is a job of prosecution, give it to a separate agency."

Brilliant Address on Maritime Policy by Mr. Ralph E. Casey

EXTENSION OF REMARKS

OF

HON. PHILIP J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 18, 1959

Mr. PHILBIN. Mr. Speaker, under unanimous consent to revise and extend my remarks in the RECORD, I include therein a very able, penetrating address by our valued and esteemed friend, Mr. Ralph E. Casey, president of the American Merchant Marine Institute, Inc., before a panel discussion of the National Security Commission at Minneapolis on August 22, 1959.

I am inserting this learned address in the RECORD with the hope that all Members of the Congress may read it.

Obviously, we have every reason to be deeply concerned by the marked decline in the vigor and vitality of American shipping. Both our economy and our national security have been and are being adversely affected by conditions developed in our great shipping industry since the end of World War II.

To my mind, few things confronting the Congress are more important than the status and strengthening of our great maritime industry.

Truly there is great need today not only for studying America's maritime policy but for taking prompt, effective action to insure that our shipping industry is adequately protected, maintained, and improved to meet our economic and maritime needs in international commerce, to bolster the national defense, and make sure that our prestige in this area is not further impaired.

I congratulate Mr. Casey upon this thoughtful, outstanding address and hope that its contents will be taken to heart and acted upon by the Congress before it is too late. A greatly strengthened and revitalized American merchant marine is one of our most compelling national needs.

The address follows:

THE UNITED STATES-EUROPEAN SHIPPING TALKS AND THEIR AFTERMATH

(Address by Ralph E. Casey, president, American Merchant Marine Institute, Inc., at National Security Commission panel discussion, August 22, 1959, Minneapolis, Minn.)

There is one phase of the merchant marine picture to which I should like to devote the few minutes allotted to me here today. I refer to the intergovernmental shipping talks which were held in Washington this past June between representatives of Eu-

ropean shipping nations and our State Department.

Now, some may feel that the crisis to which these talks gave rise is over and that we need worry no longer about this particular threat to American shipping. In my opinion this kind of thinking is not only wrong but dangerous. There is no doubt in the world but that the Europeans are just marking time; waiting for a new and more favorable opportunity to press their case. Before I point out why I know this to be so, let me give you a sketchy background and review of these June talks.

Through the years, the maritime Nations of Western Europe have competed for the great and expanding foreign trade of the United States. They have competed among themselves, and they have competed with merchant vessels under the American flag. During the 20th century the disparity in building and operating costs between American and European shipping has put us at a tremendous disadvantage. As a result the American merchant fleet dwindled to almost nothing twice in a period of less than 40 years, first in 1916 and again in 1939, times when our freedoms and our very institutions were at stake. These lessons convinced each President and each Congress for the past quarter of a century that a strong American merchant marine is absolutely essential to our health and welfare as a nation.

When World War II ended, the maritime fleets of Western Europe were shot to pieces. Over here we had hundreds of comparatively new ships built at the cost of some $19 billion to the American taxpayers. However, so instead of retaining the monopoly on world shipping which this situation gave us, we offered our foreign friends these excellent vessels at the same prices we were asking of our own citizens. In this way, the United States rehabilitated the merchant fleets of every country in Western Europe.

In this postwar period the subsidy program initiated by the 1936 act, became even more essential to the survival of American-flag shipping. In fact, we found that by reason of the strong nationalistic flag preferences and stringent currency restrictions prevalent over there, we were still fighting a losing battle in competition with the merchant fleets of Western Europe. Subsidy is no good without cargoes. So, it was established as only fair and equitable that one-half of all Government-sponsored cargoes—in other words, these goods which were, in effect, being given away to foreign nations—should be carried in American ships.

Well, the Europeans didn't like our subsidy laws and they liked our 50–50 law even less. Foreign shipping journals constantly sniped at these two phases of our shipping policy. The governments of Western Europe got together in a group called the Organization for European Economic Cooperation, known as OEEC, and the sniping became more formidable. They did, however, stay on their side of the Atlantic.

Late last year, they decided to take the gloves off and have it out with our Government face-to-face. A formal request was presented on behalf of the Netherlands, later joined by the other maritime countries, for a series of talks with U.S. Government officials in Washington to discuss certain phases of our shipping policy. It became apparent that these phases were subsidies, the 50–50 law, and the flags-of-convenience or necessity question. Our State Department agreed to these talks, and they were held on June 8–12.

This was a conference in which the United States had nothing to gain and everything to lose. Every segment of our industry was affected—passenger ships, cargo vessels, and tanker companies.

With the storm clouds brewing I went to London for the annual meeting of the International Chamber of Shipping in April. This is an international group of shipping trade associations similar to the American Merchant Marine Institute. By a fortunate coincidence, Senator JOHN MARSHALL BUTLER was on the same ship going over and we arranged to have joint discussions with labor leaders, shipping men and Government officials concerning the purpose of the forthcoming talks in Washington. Not only did we learn the precise nature of the points that would be made in Washington, but even more importantly, we came to appreciate what a serious mistake it would be to take these discussions lightly.

Anyone who knows how these diplomatic conferences are set up and carried out must realize that generally whole Government delegations do not travel 3,000 miles merely to chitchat; generally, there is reasonable assurance in advance that the mission will be successful. That was the case in this instance also; the European governments fully expected to make headway in their long fight to reduce our merchant fleet to rockbottom. Perhaps they were given some measure of hope by the fact that the President of the United States had just ordered a new study of transportation policy. Or perhaps, the intelligence received from their representatives stationed in this country was misleading. At any rate, shipping was down all over the world, cargoes were hard to get, and it was thought abroad that this was the time to strike.

As the time for the talks approached, the chairman of the two congressional committees having cognizance over merchant marine matters warned the State Department against making any concessions in the areas under discussion. The industry, speaking through its associations, asked for representation at the table. This was refused, but arrangements were made for briefing industry representatives during the course of the meetings. I can now tell you that we agreed to confidential briefings very reluctantly. Some thought it better to stay away altogether but, on the whole, we felt that would be taking too great a risk. If any weakening of the U.S. position developed, we wanted to be in a position to know about it.

That no such weakening did develop and that the European delegations went home without anything to show for their efforts to undermine, or at least water down, our basic national maritime policies is greatly to the credit of our Government's representatives and of the congressional leaders who strengthened their hand. In particular, we owe a debt of gratitude to my fellow panelist Clarence Morse, Chairman of the Federal Maritime Board, whose blunt reassertion of the principles under attack set the keynote from which our side of the talks never deviated. Great credit is also due Under Secretary of State Dillon, whose firmness won the applause of an industry which has seldom had occasion to applaud the State Department.

Toward the conclusion of the talks, perceiving that they were not going to make any immediate progress toward changing our merchant marine policies, the European spokesmen proposed setting up a permanent international consultative body before which their objections to U.S. policy could be aired on a continuing basis. When informed of this proposal in the regular briefings, the American shipping industry strongly and vigorously opposed the scheme. Our position was that acceptance of such a plan would imply a lack of conviction as to its own policies on the part of the U.S. Government. It would further expose the welfare of our industry, and indeed the security of the Nation itself, to the fluctuations of intergovernmental debate by diplomats—a game in which we constantly lose our shirts.
